

Acerca de este libro

Esta es una copia digital de un libro que, durante generaciones, se ha conservado en las estanterías de una biblioteca, hasta que Google ha decidido escanearlo como parte de un proyecto que pretende que sea posible descubrir en línea libros de todo el mundo.

Ha sobrevivido tantos años como para que los derechos de autor hayan expirado y el libro pase a ser de dominio público. El que un libro sea de dominio público significa que nunca ha estado protegido por derechos de autor, o bien que el período legal de estos derechos ya ha expirado. Es posible que una misma obra sea de dominio público en unos países y, sin embargo, no lo sea en otros. Los libros de dominio público son nuestras puertas hacia el pasado, suponen un patrimonio histórico, cultural y de conocimientos que, a menudo, resulta difícil de descubrir.

Todas las anotaciones, marcas y otras señales en los márgenes que estén presentes en el volumen original aparecerán también en este archivo como testimonio del largo viaje que el libro ha recorrido desde el editor hasta la biblioteca y, finalmente, hasta usted.

Normas de uso

Google se enorgullece de poder colaborar con distintas bibliotecas para digitalizar los materiales de dominio público a fin de hacerlos accesibles a todo el mundo. Los libros de dominio público son patrimonio de todos, nosotros somos sus humildes guardianes. No obstante, se trata de un trabajo caro. Por este motivo, y para poder ofrecer este recurso, hemos tomado medidas para evitar que se produzca un abuso por parte de terceros con fines comerciales, y hemos incluido restricciones técnicas sobre las solicitudes automatizadas.

Asimismo, le pedimos que:

- + *Haga un uso exclusivamente no comercial de estos archivos* Hemos diseñado la Búsqueda de libros de Google para el uso de particulares; como tal, le pedimos que utilice estos archivos con fines personales, y no comerciales.
- + *No envíe solicitudes automatizadas* Por favor, no envíe solicitudes automatizadas de ningún tipo al sistema de Google. Si está llevando a cabo una investigación sobre traducción automática, reconocimiento óptico de caracteres u otros campos para los que resulte útil disfrutar de acceso a una gran cantidad de texto, por favor, envíenos un mensaje. Fomentamos el uso de materiales de dominio público con estos propósitos y seguro que podremos ayudarle.
- + *Conserve la atribución* La filigrana de Google que verá en todos los archivos es fundamental para informar a los usuarios sobre este proyecto y ayudarles a encontrar materiales adicionales en la Búsqueda de libros de Google. Por favor, no la elimine.
- + *Manténgase siempre dentro de la legalidad* Sea cual sea el uso que haga de estos materiales, recuerde que es responsable de asegurarse de que todo lo que hace es legal. No dé por sentado que, por el hecho de que una obra se considere de dominio público para los usuarios de los Estados Unidos, lo será también para los usuarios de otros países. La legislación sobre derechos de autor varía de un país a otro, y no podemos facilitar información sobre si está permitido un uso específico de algún libro. Por favor, no suponga que la aparición de un libro en nuestro programa significa que se puede utilizar de igual manera en todo el mundo. La responsabilidad ante la infracción de los derechos de autor puede ser muy grave.

Acerca de la Búsqueda de libros de Google

El objetivo de Google consiste en organizar información procedente de todo el mundo y hacerla accesible y útil de forma universal. El programa de Búsqueda de libros de Google ayuda a los lectores a descubrir los libros de todo el mundo a la vez que ayuda a autores y editores a llegar a nuevas audiencias. Podrá realizar búsquedas en el texto completo de este libro en la web, en la página <http://books.google.com>

This is a reproduction of a library book that was digitized by Google as part of an ongoing effort to preserve the information in books and make it universally accessible.

The Engineer.

THE PIONEER OF SCIENTIFIC JOURNALISM.

“ The Engineer ” appeals—

To Subscribers—because each article is written for Experts by an Expert in the particular subject which is being handled.

To Advertisers—because it circulates wherever Engineering Products are required, its distribution being world-wide.

“The Engineer Directory,” which is sent free on application, gives a classified list of Manufacturers of Engineering Products, with a vocabulary in four foreign languages.

To Students in Australia & New Zealand

The **Marconi Schools of Radiotelegraphy** have complete courses of instruction in Practical and Theoretical Radio-communication.

The Schools are equipped with **Complete Modern Wireless Stations**, also with special apparatus for experimental and demonstration work.

Instruction by Correspondence combined with school attendance (or either) is directed by specially qualified teachers who are experienced in Practical work.

The only schools in Australasia licensed to use Marconi, Poulsen and Quenched Spark Patents.

HEADQUARTERS : 97 CLARENCE STREET, SYDNEY, N.S.W.

The Leading Wireless School in New Zealand

THROUGH the quality of its instruction, and the success which attends its students,

**THE DOMINION COLLEGE
OF RADIO - TELEGRAPHY**

takes first place among the "Wireless" Schools in New Zealand. Graduates obtain attractive positions, for our students are given priority of appointments by Amalgamated Wireless (A/sia), Ltd., who control over 95% Ship Stations.

Classes to suit pupil's convenience ; or Tuition
by Specialised Correspondence Course.

Save Money by putting your Cable Messages into Marconi Code!

£ For every £1 ordinarily spent upon cabling the Marconi International Code will save from 5s. to 12s.

CONSIDER THIS :

The Marconi International Code also translates your telegraphic messages into the chief languages of the world and makes it possible for the foreign merchant to read, in his own language, the message you have coded from English. It also greatly reduces the time required to code or decode a message. Time is money, you should adopt the Marconi Code if only for this advantage. Every message sent in Marconi Code is automatically checked by the recipient, so that no possibility of a mutilation being read as correct can exist.

You should know more about this wonderful Code.

World-Wide Wireless

MARINE SERVICE AND TRANS-OCEANIC COMMUNICATION

What are your requirements ?

Twenty years of activity and research have equipped the Radio Corporation of America to solve your problems. The combined experience and facilities of the Marconi Wireless Telegraph Company of America and the General Electric Company are embraced in this all-American organization.

MARINE SERVICE

If you are one of the ship owners whose Marconi-equipped vessels have been returned by the Government, you can contract with us for service—thus immediately shifting the burden of maintenance and operation to our experienced shoulders.

But if your vessel has no wireless at all, you can secure Radio Apparatus on practically any basis you wish:—You can rent, with service—buy outright—or buy with service.

On any question of radio—Service or Communication—you receive all the value of special experience and world-wide organization. Write for details or ask our representative to call.

TRANS-OCEANIC SERVICE

Modern high-power stations, equipped with the very latest and most efficient type of apparatus.

Quick, reliable, direct service to Great Britain, France, Norway (with connections to Sweden, Denmark and Finland), Hawaii and Japan.

Argentina, Brazil and Cuba will be linked up in the very near future.

Direct services to China, Siberia, Northern Russia, and to all countries in Central and South America and the West Indies will be included later.

Rates considerably lower than cable rates.

RADIO CORPORATION of AMERICA

We Actually Discovered a Man—

recently who had not heard of Mitchells. It is hardly necessary to state that we found this man to be of the type usually too tired to change for the better. His misfortune was that he dealt with a firm "for just old time's sake." He lacked what is colloquially termed "ginger." It is an established fact that each and all who peruse these pages are those individuals who can discriminate between good and bad, live and dead. YOU must be looking through these adverts, keen on business, in a greater or lesser degree. The firm you are looking for, if it is electrical material you want, is the famous Mitchell's Electrical and Wireless, Ltd. You will find them right up to date in all things electrical, from ordinary lighting to the most recent developments in Wireless Telephony. They have a department for each branch of the trade, and each branch does its own particular work. They carry huge stocks of material, and the extent of their clientèle may be judged by considering the fact that in two months 7043 Catalogues were distributed to applicants. May we mail *you* one of these useful Catalogues for 4d. in stamps. The said Catalogue has been described by many as "the livest ever," and the business premises of the Company as "the happy hunting ground of the professional and amateur." Implying, of course, that the stocks include *everything* that is used electrically. Mitchells can help you out of your difficulty if you require material, and since they control the market, the prices are right. WRITE THEM TO-DAY, for MITCHELLS is the Electrical Store of the World.

.

ADMIRALTY CHARTS

THE LATEST EDITIONS OF CHARTS, PLANS, & SAILING DIRECTIONS, PUBLISHED BY THE ADMIRALTY, CAN BE HAD FROM

J. D. POTTER, Admiralty Agent for Charts,
and Publisher of Nautical Books,

145, MINORIES, LONDON, E.1

Official Catalogue of Admiralty Charts, Plans, and Sailing Directions, a vol. of 330 pp., with 24 Index Charts (gratis).

On the Correction and Use of Charts, Light Lists, and Sailing Directions, a vol. of 40 pp., royal 8vo; bound red cloth (gratis).

Not for one year but—

for nearly half a century has that mark been identified with the products of the J. & P. Factory.

That indicates experience—an experience dating back beyond the earliest days of Wireless Telegraphy—an experience which has proved of infinite value in the manufacture of SWITCHGEAR and TRANSFORMERS for HIGH FREQUENCY PURPOSES, HOT WIRE INSTRUMENTS, FREQUENCY MOTORS, etc., in all of which we specialise.

And in this connection our knowledge and facilities are placed unreservedly at the disposal of our customers—Will you write us?

manufacture and supply the best valves for reception, transmission, and power rectification; also patent high resistances for grid leaks and resistance amplifiers.

MULLARD RADIO VALVE CO., LTD.

Manufacturers of Wireless Apparatus
Claybrooke Rd., Hammersmith, London W.6.

Contractors to the Admiralty, War Office, Air Ministry, Post Office.

ALL THE MAPS IN THIS YEAR-BOOK HAVE BEEN PRODUCED BY

“GEOGRAPHIA,” LTD.

55, Fleet Street, London, E.C. 4

Production of Special Maps of any description undertaken

WE are producers of the “Daily Telegraph” Victory Atlas of the World, which is now on sale at the undermentioned prices:—

	Carriage Paid
Cloth, with handsome gilt lettering	£6 18 6
Half Morocco, with handsome gilt design and lettering	8 10 0
Full Morocco Do. Do. Do.	9 18 6

This is the first complete, comprehensive Atlas of the World on the Market, and it is absolutely indispensable to business men.

Hitherto there has not been produced, in any quarter of the World, an Atlas nearly so complete.

The Gazetteer Index which is being compiled on the basis of this Atlas will contain upwards of 250,000 names.

“GEOGRAPHIA,” LTD.

55, Fleet Street, London, E.C. 4

New York: 1463, Broadway at 42nd Street. Melbourne: 5, St. James' Buildings, William Street.
Also at Toronto.

Portable

HIGH SPEED RADIO TRANSMITTING KEY FOR ANY POWER

300 K.W. AT 120 W.P.M.

5 K.W. AT 200 W.P.M.

- Ⓐ Either of these keys may be directly controlled by a Wheatstone or other automatic transmitter, by a P.O. working from a land line, or by a hand key.
- Ⓐ The large key utilises compressed air for opening and closing the contacts, and for extinguishing the arc which forms between them.
- Ⓐ The small key is wholly electro-magnetic, utilising a magnet blow-out for the arc, and is compact and easily portable.
- Ⓐ Keys for other powers are also available.
- Ⓐ The speeds shown (W.P.M. = words per minute) are easily attainable.

A valuable Ally

Users of electrically driven machines have no more reliable ally than the Minerva group of Insulating Varnishes and Compounds. By preventing the deleterious penetration of moisture, oils, acids, etc., to delicate parts of the electrical plant they cut out all chances of breakdown and the consequent costly delays and heavy repair bills. The Insulating book gives you expert information. It is free on request.

Minerva insulating specialties are regularly used by the leading electrical manufacturing firms, lighting and power stations, railways, tramways, etc. Definite proof of their practical utility

"VICKERS' DURALUMIN"

An Alloy of Aluminium with the strength and hardness of mild steel, but having only one-third of its weight. Unlike Aluminium, "Vickers' Duralumin" possesses excellent machining qualities. For Scientific Apparatus, Instruments of Precision, Orthopædic Apparatus and Hospital Supplies, etc. For Aeroplanes, Dirigibles, Hydroplanes, Motor Car, Yacht and Boat Fittings, etc. Will not rust. Almost unaffected by sea water. It is an ideal substitute for Aluminium, Nickel, Silver, Brass, Copper, Nickel-plated and Silvered Articles, and it is the only substitute for Steel where lightness combined with the strength of that metal is required.

*Eminently suited for use in the
construction of portable wireless sets.*

VICKERS LIMITED

VICKERS HOUSE, BROADWAY, LONDON, S.W.1.

Receiving and Transmitting VALVES

All types of Valves for use in
Wireless reception and transmission.

One Type of High Power Rectifier.

Special Types.

1. High Power Rectifying Valves.
2. High Power Rectifying Valves for use with low anode voltages.
3. Low and High Power double anode full-wave Rectifiers.
4. Continuous Wave Transmitting Valves for use with alternating current. No separate rectifying Valve necessary.
5. Receiving and Amplifying Valves of ordinary and also original types, including one operating on very low plate potentials.

The EDISON SWAN ELECTRIC Co., Ltd.
PONDERS END, MIDDLESEX.

ng and Transmitting VALVES

Established 1826

The Journal of Commerce

*The Premier International Shipping
and Commercial Newspaper.*

Daily editions circulate in all ports and commercial centres of the British Isles in addition to enjoying an extensive and influential foreign circulation.

Special features include Marine Insurance, Transport by Road, Rail and Air, Coal and Bunkering Trades.

The Shipbuilding and Engineering Edition published each Thursday is recognised as the most comprehensive and influential of the publications dealing with the shipbuilding, shiprepairing, marine engineering, and allied industries.

PREFACE

WIRELESS telegraphy, with its sister science, wireless telephony, offers so many avenues of exploration to the scientific research worker that an article from the pen of one of these experts cannot fail to prove of immense value to those who peruse it. We have endeavoured, and we think with some measure of success, to include articles on subjects as diverse as possible.

Under this head will be found a discursive contribution on the Radio Compass, by Mr. Stuart Ballantine, an American, who for some years has devoted his attention to research connected with this branch of the Radiotelegraphic Service. It has made rapid strides of late, and owing to its recognised value with regard to shipping is of the utmost importance. Many ships are now equipped with Direction Finding Apparatus, enabling them to take bearings of any wireless coast station, but in order that the full benefit of this may be felt it is necessary that the accurate geographical position of all such coast stations should be available to shipmasters. The degree of accuracy should be to the nearest second. If this be not attained the work carried out by means of the apparatus will be nullified. In order to reduce the possibility of error and to render this class of wireless working successful, the exact position of the coast station constitutes an essential factor. We have enlisted, and, in the majority of cases, secured, the kind co-operation, in this work of public utility, of most of the Governments of the world, and the result has been that the geographical positions of the land stations in our book are more accurate than in many of the current official publications giving similar information.

Mr. P. R. Coursey, B.Sc., contributes an article of absorbing interest on "Some Outstanding Problems of Radio Reception—Interference," which will doubtless be studied with avidity by a large number of our readers.

A description of a modern shipboard wireless set will be highly valued, giving, as it does, a detailed examination of the apparatus for use on our modern liners and other sea-going vessels. This has been ably written by Mr. F. P. Swann, and deals with the four-electrode

PREFACE

valve and its circuits. The author is an expert who is constantly engaged in research work connected with this apparatus and his discourse, therefore, may be considered as authoritative from every standpoint.

The year 1921 sees the twenty-fifth anniversary of the taking out by Senatore Marconi of his first patent for wireless telegraphy (June 2nd, 1896). It has been considered not inappropriate to include a technically historical article from the pen of Professor G. W. O. Howe, D.Sc., entitled, "Historical Landmarks in Wireless Invention," and we venture to think that our readers will find this article of a highly valuable and interesting character.

A new feature this year is the inclusion of a list (not by any means exhaustive) of schools and colleges, both at home and abroad, where wireless telegraphy and telephony are taught. As full details as possible are given, and it is hoped that the section will prove of utility to our readers. In succeeding issues it is hoped considerably to amplify this section.

The other and standard features in our Annual have all been thoroughly revised and brought as up to date as circumstances would permit at the time of going to press. Our chief aim, however, has been, and always will be, to present to our readers that which is of the greatest interest and utility to them, and in order that this object may be attained we appeal to our wide circle of friends to communicate with the Editor on any matter concerning the contents of this book. Any genuine suggestions will be welcomed at all times and will receive careful consideration.

Before concluding this Preface, we desire to express our indebtedness to the many friends and correspondents, both at home and abroad, who have helped to make the 1921 volume of our Annual the success we believe it to be.

THE EDITOR.

(Christmas Day).

UNITED STATES OF AMERICA.

January 1. New Year's Day: In all
States and District of Columbia, Porto
Rico, Hawaii, and Alaska, except
Massachusetts.
January 8. Anniversary of the Battle of
New Orleans: In Louisiana.
January 19. Lee's Birthday: In Alabama,
Arkansas, Florida, Georgia, North Caro-
lina, South Carolina, and Virginia.
February 12. Georgia Day: In Georgia.
February 12. Lincoln's Birthday: In
California, Colorado, Connecticut, Dela-
ware, Illinois, Indiana, Iowa, Kansas,
Kentucky, Michigan, Minnesota, Mon-
tana, Nebraska, Nevada, New Jersey,
New York, North Dakota, Oregon, Penn-
sylvania, South Dakota, Washington,
West Virginia, and Wyoming.

LIST OF OFFICIAL HOLIDAYS IN VARIOUS COUNTRIES OF THE WORLD—*continued.*

UNITED STATES OF AMERICA—*continued.*

February 14. Admission Day: In Arizona.

February 17. Mardi Gras, Shrove Tuesday: In Alabama and Florida (in counties having a carnival): in Louisiana, in the parishes of Orleans, St. Bernard, Jefferson, St. Charles, and St. John the Baptist.

February 22. Washington's Birthday: In all the States, District of Columbia, Porto Rico, Hawaii, and Alaska.

March 2. Anniversary of Texan Independence: In Texas.

March 4. Inauguration Day: In District of Columbia in years when a President of the United States is inaugurated.

March 22. Emancipation Day: In Porto Rico.

March 25. Maryland Day: In Maryland.

April 2. Good Friday: In Alabama, Connecticut, Delaware, Florida, Louisiana, Maryland, Minnesota, New Jersey, Pennsylvania, Porto Rico, Tennessee.

April 12. Halifax Independence Resolutions: In North Carolina.

April 13. Thomas Jefferson's Birthday: In Alabama.

April 19. Patriots' Day: In Maine and Massachusetts.

April 21. Anniversary of the Battle of San Jacinto: In Texas.

April 26. Confederate Memorial Day: In Alabama, Florida, Georgia, and Mississippi.

May 10. Confederate Memorial Day: In North Carolina and South Carolina.

May (Second Friday). Confederate Day: In Tennessee.

May 20. Anniversary of the Signing of the Mecklenburg Declaration of Independence: In North Carolina.

May 30. Decoration Day: In all the States and District of Columbia, Porto Rico, Hawaii, and Alaska, except Arkansas, Florida, Louisiana, Mississippi, North Carolina, South Carolina, and Texas. Confederate Memorial Day: In Virginia.

June 3. Jefferson Davis's Birthday: In Alabama, Florida, Georgia, Mississippi, South Carolina, and Texas. In Louisiana, known as "Confederate Memorial Day."

June 11. Kamehameha Day: In Hawaii.

June 15. Pioneer Day: In Idaho.

July 4. Independence Day: In all the States, and District of Columbia, Porto Rico, Hawaii, and Alaska.

July 24. Pioneers' Day: In Utah.

July 25. Landing of American Troops: Porto Rico.

August 1. Colorado Day: In Colorado.

August 16. Bennington Battle Day: In Vermont.

September 3. Labour Day: In all the States and District of Columbia, Porto Rico, Hawaii and Alaska.

September (Third Saturday). Regatta Day: In Territory of Hawaii.

September 9. Admission Day: In California.

September 12. "Defenders' Day": In Maryland.

October (First Monday): Missouri Day (commemorative of Missouri history): In Missouri.

October (Second Friday). Farmers' Day: In Florida.

October 12. Columbus Day: In Alabama, Arizona, Arkansas, California, Colorado, Connecticut, Delaware, Idaho, Illinois, Indiana, Kansas, Kentucky, Maine, Maryland, Massachusetts, Michigan, Missouri, Montana, Nebraska, Nevada, New Hampshire, New Jersey, New Mexico, New York, Ohio, Oklahoma, Oregon, Pennsylvania, Porto Rico, Rhode Island, Texas, Vermont, Washington, West Virginia.

October 18. Alaska Day: In Alaska.

October 31. Admission Day: In Nevada.

November 1. All Saints' Day: In Louisiana.

November 6. General Election Day: In most of the States.

November (usually the last Thursday). Thanksgiving Day: Is observed in all the States and in the District of Columbia, Porto Rico, Hawaii, and Alaska, although it is not a statutory holiday in all.

December 25. Christmas Day: In all the States and the District of Columbia, Porto Rico, Hawaii and Alaska.

Arbor Day: In some of the States. The date is not uniform.

Saturday Afternoon: In many of the States and cities and District of Columbia.

Sundays and Fast days are legal holidays in all the States which designate them as such.

There is no National holiday, not even the Fourth of July. Congress has at various times appointed special holidays. In the second session of the Fifty-third Congress it passed an Act making Labour Day a public holiday in the District of Columbia, and it has recognised the existence of certain days as holidays for commercial purposes; but, with the exception named, there is no general statute on the subject. The proclamation of the President designating a day of Thanksgiving only makes it a legal holiday in the District of Columbia and the Territories.

URUGUAY.

January 1 and 6. February 3 and 28. April 19. May 1, 18 and 25. June 29. July 4, 14 and 18. August 15 and 25. September 20. October 12. November 1. December 8 and 25. Also Monday and Tuesday preceding Ash Wednesday (Carnival), and Thursday, Friday and Saturday in Holy Week.

**RECORD-OF
WIRELESS
DEVELOPMENT**

**Years 1827—1920
inclusive.**

RECORD OF THE DEVELOPMENT OF WIRELESS TELEGRAPHY AND TELE- PHONY, AND INTERESTING ITEMS IN CONNECTION THEREWITH

The record below is intended to constitute a résumé, arranged in chronological order, of the outstanding events in wireless telegraphy from year to year.

This is a feature which has figured in our YEAR BOOK from its initiation in 1913. The record for the past year will be found in an extended form at the end of this section.

1827.

SAVARY found that a steel needle could be magnetised by the discharge from a leyden-jar.

1831.

Michael Faraday discovered electro-magnetic induction between two entirely separate circuits.

1837.

The first patent for an electric telegraph was taken out by Cooke and Wheatstone (London) and by Morse (U.S.A.).

1838.

K. A. Steinheil (Munich) discovered the use of the earth return, and suggested that the remaining metallic portion of the circuit might be dispensed with entirely, and a system of wireless telegraphy established.

1840.

Joseph Henry (U.S.A.) first produced high-frequency electric oscillations, and pointed out that the discharge of a condenser is oscillatory.

1842.

S. F. B. Morse made wireless experiments by electric conduction through water across Washington Canal and across wide rivers.

Joseph Henry noticed that the effect of a single electric spark about one inch long occurring in a circuit in an upper room was to magnetise steel needles included in another circuit placed in a cellar thirty feet below with two floors intervening. He was one of many observers prior to Hertz who had noticed curious effects due to electric sparks produced at a distance, which were commonly ascribed to ordinary electro-magnetic induction.

1843.

James Bowman Lindsay, of Dundee, suggested that if it were possible to provide stations not more than twenty miles apart all the way across the Atlantic, there would be no need to lay any cable.

1845.

Lindsay began making experiments across the River Tay, his method being to transmit messages by means of electricity or magnetism through and across the water without submerged wires, the water being utilised as the conducting medium.

1849.

Dr. O'Shaughnessy (afterwards Sir William O'Shaughnessy Brooke) succeeded in passing intelligible signals without any metallic conduction across the River Hooghly, 4,200 ft. wide, in India, but he found the cost of power prohibitive.

1859.

Bowman Lindsay gave a demonstration of his conduction system to the British Association Meeting, at which Michael Faraday and Sir William Thomson (afterwards Lord Kelvin) were both present. William H. Preece (afterwards Sir William) was deputed by the Electric Telegraph Company to report on Lindsay's system.

1862.

John Heyworth patented a method of conveying electric signals without the intervention of any continuous artificial conductor. Cromwell Varley tried this method, but found it a failure.

1867.

James Clerk Maxwell read a paper before the Royal Society, in which he laid down the theory of electro-magnetism, which he developed more fully in 1873, in his great treatise on electricity and magnetism. He predicted the existence of the electric waves that are now used in wireless telegraphy.

1870.

Von Bezold discovered that oscillations set up by a condenser discharge in a conductor give rise to interference phenomena.

1872.

Henry Highton made various experiments across the River Thames with Morse's method.

1879.

David E. Hughes discovered the phenomena on which depend the action of what was subsequently known as the coherer. These phenomena many years later were used in early electric-wave signalling. He found that a tube of metallic filings was sensitive to electric sparks made in its vicinity, and he was able to obtain such effects on a tube connected to a battery and a telephone at a distance of five hundred yards.

1880.

John Trowbridge, of Harvard, systematically studied the problem of propagation of electric current through "earth," either soil or water, and he found that signalling might be carried on over considerable distances by electric conduction through the earth or water between places not metallically connected.

1882.

Graham Bell experimented with Trowbridge's method on the Potomac River, when signals were detected at a distance of $1\frac{1}{4}$ miles.

Sir William H. Preece made an experiment, using Morse's method, to connect the Isle of Wight with the mainland across the Solent on two occasions during the failure of the submarine cable in the Solent.

1883.

Willoughby Smith, in a paper before the Institution of Civil Engineers, London, suggested that electric induction might be employed for railway signalling.

Heinrich Rudolph Hertz became *privat docent* at Kiel, where he began studies in Maxwell's electro-magnetic theory.

G. F. Fitzgerald suggested a method of producing electro-magnetic waves in space by the discharge of a condenser.

1885.

Thomas A. Edison, with the assistance of Messrs. Gilliland, Phelps, and W. Smith, worked out a system of communication between railway stations and moving trains by means of induction and without the use of conducting wires.

Sir W. H. Preece made experiments at Newcastle-on-Tyne which showed that in two completely insulated circuits of square form, each side being 440 yards, placed a quarter of a mile apart, telephonic speech was conveyed from one to the other by induction.

1886.

A. E. Dolbear, of Tuft's College, Boston, patented a plan for establishing wireless communication by means of two insulated elevated plates, but there is no evidence that the method proposed by him did, or could, effect the transmission of signals between stations separated by any distance.

1887.

Heinrich Rudolph Hertz discovered the progressive propagation of electro-magnetic action through space, and was able to measure the length and velocity of electro-magnetic waves, and to show that in the transverse nature of their vibration, and their susceptibility to refraction and polarisation, they are in complete accordance with the waves of light and heat.

Hertz employed as a detector of the electric wave a simple nearly closed circuit of wire, called the "Hertz Resonator," but it was subsequently discovered that the metallic microphone of Hughes was a far more sensitive detector.

A. W. Heaviside established communication by telephonic speech between the surface of the earth and the subterranean galleries of the Broomhill Collieries, 350 ft. deep, by laying above and below ground two complete metallic circuits, each about $2\frac{1}{4}$ miles in length, and parallel to each other.

1889.

Elihu Thompson suggested that electric waves were particularly suitable for the transmission of signals through fogs and material objects.

1891.

John Trowbridge suggested that by means of magnetic induction between two separate and completely insulated circuits communication could be effected between distances.

1892.

Edouard Branly devised an appliance for detecting electro-magnetic waves, which was known as a "coherer." He discovered that these waves had the power of affecting the electric conductivity of materials when in the state of a powder.

Sir W. H. Preece adopted a method which united both conduction and

induction as the means of affecting one circuit by the current in another, in this way he established communication between two points on the Great Eastern Railway Channel, and at Lochness, in Scotland.

C. A. Stevenson, of the Northern Lighthouse Board, Edinburgh, adopted the use of an inductive system for communication between the main and isolated lighthouses.

1894.

E. Rathenau, of Berlin, experimented with a conductive system for wireless telegraphy, and signalled through three miles of water.

1895.

Senatore G. Marconi's investigations led him to the conclusion that electrical actions and manifestations could be transmitted through the air, or water by means of electrical oscillations of high frequency ; in consequence he made important experiments at his father's home in Italy.

Willoughby Smith established communication by conduction with a lighthouse on the Fastnet.

1896.

On February 2nd Senatore Marconi came to England, and on June 1st lodged his application for the first British Patent for Wireless Telegraphy, No. 12,039 of 1896.

In July of that year he was introduced to Sir William H. Preece, Chief Electrical Engineer of the Post Office, at whose request Senatore Marconi conducted experiments over a distance of about 100 yards before the officials of the Post Office. Shortly afterwards a further series of trials were conducted by Senatore Marconi on Salisbury Plain, when communication was successfully established over a distance of $1\frac{1}{2}$ miles.

On July 27th the first demonstration of directional wireless, using reflectors, was given on the roof of the G.P.O., London.

On September 3rd experiments were conducted to determine the relative speed of propagation of light waves and the electric vibrations which act as a receiver at a distance of $1\frac{1}{2}$ miles between reflectors.

On December 12th Sir William H. Preece lectured on Senatore Marconi's invention at Toynbee Hall, the inventor himself conducting the experiments.

1897.

In March, 1897, Senatore Marconi demonstrated before the representatives of various Government Departments, communication being established over a distance of 4 miles.

On March 17th balloons were first used for the suspension of wireless aërials.

In May further trials were made between Lavernock and Flatholm, over a distance of over three miles ; and on the 13th of that month the late Professor Slaby was present at further trials, when communication was established over a distance of about 8 miles.

In July, Senatore Marconi gave a demonstration of his invention at the Admiralty in Rome, and before King Humbert at the Royal Palace of the Quirinal. Between July 10th and 18th trials were made at Spezia, and the 17th and 18th communication was maintained between the shore and the Italian cruiser *San Martin* at sea, at distances up to 10 miles.

On July 20th, 1897, the Wireless Telegraph and Signal Company Limited, was incorporated, with a capital of £100,000, to acquire Senatore Marconi's patents in all countries except Italy and dependencies.

On August 27th Professor Slaby lectured on Wireless Telegraphy at the Sailors' Home, Potsdam, before the German Emperor and Empress and the King of Spain.

In September and October Senatore Marconi further experimented on Salisbury Plain. Trials were also made at Dover by officials of the Post Office. Apparatus was erected at Bath, and signals received from Salisbury, 34 miles away.

The first Marconi station was erected at the Needles, Isle of Wight, in November, and experiments conducted between that station and Bournemouth, a distance of $14\frac{1}{2}$ miles.

On December 6th, in the presence of Captain Kennedy, R.E., tests were made between the Needles station and a steamer, readable signals being received up to a distance of 18 miles.

On December 7th the first floating wireless station was completed. It was operated by Senatore Marconi for developing the first two land stations on the Solent.

1898.

In May, 1898, Senatore Marconi experimented between St. Thomas's Hospital and the House of Commons. In the same month experiments were carried out between Ballycastle and Rathlin Island, a distance of $7\frac{1}{2}$ miles.

On June 3rd Lord Kelvin visited the Needles station and sent from there the first paid marconigram.

On July 20th and 22nd the events of the Kingstown Regatta were reported by wireless telegraphy, for the *Dublin Daily Express*, from the steamer *Flying Huntress*, equipped with Marconi apparatus.

On August 3rd wireless telegraphic communication was established between the Royal yacht *Osborne* and Ladywood Cottage, Osborne, in order that Queen Victoria might communicate with the then Prince of Wales. Constant and uninterrupted communication was maintained during the sixteen days the system was in use.

On August 26th wireless messages were successfully transmitted through fog from Rathlin lighthouse.

In September the installation at Bournemouth was removed to Poole Harbour, Dorset.

By arrangement with Trinity House, wireless apparatus was installed in December, 1898, on the East Goodwin Lightship and at the South Foreland Lighthouse, the intervening distance being 12 miles.

1899.

During a gale in January, 1899, the East Goodwin Lightship was damaged and the mishap reported by wireless telegraphy to Trinity House.

On March 2nd Senatore Marconi read a paper on Wireless Telegraphy at the Institution of Electrical Engineers.

On March 3rd the s.s. *R. F. Matthews* ran into the East Goodwin Lightship. The accident was reported by wireless telegraphy to the South Foreland Lighthouse, and assistance was promptly sent.

On March 27th communication was established between Wimereux, near Boulogne, and the South Foreland Lighthouse.

On April 22nd the first French gun-boat was fitted with wireless telegraph apparatus at Boulogne.

The first wireless station at Chelmsford was finished on June 1st, and this was closely followed by the first wireless station at Dovercourt, which was finished and communicated with Chelmsford station on July 13th.

On July 14th Prof. Tuma established wireless communication between two balloons at Vienna.

During the naval manoeuvres in July three British warships, equipped with Marconi apparatus, interchanged messages at distances up to 74 nautical miles (about 85 land miles).

During the meetings of the British Association at Dover and of the Association Française pour l'Avancement de Science at Boulogne, in August, communication was maintained by means of apparatus installed at the Dover Town Hall and at Wimereux.

The international yacht races which took place in September and October were reported by wireless telegraphy for the *New York Herald*. At the conclusion of the races, series of trials were made between the United States cruiser *New York* and the battleship *Massachusetts*, signals being exchanged between the vessels at distances up to about 36 miles. On the return journey from America Senatore Marconi fitted the s.s. *St. Paul* with his apparatus, and on November 15th established communication with the Needles Station when 36 miles away. Reports of the progress of the war in South Africa were telegraphed to the vessel, and published in a leaflet entitled *The Transatlantic Times*, printed on board.

In October the War Office adopted Marconi apparatus for use in the field in South Africa, and on November 2nd six electricians left for South Africa with sets of apparatus. These proved of considerable service to the Army and the Navy, to which latter they were subsequently transferred.

On November 22nd the Marconi Wireless Telegraph Company of America was formed for the purpose of exploiting Marconi patents in the United States of America and possessions.

1900.

On February 2nd Senatore Marconi delivered a discourse on "Wireless Telegraphy" at the Royal Institution.

On February 18th the first German commercial wireless station (Nord-deutsche Lloyd Steamship Company) on Borkum Island was opened.

On February 28th the first German liner (*Kaiser Wilhelm der Grosse*) fitted with wireless apparatus communicated with Borkum Island over a range of 60 miles.

On April 25th the Marconi International Marine Communication Company was incorporated, with offices in London and Brussels, and agencies in Paris and Rome, for the maritime working of the Marconi system. On April 26th Senatore Marconi took out his important patent, No. 7,777, upon which all modern development is based, and which is commonly referred to as the "four sevens patent."

On July 4th a contract was made with the British Admiralty for the installation of apparatus on twenty-six of His Majesty's ships and six Admiralty coast stations.

In October the erection of the High Power Station at Poldhu was commenced, the engine-house being built in this year—viz., 1900.

The first wireless land station in Belgium was finished at La Panne on November 2nd, 1900.

The *Princesse Clémentine* was fitted with wireless telegraphy on November 3rd, 1900, and communication established with La Panne and maintained the whole way from Ostend to Dover.

1901.

On January 1st the barque *Medora* was reported by wireless as water-logged on Ratel Bank. Assistance was immediately sent.

On January 19th the *Princesse Clémentine* ran ashore, and news of the accident was telegraphed to Ostend by wireless.

On January 22nd the wireless station at the Lizard was finished.

On February 11th communication was established between Niton Station, Isle of Wight, and the Lizard Station, a distance of 196 miles.

On February 14th the construction of transmitting and receiving plant and the aerial of the Poldhu Transatlantic station was commenced.

On March 1st a public Wireless Telegraph Service was inaugurated between the five principal islands of the Hawaiian group—viz., Oahu, Kauai, Molaki, Maui and Hawaii.

In April communication was successfully established and maintained between a station at Calvi, Corsica, and another at Antibes, in the Riviera.

On May 15th, 1901, Senatore Marconi read a paper on Syntonic Wireless Telegraphy at the Royal Society of Arts, London.

The first British ship, the s.s. *Lake Champlain*, was equipped with wireless telegraphic apparatus on May 21st. About the same date coast stations in England and Ireland were opened for communication with ships at, sea as follows:—Crookhaven, Co. Cork; Rosslare, Co. Wexford; Holyhead; Caister, near Yarmouth; North Foreland.

The masts at Poldhu were wrecked during a very heavy gale on September 20th, and the masts at Cape Cod shared a like fate in the November following. The masts were then replaced by four towers, 210 ft. high, built of timber.

On September 26th a 14 years' contract was made for the installation of wireless apparatus at ten of Lloyd's Signal Stations.

On October 15th the first fan aërials were erected for experiments between Poldhu and Newfoundland.

The Compagnie de Télégraphie sans Fil of Brussels was formed on October 26th, to develop and work the Marconi system on the Continent.

On December 12th and 13th signals were received by Senatore Marconi at St. John's, Newfoundland, from Poldhu station, Cornwall, a distance of 1,800 miles.

1902.

In February Senatore Marconi received on board the s.s. *Philadelphia* readable messages up to a distance of 1,551 statute miles, and signals up to a distance of 2,099 statute miles from Poldhu Station, Cornwall.

Senatore Marconi gave the first wireless demonstration in Scotland on May 6th at Dundee, and lectured on the "Progress of Electric Space Telegraphy" at the Royal Institution of Great Britain on June 13th.

On June 25th the first moving wire magnetic detector actuated by clockwork was installed on the Italian cruiser *Carlo Alberto*.

On July 14th-16th Senatore Marconi received messages from Poldhu on the Italian battleship *Carlo Alberto*, lying at Cape Skagen, a distance of 800 miles; and at Kronstadt, 1,600 miles.

The Colonial Premiers who were in England for King Edward's coronation witnessed a demonstration of Senatore Marconi's invention on board the *Koh-i-noor*.

On October 19th the cruiser *Carlo Alberto* left Plymouth for long distance experiments.

The Marconi Wireless Telegraph Company of Canada was formed on November 1st. On December 17th the first wireless message was transmitted across the Atlantic. On December 18th wireless messages were despatched by Senatore Marconi and the Earl Minto from the Cape Breton Station to His Majesty King Edward VII. Senatore Marconi also sent a message to King Victor of Italy. Senatore Marconi was made a member of the Italian Order of Merit.

1903.

President Roosevelt sent a Transatlantic message to King Edward VII via Cape Cod and Poldhu Stations on January 18th. High-power and other stations were ordered by the Italian Government, and the Italian Senate and Chamber of Deputies tendered a vote of thanks to Senatore Marconi for the results obtained with wireless telegraphy.

The first Transatlantic marconigram was published in *The Times* on March 30th.

On April 5th the first licence for the erection of an Italian high-power station was granted.

The Compagnie Française Maritime et Coloniale de Télégraphie Sans Fil was formed on April 24th to exploit the Marconi system in France.

An agreement was made on July 24th by the British Admiralty for the general use of the Marconi system in the Navy.

The first International Conference on Wireless Telegraphy was held in Berlin on August 4th.

On August 22nd a wireless telegraphic service of news to ships at sea was inaugurated.

The passengers of the Red Star liner *Kroonland*, which was disabled on December 8th, 130 miles west of the Fastnet, were saved great inconvenience by wireless communication being established with the Crookhaven Station.

Senatore Marconi was made a knight of the Order of St. Anne of Russia.

1904.

On January 12th the first wireless message was exchanged between the Army and Navy.

On January 20th the first Press message was transmitted across the Atlantic.

Meteorological information was supplied by wireless to the *Daily Telegraph*.

Accidents to s.s. *New York* and s.s. *Friesland* early in the year were reported by wireless telegraphy.

On August 15th the Wireless Telegraph Act of Great Britain was passed.

On August 22nd the Wireless News Message Service to liners was inaugurated.

On November 16th Dr. J. Ambrose Fleming took out his original patent, No. 24,850, for thermionic valves.

1905.

On January 1st ships' messages were accepted at British Post Offices.

Judgment was given by Judge Townsend in New York on May 4th in favour of the Marconi Company in its action against the De Forest Wireless Telegraph Company for infringement of patents.

On May 12th the Canadian Government ordered stations for Cape Sable (N.S.) and St. John (N.B.), and on May 30th instructions were given by Trinity House for five more lightships to be installed with wireless apparatus.

On September 4th the first demonstration was given of long distance wireless reception with an open oscillating circuit stretched along the ground.

Erection of the Clifden High-Power Station (Ireland) was commenced in October.

Senatore Marconi was made a Civil Member of the Royal Order of Savoy.

In 1905 Senatore Marconi took out his patent for the horizontal directional aerial (No. 14,788), which marked a step of great importance in the progress of long-distance work.

1906.

On March 23rd the first high-power directional aerial was used at Clifden.

In May a contract was entered into between the British Post Office and the Marconi Company whereby the latter was charged with the erection of wireless stations at Tobermory and Loch Boisdale, Scotland.

On August 4th the Argentine Marconi Company was formed to work Marconi patents in Argentina and Uruguay.

In October and November an International Radiotelegraphic Conference was held at Berlin, and a convention signed by most of the countries of the world.

On December 29th the first experiments with the Marconi high-speed disc discharger were carried out.

1907.

On February 8th successful tests were made of the use of steel discs for producing notes.

Marconi Transatlantic Stations at Clifden, Ireland, and Glace Bay (Nova Scotia) were opened for limited public service on October 17th.

1908.

On February 3rd transatlantic stations were opened to the general public for transmission of messages between the United Kingdom and the principal towns in Canada.

Senatore Marconi lectured on "The Commercial Application of Wireless Telegraphy" at Liverpool on February 24th.

The Russian Company of Wireless Telegraphs and Telephones was formed on October 8th.

1909.

The *Republic*, after collision with the s.s. *Florida* off the coast of the United States on January 23rd, succeeded in calling assistance by wireless, with the result that all her passengers and crew were saved before the vessel sank.

Senatore Marconi lectured before the Dutch Royal Institute of Engineers in May and in December.

The Marconi British coast stations were taken over by the Postmaster-General on September 29th, who was granted a licence to use the company's patents.

In December Senatore Marconi lectured at the Royal Academy of Science, Stockholm, and (with Prof. Braun) was awarded the Nobel Prize for Physics.

1910.

On February 7th the first Wireless Shipping Report was published at Lloyd's.

Senatore Marconi, *en route* for Buenos Aires on board the *Principessa Mafalda*, received messages from Clifden at a distance of 4,000 miles by day and 6,735 miles by night.

On April 23rd the Marconi Transatlantic (Europe-America) Service was opened.

The Compania Nacional de Telegrafia sin Hilos was formed on December 24th to exploit the Marconi system in Spain.

1911.

On February 21st judgment was given in the action instituted in December, 1910, by the Marconi Company against the British Radiotelegraph and Telephone Company for infringement of their tuning patent No. 7777 of 1900. Mr. Justice Parker's decision was in favour of the Marconi Company, and he granted them a certificate of validity of their patent and an injunction, together with costs and damages.

A contract was made between the Marconi Company and the Canadian Government for operating wireless telegraph stations in Canada for a period of 20 years.

Stations at Teneriffe, Cadiz, Barcelona, and Las Palmas were opened for public business by the Compania Nacional de Telegrafia sin Hilos, the *concessionnaires* of the public wireless telegraph service of Spain.

The Imperial Conference held in May approved the proposal that an Imperial Wireless Telegraph system should be created.

Senatore Marconi lectured on "Radiotelegraphy" at the Royal Institution on June 2nd.

The Lodge-Muirhead patents were acquired by the Marconi Company, and Sir Oliver Lodge became a scientific adviser to the Company.

1912.

Early in the year the American Marconi Company absorbed the United Wireless Company of the United States.

On January 27th the central station of the Spanish wireless service (Aranjuez) was opened by King Alfonso XIII.

In February the Marconi Company secured the patents of Bellini and Tosi, including those for the wireless direction-finder.

On February 9th the first Australian Commonwealth Station was opened.

On April 15th the s.s. *Titanic* struck an iceberg and sank, but, owing to the prompt wireless call for assistance, the lives of more than 700 of her passengers were saved.

Senatore Marconi, whilst in America, delivered an address on the "Progress of Wireless Telegraphy" before the New York Electrical Society, on April 17th.

The International Radiotelegraphic Conference, opened in London on June 4th, approved important regulations to secure uniformity of practice in wireless telegraphic services.

On July 5th the International Radiotelegraphic Convention was signed at London.

The British Government entered into a contract in July with the Marconi Company for the erection of a chain of high-power Wireless Telegraph stations, as recommended at the Imperial Conference held in 1911.

The Marconi Wireless Telegraph Company of Canada was entrusted by the Dominion Government on September 17th with the working of the existing stations on the Great Lakes until 1931, and also with the erection of further stations. A similar arrangement was made in December with the Newfoundland Government for stations at Belle Isle, and on the Labrador coast.

Senatore Marconi was decorated with the Grand Cross of the Order of Alfonso XII, and made a Grand Officer of the Order of St. Maurice and Lazarus.

1913.

During this year the Governments of France and the United States experimented between the Eiffel Tower station and Washington by wireless, to secure data for comparing the velocity of electro-magnetic waves with that of light.

In January the High Court of Justice of France delivered a judgment declaring the validity of all claims of the Marconi patent 305060, which corresponds with the "four sevens" patent.

On January 23rd the Postmaster-General appointed a committee "To consider and report on the merits of the existing systems of long-distance wireless telegraphy, and in particular as to their capacity for continuous communication for the distances required by the Imperial Chain." The committee reported that "The Marconi system is at present the only system of which it can be said with any certainty that it is capable of fulfilling the requirements of the Imperial Chain."

As a result of the official enquiry into the loss of the *Titanic*, the *Scotia*, equipped with a Marconi wireless installation, left Dundee on March 8th to patrol the waters of the North Atlantic and to collect information regarding the movement of ice.

In June a Wireless Telegraph Bill was presented to the Ottawa Parliament, and passed under the title: "Radiotelegraph Act of Canada."

On October 11th the *Volturmo* was burnt in mid-Atlantic, and in response to the wireless appeal ten vessels came to the rescue, 521 lives being saved.

The Wireless Society of London was formed in October.

On November 12th an International Conference for the purpose of considering means of saving life at sea was opened in London by the President of the Board of Trade.

On November 24th the first practical trials with wireless apparatus on trains were made on a train belonging to the Delaware, Lackawanna and Western Railroad of America.

On November 25th Commander H. A. Edwards, who was at the head of the Bolivian Survey Commission, reported that the Commission had been able to determine the difference of longitude between the Brazilian towns Mañaos and Porto Velho by means of wireless signals.

Dr. Mawson, whilst exploring in Antarctica, was enabled by means of wireless to keep in touch with the outer world through the station on Macquarie Island.

During his expedition to Central Asia Dr. Filippo de Filippi, the Italian explorer, frequently determined his longitude by means of wireless time signals transmitted from Lahore.

1914.

On January 20th the Safety of Life at Sea Convention, drawn up by the International Conference which met on November 14th, 1913, was signed at London. That section of the Convention which deals with Wireless Telegraphy lays down the minimum wireless telegraphy equipment to be carried by vessels of different grades.

Early in the year an International Wireless Conference met at Brussels. The object of the Conference was to adopt a programme whereby careful observations could be taken with a view to arriving at some practical explanation of the laws governing the variation in the strength of wireless signals.

During the early part of March Senatore Marconi joined one of the Italian war vessels attached to the squadron commanded by the Duke of Abruzzi. Experiments in wireless telephony were carried out between several vessels lying at anchor $\frac{1}{2}$ mile apart, ordinary receivers being used with great success. The wireless telephone experiments were continued between two warships on the high seas, and the reception was consistently good over a distance of $18\frac{1}{2}$ miles. Successful wireless telephone communications were effected later, using only very limited energy between vessels on the high seas 70 km. (44 miles) apart. These experiments were repeated where land intervened between the communicating vessels, and in this case again excellent results were obtained. On this day radiotelephonic communication was constantly maintained for twelve hours.

This year saw the first practical application of wireless to lifeboats belonging to large ocean steamships, the Marconi Company having designed a special type of apparatus for this purpose.

On April 12th the Council of the Royal Society of Arts presented the Society's Albert Medal to Senatore Marconi for his services in the development and practical application of wireless telegraphy.

On April 15th, at Godalming, a memorial was unveiled to the memory of Jack Phillips, chief wireless telegraphist of the ill-fated *Titanic*, who "died at his post when the vessel foundered in mid-Atlantic on the 15th day of April, 1912."

On June 8th a report was issued by the committee appointed by the Postmaster-General to consider how far and by what methods the State should make provision for research work in Wireless Telegraphy. This report recommends (1) that the Government should establish a National Committee for Telegraphic Research which would promote in the public interest, both by theoretical investigation and by experiment, the progress of telegraphy and telephony, and (2) that the Government should establish a National Research Laboratory, with a special scientific staff to undertake, under the direction of the committee, and on the lines laid down in this report, telegraphic investigation, the results of which should be available for all departments of the public service.

In June important tests were made with the Marconi-Bellini-Tosi wireless direction finder on board the s.s. *Royal George*. During a voyage from Bristol to Montreal the liner, even in the thickest weather and without the aid of compass or sextant, was enabled to find her position when within a radius of about fifty miles of a land wireless station.

On July 24th the King conferred upon Senatore Marconi the Honorary Knighthood of the Grand Cross of the Victorian Order.

On July 24th judgment for plaintiffs was delivered in an action brought by the Marconi Company against the Helsby Wireless Telegraph Company, Limited, for infringement of patent 7777 of 1900.

War was declared on Germany by Great Britain on August 4th, and all *private* radiotelegraphy was suspended.

On August 9th the wireless station at Dar-es-Salaam, German East Africa, was announced to have been destroyed by the British.

The German station at Yap, Caroline Islands, was destroyed on August 12th.

On August 24th the Germans blew up the giant station at Kamina, Togoland, to prevent its falling into the hands of the British.

On August 24th the United States Government notified the owners of the German Transatlantic station at Tuckerton, New Jersey, that its experimental licence had expired, and it must therefore close down. Arrangements were afterwards made for restricted working.

On August 29th the German wireless station at Samoa was captured by an Australian Naval Force.

The German station at Nauru, Marshall Islands, was captured shortly after this.

On September 12th an Australian Naval Reserve Force captured the German wireless station at Herbertshohe on the island of Neu Pommern.

The powerful German station at Duala, Cameroons, was seized on September 27th.

On November 9th a Japanese force occupied Kiauchau and its wireless station.

On November 13th the Marconi Wireless Telegraph Company of America obtained a preliminary injunction against the De Forest Radio Telephone and Telegraph Company and the Standard Oil Company in a suit for infringement of patent.

On November 28th the following notice, under the Defence of the Realm (Consolidation) Regulations 1914, was issued: "No person shall, without the written permission of the Postmaster-General, buy, sell, or have in his possession or under his control any apparatus for the sending or receiving of messages by wireless telegraphy, or any apparatus intended to be used as a component part of such apparatus."

During the year high-power trans-oceanic stations were completed at Carnarvon (Wales), Belmar, New Jersey (U.S.A.), Honolulu (Hawaiian Islands), and San Francisco (Cal.). The Honolulu and San Francisco stations were formally opened to public service on September 24th.

1915.

In January Senatore Marconi took his seat in the Italian Senate.

On February 20th the Panama-Pacific Exhibition at San Francisco was officially opened by President Wilson at Washington, through the medium of wireless telegraphy.

A wireless telegraph service between Spain and Italy was inaugurated on May 1st.

On May 12th the German high-power wireless station at Windhoek was captured by a South African force.

On May 12th, in Battery Park, New York, the Mayor of New York unveiled the monument in memory of wireless operators who had lost their lives at the post of duty.

On July 8th, as a result of investigations into alleged breaches of neutrality, the United States Government decided to take over the control of the Telefunken wireless station at Sayville, Long Island.

At the annual meeting of Marconi's Wireless Telegraph Company on July 26th Mr. Godfrey Isaacs announced the complete disruption of the German wireless chain, upon which our late enemy had expended so much money, and on which they based their high hopes of a commercial world-domination.

On July 27th wireless communication between the United States and Japan was effected. The two terminal stations were situated at San Francisco and Funabashi, near Tokio, and the messages were relayed through Honolulu.

On July 28th communication was obtained between Arlington and Hawaii by wireless telephony.

At the end of August the submarine cable between Oban and south-east Mull broke, and until its repair wireless telegraphy formed the only means of communication between the outlying islands and the mainland.

On September 28th the American Telephone and Telegraph Company, working in conjunction with the Western Electric Company, succeeded in telephoning by wireless across the American Continent from Arlington to Hawaii, a distance of nearly 5,000 miles.

In September a commercial wireless service was inaugurated between Japan and foreign countries *via* Ochūshi and Petropavlovsk, in Siberia.

On October 26th the wireless telephone experiments were continued, communication being effected across the Atlantic from Arlington to the Eiffel Tower, Paris.

In November Mr. Daniels, United States Secretary of the Navy, successfully transmitted from Washington a wireless telephonic naval order to Rear-Admiral Usher at Brooklyn Naval Yard.

On December 1st the wireless station at Macquarie Island was closed for the period of the war.

1916.

In January, by an Order in Council, His Britannic Majesty prohibited to all destinations the export of material for wireless telegraphs and telephones.

In February the Pope, restoring an ancient custom of the Church, announced his intention of officially blessing wireless telegraphy in recognition of its services to mankind.

During the course of a severe blizzard in the United States in February wireless telegraphy was extensively used for train despatching, as the telegraph wires had been destroyed.

In the early part of the year wireless enthusiasts in Holland formed a wireless association, "The Nederlandsche Vereeniging voor Radio-Telegraphie," with headquarters at The Hague.

During the Irish rebellion at Easter in this year wireless telegraphy played an important part, as the insurgents had entirely isolated Ireland by cutting the cable to England.

Among the subjects discussed at the Pan-American Conference held at Buenos Aires in April was the control of wireless telegraphy. This constituted

a big step forward on the part of the South American Republics, clearly proving their appreciation of the necessity of a reliable wireless telegraphic service.

The determination of the difference in longitude between Paris and Washington with the aid of wireless telegraphy, which had been in progress since October, 1913, was completed in May, the result, expressed in terms of time, being 5 hours 17 minutes 35.67 seconds, and has a probable accuracy of the order of .01 second.

On July 28th the *London Gazette* printed the text of a new official regulation requiring the owner of every vessel of 3,000 tons or over registered at a British port in the United Kingdom to take out a licence for a wireless installation before August 21st, 1916, irrespective of whether his ship carries passengers or not.

On September 20th, Judge Mayer, of the U.S.A. District Court, delivered an important decision regarding the suit tried before him, affecting the patents involved in the Fleming Valve controversy, between the Marconi's Wireless Telegraph Company of America and the De Forest Radio Telegraph and Telephone Company. He gave his decision in favour of the former, and his judgment has been pronounced to constitute one of the finest opinions on technical matters delivered from the American Bench.

On November 12th, Senatore Marconi delivered an important lecture at the Lince Academy, Rome, before H.R.H. the Duke of Genoa and a most distinguished audience. He took as his subject those problems of Radiotelegraphy to which scientists are likely to direct their attention in the immediate future.

The initiation of the newly established Trans-Pacific Wireless Service between the U.S. and Japan was celebrated on Wednesday, November 5th, by an interchange of messages between the Mikado and President Wilson.

1917.

On February 28th the wireless station of the *New York Herald*, re-equipped by the Marconi Wireless Telegraph Co. of America, again started operations.

On March 12th a new station was opened at Cape May (New Jersey), about a mile from the old installation and half a mile from the point of Cape May.

On March 12th a Women's Division of the National Amateur Wireless Association was formed in New York for war-time instruction, the first class of 25 convening at Hunter College, New York City.

At the beginning of August the British Government found it advisable in national interests to suspend the Transatlantic Commercial Wireless Service, both eastbound and westbound.

On May 8th the Circuit Court of Appeals, New York City, confirmed the decision of Judge Mayer (reprinted in the YEAR-BOOK for 1917) that the De Forest Audion was an infringement of the Fleming Valve Patent and handed down an unanimous opinion in favour of the Marconi Wireless Telegraph Co. of America.

June 2nd marked the "coming of age" of wireless telegraphy—i.e., that 21 years had elapsed since the registration of patent 12039 in 1896.

On June 6th Senatore Marconi, who was then on a visit to the United States on behalf of Italy, was invested by the world-famous University of

Columbia with the honorary degree of Doctor of Science. Senatore Marconi's visit produced an immensely stimulating effect upon recruiting for wireless in the U.S.A.

On June 29th and 30th tests of Marconi's timed spark for continuous wave generation were carried out between the United Kingdom and the U.S.A.

In June, Commissioner Woods, of New York, pronounced the City's Police Wireless System a "demonstrated success" in a public statement officially issued by him.

In October, 1917, a radiophone fog warning device was installed by the United States Naval Communication Service near Newport, Rhode Island.

In the course of the year the Netherlands Government established two new radiotelegraphic stations on lightships at the Dogger Bank. Several new stations were opened by Norway, one Rundermand Station, near Bergen, and another Tryvand Station, near Christiania.

Wireless communication was also opened up in the course of the year with Tulagi (Solomon Island) and with Ocean Island (Gilbert Group).

1918.

The trend of progress towards continuous wave communication as distinct from that by damped waves was very marked during this year, a particular impetus being given by the continued development of the thermionic valve as an efficient receiver and generator of undamped oscillations. Steady improvement was also evident in the arc form of generator which was installed in many new high-power stations.

Wireless telephony also progressed to a marked extent, particularly in the direction of reliability and increase of range, due mainly to the development of valve generator and receivers.

In the equipment of aircraft with wireless great progress was made, both in radiotelegraphy and radiotelephony.

With the signing of the Armistice the enormous part played in the war by the series of directional wireless stations utilising the Marconi modifications of the Bellini-Tosi Radiogoniometer was made public.

Several new high-power stations, forming part of the scheme of high-power wireless communication in the United States, were opened during the year. One of these, which is claimed to be capable of communicating over a distance of at least 4,000 miles, was erected at Annapolis, Md.

In the Argentine the erection of a station destined for direct communication with the N. American continent was commenced in the vicinity of Buenos Ayres. It is owned by the Pan-American Wireless Telegraph and Telephone Company.

Considerable progress was also made with the erection of a Government wireless station at Karlsborg, Sweden, by the Telefunken Company.

The extension in the application of wireless telegraphy to merchant vessels continued, and at the close of the year some 2,500 to 3,000 vessels of the British Mercantile Marine carried installations.

On August 1st an Order in Council was published to the effect that every British sea-going ship of 1,600 gross tonnage or upwards registered

in New Zealand, in respect of which a licence to instal wireless telegraph apparatus is or has been granted by the Minister of Telegraphs, shall be provided with a wireless telegraph installation, and with two certified operators.

On July 31st the U.S. Government took over all wireless land stations in the United States, with the exception of certain high-power stations, which remained under the control of commercial companies.

In August a powerful station was opened at Balboa, at the entrance to the Panama Canal. In connection with this station a wireless time signal service was inaugurated.

On September 22nd messages transmitted from Carnarvon were received in Sydney, 12,000 miles away. Cable confirmations of these messages were sent forward at the same time, but were received some hours later than the corresponding radiotelegrams.

In March wireless communication was established between San Diego, California, and the American Legation in Pekin, a distance of roughly 7,500 miles.

In April a high-power station was opened at Stavanger, Norway, for the use of the Norwegian Government. This station, which will communicate directly with the United States, was erected by the Marconi Company.

On December 3rd the Marconi Transatlantic Service between Clifden and Glace Bay was reopened for public communication. Commercial working across the Pacific from San Francisco to Hawaii and Japan was resumed on December 19th.

1919.

The year 1919 chiefly was characterised by the publication of some of the wartime researches carried out in various Government Departments.

The eclipse of the sun, on May 29th, was utilised by the British Association Radio Committee for further investigations on the propagation of wireless waves and of atmospheric disturbances. Knowledge of this subject has also been increased by valuable investigations by Dr. Watson, by Dr van der Pol and by Dr Chapman in connection with effects taking place in the upper atmosphere.

In September the British Association resumed their annual meetings, which had been suspended during the latter stages of the war. At this meeting a number of useful papers of wireless interest were presented, dealing particularly with war-time developments.

The several trans-Atlantic aerial flights which took place during the year demonstrated the great utility of wireless communication with aircraft. In both the American flight on the NC 4 machine, and the British on the R 34 dirigible, great use was made of wireless communication. The R 34 was in communication with both sides of the Atlantic during most of the flight.

The temporary war measures relative to the installation of wireless telegraph apparatus on all merchant vessels of 1,600 tons or over have been made permanent by a Bill introduced by Lord Somerleyton.

In February a Spanish decree was issued to the effect that all sailing vessels of 500 tons or over, and carrying fifty or more passengers are to carry a wireless installation.

During the year the Chinese National Wireless Company was formed for the manufacture of wireless equipment in China.

The Companhia Radiotelegraphica Brasileira was also formed to exploit the patents of the Marconi Company in Brazil.

Two subsidiary Marconi Companies—the Marconi Scientific Instrument Company and the Marconi-Osram Valve Company—were formed to take over special work for the parent Company.

In America an important amalgamation was effected with the formation of the Radio Corporation of America, which took over the radio interests of the American Marconi Company and the General Electric Company of Schenectady.

The war-time ban on private and experimental wireless installations was partially removed in this country, and wholly so in America.

Improvements in valve transmitting apparatus for radio-telephony enabled a test to be carried out by the Marconi Company across the Atlantic with the object of ascertaining the minimum power necessary for effective telephonic communication over that range. Good results were obtained using only two transmitting valves.

1920.

The steady development of continuous wave wireless work has been continued during the year and some further progress has been made in the commercial application of valve apparatus. In this connection the full effects of all the wartime radio developments and research have not even yet been felt. A part at least of this work has not been made public, and probably some must remain secret, but the results of further work have recently been released. Of such publications probably the most important was a paper by Mr. B. S. Gossling on "The Development of Thermionic Valves for Naval Uses," which gave an exhaustive summary of the research and test methods developed at H.M. Signal School, Portsmouth, for the design and testing of triode valves during the war. Other valuable papers of this nature were "Direction and Position Finding," by Capt. H. J. Round, which summarised the developments in that field of wireless work, mostly with regard to D.F. Stations on land; "Wireless Telephony on Aeroplanes," by Major C. E. Prince; and "Duplex Wireless Telephony—Some Experiments on its application to Aircraft," by Capt. P. P. Eckersley. All these papers were delivered before the Wireless Section of the Institution of Electrical Engineers.

The annual British Association meeting held at Cardiff at the end of 1920 had little of radio interest, and only one paper dealing directly with the subject was presented.

As regards high power radio stations the Lafayette station at Bordeaux, which was under construction by the United States Navy during the war, has at last been completed, and during August and September of the year under review underwent tests. The first official message from this station was sent out on August 21st, 1920, and was addressed to the Secretary of the United States Navy. It ran as follows: "This first wireless message to be heard around the world marks a milestone on the road of scientific achievement."

As regards other high power stations that at Sayville, which was closed by the United States authorities during the war, was reopened for traffic in April of this year, and a new station at Christiania was opened on January 10th for European traffic only, the Stavanger station being reserved for traffic with the United States. Arrangements are being made for the erection of a new high power wireless station in Japan for direct communication

with a station on the Pacific Coast of the United States, and also a high power station in Denmark for communication with America. The Amalgamated Wireless (Australasia), Limited, propose to establish a high power high-speed radio station near Sydney, or Perth, in order to communicate direct with England. Medium power stations are also to be erected in each of the other States to pass traffic to and from the main trunk station. A powerful station to be available for commercial and official purposes is shortly to be established in Shanghai, and the Radio Bureau of the Swedish Telegraph Department is planning the erection of a large wireless station to deal with traffic for the United States. The Argentine Radiotelegraphic Co., Ltd., is shortly to erect a high power wireless station which will maintain communication with Nauen and other stations of the Telefunken group.

An extremely large wireless station is under contemplation by the Radio Corporation of America for erection on Long Island. Six thousand acres of land have already been purchased and at least five separate aerial systems are to be provided for simultaneous communication with France, Italy, Poland, Scandinavia, Germany and the Argentine.

A number of smaller coastal and other stations whose services have been suspended during the war have recently been reopened for traffic.

A number of D.F. stations both in this and other countries which were originally put up by Government Departments for wartime use have also become available for merchant service purposes and have been giving valuable aid in navigation in difficult waters.

In order to relieve the congestion on the internal telegraph network, the German Government has erected a number of medium power radio stations in the important industrial centres of the country. The majority of the pre-war Press, Time Signal, and Meteorological Services have now been re-established and are available in most countries. A novelty in this direction is the establishment of an astronomical service from the Nauen Station to give information on important astronomical events to all neighbouring observatories, so that observations on outbursts of novæ and similar phenomena may be taken in hand without delay. The British Air Ministry has established a comprehensive scheme of meteorological bulletins, which are transmitted both from their own station and from the Aberdeen Wireless Station several times during the twenty-four hours. These messages give the latest information about flying conditions over the British Isles and neighbouring countries,

As regards improvements in commercial apparatus perhaps the most noticeable have been those of wireless telephonic apparatus carried out by Marconi's Wireless Telegraph Company at Chelmsford. On a number of occasions during the year transmissions have been carried out from that station using as much as 15 kw., and regular concert programmes have also been sent. These transmissions have been picked up as far away as St. John's, Newfoundland, a range of 2,673 miles, while ships 1,000 miles at sea have also overheard the programmes. The successful linking up of wireless telephonic apparatus with the land line telephones has been accomplished. Experiments in this direction have been carried on for some time past, and on August 19th a successful connection was established between a subscriber's instrument in London and an aeroplane in flight on its way to Paris. Regular wireless telephonic transmissions have also been carried on from a Dutch Wireless Station.

Continuous wave valve apparatus is also being applied extensively on seaboard, and a number of well-known liners have been fitted with powerful installations which enable them to maintain direct communication with the land over distances of at least 1,400 miles. In connection with the development of continuous wave apparatus the United States Naval Communication

Service report that they have so increased the reliability of manufacture of valves that their effective life has been increased to over 5,000 hours.

The United States battleship *Iowa* has been fitted with a radio control installation and experiments have been carried out by the United States Naval Department to test the possibility of navigating this 12,000 ton vessel from the shore. The control is stated to have been thoroughly efficient up to a maximum distance of ten or twelve miles.

The Imperial Wireless Telegraphy Committee, which was appointed on November 24th, 1919, by the Secretary of State for the Colonies "to prepare a complete scheme of Imperial wireless communications in the light of modern wireless science and Imperial needs," published its report in June. In this report they recommend the adoption of a scheme using thermionic valve apparatus at transmitting stations, with stages not exceeding 2,000 miles in length.

The Government of India has formed an Indian Wireless Telegraph Board, with a view to extending and reorganising its existing telegraph system, in order to meet the strategic, political and commercial requirements of the Empire.

An Air Conference, organised by the Air Ministry, was held in London from October 12th to 14th. A number of papers were read and discussed at this meeting, which emphasised the importance of wireless equipment on aircraft, not only for direction finding, but also for communicating with the landing grounds and with the land telephone system by wireless telephony, and for the rapid circulation of weather forecasts.

The Department of Scientific and Industrial Research has established four sub-committees to assist the Radio Research Board. These are to deal respectively with the following branches of radio research: (a) the propagation of wireless waves; (b) atmospherics; (c) directional wireless; (d) thermionic valves.

It was announced on July 21st that the German Wireless Stations were all in full and unrestricted operation again.

As from January 10th of this year the Republic of Czecho-Slovakia adhered to the Telegraphic and Radiotelegraphic Conventions.

On January 14th a law was passed in Greece making the carrying of wireless apparatus obligatory on all Greek merchant ships of 1,600 tons gross and upwards, or having 50 or more persons aboard including crew. Certain modifications have also been made in the rules and regulations governing wireless telegraphy in the British Mercantile Marine. As from September 1st, 1920, automatic call apparatus may be installed subject to the approval of the Board of Trade. For voyages other than coastwise ones exceeding 48 hours from port to port any vessel carrying 200 passengers or more must carry three operators. For voyages exceeding eight hours, but less than 48 hours from port to port, two operators must be carried. Regulations have also been issued relative to the carrying of wireless telegraph watchers on board in place of one or more certificated wireless operators.

The Gold Medal of the Institute of Radio Engineers for the year 1920 has been awarded by the Board of Direction of the Institute to Senatore Marconi.

The Paris Academy of Sciences Herbert Prize for 1919 was awarded early in 1920 to Raymond Jouaust for his work on Magnetism, Electrical Standards, Photometry and Wireless Telegraphy.

The American Academy of Arts and Sciences has awarded the Rumford premium to Dr. Irving Langmuir for his research in thermionic and allied phenomena.

During the year a number of new companies interested in or connected with radiotelegraphy have been formed. Amongst these we may mention the Societatea Marconi at Bucarest, Roumania; Société Radio-technique en Pologne at Warsaw (to undertake the manufacture, installation and maintenance in Poland of every system of telegraphy including wireless); The Société Independante Belge de Télégraphie sans fil at Brussels; The Continental Radio Telephone and Telegraph Company at Dallas, Texas; The Radio Engineering Company, Ltd.; and The Argentine Radiotelegraphic Company, Ltd.

A new Radio Society has been formed in Holland, known as the Nederlandsch Radio Genootschap, with the object of being the centre of scientific radio work in Holland. This society is contemplating the publication of the technical proceedings of its meetings. Two new French wireless publications have also appeared during the year, *Radioélectricité* and *La T. S. F. Moderne*, the former of which deals with technical wireless development as well as marine and commercial information.

Professor A. Righi, who was one of the earliest workers in the radiotelegraphic field and of whom Senatore Marconi was a pupil, died this year at Bologna. The death is also announced of Major S. C. A. Wace, head of the British Wireless Telegraphy Board.

Amateur wireless work in this and other countries has progressed steadily during the year with the gradual removal of wartime restrictions. The number of radio amateurs in the United States is now over 200,000, and useful work is in many cases being undertaken in co-operation with Government Departments. The restrictions on private wireless in Australia have been modified to some extent, and licences are now being granted both for transmission and reception.

**NATIONAL AND
INTERNATIONAL
WIRELESS LAWS
& REGULATIONS**

RÉSUMÉ OF RADIOTELEGRAPHIC LEGISLATION

LEGISLATION relating to Wireless Telegraphy does not date back further than the year 1903, although four years earlier (in 1899) the Marconi system had reached a point of development sufficiently advanced for the British Admiralty to think it desirable to obtain sets of apparatus for trial, and two years later (in 1901) an agreement of a limited nature was entered into between the Admiralty and the Company for the supply of Marconi apparatus. In July, 1903, a further and more complete agreement was concluded. At that time the increasing use of Wireless Telegraphy for maritime purposes throughout the world had raised questions of international interest, and circumstances had clearly demonstrated that international agreement was desirable with regard to many points dealing with the interchange of messages through the newly established medium.

A conference met at Berlin in August, 1903, on the invitation of the German Government. As a result of that conference all the Powers, with the exception of Great Britain and Italy, agreed to certain proposals, to be considered at a subsequent conference, for the international regulation of Wireless Telegraphy.

The Wireless Telegraphy Act, which was passed in 1904 for two years only, and which was renewed in 1906 without modification (and is still in force), prohibits the installation or working of wireless telegraph apparatus in the United Kingdom, or on board British ships, except under licence from the Postmaster-General. Its principal objects were, by means of systematic regulations, to make Wireless Telegraphy more useful for purposes of defence and general communication. The memorandum which was laid before the House of Commons in explanation of the Bill stated that the necessity for legislation depended, firstly, on the importance from the naval point of view of giving the Government control over wireless stations in time of war or emergency; and, secondly, on the desirability of placing the Government in such a position as to have the power of entering into an agreement on the subject with other countries if it should be found expedient to do so.

In October, 1906, a second International Conference was held in Berlin, and its primary objects may be classified under the following headings:— (1) The acceptance and transmission of telegrams. (2) The adoption of rules of working. (3) The provision of means of collecting charges and settling accounts between the different countries. (4) Arrangements for the publication of all information necessary for inter-communication. (5) Rules to prevent interference and confusion in working, with adequate provisions for enforcement. (6) Provision that, with certain exceptions, inter-communication must not be refused on account of the differences in the systems of Wireless Telegraphy employed.

The documents signed at Berlin on November 3rd, 1906, consisted of:— (a) The Convention; (b) the Additional Undertaking; (c) the Final Protocol; (d) the Service Regulations. These documents were revised at the London Convention held in 1912, and the Radiotelegraphic Convention which came into operation on July 1st, 1913, is printed *in extenso* in the following pages. About 40 per cent. of the delegates present at the last conference were administrative, executive, or technical officials, acting for the postal telegraph and cable departments of the various countries represented. About another third of the assembly (37 per cent.) were composed of army and navy officers the relative ratio of naval and military officers being about 4 to 3. About 6 per cent. of the delegates were trained and experienced diplomats, and the remainder included eminent scientists, noted meteorologists, and prominent personages interested in the technical, commercial, and humanitarian development of wireless telegraphy.

The signing of the International Convention for the Safety of Life at Sea on January 20th, 1914, constituted a most noteworthy advance in the legislation relating to Wireless Telegraphy. The Convention was drawn up by an International Conference which met in London on November 12th, 1913, and laid down, *inter alia*, the minimum Wireless Telegraphy equipment to be carried by ships of different grades. For the purpose of defining the hours of service (*i.e.*, setting out the times when the various stations are to open for the receipt and transmission of messages) the Radiotelegraphic Convention, 1912, divided ship stations into three classes, but did not specify which vessels (by virtue of the services maintained on board) should be placed in the various classes. Under the provisions of the Safety of Life at Sea Convention which deal with Wireless Telegraphy, these classes are clearly defined.

In order to give effect to this International Convention, the British Government has amended the laws relating to merchant ships by the Merchant Shipping (Convention) Act, 1914, and the Merchant Shipping (Wireless Telegraphy) Act, 1919. Part III of the former deals with Wireless Telegraphy, and together with the 1919 Act, is reprinted under "*United Kingdom*," in the "*Laws and Regulations*" section of this book.

At the outbreak of the late war immediate steps were taken by the Governments of the belligerent countries to bring the use of Wireless Telegraphy under direct official control, and all stations not operated under Government supervision were ordered by the respective Governments to be dismantled.

This action, as might well have been expected, did not stop at the belligerent countries, but extended to neutral Governments almost all over the world. It was necessary that steps should be taken by non-belligerent powers to ensure that their neutrality obligations were not violated by the utilisation of wireless stations in their territory for the transmission of communications of a non-neutral character. Consequently, almost all countries throughout the world issued special regulations relating to the use of Wireless Telegraphy in war time. A number of these wartime measures have not, even yet, been repealed, and such as remain in force will be found printed in the section of this book devoted to the Laws and Regulations of the World.

The central agency established for the purpose of collecting and distributing information in accordance with the requirements of the International Radiotelegraphic Convention is commonly known as the "Berne Bureau." This is merely a branch of the Bureau of the International Telegraph Union, situated at Berne, in Switzerland. It possesses neither powers for initiating new regulations nor for dealing with those already existing; its functions are practically entirely confined to the collection and circulation of information.

Notwithstanding this, the International Bureau at Berne has become an organisation of supreme importance, thanks to the zealous, economical and efficient manner in which it is conducted. To this organisation is entrusted the work of preparing and circulating, in accordance with Article 13 of the Convention, particulars regarding every station located in countries adhering to the Convention.

The normal supplementary expenses resulting from the work of the International Bureau in connection with radiotelegraphy must not exceed 80,000 francs per annum. This sum, however, does not include any special expenditure such as would be necessitated by the holding of an International Conference. For the purpose of fixing their respective contributions towards the expenses, the governing bodies of the contracting States are divided into six classes, as set forth in Article 43 of the regulations.

INTERNATIONAL RADIOTELEGRAPHIC CONVENTION

London, July 5th, 1912.

INTERNATIONAL Radiotelegraphic Convention concluded between Great Britain and various British Colonies and Protectorates,* Union of South Africa, Commonwealth of Australia, Canada, British India, New Zealand, Greece, Italy and Italian Colonies, Germany and Protectorates, United States of America and Possessions, Argentina, Austria, Hungary, Bosnia-Herzegovina, Belgium, Belgian Congo, Brazil, Bulgaria, Chili, Denmark, Egypt, France and Algeria, French West Africa, French Equatorial Africa, Greece, Indo-China, Madagascar, Tunis, Japan and Chosen, Formosa, Japanese Sakhalin and the leased territory of Kwantung, Morocco, Monaco, Norway, Netherlands, Dutch Indies, Curaçoa, Persia, Portugal and Portuguese Colonies, Roumania, Russia and Russian Possessions and Protectorates, San Marino, Siam, Spain and Spanish Colonies, Sweden, Turkey and Uruguay.

The undersigned Plenipotentiaries of the Governments of the countries enumerated above, being assembled in Conference in London, have, by mutual consent, and subject to ratification, concluded the following Convention :—

ARTICLE 1.

Application of Provisions.

The High Contracting Parties undertake to apply the provisions of the present Convention at all the radiotelegraph stations (coast stations and ship stations) which are established or worked by the Contracting Parties and open for the service of public correspondence between the land and ships at sea.

They undertake, moreover to impose the observance of these provisions upon private enterprises authorised either to establish or to work radiotelegraphic coast stations open to the service of public correspondence between the land and ships at sea, or to establish or to work radiotelegraphic stations whether open for public correspondence or not on board the ships which carry their flag.

ARTICLE 2.

Interpretation of Terms.

The term coast station means radiotelegraphic station established on land or on board any ship permanently anchored and used for the exchange of correspondence with ships at sea.

The term ship station means any radiotelegraphic station established on board a ship other than a permanently moored ship.

ARTICLE 3.

Compulsory Interchange of Messages.

Coast stations and ship stations are bound to exchange radiotelegrams reciprocally without regard to the radiotelegraph system adopted by such stations.

Each ship station is bound to exchange radiotelegrams with any other ship station without distinction as to radiotelegraphic system adopted by such stations.

Nevertheless, in order not to impede scientific progress, the provisions of the present Article do not prevent the contingent employment of a radiotelegraphic system incapable of communicating with other systems, provided that such incapacity be due to the specific nature of such system and that it be not caused by devices adopted solely with the object of preventing inter-communication.

ARTICLE 4.

Restriction of Service.

Notwithstanding the provisions of Article 3, a station may be appropriated to a restricted public service determined by the object of the correspondence or by other circumstances independent of the system employed.

ARTICLE 5.

Connection with Land Telegraph System.

Each of the High Contracting Parties undertakes to cause the coast stations to be connected with the telegraph system by means of special wires, or, at least, to take such other measures as will ensure a rapid exchange between the coast stations and the telegraph system.

ARTICLE 6.

Notification of Particulars.

The High Contracting Parties shall mutually notify one another of the names of the coast stations and ship stations covered by Article 1,

* Barbados, Basutoland, Bermudas, Borneo, Ceylon, Cyprus, Gold Coast and Ashanti, Malay States (Perak, Selangor, Negri Sembilan, Pahang), Gambia, Gibraltar, British Guiana, British Honduras, Hong Kong, Bahama Islands, Windward Islands (Grenada, St. Lucia, St. Vincent), Falkland Islands, Fiji Islands, Jamaica, Turks and Caicos Islands, Cayman Islands, Leeward Islands (Antigua, Montserrat, St. Kitts-Nevis, Dominica, Virgin Islands), Malta, Mauritius, Northern and Southern Nigeria, Western Pacific Islands (Fanning Island, Gilbert and Ellice Islands, British Solomon Islands), East African Protectorate, Uganda, Bechuanaland, Nyassaland, British Somaliland, Northern and Southern Rhodesia, Seychelles, Sierra Leone, St. Helena, Straits Settlements (Labuan, Cocos Islands), Swaziland, Trinidad and Tobago. Wei-hai-wei,

as well as of all the particulars necessary to facilitate and accelerate the radiotelegraphic exchanges as specified in the Detailed Regulations.

ARTICLE 7.

Other Radiotelegraphic Arrangements.

Each of the High Contracting Parties reserves to itself the right to prescribe or to permit in the stations covered by Article 1—independently of the installation of which the particulars are published conformable to Article 6—the installation and working of other arrangements designed for special radiotelegraphic transmission without publication of the details of such devices.

ARTICLE 8.

Interference with Other Stations.

The working of radiotelegraphic stations shall be organised as far as possible in such a manner as not to interfere with the working of other stations of the kind.

ARTICLE 9.

Distress Calls.

Radiotelegraphic stations shall be obliged to accept with absolute priority calls of distress from whatever source, to reply in like manner to such calls, and to give the effect to them which they require.

ARTICLE 10.

Charges.

The charge for a radiotelegram shall include, according to the circumstances:—

1. (a) The "coast charge" which accrues to the coast station.

(b) The "ship charge" which accrues to the ship station.

2. The charge for transmission over the lines of the telegraph system, calculated in accordance with the ordinary rules.

3. The transit charges of the intermediate coast or ship stations and the charges appertaining to special services required by the sender.

The rate of the coast charge shall be subject to the approval of the Government to whose authority the coast station is subject, and the rate of the ship charge to the approval of the Government to which the ship belongs.

ARTICLE 11.

Validity and Modifications.

The provisions of the present Convention are completed by Detailed Regulations which have the same validity and come into force at the same time as the Convention.

The provisions of the present Convention and of the Regulations relating thereto may be modified at any time by mutual consent of the High Contracting Parties. Conferences of Plenipotentiaries having power to modify the Convention and the Regulations shall take place periodically; each Conference shall itself fix the place and time of the succeeding Conference.

ARTICLE 12.

Exercise of Voting Powers.

These Conferences shall be composed of Delegates of the Governments of the Contracting Parties.

In the deliberations each country shall have one vote only.

If a Government adhere to the Convention or its colonies, possessions or protectorates, subsequent Conferences may determine that the whole or part of such colonies, possessions or protectorates is to be regarded as forming a country for the purposes of the foregoing clauses. But the number of votes to be exercised by a Government, including its colonies, possessions or protectorates, may not exceed six.

The following are regarded as forming a single country for the purposes of the present Article:—

The Union of South Africa.
The Australian Commonwealth.
Canada.
British India.
New Zealand.
Ex-German East Africa.
Ex-German South-West Africa.
The Cameroons.
Togoland.
The Ex-German Pacific Protectorates.
Alaska.
Hawaii and the other American possessions in Polynesia.
The Philippine Islands.
Porto Rico and the American possessions in the Antilles.
The zone of the Panama Canal.
The Belgian Congo.
The Spanish Colony of the Gulf of Guinea.
French West Africa.
French Equatorial Africa.
Indo-China.
Madagascar.
Tunisia.
Erythrea.
Italian Somaliland.
Chosen, Formosa, Japanese Sakhalin and the leased territory of Kwantung.
The Dutch Indies.
The Colony of Curaçao.
Portuguese West Africa.
Portuguese East Africa and the Portuguese possessions in Asia.
Russian Central Asia (littoral of the Caspian Sea).
Bokhara.
Khiva.
Western Siberia (littoral of the Arctic Ocean).
Eastern Siberia (littoral of the Pacific Ocean).

ARTICLE 13.

Collection of Information.

The International Bureau of the Telegraph Union shall be entrusted with the duty of collecting, co-ordinating, and publishing information of every kind relating to radiotelegraphy; of circulating in proper form proposals for the modification of the Convention and of the Regulations; of notifying the changes adopted, and, generally, of carrying out any Administrative work which it may be called upon to undertake in the interests of International Radiotelegraphy.

The expenses of this institution shall be borne by all the Contracting Parties.

ARTICLE 14.

Conditions of Transmission and Receipt.

Each of the High Contracting Parties reserves to itself the right to fix the conditions under which it will admit radiotelegrams coming from or destined for a station, whether a ship station or a coast station, which is not subject to the provisions of the present Convention.

If a radiotelegram is admitted, the ordinary charges must be applied to it.

Every radiotelegram originating at a ship station and received by a coast station of the contracting country, or accepted in transit by the Administration of a contracting country, shall be sent forward.

Every radiotelegram intended for a ship shall also be sent forward if the Administration of the contracting country has accepted it from the sender, or if the Administration of a contracting country has accepted it in transit from a non-contracting country, subject to the right of the coast station to refuse transmission to a ship station belonging to a non-contracting country.

ARTICLE 15.

Further Applications.

The provisions of the Articles 8 and 9 of this Convention are equally applicable to radio-telegraphic installations other than those indicated in Article 1.

ARTICLE 16.

Admission of New Parties.

Governments which have not taken part in the present Convention shall be allowed to become party to it at their own request.

Such adherence shall be notified through diplomatic channels to that one of the contracting Governments in whose territory the last Conference was held, and by that Government to the others.

Such adherence shall involve complete acceptance of all the clauses of the present Convention and admission to all the advantages stipulated therein.

The adherence to the Convention of the Government of a country having colonies, possessions, or protectorates shall not carry with it the adherence of the colonies, possessions, or protectorates of such Government, unless a declaration be made to that effect by such Government. These colonies, possessions, or protectorates as a whole, or each one of them separately, may form the subject of a separate adherence or of a separate denunciation under the conditions indicated in the present Article and in Article 22.

ARTICLE 17.

Application of International Telegraph Convention of 1875.

The provisions of Articles 1, 2, 3, 5, 6, 7, 8, 11, 12, and 17, of the International Telegraph Convention of St. Petersburg dated 10/22 July, 1875, shall be applicable to International Radiotelegraphy.

ARTICLE 18.

Arbitration.

In cases of difference of opinion between two or more contracting Governments concerning the interpretation or the execution either of the present Convention or of the Regulations provided for by Article 11, the question at issue may, by mutual consent, be submitted to arbitration. In that event each of the Governments concerned shall choose another not interested in the question.

The decision of the Arbitrators shall be made by an absolute majority of votes.

In the event of an equality of votes, the Arbitrators shall appoint, in order to settle the difficulty, another Contracting Government not concerned in the question in dispute. In default of an agreement with regard to such

choice, each Arbitrator shall propose a Contracting Government not interested in the dispute; and lots shall be drawn as between the Governments proposed. The drawing of lots shall be the prerogative of the Government in whose territory the International Bureau provided for in Article 13 performs its work.

ARTICLE 19.

Legislative Measures.

The High Contracting Parties undertake to adopt or to propose to their respective legislatures the measures necessary to ensure the execution of the present Convention.

ARTICLE 20.

Communication between Contracting Parties.

The High Contracting Powers shall communicate to one another such laws as may have been already enacted or which may be about to be so enacted in their countries, relating to the subject of the present Convention

ARTICLE 21.

Freedom of Action.

The High Contracting Parties maintain their entire liberty concerning the radiotelegraphic installation not covered by Article 1, and particularly with regard to naval and military installations, and also to stations carrying out communications between fixed points. All such installations and stations shall remain subject solely to the obligations provided for in Articles 8 and 9 of the present Convention.

Nevertheless, when these installations and stations carry out an exchange of maritime public correspondence, they shall conform, in carrying out such service, to the requirements of the Regulations so far as concerns the method of transmission and accounting.

If, on the other hand, coast stations carry out, at the same time as public correspondence with ships at sea, communications between fixed points, they shall not be subject, in the execution of this latter service, to the provisions of the Convention, except as to the observance of Articles 8 and 9 of this Convention.

However, fixed stations which carry out correspondence between land and land must not refuse the exchange of radiotelegrams with another fixed station on account of the system adopted by such station; nevertheless, the liberty of each country shall remain complete in respect of the organisation of the service for correspondence between fixed points and the decision as to the correspondence to be carried out by the stations appropriated to such service.

ARTICLE 22.

Date of Operation.

The present Convention shall come into execution on and from the 1st July, 1913, and shall remain in force for an indeterminate period and until the expiry of one year from the day upon which it is denounced.

Denunciation shall only take effect as regards the Government in whose name it is made. So far as the other Contracting Parties are concerned, the Convention shall remain in force.

ARTICLE 23.

Ratification.

The present Convention shall be ratified, and the ratification thereof shall be deposited in London with as little delay as possible.

If one or more of the High Contracting Parties shall not ratify the Convention, it shall not be less valid thereby for the parties which have ratified it.

In witness whereof the respective Plenipotentiaries have signed the Convention in a single copy, which shall remain deposited in the archives of the British Government, and of which a copy shall be sent to each Party.

London, the 5th of July, 1912.

FINAL PROTOCOL.

At the time of proceeding to the signature of the Convention adopted by the International Radiotelegraphic Conference of London, the undersigned Plenipotentiaries have agreed as follows :—

I.

The exact nature of the adherence notified on the part of Bosnia-Herzegovina not being yet determined, it is recognised that Bosnia-Herzegovina is entitled to a vote, a decision at a later date being necessary on the question whether this vote belongs to Bosnia-Herzegovina in virtue of the second paragraph of Article 12 of the Convention, or whether this vote is accorded to it conformably to the provisions of the third paragraph of that Article.

II.

The following declaration is placed on record :—

The Delegation of the United States declares that its Government is under the necessity of abstaining from all action with regard to tariffs, because the transmission of radiotelegrams as well as of telegrams in the United States is undertaken, wholly or in part, by commercial or private companies.

III.

The following declaration was also placed on record :—

The Government of Canada reserves to itself the right to fix separately, for each of its coast stations, a total sea charge for radiotelegrams originating from North America and intended for any ship whatever, the coast charge amounting to three-fifths and the ship charge to two-fifths of such total charge.

In witness whereof the respective Plenipotentiaries have drawn up the present Final Protocol, which shall have the same force and the same validity as if the provisions thereof had been inserted in the text itself of the Convention to which it belongs, and they have signed it in a single copy which shall remain deposited in the archives of the British Government, and of which a copy shall be sent to each party.

London, the 5th of July, 1912.

SERVICE REGULATIONS ANNEXED TO THE INTERNATIONAL RADIOTELEGRAPHIC CONVENTION.

CONTENTS.

1. Organisation of radiotelegraphic stations.
2. Hours of service of stations.
3. Form and acceptance of radiotelegrams.
4. Charges.
5. Collection of charges.
6. Transmission of radiotelegrams :—
 - (a) Signals of transmission.
 - (b) Order of transmission.
 - (c) Calling of stations and transmission of radiotelegrams.
 - (d) Acknowledgment of receipt and end of work.
 - (e) Route to be followed by radiotelegrams.
7. Delivery of radiotelegrams.
8. Special radiotelegrams.
9. Records.
10. Refunds and reimbursements.
11. Accounting.
12. International Bureau.
13. Meteorological, time, and other transmissions.
14. Miscellaneous provisions.

I.—ORGANISATION OF RADIO-TELEGRAPHIC STATIONS.

1.

Choice of Apparatus.

The choice of radiotelegraphic apparatus and devices to be used by coast stations and ship stations is free. The installation of these stations must, as far as possible, be in keeping with scientific and technical progress.

II.

Wavelength.

Two wavelengths, one of 600 and the other of 300 metres, shall be admitted for the service of general public correspondence. Every coast station open to this service must be equipped in such a way as to be able to use these two wavelengths, of which one shall be designated as the normal wavelength of a station. During the whole time that it is open

every coast station must be in a position to receive calls made by means of its normal wavelength. Nevertheless, for the correspondence covered by paragraph 2 of Regulation XXXV, use shall be made of a wavelength of 1,800 metres. Further, each Government may authorise the use, in a coast station, of other wavelengths for the purpose of securing a long-range service or a service other than that of general public correspondence, and established in conformity with the provisions of the Convention, with the reservation that these wavelengths do not exceed 600 metres, or that they do exceed 1,600 metres.

In particular, stations used exclusively for the despatch of signals intended to determine the position of ships must not use wavelengths exceeding 150 metres.

III.

Equipment.

1. Every ship station must be equipped in such a way as to be able to use the wavelengths of 600 metres and of 300 metres. The first shall be the normal wavelength, and may not be exceeded in transmission, the case of Regulation XXXV (paragraph 2) excepted.

Use may be made of other wavelengths not exceeding 600 metres in special cases, and subject to the approval of the Administrations to which the coast stations and ship stations concerned are subject.

2. During the whole time that it is open every ship station must be able to receive calls made by means of its normal wavelength.

3. Ships of small tonnage, in the case of which it would be materially impossible to use the wavelength of 600 metres for transmission, may be authorised to employ exclusively the wavelength of 300 metres; they must be able to receive by means of the wavelength of 600 metres.

IV.

Communication.

Communications between a coast station and a ship station, or between two ship stations, must be exchanged on both sides by means of the same wavelength. If, in a particular case, communication is difficult, the two stations may, by mutual consent, pass from the wavelength by means of which they are communicating to the other regulation wavelength. Both stations shall resume their normal wavelengths when the radiotelegraphic exchange is finished.

V.

Map and Nomenclature.

1. The International Bureau shall prepare, publish and revise periodically an official map showing the coast stations, their normal ranges, the principal lines of navigation, and the time normally taken by ships for the voyage between the various ports of call.

2. It shall draw up and publish a Nomenclature of the radiotelegraphic stations covered by Article 1 of the Convention, and also periodical supplements for additions and modifications. This Nomenclature shall give, in the case of each station, the following information:—

1st.—For coast stations: the name, nationality, and geographical position indicated by the territorial subdivision and by the longitude and latitude of the place; for ship stations: the name and nationality of the ships; when the case arises, the name and address of the contractor.

2nd.—The call signal. (The call signals must be differentiated from one another, and each one must consist of a group of three letters.)

3rd.—The normal range.

4th.—The radiotelegraphic system with the characteristics of the system of discharge (musical sparks, tone expressed by the number of double vibrations, etc.).

5th.—The wavelengths used (the normal wavelength to be underlined).

6th.—The nature of the services performed.

7th.—The hours of working.

8th.—When necessary the hour and method of despatch of time signals and meteorological telegrams.

9th.—The coast or ship charge.

3. There shall also be included in the Nomenclature such information relating to radiotelegraphic stations other than those covered by Article 1 of the Convention, as shall be communicated to the International Bureau by the Administrations to which such stations are subject, provided that these are either Administrations which are parties to the Convention, or, if they are not parties to it, have made the declaration provided for in Regulation XLVIII.

4. The following notations shall be adopted in documents for the use of the international service to designate radiotelegraph stations:—

PG—station open for general public correspondence.

PR—Station open for restricted public correspondence.

P—private station.

O—station open only for official correspondence.

N—station always open.

X—station not having fixed working hours.

5. The name of a ship station indicated in the first column of the Nomenclature must be followed, when there is duplication of the name, by the call-signal of such station.

VI.

Experiments and Practice.

The exchange of unnecessary signals and words is forbidden to the stations covered by Article 1 of the Convention. Experiments and practice shall not be allowed in these stations, except so far as they do not disturb the service of other stations.

Practice must be carried out with wavelengths different from those allowed for public correspondence, and with the minimum of power necessary.

VII.

Compulsory Conditions.

1. All stations are bound to exchange traffic with the minimum of energy necessary to ensure good communication.

2. Every coast and ship station must comply with the following conditions:—

(a) The waves emitted must be as pure and as little damped as possible.

In particular, the use of transmitting devices in which the production of the waves emitted is obtained by discharging the aerial direct by sparks (plain aerial) shall not be allowed except in cases of distress.

It may, however, be allowed in the case of certain special stations (for example, those of small ships) in which the primary power does not exceed 50 watts.

(b) The apparatus must be capable of transmitting and receiving at a speed at least equal

to 20 words per minute, the word being reckoned at the rate of five letters.

New installations bringing into play an energy of more than 50 watts shall be equipped in such a way that it may be possible to obtain easily several ranges less than the normal range, the shortest being of approximately 15 nautical miles. Installations already established bringing into play an energy of more than 50 watts shall be transformed as far as possible in such a manner as to satisfy the foregoing requirements.

(c) Receiving apparatus must allow of receiving, with the greatest possible amount of protection from disturbance, transmissions made with the wavelengths specified in present Regulations, up to 600 metres.

3. Stations serving solely for determining the position of ships (*radiophares*) must not operate over an area of greater radius than 30 nautical miles.

VIII.

Power.

Independently of the general conditions specified in Regulation VII., ship stations must also satisfy the following conditions:—

(a) The power transmitted to the radiotelegraphic apparatus, measured at the terminals of the generator of the station, must not under normal circumstances exceed one kilowatt.

(b) Subject to the provisions of Regulation XXXV, par. 2, a power exceeding one kilowatt may be used if the ship is under the necessity of corresponding at a distance of more than 200 nautical miles from the nearest coast station, or if, in consequence of exceptional circumstances, communication cannot be realised except by means of an increase of power.

IX.

Licences.

1. No ship station may be established or worked by private enterprise without a licence issued by the Government to which the ship is subject.

Stations on board ship having their port of register in a colony, possession, or protectorate may be described as being subject to the authority of such colony, possession, or protectorate.

2. Every ship station holding a licence issued by one of the contracting Governments must be regarded by the other Governments as having an installation fulfilling the conditions imposed by the present Regulations.

The competent authorities of the countries where the ship calls may demand the production of the licence. In default of such production, these authorities may ascertain whether the radiotelegraph installations of the ship satisfy the conditions imposed by the present Regulations.

When an Administration has practical evidence that a ship station is not fulfilling these conditions, it must, in every case, address a complaint to the Administration of the country to which the ship is subject. From that point onwards the procedure shall be, when necessary, as provided in Regulation XII., paragraph 2.

X.

Certificates.

1. The service of the ship station must be carried out by a telegraphist holding a certificate issued by the Government to which the

ship is subject, or, in an emergency and for one voyage only, by another Government party to the convention.

2. There shall be two classes of certificates:—
The first-class certificate shall state the professional qualifications of the operator with regard to:—

(a) the adjustment of the apparatus and knowledge of their working;

(b) transmitting and receiving by ear, at a speed which must not be less than 20 words per minute;

(c) knowledge of the regulations applying to the exchange of radiotelegraphic communications.

The second-class certificate may be issued to a telegraphist who only attains to a speed in transmitting and receiving of 12 to 19 words per minute, but who fulfils the other conditions mentioned above. Telegraphists holding a second-class certificate may be allowed:—

(a) on ships only using radiotelegraphy for their own service and for the correspondence of the ship's company, in particular on fishing vessels;

(b) on all ships as substitutes, provided that such ships have on board at least one operator holding a first-class certificate. Nevertheless, on ships placed in the first class indicated in Regulation XIII., the service must be carried out by at least two telegraphists holding first-class certificates.

In ship stations, transmissions may only be made by a telegraphist holding a first or second-class certificate, an exception being made in cases of emergency, in which it would be impossible to conform to this provision.

3. Further, the certificate shall testify that the Government has placed the telegraphist under the obligation of preserving the secrecy of correspondence.

4. The radiotelegraph service of the ship station shall be placed under the supreme authority of the captain of the ship.

XI.

Emergency Equipment.

Ships provided with radiotelegraph installations and placed in the first two classes indicated in Regulation XIII shall be bound to have emergency radiotelegraph installations of which all the parts shall be placed in conditions of the greatest safety possible, such conditions to be determined by the Government which issues the licence. These emergency installations must have at command a source of power of their own, must be capable of being set working speedily, must be able to work for six hours at least, and must have a minimum range of 80 nautical miles in the case of ships in the first class, and of 50 miles in the case of those of the second class. This emergency installation shall not be required in the case of ships whose ordinary installation fulfils the conditions of the present article.

XII.

Responsibility for Breach of the Convention.

1. If an Administration has information of a breach of the Convention or of the Regulations committed in one of the stations which it has authorised, it shall ascertain the facts and fix the responsibility.

In the case of ship stations, if the responsibility rests on the operator, the Administration shall take the necessary steps, and, if necessary, shall withdraw the certificate. If it is shown that the breach was due to the condition of the

apparatus or to instructions given to the telegraphist, the same procedure shall be followed in respect of the licence issued to the ship.

2. In the event of repeated breaches by the same ship, if the representations made to the Administration to which the ship is subject, by another Administration, remain without effect, the latter shall have the right, after notice given, of authorising its coast stations not to accept communications coming from the ship in question. In case of a difference between the two Administrations the questions shall be submitted to arbitration on the request of one of the Governments concerned. The procedure is indicated in Article XVIII. of the Convention.

II.—HOURS OF SERVICE OF STATIONS.

XIII.

Land and Ship Stations.

(a) *Coast Stations.*

1. The service of coast stations shall be, as far as possible, permanent, day and night, without interruptions.

Nevertheless, certain coast stations may have a service of limited duration. Each Administration shall fix the hours of service.

2. Coast stations whose service is not permanent may not close before having transmitted all their radiotelegrams to the ships which are in their radius of action nor before having received from such ships all the radiotelegrams of which notice has been given. This provision shall also apply when ships notify their presence before work has actually ceased.

(b) *Ship Stations.*

3. Ship stations shall be placed in three classes:—

- (1st) Stations always open;
- (2nd) stations having limited working hours;
- (3rd) stations having no fixed working hours.

During navigation, the following must remain permanently on the watch: (1st) ships of the first class; (2nd) those of the second class, during the hours that they are open for service; out of these hours, the latter stations must remain on the watch for the first 10 minutes of each hour. The stations of the third class are not bound to perform any regular "listening" service.

It shall fall to the Governments which issue the licences specified in Article IX. to fix the class in which the ship is to be placed, in respect of its obligations in the matter of keeping watch. This classification shall be mentioned in the licence.

III.—DRAWING UP AND HANDING IN OF RADIO-TELEGRAMS.

XIV.

Transmission from Ship to Land.

1. Radiotelegrams shall bear, as the first word of the preamble, the service instructions "radio."

2. In the transmission of radiotelegrams coming from a ship at sea, the date and the hour of the handing in at the ship station shall be indicated in the preamble.

3. On forwarding over the telegraph system, the coast station shall insert, as the indication

of the office of origin, the name of the ship of origin as it appears in the Nomenclature, and also, when the case arises, that of the last ship which served as an intermediary. These particulars shall be followed by the name of the coast station.

XV.

Transmission from Land to Ship.

1. The address of radiotelegrams intended for ships must be as complete as possible. It shall be compulsorily drawn up as follows:—

(a) Name or title of the addressee, with supplementary particulars if necessary.

(b) Name of the ship, as it appears in the first column of the Nomenclature.

(c) Name of the coast station, as it appears in the Nomenclature.

Nevertheless the name of the ship may be replaced, at the risks and perils of the sender, by the particulars of the voyage taken by such ship and determined by the names of the ports of origin and destination or by any other equivalent particulars.

2. In the address, the name of the ship, as it appears in the first column of the Nomenclature, shall be counted in every case, and independently of its length, as one word.

3. Radiotelegrams drawn up by means of the International Signal Code shall be forwarded to their destination without being de-coded.

IV.—CHARGES.

XVI.

Coast and Ship Charges.

1. The coast charge and the ship charge shall be fixed in accordance with the tariff per word pure and simple, on the basis of a fair remuneration for radiotelegraphic work, with optional application of a minimum charge per radiotelegram.

The coast charge may not exceed 60 centimes per word, nor the ship charge 40 centimes per word. Nevertheless each Administration shall have the right to authorise coast and ship charges higher than these maxima in the case of stations having a range of more than 400 nautical miles, or of stations exceptionally onerous on account of the material conditions of their installation or working.

The optional minimum charge per radiotelegram may not exceed the coast or ship charge for a radiotelegram of 10 words.

2. In the case of radiotelegrams originating from or intended for a country or exchanged directly with the coast stations of that country, the charge applying to the transmission over the lines of the telegraph system must not exceed, on the average, that of the inland rate of that country.

This charge shall be reckoned per word pure and simple, with an optional minimum charge not exceeding the charge for 10 words. It shall be notified in francs by the Administration of the country to which the coast station is subject.

In the cases of countries in the European system, with the exception of Russia and Turkey, there shall only be a single charge for the territory of each country.

XVII.

Retransmission.

1. When a radiotelegram originating from a ship and intended for *terra firma* passes through one or two ship stations, the charge shall include, in addition to those of the ship of

origin, the coast station, and the telegraph system, the ship charge of each of the ships taking part in the transmission.

2. The sender of a radiotelegram originating from *terra firma* and intended for a ship may require that his message be transmitted by way of one or two ship stations; he shall deposit for this purpose the amount of the radiotelegraphic and telegraphic charges, and besides, as a deposit, a sum to be fixed by the office of origin with a view to the payment to the intermediate ship stations of the transit charges fixed in paragraph 1; he must further pay, as he may choose, either the charge for a telegram of five words or the cost of postage of a letter to be sent by the coast station to the office of origin giving the information necessary to the liquidation of the sum deposited.

The radiotelegram shall then be accepted at the risks and perils of the sender; it shall bear before the address the paid additional particulars "x retransmissions telegraphes" or "x retransmissions lettre" (x representing the number of retransmissions required by the sender) accordingly as the sender desires that the information necessary for the liquidation of the deposit be furnished by telegram or by letter.

3. The charge for radiotelegrams originating from a ship, intended for another ship, and sent by way of one or two intermediate coast stations, shall include:—

The ship charges of both ships, the charge of the coast station or the two coast stations, as the case may be, and when necessary the telegraph charge appropriate to the transit between the two coast stations.

4. The charge for radiotelegrams exchanged between ships without the aid of a coast station includes the ship charges of the ship of origin and of the ship of destination, with the ship charges of the intermediate stations added thereto.

5. The coast and ship charges due to the stations of transit shall be the same as those fixed for such stations when these are stations of origin and destination. In no case shall they be collected more than once.

6. In the case of any intermediate coast station, the charge to be collected for the transit service shall be the highest of the coast charges appertaining to the direct exchange with the two ships in question.

XVIII.

Origin of Telegrams.

The country in whose territory is established a coast station acting as intermediary for the exchange of radiotelegrams between a ship station and another country shall be regarded, for the purpose of applying telegraphic charges, as the country of origin or of destination of such radiotelegrams and not as the country of transit.

V.—COLLECTION OF CHARGES.

XIX.

Tariffs.

1. The total charge for radiotelegrams shall be collected from the sender, with the exception—1st, of the cost of express delivery (Article LVIII, paragraph 1, of the Telegraph Regulations); 2nd, of the charges applying to inadmissible joinings or alterations of words noted by the office or station of destination

(Article XIX, paragraph 9, of the Telegraph Regulations), these charges being collected from the addressee.

Ship stations must possess the necessary tariffs for this purpose. They shall have, however, the right to obtain information from coast stations with regard to charges for radiotelegrams for which they do not possess all the necessary information.

2. The counting of words by the office of origin shall be decisive in the case of radiotelegrams addressed to ships, and that of the ship station of origin shall be decisive in the case of radiotelegrams originating in ships, both for the purpose of transmission and for that of the international accounts. Nevertheless when the radiotelegram is worded wholly or in part either in one of the languages of the country of destination, in the case of radiotelegrams originating in ships, or in one of the languages of the country to which the ship belongs, in the case of radiotelegrams addressed to ships, and when the radiotelegram contains joinings or alterations of words contrary to the common use of that language, the office or ship station of destination, as the case may be, shall have the right to recover from the addressee the amount of the charge not collected. In the case of a refusal to pay the radiotelegram may be withheld.

VI.—TRANSMISSION OF RADIOTELEGRAMS.

A) SIGNALS OF TRANSMISSION.

XX.

Code.

The signals employed shall be those of the International Morse Code.

XXI.

Distress Signals.

Ships in distress shall make use of the following signal,

• • • — — — • • •

repeated at short intervals, followed by the necessary particulars.

As soon as a station hears the signal of distress, it must suspend all correspondence and must not resume the same until after it has made sure that the communication consequent upon the call for help is finished.

The stations that hear a call of distress must act according to indications given by the ship which makes the call, with regard to the order of messages or their cessation.

When, at the end of a series of distress calls, there is added the call signal of the particular station, the reply to the call is proper to that station only, unless that station does not reply. Failing the indication of a particular station in the call for help, every station that hears the call shall be bound to reply thereto.

XXII.

Information.

For the purpose of giving or asking information concerning the radiotelegraph service, stations must make use of the signals contained in the list appended to the present Regulations. (See p. 62.)

(B) ORDER OF TRANSMISSION.

XXIII.

Duration of Transmission.

Between two stations, radiotelegrams of the same class shall be retransmitted singly in

alternate order or by series of several radiotelegrams, according to the instructions given by the coast station, on condition that the duration of the transmission of each series does not exceed 15 minutes.

(C) CALLING OF STATIONS AND TRANSMISSION OF RADIOTELEGRAMS.

XXIV.

Calls.

1. As a general rule, it shall be the ship station that calls the coast station, whether it has radiotelegrams to transmit or not.

2. In waters where the radiotelegraphic traffic is congested (the Channel, etc.), the call of a ship to a coast station may not, as a general rule, be made unless the latter is within the normal range of the ship station and the ship station has approached to a distance less than 75 per cent. of the normal range of the coast station.

3. Before proceeding to make a call, the coast station or the ship station must adjust its receiving system to the highest possible degree of sensitiveness, and must make sure that no other communication is being made within its radius of action; if it is otherwise, it shall wait the first break, unless it finds that its call is not likely to disturb the communication in progress. The same applies when the station wishes to answer a call.

4. For making a call every station shall use the normal wave of the station to be called.

5. If, in spite of these precautions, a radiotelegraphic transmission be impeded, the call must cease on the first request made by a coast station open to public correspondence. This station must then indicate the approximate duration of the wait.

6. The ship station must make known to each coast station to which it has notified its presence the time at which it proposes to cease as operations, and also the probable duration of the interruption.

XXV.

Call Signals.

1. The call comprises the signal — • — • —, the call signal of the station called, sent three times, and the word "de," followed by the call signal of the sending station, sent three times.

2. The station called shall reply by giving the signal — • — • —, followed by the call signal, sent three times, of the calling station, by the word "de," its own call signal and the signal — • — • —.

3. Stations which wish to enter into communication with ships, without, however, knowing the names of those ships which are within their radius of action, may use the signal — • — • — • — • — (signal of enquiry). The provisions of paragraphs 1 and 2 are also applicable to the transmission of the signal of enquiry and to the reply to that signal.

XXVI.

Station failing to Reply.

If a station when called does not reply within the call (Regulation XXV) has been sent three times at intervals of 2 minutes, the call may not be resumed until after an interval of 15 minutes, the station making the call first making sure of the fact that no radiotelegraphic communication is in progress.

XXVII.

Use of High Power.

Every station which has to make a transmission necessitating the use of high power shall first send out three times the warning

signal — • — • —, with the minimum of power necessary to reach the neighbouring stations. It shall not then begin to transmit with the high power until 30 seconds after sending the warning signal.

XXVIII.

Particulars regarding Reception.

1. As soon as the coast station has replied, the ship station shall furnish it with the following information if it has messages to transmit to it; this information shall also be given when the coast stations ask for it:—

(a) The approximate distance, in nautical miles, of the vessel from the coast station;

(b) The position of the ship given in a concise form and adapted to the circumstances of the individual case;

(c) The next port at which the ship will touch;

(d) The number of radiotelegrams if they are of normal length or the number of words if the messages are of exceptional length.

The speed of the ship in nautical miles shall be given specially at the express request of the coast station.

2. The coast station shall reply giving, as provided in paragraph 1, either the number of telegrams or the number of words to be transmitted to the ship and also the order of transmission.

3. If transmission cannot take place immediately the coast station shall inform the ship station of the approximate length of the wait.

4. If a ship station when called cannot receive for the moment it shall inform the calling station of the approximate length of the wait.

5. In the case of exchanges between two ship stations it shall rest with the station called to fix the order of transmission.

XXIX.

Exchange of Messages.

When a coast station is called by several ship stations, it shall decide the order in which these stations shall be allowed to exchange their messages.

In the regulation of this order, the coast station shall be guided solely by the necessity for allowing every station concerned to exchange the greatest possible number of radiotelegrams.

XXX.

Order of Transmission.

Before beginning to exchange correspondence, the coast station shall inform the ship station whether the transmission is to be made in alternate order by series (Regulation XXIII); it shall then begin to transmit, or shall follow up these instructions by the signal — • — • —.

XXXI.

Initial and Final Signals

The transmission of a radiotelegram shall be preceded by the signal — • — • — and ended by the signal — • — • — followed by the call signal of the sending station and by the signal — • — • —.

In the case of a series of radiotelegrams, the call-letter of the sending station and the signal — • — • — shall only be given at the end of the series.

XXXII.

Lengthy Messages.

When the radiotelegram to be transmitted contains more than 40 words, the sending

station shall interrupt the transmission by the signal $\bullet \bullet \bullet \bullet \bullet$ after each series of 20 words or thereabouts, and it shall not resume transmission until after having obtained from the station in correspondence the repetition of the last word clearly received, followed by the said signal, or, if the reception is clear, the signal $\bullet \bullet \bullet$.

In the case of transmission in series, the acknowledgment of receipt shall be given after each radiotelegram.

Coast stations engaged in transmitting long radiotelegrams must suspend transmission at the end of each period of 15 minutes, and must remain silent during a period of 3 minutes before continuing transmission.

Coast and ship stations which work in the conditions laid down in Regulation XXXV, paragraph 2, must suspend work at the end of each period of 15 minutes, and keep watch on the wavelength of 600 metres during a period of 3 minutes before continuing transmission.

XXXIII.

Doubtful Messages.

1. When the signals become doubtful, all possible resources must be drawn upon to accomplish transmission. To this end, the radiotelegram shall be transmitted three times at most, at the request of the receiving station. If in spite of this triple transmission the signals are still unintelligible, the radiotelegram shall be cancelled.

If the acknowledgment of receipt does not come to hand, the sending station shall again call the station with which it is in correspondence. When no reply is made after three calls, the transmission shall not be persevered with. In such case, the sending station shall have the right to obtain the acknowledgment of receipt through the medium of another radiotelegraph station, using, when necessary, the lines of the telegraph system.

2. If the receiving station considers that, in spite of defective receiving, the radiotelegram can be delivered, it shall insert at the end of the preamble the service advice "Reception douteuse," and shall forward the radiotelegram. In such case, the Administration to which the coast station is subject shall claim the charges, in conformity with Clause XLII of the present Regulations. Nevertheless, if the ship station later on transmits the radiotelegram to another coast station of the same Administration, the latter can only claim the charges appertaining to a single transmission.

(D) ACKNOWLEDGMENT OF RECEIPT AND END OF WORK.

XXXIV.

Acknowledgment of Reception and Completion.

1. The acknowledgment of receipt shall be given in the form prescribed by the International Telegraph Regulations; it shall be preceded by the call signal of the sending station and followed by the call signal of the receiving station.

2. The end of the work between two stations shall be indicated by each one of them by means of the signal $\bullet \bullet \bullet \bullet \bullet$ followed by its own call signal.

(E) ROUTE TO BE TAKEN BY RADIOTELEGRAMS.

XXXV.

Route of Transmission.

1. As a general principle, the ship station shall transmit its radiotelegrams to the nearest coast station.

However, if the ship station has the choice between several coast stations at equal or nearly equal distances, it shall give the preference to that which is established on the territory of the country of destination or of normal transit of its radiotelegrams.

2. Nevertheless, a sender on board a ship shall have the right to indicate the coast station by which he wishes his radiotelegram to be forwarded. The ship station shall then wait until this coast station is the nearest.

Exceptionally, transmission may be made to a more distant coast station, provided:—

(a) that the radiotelegram is intended for the country in which such coast station is situated and that it comes from a ship subject to that country;

(b) that for calls and transmission both stations use a wavelength of 1,800 metres;

(c) that transmission by this wavelength does not disturb any transmission made, by means of the same wavelength, by a nearer coast station;

(d) that the ship station is more than 50 nautical miles distant from any coast station shown in the Nomenclature. The distance of 50 miles may be reduced to 25 miles, subject to the reservation that the maximum power at the terminals of the generator do not exceed 5 kilowatts and that the ship stations be established in conformity with Regulations VII and VIII. This reduction of distance shall not apply in the seas, bays, or gulfs of which the shores belong to one country only, and of which the opening to the high sea is less than 100 miles wide.

VII.—DELIVERY OF RADIO-TELEGRAMS.

XXXVI.

Delivery.

When for any cause whatsoever a radiotelegram coming from a ship at sea and intended for *terra firma* cannot be delivered to the addressee, an advice of non-delivery shall be sent out. This advice shall be transmitted to the coast station which received the original radiotelegram. The latter, after verifying the address, shall forward the advice to the ship, if possible, and, if need be, by way of another coast station of the same country or of a neighbouring country.

When a radiotelegram, having arrived at the ship station, cannot be delivered, that station shall inform the office or ship station of origin by means of a service advice. In the case of radiotelegrams coming from *terra firma* this advice shall be transmitted, whenever possible, to the coast station by way of which the radiotelegram passed, or, if necessary, to another coast station of the same country or of a neighbouring country.

XXXVII.

Non-Delivery.

If the ship to which the radiotelegram is addressed has not notified its presence to the coast station within the time specified by the sender, or, in the absence of such specification, up to the morning of the eighth day following, such coast station shall give notice of the fact to the office of origin, which shall inform the sender of the same.

This latter shall have the option of requiring by paid service advice, telegraphic or postal, addressed to the coast station, that his radiotelegram be kept for a fresh period of nine days,

for transmission to the ship, and so on. In the absence of such request the radiotelegram shall be returned as undelivered at the end of the ninth day (the day of handing in not to be included).

However, if the coast station is sure that the ship has left its radius of action before the station could have transmitted the radiotelegram to it, such station shall immediately inform the office of origin, which shall without delay advise the sender of the cancellation of the message. Nevertheless, the sender may, by paid service advice, request the coast station to transmit the radiotelegram when the ship next passes.

VIII.—SPECIAL RADIOTELEGRAMS.

XXXVIII.

Special Messages.

The following only shall be allowed :—

1st, *Reply Paid Radiotelegrams.*—These radiotelegrams shall bear, before the address, the indication, "Réponse payée," or "RP," completed by the mention of the amount paid in advance for the reply—for example: "Réponse payée fr. x," or "Rp. fr. x."

The reply voucher issued on board a ship shall give the right to send, up to the limit of its value, a radiotelegram to any address whatever from the ship station which issues such voucher.

2nd, *Collected Radiotelegrams.*

3rd, *Express Delivery Radiotelegrams.*—But only in cases in which the amount of the cost of express delivery is collected from the addressee. The countries which cannot adopt these radiotelegrams must notify the fact to the International Bureau. Radiotelegrams for express delivery, with collection of the cost from the sender, may be allowed when they are intended for the country in whose territory the corresponding coast station is situated.

4th, *Radiotelegrams for Delivery by Post.*

5th, *Multiple Radiotelegrams.*

6th, *Radiotelegrams with Acknowledgment of Receipt.*—But only with regard to notification of the date and time at which the coast station has transmitted to the ship station the telegram addressed to the latter.

7th, *Paid Service Advices.*—Except those asking for repetition of information. Nevertheless, all paid service advices shall be allowed on the route over the telegraph lines.

8th, *Urgent Radiotelegrams.*—But only in transmission over the telegraph lines, and subject to the application of the International Telegraph Regulations.

XXXIX.

Postal Radiotelegrams.

Radiotelegrams may be transmitted by a coast station to a ship, or by a ship to another ship, with the object of being forwarded by post, the posting to take place from a port of call of the receiving ship.

The address of these radiotelegrams must be drawn up as follows :—

1st, Paid instruction "poste," followed by the name of the port where the radiotelegram is to be posted ;

2nd, Full name and address of the addressee ;

3rd, Name of the ship station which is to carry out the posting ;

4th, When necessary, name of the coast station.

Example :—Poste Buenos Aires, Martinez, 14 Calle Prat, Valparaiso, Avon Lizard.

The charge shall include, as well as the radiotelegraph and telegraph charges, a sum of 25 centimes for the postage of the radiotelegram.

IX.—ARCHIVES.

XL.

Records.

The originals of radiotelegrams, as well as the documents relating thereto, retained by the Administrations, shall be kept with all necessary precautions in respect of secrecy for at least fifteen months, counting from the month following that in which the radiotelegrams were handed in.

These originals and documents shall be sent, as far as possible, at least once a month by the ship stations to the Administrations to which they are subject.

X.—REFUNDS AND REIMBURSEMENTS.

XLII.

Refund of Charges.

With regard to refunds and reimbursements, the provisions of the International Telegraph Regulations shall apply, bearing in mind the restrictions laid down in Clauses XXXVIII and XXXIX of the present Regulations and subject to the following reservations :—

The time occupied in radiotelegraphic transmission, and also the time during which the radiotelegram remains at the coast station in the case of radiotelegrams addressed to ships, or in the ship station in the case of radiotelegrams originating in ships, shall not be counted in the period of delay giving rise to refunds and reimbursements.

If the coast station informs the office of origin that a radiotelegram cannot be transmitted to the ship to which it is addressed, the Administration of the country of origin shall immediately initiate the reimbursement to the sender of the coast and ship charges in respect of such radiotelegram. In this case, the charges reimbursed shall not appear in the account for which provision is made by Regulation XLII, but the radiotelegram shall be mentioned therein as a memorandum.

Reimbursements shall be borne by the various Administrations and private enterprises which have taken part in the forwarding of the radiotelegram, each one of them relinquishing its share of the charge. Nevertheless, radiotelegrams falling under the provision of Articles VII and VIII of the Convention of St. Petersburg shall remain subject to the provisions of the International Telegraph Regulations, except when it is due to an error of service that such radiotelegrams have been accepted.

When the acknowledgment of receipt of a radiotelegram has not reached the station which transmitted the message, the charge shall not be refunded until it has been proved that the radiotelegram is one which gives occasion for reimbursement.

XI.—ACCOUNTING.

XLIII.

Accounts.

1. Coast and ship charges shall not be entered in the accounts provided for by the International Telegraph Regulations.

The accounts relating to these charges shall be settled by the Administrations of the countries concerned. They shall be prepared by the Administrations to which the coast stations belong, and communicated by them to the Administrations concerned. In cases in which the working of the coast stations is independent of the Administration of the country, the person working these stations may be substituted in respect of accounts for the Administration of such country.

2. As to transmission over the lines of the telegraph system the radiotelegram shall be treated in respect of accounts in conformity with the Telegraph Regulations.

3. In the case of radiotelegrams originating from ships the Administration to which the coast station is subject shall debit the Administration to which the ship station of origin is subject with the coast and ordinary telegraph charges, the total charges collected for prepaid replies, the coast and telegraph charges collected for collations, the charges appertaining to express delivery (in the case provided for in Regulation XXXVIII) or delivery by post, and with those collected for supplementary copies (TM). The Administration to which the coast station is subject shall credit, when the case arises, through the channel of the telegraph accounts and through the medium of the offices which have taken part in the transmission of the radiotelegrams, the Administration to which the office of destination is subject with the total charges relating to prepaid replies. With regard to telegraph charges and charges relating to express delivery or delivery by post, and to supplementary copies, the procedure shall be in conformity with the telegraph regulations, the coast station being regarded as the telegraph office of origin.

In the case of radiotelegrams intended for a country lying beyond that to which the coast station belongs, the telegraph charges to be liquidated conformably to the above provisions are those which arise either from tables "A" and "B" appended to the International Telegraph Regulations or from special arrangements concluded between the Administrations of adjoining countries and published by those Administrations and not the charges which might be made under the special provisions of Regulations XXIII (paragraph 1) and XXVII (paragraph 1) of the Telegraph Regulations.

In the case of radiotelegrams and paid-service advices addressed to ships, the Administration to which the office of origin is subject shall be debited directly by that to which the coast station is subject with the coast and ship charges. Nevertheless, the total charges appertaining to prepaid replies shall be credited, if there is occasion, from country to country through the channel of Administration to which the coast station is subject. In respect to the telegraph charges and charges relating to delivery by post and for supplementary copies, the procedure shall be in conformity with the telegraph regulations. The Administration to which the coast station is subject shall credit that to which the ship of destination is subject with the ship charge, if there is occasion, with the charges belonging to the intermediate ship stations, with the total charge collected for prepaid replies, with the ship charge relating to collation, and also with the charges made for preparing supplementary copies and for delivery by post.

The paid service advices, and the prepaid replies themselves, shall be treated, in the radiotelegraphic accounts, in all respects like other radiotelegrams.

In the case of radiotelegrams forwarded by means of one or two intermediate ship stations, each of the latter shall debit the ship station of origin, if the radiotelegram is one coming from a ship, or the ship station of destination if the radiotelegram is one intended for a ship, with the ship charge due to it for transit.

4. In principle the settlement of account appertaining to exchanges between ship stations shall be made directly as between the companies working those stations, the station of origin being debited by the station of destination.

5. The monthly accounts serving as a basis for the special accounting in respect of radiotelegrams shall be drawn up radiotelegram by radiotelegram, with all necessary particulars, and within a period of six months counting from the month to which they belong.

6. The Governments reserve to themselves the option of making between themselves and with private companies (contractors working radiotelegraphic stations, shipping companies, etc.) special arrangements with a view to the adoption of other provisions respecting accounts.

XII.—INTERNATIONAL BUREAU.

XLIII.

Expenses.

The supplementary expenses resulting from the work of the International Bureau in connection with radiotelegraphy must not exceed 80,000 fcs. per annum, not including special expenses to which the meeting of an International Conference gives rise. The Administrations of the contracting States shall be, for the purposes of contribution towards the expenses, divided into six classes as follows:—

1st Class.—Union of South Africa, Germany, United States of America, Alaska, Hawaii, and the other American possessions in Polynesia, the Philippine Islands, Porto Rico and the American possessions in the Antilles, the zone of the Panama Canal, the Argentine Republic, Australia, Austria, Brazil, Canada, France, Great Britain, Hungary, British India, Italy, Japan New Zealand, Russia, Turkey.

2nd Class.—Spain.

3rd Class.—Russian Central Asia (littoral of the Caspian Sea), Belgium, Chili, Chosen, Formosa, Japanese Sakhalin and the leased territory of Kwantung, Dutch Indies, Norway, Holland, Portugal, Roumania, Western Siberia (littoral of the Arctic Ocean), Eastern Siberia (littoral of the Pacific Ocean), Sweden.

4th Class.—Ex-German East Africa, Ex-German South-West Africa, The Cameroons, Togoland, Ex-German Pacific Protectorates, Denmark, Egypt, Indo-China, Mexico, Siam, Uruguay.

5th Class.—French West Africa, Bosnia-Herzegovina, Bulgaria, Greece, Madagascar, Tunis.

6th Class.—French Equatorial Africa, Portuguese West Africa, Portuguese East Africa and the Portuguese possessions in Asia, Bokhara, the Belgian Congo, the Colony of

Curaçao, the Spanish Colony of the Gulf of Guinea, Erythrea, Khiva, Morocco, Monaco, Persia, San Marino, Italian Somaliland.

XLIV.

Work of Berne Bureau.

The various Administrations shall forward to the International Bureau a form modelled on that hereto appended (see page 61) and containing the particulars enumerated in the form with regard to the stations covered by Clause V of the Regulations. Any modifications which may take place and additions shall be communicated by the Administrations to the International Bureau from the 1st to the 10th of each month. With the help of these communications the International Bureau will draw up the Nomenclature provided for by Regulation V. The Nomenclature shall be distributed to the Administrations concerned. It may also, with the supplements relating thereto, be sold to the public at cost price.

The International Bureau shall take care that the adoption of identical call signals for radiotelegraph stations be avoided.

XIII.—METEOROLOGICAL TRANSMISSIONS, TIME SIGNALS, AND OTHER TRANSMISSIONS.

XLV.

Meteorological and other Messages.

1. The Administrations shall take the necessary steps to supply their coast stations with meteorological telegrams containing the particulars of interest to the district of such stations. These telegrams, the text of which must not exceed twenty words, shall be sent to the ships which ask for them. The charge for these meteorological telegrams shall be carried to the account of the ships to which they are addressed.

2. The meteorological observations, made by certain ships appointed for that purpose by the country to which they belong, may be sent once a day as paid service advices to the coast stations authorised to receive them by the Administrations concerned, who shall also appoint the meteorological offices to which these observations shall be addressed by the coast station.

3. Time signals and meteorological telegrams shall be transmitted in succession one to another in such a way that the total duration of their transmission does not exceed ten minutes. In principle, while they are being sent, radiotelegraph stations, transmission by which might disturb the reception of these signals and telegrams, shall keep silent so as to allow all stations which desire to do so to receive these telegrams and signals. Exception shall be made in the case of distress calls and State telegrams.

4. The Administrations shall facilitate the communication to the marine information agencies which they may appoint of the information respecting wrecks and casualties at sea, or presenting a general interest for navigation, which the coast stations can communicate regularly.

XIV.—MISCELLANEOUS PROVISIONS.

XLVI.

Interference.

Transmission exchanged between ship stations must be carried out in such a way as not to interfere with the service of coast stations, as the latter must have, as a general rule, right of priority for public correspondence.

XLVII.

Compulsory Retransmission.

Coast stations and ship stations shall be bound to take part in the retransmission of radiotelegrams in cases in which communication cannot be established directly between the stations of origin and destination.

Nevertheless, the number of transmissions shall be limited to two.

In the case of radiotelegrams intended for *terra firma* use may only be made of retransmissions to reach the nearest coast station.

Retransmission shall be in all cases subject to the condition that the intermediate station which receives the radiotelegram in transit is in a position to send it on.

XLVIII.

Non-Contracting Governments.

If the transmission of a radiotelegram is carried out partly on the telegraph lines or through radiotelegraph stations belonging to a non-contracting Government, such radiotelegram may be sent forward, subject to the reservation that at least the Administrations to which these lines or stations belong shall have declared that they are willing to apply, when the case arises, the provisions of the Convention and of the Regulations, which are indispensable, in order that radiotelegrams may be regularly forwarded, and that accounting may be assured.

Such declaration shall be made to the International Bureau, and brought to the knowledge of the offices of the Telegraph Union.

XLIX.

Operation of Modifications to Regulations.

The modifications of the present Regulations which may be rendered necessary in consequence of the decisions of future Telegraph Conferences shall come into force on the date fixed for the application of the provisions decided upon by each one of these later Conferences.

L.

Application of International Telegraph Regulations.

The provisions of the International Telegraph Regulations shall apply by analogy to radiotelegraph correspondence in so far as they are not contrary to the provisions of the present Regulations.

The following in particular apply to radiotelegraph correspondence:—

The provisions of Article XXVII, paragraphs 3 to 6, of the Telegraph Regulations referring to the collection of charges; those of Articles XXXVI and XLI referring to the indication of the route to be taken; those of Articles LXXV, paragraph 1, LXXVIII, paragraphs 2 to 4, and LXXIX, paragraphs 2

to 4, relating to preparing of accounts. Nevertheless, first, the period of six months provided by paragraph 2 of Article LXXIX of the Telegraph Regulations for the verification of accounts is extended to nine months in the case of radiotelegrams; second, the provisions of Article XVI, paragraph 2, are not considered as authorising the free transmission by radiotelegraph stations of service telegrams relating exclusively to the telegraph service, nor the free transmission over the lines of the telegraph system of service telegrams relating exclusively to the radiotelegraph service; third, the provisions of Article LXXIX, paragraphs 3 and 5, do not apply to radiotele-

graph accounting. For the purposes of applying the provisions of the Telegraph Regulations coast stations shall be regarded as offices of transit, except when the Radiotelegraphic Regulations stipulate expressly that these stations are to be considered as offices of origin or destination.

Conformable to Article II of the Convention of London the present regulations will come into force on July 1st, 1913.

In witness whereof the respective Plenipotentiaries have signed these Regulations on a single copy, which will remain deposited in the Archives of the British Government, and of which a copy will be sent to each party.

APPENDIX

I.

TABLE REFERRED TO IN REGULATION XLIV (p. 60).

(a) COAST STATIONS.

Name.	Nationality.	Geographical Position. E=East longitude; O=West longitude; N=North latitude; S=South latitude. Territorial subdivisions.	Call Signal.	Normal Range in Nautical Miles.	Radiotelegraph System, with the characteristics of the System of emission.	Wavelengths in Metres (the normal wavelength is underlined).
-------	--------------	--	--------------	---------------------------------	--	--

Nature of Services effected.	Working hours (Time according to the Meridian).	Coast Charge.		Observations (if occasion, Time and Method of sending Time-Signals and Meteorological Telegrams).
		Per Word in Francs.	Minimum per Radiotelegram in Francs.	

(b) SHIP STATIONS.

Name.	Nationality.	Call Signal.	Normal Range in Nautical Miles.	Radiotelegraph System, with the characteristics of the System of emission.	Wavelengths in Metres.
-------	--------------	--------------	---------------------------------	--	------------------------

Nature of Services effected.	Working Hours.	Ship Charge.		Observations (if occasion, Name and Address of the person working the Station).
		Per Word in Francs.	Minimum per Radiotelegram in Francs.	

1* WARSHIPS.

2* MERCHANT SHIPS.

II.

LIST OF ABBREVIATIONS TO BE USED IN RADIOTELEGRAPH TRANSMISSIONS
(referred to in Article XXII, p. 35).

Abbrevia- tion. 1.	Question. 2.	Answer or Advice. 3.
— • • • — (CQ)	Inquiry signal employed by a station which desires to correspond.
— • • • (TR)	Signal announcing the sending of indications concerning a ship station (Article XXVIII).
— — • • — (I)	Signal indicating that a station is about to send with high power.
PRB	Do you wish to communicate with my station by means of the International Signal Code?	I wish to communicate with your station by means of International Signal Code.
QRA	What is the name of your station?	This station is.....
QRB	How far are you from my station?	The distance between our station is..... nautical miles.
QRC	What are your true bearings?	My true bearings are.....degrees.
QRD	Where are you bound?	I am bound for.....
QRF	Where are you coming from?	I am coming from.....
QRG	To what company or line of navigation do you belong?	I belong to.....
QRH	What is your wavelength?	My wavelength is.....metres.
QRI	How many words have you to transmit?	I have.....words to transmit.
QRK	How are you receiving?	I am receiving well.
QRL	Are you receiving badly? Shall I transmit 20 times • • • • • so that you can adjust your apparatus.	I am receiving badly. Transmit 20 times • • • • • so that I can adjust apparatus.
QRM	Are you disturbed?	I am disturbed.
QRN	Are the atmospherics very strong?	The atmospherics are very strong.
QRO	Shall I increase my power?	Increase your power.
QRP	Shall I decrease my power?	Decrease your power.
QRQ	Shall I transmit faster?	Transmit faster.
QRS	Shall I transmit more slowly?	Transmit more slowly.
QRT	Shall I stop transmitting?	Stop transmitting.
QRU	—	I have nothing to transmit.
QRV	Are you ready?	I have nothing for you.
QRW	Are you busy?	I am ready. All is in order.
QRX	Shall I wait?	I am busy with another station (or with please do not interrupt).
QRY	What is my turn?	Wait. I will call you at.....o'clock (or when I want you).
QRZ	Are my signals weak?	Your turn is No.....
QSA	Are my signals strong?	Your signals are weak.
QSB	Is my tone bad?	Your signals are strong.
QSC	Is my spark bad?	The tone is bad.
QSD	Is the spacing bad?	The spark is bad.
QSF	Let us compare watches. My time is What is your time?	The spacing is bad.
QSG	Are the radiotelegrams to be transmitted alternately or in series?	The time is.....
QSH	—	Transmission will be in alternate order.
QSI	What is the charge to collect for....?	Transmission will be in series of five radiotelegrams.
QSK	Is the last radiotelegram cancelled?	Transmission will be in series of ten radiotelegrams.
QSL	Have you got the receipt?	The charge to collect is.....
QSM	What is your true course?	The last radiotelegram is cancelled.
QSN	Are you communicating with land?	Please give a receipt.
QSO	Are you in communication with another station (or with.....)?	My true course is.....degrees.
QSP	Shall I signal to that you are calling him?	I am not communicating with land.
QSQ	Am I being called by.....?	I am in communication with (through the medium of.....).
QSR	Will you dispatch the radiotelegram?	Inform that I am calling him.
QST	Have you received a general call?	You are being called by.....
QSU	Please call me when you have finished (or at.....o'clock)	I will forward the radiotelegram.
QSV	Is public correspondence engaged?	General call to all stations.
QSW	Must I increase the frequency of my spark?	I will call you when I have finished.
QSX	Must I diminish the frequency of my spark?	Public correspondence is engaged. Please do not interrupt.

Abbrevia- tion.	Question.	Answer or Advice.
1. QSY	2. Shall I transmit with a wavelength ofmetres?	3. Let us transfer to the wavelength of..... metres.
QSZ	Transmit each word twice. I have difficulty in receiving your signals.
QTA	Transmit each radiotelegram twice. I have difficulty in receiving your signals or Repeat the radiotelegram you have just sent. Reception doubtful.
QTC	Have you anything to transmit?	I have something to transmit. I have one (or several) radiotelegrams for..

When an abbreviation is followed by a mark of interrogation it applies to the question indicated in respect of that abbreviation.

In addition to these signals, which, it will be observed, are uniform in construction, the following signals of the International Telegraph Code may be used in these communications:—

• • — • • • "Repeat" sign (as well as mark of interrogation).
• • — • • • Understood.
• — • • • Wait.

EXAMPLES.

Station	
A	QRA ? What is the name of your station ?
B	QRA Campania This is the Campania.
A	QRG ? To what company or line of navigation do you belong ?
B	QRG Cunard. QRZ I belong to the Cunard Line. Your signals are weak.
Station A then increases the power of its transmitter and sends :—	
A	QRK ? How are you receiving ?
B	QRK I am receiving well.
	QRB 80 The distance between our stations is 80 nautical miles.
	QRC 62 My true bearings are 62 degrees, etc.

The following States have subsequently adhered to the Convention but were not represented thereat :—

Bolivia	New Caledonia
Colombia	Newfoundland
Cuba	Norfolk Island
Cyrenaica	Panama
Czecho-Slovakia	Papua
Ecuador	Peru
French Oceania	Sarawak
Guadeloupe	Tonga Islands
Guatemala	Tripoli
Iceland	Venezuela
Martinique	Zanzibar
Mexico	

INTERNATIONAL CONVENTION ON SAFETY OF LIFE AT SEA

London, January 20th, 1914.

THE London International Conference on the Safety of Life at Sea, by which the Convention signed on January 20th, 1914, has been drawn up, met for the first time on November 12th, 1913, at the Foreign Office, London. The suggestion that such a Conference should be held emanated from the ex-German Emperor, and the task of convening it was undertaken by the British Government. The following States were represented: Great Britain, Germany, the United States, Australia, Austria-Hungary, Belgium, Canada, Denmark, Spain, France, Italy, Japan, Norway, the Netherlands, Russia, Sweden, and New Zealand. The delegations from the different States, were composed, not of the representatives of the shipping trade, but of administrators, experts and jurists.

The late Lord Mersey was appointed Chairman of the Conference. To deal with the specific subjects submitted to it the Conference appointed five sub-committees, together with a sixth sub-committee for drafting the Convention, which was to embody the recommendations of the Committees as approved by the whole Conference.

The Convention contains seventy-four articles, of which we present below the articles governing the use of wireless telegraphy:—

CHAPTER I.

SAFETY OF LIFE AT SEA.

Article 1.—The High Contracting Parties undertake to give effect to the provisions of this Convention, for the purpose of securing safety of life at sea, to promulgate all regulations and to take all steps which may be necessary to give the Convention full and complete effect.

The provisions of this Convention are completed by Regulations which have the same force and take effect at the same time as the Convention. Every reference to the Convention implies at the same time a reference to the Regulations annexed thereto.

CHAPTER II.

SHIPS TO WHICH THIS CONVENTION APPLIES.

Article 2.—Except where otherwise provided by this Convention, the merchant ships of any of the States of the High Contracting Parties, which are mechanically propelled, which carry more than 12 passengers, and which proceed from a port of one of the said States to a port situated outside that State, or conversely, are subject to the provisions of this Convention. Ports situated in the Colonies, Possessions, or Protectorates of the High Contracting Parties are considered to be ports outside the States of the High Contracting Parties.

Persons who are on board by reason of *force majeure* or in consequence of the obligation laid upon the master to carry ship-

wrecked or other persons, are not deemed to be passengers.

Article 3.—There are excepted from this Convention, save in the cases where the Convention otherwise provides, ships making voyages specified in a schedule to be communicated by each High Contracting Party to the British Government at the time of ratifying the Convention.

No schedule may include voyages in the course of which the ships go more than 200 sea miles from the nearest coast.

Each High Contracting Party has the right subsequently to modify its schedule of voyages in conformity with this Article on condition that it notifies the British Government of such modification.

Each High Contracting Party has the right to claim from another Contracting Party the benefit of the privileges of the Convention for all of its ships which are engaged in any one of the voyages mentioned in its own schedule. For this purpose the Party claiming such benefit shall impose on the said ships the obligations prescribed by the Convention in so far as, having regard to the nature of the voyage, these obligations would not be unnecessary or unreasonable.

Article 4.—No ship, not subject to the provisions of the Convention at the time of its departure, can be subjected to the Convention in the course of its voyage if stress of weather or any other cause of *force majeure* compels it to take refuge in a port of one of the States of the High Contracting Parties.

CHAPTER III.

SAFETY OF NAVIGATION.

Article 5.—When the expression “every ship” is used in this chapter and in the corresponding part of the annexed Regulations it includes all merchant ships, whether they are the ships defined in Article 2 or not, which belong to any of the Contracting States.

Article 6.—The High Contracting Parties undertake to take all steps to ensure the destruction of derelicts in the northern part of the Atlantic Ocean east of a line drawn from Cape Sable to a point situated in latitude 34° north and longitude 70° west. Further, they will establish in the North Atlantic with the least possible delay a service for the study and observation of ice conditions and a service of ice patrol. For this purpose:

Two vessels shall be charged with these three services.

During the whole of the ice season they shall be employed in ice patrol.

During the rest of the year the two vessels shall be employed in the study and observation of ice conditions and in the destruction of derelicts; nevertheless the study and observation of ice conditions shall be effectively maintained, in particular from the beginning of February to the opening of the ice season.

While the two vessels are employed in ice patrol the High Contracting Parties, to the extent of their ability and so far as the exigencies of the Naval Service will permit, will send warships or other vessels to destroy any dangerous derelicts, if this destruction is considered necessary at that time.

Article 7.—The Government of the United States is invited to undertake the management of the three services of derelict destruction, study and observation of ice conditions, and ice patrol. The High Contracting Parties which are specially interested in these services, and whose names are given below, undertake to contribute to the expense of establishing and working the said services in the following proportions:—

	Per cent.
Austria-Hungary	2
Belgium	4
Canada	2
Denmark	2
France	15
Germany	15
Great Britain	30
Italy	4
Netherlands	4
Norway	3
Russia	2
Sweden	2
United States of America ..	15

Each of the High Contracting Parties has the right to discontinue its contribution to the expense of working these services after September 1st, 1916. Nevertheless, the High Contracting Party which avails itself of this right will continue responsible for the expenses of working up to the 1st September following the date of denunciation of the Convention on this particular point. To take advantage of the said right, it must give notice to the other Contracting Parties at least six months before the said 1st September; so that, to be free from its obligations on September 1st, 1916, it must give notice on March 1st, 1916, at the latest, and similarly for each subsequent year.

In case the United States Government should not accept the proposal made to them,

or in case one of the High Contracting Parties, for any reason, should not assume responsibility for the pecuniary contribution defined above, the High Contracting Parties shall settle the question in accordance with their mutual interests.

The Government of the High Contracting Party which undertakes the management of the service of derelict destruction is invited to devise means of granting, at the expense of this service, to merchant ships, which have contributed in an effective manner to the destruction of ocean derelicts, rewards to be fixed by the Government in accordance with the services rendered.

The High Contracting Parties which contribute to the cost of the three above-mentioned services shall have the right by common consent to make from time to time such alterations in the provisions of this Article and of Article 6 as appear desirable.

Article 8.—The master of every ship which meets with dangerous ice or a dangerous derelict is bound to communicate the information by all the means of communication at his disposal to the ships in the vicinity, and also to the competent authorities at the first point of the coast with which he can communicate.

Every Administration which receives intelligence of dangerous ice or a dangerous derelict shall take all steps which it thinks necessary for bringing the information to the knowledge of those concerned and for communicating it to the other Administrations.

The transmission of the messages respecting ice and derelicts is free of cost to the ships concerned.

It is desirable that the said information should be sent in a uniform manner. For this purpose a code, the use of which is optional, appears in Article I of the Regulations annexed hereto.

Article 9.—The master of every ship fitted with a radiotelegraph installation, on becoming aware of the existence of an imminent and serious danger to navigation, shall report it immediately in the manner prescribed by Article II of the Regulations annexed hereto.

Article 10.—When ice is reported on, or near his course, the master of every ship is bound to proceed at night at a moderate speed, or to alter his course so as to go well clear of the danger zone.

Article 11.—The ships defined by Article 2 shall have on board a Morse signalling lamp of sufficient range.

The use of Morse signals is regulated by the Code appearing in Article III, as well as by Article IV of the Regulations annexed hereto.

Article 12.—The use of the international distress signals for any other purpose than that of signals of distress is prohibited on every ship.

The use of private signals which are liable to be confused with the international distress signals is prohibited on every ship.

Article 13.—The selection of the routes across the North Atlantic in both directions is left to the responsibility of the steamship companies. Nevertheless the High Contracting Parties undertake to impose on these companies the obligation to give public notice of the regular routes which they propose their vessels should follow, and of any changes which they make in them.

The High Contracting Parties undertake, further, to use their influence to induce the

owners of all vessels crossing the Atlantic to follow as far as possible the routes adopted by the principal companies.

Article 14.—The High Contracting Parties undertake to use all diligence to obtain from the Governments which are not parties to this Convention their agreement to the revision of the International Regulations for Preventing Collisions at Sea as indicated below:—

(A) The Regulations shall be completed or revised in regard to the following points:

- (1) The second white light.
- (2) The stern light.
- (3) A day signal for motor vessels.
- (4) A sound signal for a vessel towed.
- (5) The prohibition of signals similar to distress signals.

(B) Articles 2, 10, 14, 15, 31 of the said Regulations shall be amended in accordance with the following provisions:

Article 2. The second white mast-head light to be compulsory.

Article 10. A permanent fixed stern light to be compulsory.

Article 14. A special day signal to be compulsory for motor vessels.

Article 15. A special sound signal to be established for use by a vessel in tow, or if the tow is composed of several vessels, by the last vessel of the tow.

Article 31. Article 31 to be modified in the following manner: Add to the lists of both day and night signals the international radiotelegraph distress signal.

Article 15.—The Governments of the High Contracting Parties undertake to maintain, or, if it is necessary, to adopt, measures for the purpose of ensuring that from the point of view of safety of life at sea, the ships defined in Article 2 shall be sufficiently and efficiently manned.

Chapter IV, which contains Articles 16 to 30, refers to construction.

CHAPTER V.

RADIOTELEGRAPHY.

Article 31.—All merchant ships belonging to any of the Contracting States, whether they are propelled by machinery or by sails, and whether they carry passengers or not, shall, when engaged on the voyages specified in Article 2, be fitted with a radiotelegraph installation if they have on board fifty or more persons in all.

Advantage may not be taken of the provisions of Articles 2 and 3 of this Convention to exempt a ship from the requirements of this chapter.

Article 32.—Ships on which the number of persons on board is exceptionally and temporarily increased up to or beyond fifty as the result of *force majeure*, or because the master is under the necessity of increasing the number of his crew to fill the places of those who are ill, or is obliged to carry shipwrecked or other persons, are exempted from the above obligation.

Moreover, the Governments of each of the Contracting States, if they consider that the route and the conditions of the voyage are such as to render a radiotelegraph installation unreasonable or unnecessary, may exempt from the above requirement the following ships:—

- (1) Ships which in the course of their voyage do not go more than 150 sea miles from the nearest coast.
- (2) Ships on which the number of persons

on board is exceptionally or temporarily increased up to or beyond fifty by the carriage of cargo hands or a part of the voyage, provided that the said ships are not going from one Continent to another, and, that, during that part of their voyage, they remain within the limits of latitude 30° N. and 30° S.

(3) Sailing vessels of primitive build, such as *dhows*, *junks*, etc., if it is practically impossible to instal a radiotelegraph apparatus.

Article 33.—Ships which, in accordance with Article 31 above, are required to be fitted with a radiotelegraph installation are divided, for the purpose of radiotelegraph service, into three classes, in accordance with the classification established for ship stations in Article XIII (b) of the Regulations annexed to the Radiotelegraph Convention, signed in London on July 5th, 1912, viz:—

First Class.—Ships having a continuous service.

There shall be placed in the First Class ships which are intended to carry twenty-five or more passengers:—

(1) if they have an average speed in service of fifteen knots or more;

(2) if they have an average speed in service of more than thirteen knots, but only subject to the twofold condition that they have on board two hundred persons or more (passengers and crew), and that, in the course of their voyage, they go a distance of more than 500 sea miles between any two consecutive ports. Nevertheless these ships may be placed in the Second Class on condition that they have a continuous watch.

Second Class.—Ships having a service of limited duration.

There shall be placed in the Second Class all ships which are intended to carry twenty-five or more passengers, if they are not, for other reasons, placed in the First Class.

Ships placed in the Second Class must, during navigation, maintain a continuous watch for at least seven hours a day, and a watch of ten minutes at the beginning of every other hour.

Third Class.—Ships which have no fixed periods of service.

All ships which are placed neither in the First nor in the Second Class shall be placed in the Third Class.

The owner of a ship placed in the Second or in the Third Class has the right to require that, if the ship complies with all the requirements for a superior class, a statement to the effect that it belongs to that superior class shall be inserted in the Safety Certificate.

Article 34.—Ships which are required by Article 31 above to be fitted with a radiotelegraph installation shall be required, by the Government of the countries to which they belong, to maintain a continuous watch during navigation as soon as the said Governments consider that it will be of service for the purpose of safety of life at sea.

Meanwhile, the High Contracting Parties undertake to require, from the date of the ratification of the present Convention, subject to the delays specified below, a continuous watch on the following ships:—

- (1) Ships whose average speed in service exceeds thirteen knots, which have on board 200 persons or more, and which, in the course of their voyage, go a distance of more than 500 sea miles between two

consecutive ports, when these ships are placed in the Second Class.

(2) Ships in the Second Class, for the whole of the time during which they are more than 500 sea miles from the nearest coast.

(3) Other ships specified in Article 31, when they are engaged in the Trans-Atlantic trade, or when they are engaged in other trades if their route takes them more than 1,000 sea miles from the nearest coast.

Ships connected with all kinds of fishing business, including whaling, which are required to be fitted with a radiotelegraph installation, shall not be required to maintain a continuous watch.

The continuous watch may be kept by one or more operators, holding certificates in accordance with Article X of the Regulations annexed to the International Radiotelegraph Convention, 1912, together, if necessary, with one or more certificated watchers. Nevertheless, if an efficient automatic calling apparatus is invented, the continuous watch may be maintained by this means by agreement between the Governments of the High Contracting Parties.

By "certificated watcher" is meant any person holding a certificate issued under the authority of the Administration concerned. To obtain this certificate, the applicant must prove that he is capable of receiving and understanding the radiotelegraph distress signal and the safety signal described in the Regulations annexed hereto.

The High Contracting Parties undertake to take steps to ensure that the certificated watchers observe the secrecy of correspondence.

Article 35.—The radiotelegraph installations required by Article 31 above shall be capable of transmitting clearly perceptible signals from ship to ship over a range of at least 100 sea miles by day under normal conditions and circumstances.

Every ship which is required, in conformity with the provisions of Article 31 above, to be fitted with a radiotelegraph installation, shall, whatever be the class in which it is placed, be provided in accordance with Article XI of the Regulations annexed to the International Radiotelegraph Convention, 1912, with an emergency installation, every part of which is placed in a position of the greatest possible safety to be determined by the Government of the country to which the ship belongs.

In all cases the emergency installation must be placed, in its entirety, in the upper part of the ship, as high as practically possible.

The emergency installation includes, as provided by Article XI of the Regulations annexed to the International Radiotelegraph Convention, 1912, an independent source of energy capable of being put into operation rapidly and of working for at least six hours with a minimum range of eighty sea miles for ships in the First Class and fifty sea miles for ships in the two other classes.

If the normal installation, which, in accordance with this Article, has a range of at least 100 sea miles, satisfies all the conditions prescribed above, an emergency installation is not required.

The licence provided for in Article IX of the Regulations annexed to the International Radiotelegraph Convention, 1912, may not be issued unless the installation complies both with the provisions of that Con-

vention and also with the provisions of this Convention.

Article 36.—The matters governed by the International Radiotelegraph Convention, 1912, and the Regulations annexed thereto, and in particular the radiotelegraph installations on ships, the transmission of messages, and the certificates of the operators, remain and will continue subject to the provisions:

(1) of that Convention and the Regulations annexed thereto, or of any other instruments which may in the future be substituted therefor;

(2) of this Convention, in regard to all the points in which it supplements the aforementioned documents.

Article 37.—Every master of a ship who receives a call for assistance from a vessel in distress is bound to proceed to the assistance of the persons in distress.

Every master of a vessel in distress has the right to requisition from among the ships which answer his call for assistance the ship or ships which he considers best able to render him assistance, but he must exercise this right only after consultation, so far as may be possible, with the masters of those ships. Such ships are then bound to comply immediately with the requisition by proceeding with all speed to the assistance of the persons in distress.

The masters of the ships which are required to render assistance are released from this obligation as soon as the master or masters requisitioned have made known that they will comply with the requisition, or as soon as the master of one of the ships which has reached the scene of the casualty has made known to them that their assistance is no longer necessary.

If the master of a ship is unable, or considers it unreasonable or unnecessary, in the special circumstances of the case, to go to the assistance of the vessel in distress, he must immediately inform the master of the vessel in distress accordingly. Moreover, he must enter in his log book the reasons justifying his action.

The above provisions do not prejudice the International Convention for the unification of certain rules with respect to Assistance and Salvage at Sea, signed at Brussels on September 23rd, 1910, and in particular, the obligation to render assistance laid down in Article II of that Convention.

Article 38.—The High Contracting Parties undertake to take all steps necessary for giving effect to the provisions of this chapter with the least possible delay. Nevertheless, they may allow:

A delay not exceeding one year, from the date of the ratification of this Convention, for the provision and training of operators and for the installation of the apparatus on ships placed in the First and Second Classes.

A delay not exceeding two years, from the date of the ratification of this Convention, for the provision and training of the operators and watchers on the ships in the Third Class, for the installation of the apparatus on ships in the Third Class and for the establishment of a continuous watch on ships placed in the Second and Third Classes.

Chapter VI refers to Life-saving Appliances and Fire Protection.

REGULATIONS. SAFETY OF NAVIGATION.

ARTICLE I.

CODE FOR THE TRANSMISSION BY RADIOTELEGRAPHY OF INFORMATION RELATING TO ICE, DERELICTS, AND WEATHER.

INSTRUCTIONS.

Transmission of Information.—The transmission of information concerning ice and derelicts is obligatory. This information may be sent from ship to ship or to the Hydrographic Office, Washington, either in clear or by means of the abbreviations used in Part I of this Code.

The transmission of information relating to weather is optional. Part II of this Code may be used for this purpose, but may be modified at any time by the Meteorological Congress.

Information required :

PART I.—ICE AND DERELICTS.

1. The kind of ice or derelict observed.
2. The position of ice or derelict when last determined.

PART II.—METEOROLOGICAL INFORMATION.

1. The direction and force of the wind.
2. The set and velocity of the current.
3. Weather or state of the sky at a fixed hour.
4. Height of barometer and air temperature.
5. Barometric tendency and sea-surface temperature.

The time to be adopted :

In all radiotelegrams relating to ice or derelicts the time shall be given in Greenwich mean time.

The Address :

Reports, when sent to the Hydrographic Office, Washington, should be addressed "Hydrographic"; reports to the Meteorological Office, London, should be addressed "Meteorology."

The Message :

1. When sending information about ice or derelicts alone, two groups of five figures each are used, preceded by the word "ice"; these groups may be repeated as often as necessary.
2. If meteorological information is to be sent in addition, a further four groups of five figures each are used, preceded by the word "weather." These groups are inserted at the end of the message after all the information relating to ice has been given.

N.B.—If the message contains the word "weather," all the code groups before that word give information relating to ice, and those after the word "weather" give meteorological information. If there is no word "weather" in the message, it only contains information about ice. (See examples of the two kinds of message given in this Article.)

PART I.

ICE AND DERELICTS.

Information respecting ice and derelicts is given by means of ten figures divided into two groups of five figures each. These groups are preceded by the word "ice."

- | | |
|---------------------|---|
| Two figures | The day of the month (<i>dd</i>), according to Code I. |
| One figure | The time of observation (<i>T</i>), according to Code II. |
| One figure | The kind of ice observed (<i>I</i>), according to Code III. |
| Three figures | The latitude of the ice observed (<i>p p p</i>), to tenths of a degree (see table below). |
| Three figures.. .. | The longitude of the ice observed (<i>p' p' p'</i>), to tenths of a degree (see table below). |

The first group consists of *ddTIp*.

The second group consists of *ppp'p'p'*.

Safety of Life at Sea

CODES.

CODE I.—Day of the Month.

The day of the month is given by two figures, of which the first may be zero: 01 to 31.

Code II.—Time of Observation.

The time of observation is included between—
Greenwich Mean Time

	Code No.
1 a.m. and 4 a.m.	1
4 a.m. and 7 a.m.	2
7 a.m. and 10 a.m.	3
10 a.m. and 1 p.m.	4
1 p.m. and 4 p.m.	5
4 p.m. and 7 p.m.	6
7 p.m. and 10 p.m.	7
10 p.m. and 1 a.m.	8

Code III.—Nature of Ice or Derelict Observed.

- No ice observed.
- Single iceberg. Huge mass of floating ice.
- Several icebergs.
- Numerous icebergs.
- Floeberg. Thick piece of salt-water ice like a small iceberg.
- Field ice. Ice extending as far as the eye can reach, but through which it is possible to navigate.
- Pack ice. Pieces of ice broken from berg or floe, partly closed together.
- Land ice. Ice attached to the shore since the winter.
- Derelict.
- (Not allotted.)

EXAMPLE.

Message sent from Ship to Ship.

	First Message.	Coded as	Second Message.	Coded as	Third Message.	Coded as	Fourth Message.	Coded as
Date of observation	15	15	15	15	15	15	16	16
Time of observation	10 a.m.—1 p.m.	4	4 p.m.—7 p.m.	6	7 p.m.—10 p.m.	7	4 p.m.—7 a.m.	2
Nature of ice or derelict	Field	5	Numerous icebergs	3	Derelict	8	Single iceberg	1
Position of ice or derelict	Latitude 45° 42' Longitude 46° 11'	457 462	Latitude 46° 5' Longitude 44° 40'	461 447	Latitude 46° 25' Longitude 43° 58'	464 440	Latitude 47° 19' Longitude 40° 15'	473 402

The code of the above message would thus be :
S.S. to S.S.

Ice, 15454, 57462 : 15634, 61447 : 15784, 64440 : 16214, 73402.

PART II.

METEOROLOGICAL INFORMATION.

Information respecting weather, etc., is given by four groups of five figures each. These groups are preceded by the word "weather."
First Group (DDPPP) :
The day of the month : two figures (DD), according to Code I.
The position of the ship when transmitting the message, indicated by three figures (PPP), representing the 1° square in which the ship is situated, according to Code IV and the numbered chart annexed to this Article.
Second Group (WWCCX) :
Wind direction and force at 8 a.m. at the 75th meridian of west longitude : two figures (WW), according to Code V.
Set and velocity of current : two figures (CC), according to Code VI.
Weather or state of the sky at the same hour : one figure (X), according to Code VII.

Third Group (BBBAA) ;

The barometric height to tenths of a millimetre at 8 a.m. at the 75th meridian of west longitude : three figures (BBB), according to Code VIII.

Air temperature at the same hour : two figures (AA), according to Code IX.

Fourth Group (bbSSS) ;

Barometric tendency at 8 a.m. at the 75th meridian of west longitude : two figures (bb), according to Code X.

Sea surface temperature at the same hour : three figures (SSS), according to Code XI.

CODES.**Code IV.—Position of Ship.**

A chart gives the numbers to be assigned to each 1° square in the North Atlantic. The position of the ship, when the meteorological data given in Part II were observed, is indicated by the three figures representing the 1° square in which the ship is situated. For example : A position 51° 55' N., 26° 49' W. would be reported as 561.

Code V.

Wind Direction (to 16 points) and **Wind Force** at 8 a.m. mean time at the 75th meridian of west longitude (WW).

	Wind Force. Beaufort Scale.	N.N.E.	N.E.	E.N.E.	E.	E.S.E.	S.E.	S.S.E.	S.	S.S.W.	S.W.	W.S.W.	W.	W.N.W.	N.W.	N.N.W.	N.

00	No current.															
99	No observation.															

N.B.—The current is to be referred to true bearings.

Code VII.

The State of the Sky at 8 a.m. mean time at the 75th meridian of west longitude :

0. Sky quite clear.
1. Sky quarter clouded.
2. Sky half clouded.
3. Sky three-quarters clouded.
4. Sky entirely overcast.
5. Rain falling.

6. Snow or hail falling.
7. Haze or mist.
8. Fog.
9. Thunderstorm.

Code VIII.—*Height of Barometer.*

The reading of the mercury barometer is to be corrected for index error, and reduced to 0° C. and sea level. A table of corrections is given below.

The corrected reading is coded by omitting the first figure of the barometer reading in tenths of a millimetre: for example, 761.2 mm. is coded 612.

A table for converting hundredths of an inch to tenths of a millimetre is given below.

Code IX.

Air Temperature is coded in two figures according to the following table:—

Degrees Centigrade.	Degrees Fahrenheit.	Code No.	Degrees Centigrade.	Degrees Fahrenheit.	Code No.

9.5	49.1	49	34.5	94.1	99

Code X.—*Barometric Tendency.*

By the "barometric tendency at a given hour" is meant the amount by which the barometric height has changed during the preceding three

hours. It is to be expressed in millimetres. For example, the barometric tendency at 8 a.m. could be obtained by comparing the reading taken at that hour, say 755.7 mm., with a reading taken at 5 a.m., say 759.3 mm. In this case the barometric tendency would be expressed by a fall of 3.6 millimetres. As a general rule the barometric tendency is to be determined from the trace of the barograph.

The barometric tendency is coded in two figures, according to the following table :—

Rise in Barometer.		Code No.	Fall in Barometer.		Code No.
Millimetres.	Inches.		Millimetres.	Inches.	
0.0—0.4	0.00—0.01	01	0.0—0.4	0.00—0.01	51

Code XI.—Sea Surface Temperature.

Sea surface temperature to tenths of a degree Centigrade is coded by three figures, or, when necessary, by two figures preceded by zero. If the temperature is negative, the first of these three figures is 5.

For example : — 2.2° C. is coded as 522.
 + 1.0° C. " 010.
 + 15.6° C. " 156.

to the follow.

TABLE OF CORRECTIONS FOR REDUCING BAROMETRIC HEIGHTS TO 0° C. AND TO SEA LEVEL.

NOTE.—The barometric reading should first be corrected for index error. This error may be neglected if it is less than 0.3 mm. The + sign indicates that the correction is to be added to the barometric ruling. The - sign indicates that the correction is to be subtracted.

ARTICLE II.

SAFETY SIGNAL.

The radiotelegraph stations which have to transmit to ships information involving safety of navigation and being of an urgent character (icebergs, derelicts, cyclones, typhoons, sudden changes in the position or form of fixed obstructions or of land marks) shall make use of the following signal, called the safety signal, repeated at short intervals ten times at full power :

— — — (T T T)

In principle, all radiotelegraph stations receiving the safety signal shall, if the transmission of messages by them would interfere with the receipt by any other station of the safety signal and the following safety message, keep silence, in order to allow all interested stations to receive that message. This does not apply to cases of distress.

The safety message shall be transmitted one minute after the safety signal has been sent out, and shall be repeated thereafter three times at intervals of ten minutes.

The Governments of the Contracting States will select the stations which are to send out to mariners safety information of an urgent character.

When the information in question has been sent out by stations performing the time service, it shall be again sent out after the transmission of the time signal and the weather report.

ARTICLE III. MORSE CODE.

INTERNATIONAL SIGNALS.

These signals may be made at night or in thick weather, either by long and short flashes of light, or by long and short sound signals (whistles, fog-horns, etc.), or during the day by hand flags.

1.—URGENT AND IMPORTANT SIGNALS.

You are standing into danger.. ..	• • —
I want assistance: remain by me	• • • —
Have encountered ice	• — —
Your lights are out (<i>or</i> , burning badly) ..	• — — •
The way is off my ship; you may feel your way past me	• — •
Stop (<i>or</i> , heave to); I have something important to communicate	• — • •
Am disabled; communicate with me ..	• • — •

2.—GENERAL SIGNALS.

Meaning.	Signal.	Equivalent Letters and How Made.	How Answered.
Preparative ..	• • • • • &c.	A succession of E's in one group	By the general answer T.
Answer	—	T (singly)	
Spelling	• • — • • — •	F F in one group	By the general answer T.
Use International Code of Signals	— — — — —	M M M in one group	By the general answer T.
International Code Flag sign	— — — — —	M M in one group	
Break sign	• • • •	I I as separate letters	
Stop	• • • • •	I I I as separate letters	
Finish of the message	• • • — •	V E as one group	• — • R. • • • D. As separate letters.
Erase sign	• • • • &c.	A succession of E's as separate letters	By a succession of E's as separate letters.
Annul	W — — — — W	W W as one group	By W W as one group.
Repeat word after: (when a single word is required)	<div style="display: flex; align-items: center;"> <div style="margin-right: 10px;"> I M I • — — • W A • — — • </div> <div> Followed by the word preceding the one required </div> </div>	<div style="display: flex; align-items: center;"> <div style="margin-right: 10px;"> I M I as one group W A as separate letters </div> <div> } </div> </div>	By the general answer T.
Repeat all after: (if more than one word is required)	<div style="display: flex; align-items: center;"> <div style="margin-right: 10px;"> I M I • — — • A A • — — • </div> <div> } </div> </div>	<div style="display: flex; align-items: center;"> <div style="margin-right: 10px;"> I M I as one group A A as separate letters </div> <div> } </div> </div>	By the general answer T.
Repeat all: (if the whole message is to be repeated)	<div style="display: flex; align-items: center;"> <div style="margin-right: 10px;"> I M I • • — — • A L L • — — • </div> <div> } </div> </div>	<div style="display: flex; align-items: center;"> <div style="margin-right: 10px;"> I M I as one group A L L as separate letters </div> <div> } </div> </div>	By the general answer T.

3.—NATIONALITY SIGNALS.

Meaning.	Signal.	Equivalent Letters and How Made.
American	— — — — —	C D as separate letters.
Argentine	— — — — —	C G " "
Austro-Hungarian	— — — — —	C F " "
Belgian	— — — — —	D C " "
Brazilian	— — — — —	D E " "
British	— — — — —	F.
Bulgarian	— — — — —	D F as separate letters.
Chilian	— — — — —	D G " "
Chinese	— — — — —	E C " "
Colombian	— — — — —	E D " "
Danish	— — — — —	E F " "
Dutch	— — — — —	E G " "
French	— — — — —	F.
German	— — — — —	G.
Greek	— — — — —	M M in one group followed by D.
Italian	— — — — —	C E as separate letters.
Japanese	— — — — —	C.
Mexican	— — — — —	F C as separate letters.
Norwegian	— — — — —	M M in one group followed by C.
Peruvian	— — — — —	F D as separate letters.
Portuguese	— — — — —	F E " "
Russian	— — — — —	D.
Siamese	— — — — —	F G as separate letters.
Spanish	— — — — —	G C
Swedish	— — — — —	M M in " " followed by E.
Turkish	— — — — —	G D as separate letters.
Uruguayan	— — — — —	G E " "
Venezuelan	— — — — —	G F " "

4.—INSTRUCTIONS.

1. THE URGENT AND IMPORTANT SIGNALS may be made without the Preparative Signal being answered if it is supposed that the person addressed cannot reply, or in other special circumstances; but in this case a pause should be made between the Preparative Signal and the message.

2. THE SIGNAL • • — • • • — • (FF) is used previous to any letters which are intended to spell words.

3. THE SIGNAL — — — — — (MMM) is used previous to any message sent by means of the International Code of Signals.

4. THE SIGNAL — — — — — (M.M) means the Code Flag of the International Code of Signals, and is used as indicated in the Code Book.

5. THE BREAK SIGN is used between the address of the receiver and the text of the message, and after the message if the name of the sender is to be signalled.

6. THE STOP is used, where necessary, in the text of the signal.

7. THE ERASE is used to cancel the last word or signal group, sent by mistake.

8. THE ANNUL is used to cancel *all* the message.

9. METHOD OF ANSWERING. Each word or signal group, when understood, is to be answered by one long flash — (T).

If a word or signal group is not answered, the sender is to repeat it until answered by a long flash.

At the end of the message, if understood, the receiver will make • — • • • (RD).

The Erase and Annul signs are to be answered by their own signs.

10. THE NATIONALITY SIGNAL is made immediately after the answer to the Preparatory Signal has been received, to indicate the nationality of the vessel making the signal. It is answered by the nationality signal of the vessel receiving the message.

SAFETY CERTIFICATE.

Radiotelegraph installation :—

—	Class and numbers required by Articles 33 and 34 of the said Convention.	Actual class and numbers.
Class of Ship :—	—	—
Number of { Operators of the 1st Class ..	—	—
{ 2nd " ..	—	—
{ "Certificated Watchers " ..	—	—

III. That in all other respects the ship complies with the requirements of the said Convention so far as those requirements apply thereto.

This certificate is issued under the authority of the Government. It will remain in force until

The undersigned declares that he is duly authorised by the said Government to issue this certificate.

WIRELESS LAWS AND REGULATIONS

THE VARIOUS ACTS, DECREES, REGULATIONS, ETC., REFERRED TO IN THE FOLLOWING LAWS ARE ENUMERATED AT THE BEGINNING OF EACH COUNTRY'S LAWS AND DISTINGUISHED BY CAPITAL LETTERS OF THE ALPHABET.

(N.B.—The wireless information in the maps in this book is copyright by the Wireless Press, Ltd., 12-13, Henrietta Street, Strand, London, W.C.2.)

ABYSSINIA

THIS historically famous country, more commonly known to the ancients as Ethiopia, is an empire, at present under the rule of Waizeru Zauditu. The people profess a primitive form of Christianity, but are illiterate, and the admission of Abyssinia to the Postal Union is probably due to the fact that the posts and telegraphs are under French administration.

There are no wireless stations working in the "Empire" under independent native rule, but a radiotelegraphic station is maintained at Gambela, in the enclave of Kassala. This was constructed, and is worked, by the Sudan Government. (For Regulations, see under "Sudan.")

ARGENTINA

SITUATED, so far as latitude is concerned, between 20° 50' and 55° 19' South, and possessing a longitude stretching from 53° 41' to 70° 56' west of Greenwich, Argentina is the second in size of the republics of South America. The country was first visited by Spanish explorers in 1516, and remained a colony of Spain until 1810, when the natives commenced their struggle for independence, which was solemnly proclaimed by the Congress assembled at Tucuman in 1816.

This was followed by a long period of civil war until 1853, when a National Constitution was elaborated, with modifications introduced in 1860, 1866, and 1898. Great Britain definitely recognised Argentine independence in 1825. The system of government adopted is that of a Federal Republic composed of three powers—the Executive, the Legislative, and the Judicial. The Executive power is exercised by the President of the Republic, who remains in office for a period of six years, assisted by eight Minister-Secretaries. The Legislative power is exercised by a National Congress composed of two Chambers, the Senate and the Chamber of Deputies.

The total area of the fourteen autonomous provinces and ten national governments which go to make up Argentina comprises in all about 1,132,000 square miles. The capital city is Buenos Aires, situated on the Rio de la Plata. The census of 1914 gave the total population of the country as comprising 7,905,502 persons.

CONTROL.

The Radiotelegraphic Law, passed in October, 1914, definitely assigned the direction of wireless telegraphy and the public wireless service to the Ministries of War and Marine.

The Ministry of Marine has jurisdiction over zones extending as far as 100 kilometres from the sea coast and the Rio de la Plata and 50 kilometres on each bank of the navigable rivers. The rest of the country is under the jurisdiction of the Ministry of War.

The chief of the public maritime radiotelegraph service is the General Secretary of the Ministry of Marine, under the direct control of which is the "División Servicio Radiotelegrafico," which has authority over everything concerning radiotelegraphy within the maritime zone. Under the control of the Ministry of Marine there are 21 coastal radiotelegraph stations, which are of the Telefunken system modified in accordance with the necessities of the Navy. According to the latest information, they are:—

Commercial traffic with ships	11
Naval official traffic only	6
Public correspondence in the inland service ..	2
Official correspondence inland	2

There are also 78 ship stations.

The "División Servicio Radiotelegrafico" has its own radiotelegraph works which construct and repair the greater part of the apparatus used in the Navy. These works are also able to effect repairs to radiotelegraph apparatus of merchant vessels calling at Argentine ports.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
Sr. D. Julio Moreno ..	Minister of Marine	Buenos Aires
Capt. de Navio, Ismael F. Galindez	Secretary-General of the Ministry and Chief of the Public Maritime Radiotelegraphic Service	Buenos Aires
Capt. de Fragata, Francisco Arnaut	Chief of the Divisional Radiotelegraphic Service	Buenos Aires

The Supreme Government has granted four concessions to different foreign countries to instal and work within the maritime zone high-power radiotelegraph stations. These companies are: the "Compañía Marconi de Telegrafía sin Hilos de la Plata" (English), which will place this country in communication with England, the "Pan American Wireless Telegraph and Telephone Company" (North American), which has taken over the concession granted to the "Federal Holding Company" to communicate direct with the United States, the German "Wireless Telegraph Company of Berlin" represented by the Siemens Schukert Company, which holds the concession to communicate direct with Nauen. Lastly, there is the Spanish Company "Gasoliba Alvargonzalez Sociedad Anonima" of Radiotelegraphy and Radiotelephony, which will place Buenos Aires in communication with the Iberian Peninsula.

There are also some private stations of very small energy, the installations of which are used solely for experimental purposes.

ORGANISATION.

The Station of Dársena Norte (LIA) transmits daily to all ships and coast stations a news service, as does likewise the radiotelegraph "top" which gives the official time.

There are no special publications devoted to wireless.

ADMINISTRATION.

Below are given the law and regulations in force at the present time:—

A—Law No. 9,127 regarding radiotelegraphy.

B—Regulations made by the Executive Power for Radiotelegraphy.

C—Decrees of the Executive Power amplifying the regulations.

LAW.

A LAW NO. 9,127 PASSED BY THE NATIONAL CONGRESS ON SEPTEMBER 16TH, 1913.

ART. 1.—The wireless service within the national territory, and for international communications within a minimum distance of 1,000 kilometres, shall be exclusively under the control of the State.

ART. 2.—The executive shall attend to the erection of wireless stations within the national territory, and shall so select the sites for the coast ones that all ships sailing near our coasts and navigating our rivers may always be in touch with them.

ART. 3.—The sum of \$100,000 national currency are hereby allocated to the above. This amount will be charged to General Expenses.

ART. 4.—The use of wireless apparatus in perfect working order is hereby declared compulsory for all ships calling at the ports of Argentina carrying fifty or more persons on board, counting the passengers and the crew, on and after ninety days have elapsed since the promulgation of this law.

ART. 5.—Wireless apparatus handled by skilled operators must have at all times a transmission power of not less than 200 kilometres for river craft, and not less than 500 kilometres for sea-going vessels.

ART. 6.—No ships will be allowed to leave port until the prescriptions of Arts. 4 and 5 have been complied with, and should the captain or the officer in charge try to elude or contravene this regulation, the superior local marine authority shall impose a fine of from 1,000 to 5,000 pesos. The party so fined can appeal to the federal magistrate of the district where the contravention has been committed. A double fine will be the penalty for a repetition of the offence.

ART. 7.—The Executive will promulgate the regulations in accordance with this law.

ART. 8.—The above Act of Parliament shall be communicated to the Executive.

The above was approved by the Argentine Congress in the city of Buenos Aires on the sixteenth day of September in the year of our Lord nineteen hundred and thirteen.

EXECUTIVE DECREE OF JULY 12TH, 1917.

This is divided into two parts. Of these Part I only is printed.

PART I.

CHAPTER I.

SUB-SECTION I.

B ART. 1.—The "General Rules and Regulations for the Radiotelegraphic Service in the Argentine Republic," as issued by the Secretary-General of the Marine Ministry are hereby approved.

ART. 2.—The following Regulations and Ordinances are hereby repealed:

Regulations for the Radiotelegraphic Stations of the Navy (December 1st 1906).

Regulations and Plan of Studies for the Radiotelegraphic Staff (November 27th, 1912).

Regulations for the Radiotelegraphic Service (July 5th, 1913).

Regulations for the Radiotelegraphic Service in the Argentine Republic (October 24th, 1914), and every other regulation affecting the Radiotelegraphic Service issued either as General Instructions, Orders of the Day or Circular Letters from the Marine Ministry, as from the year 1906 inclusive to this date.

ART. 3.—The necessary copies of the new Rules, as mentioned in Art. 1) to be printed.

ART. 4.—This decree to be communicated, published, etc.

(Signed) Irigoyen.

F. ALVAREZ DE TOLEDO.

The following are the documents approved by the Executive Decree above quoted:—

SUB-SECTION 2.

ORGANISATION OF THE RADIOTELEGRAPHIC DEPARTMENT.

ART. 1.—The Radiotelegraphic Service constitutes a Department of the General Secretaryship of the Ministry of Marine.

ART. 2.—The following duties correspond to this Department:—

(a) To intervene in everything affecting the military and public radiotelegraphic service depending from the Ministry of Marine and under its inspection and control.

(b) To intervene in the formation of reports and in the claims and suits that may be promoted.

(c) To study and comply with the international laws, regulations, instructions and conventions or pacts that may affect this service.

(d) To work in the reforms tending to improve the service both in connection with technical details and those of a purely disciplinary character.

(e) To intervene in the preparation of instruction plans and the examination of subordinate radiotelegraphists and civil operators, to propose their promotion and to issue the corresponding credentials (*patentes*).

(f) To intervene in the purchase of radiotelegraphic materials, giving advice and reporting on results.

(g) To attend to that part of the correspondence and intercourse with the Berne International Office referring to this service.

ART. 3.—The Radiotelegraphic Service Department will be divided into the following sections:—

(a) Inquiries, Correspondence, and Archives.

(b) Technical Inspection and Superintendency.

(c) Shop, Installations, and Repairs.

(d) Test of apparatus and materials.

(e) Accounting.

ART. 4.—The staffs in the land stations and in the floating lighthouses will be as permanent as consistent with the good service. The staffs will in matters affecting discipline, re-examination and licences, be subordinate to the Secretary of the Ministry: but the last-named officer will see that the General Direction of Personnel is kept informed of the changes occurring in this service.

With the General Secretary rests the duty of putting before the General Director of Personnel any changes that may be considered necessary in the radiotelegraphic staffs on board units of the Navy.

CHAPTER II.

REGULATIONS GOVERNING THE RADIOTELEGRAPHIC SERVICE.

SUB-SECTION I.

JURISDICTION OF THE SEVERAL MINISTRIES ACCORDING TO LAW No. 9127.

ART. 1.—The national territory is hereby divided into two zones for the purposes of jurisdiction and regularisation affecting the

service of radiotelegraphic installations. The aforesaid zones are as follows:—

(a) The *Maritime Zone*, which includes all ship stations in the maritime territorial waters and navigable rivers, besides all land stations situated within one hundred kilometres from the sea and River Plate coasts and those situated within fifty kilometres from the banks of any other navigable rivers.

(b) The *Terrestrial Zone*, which includes all other installations on national territory which are not covered by the above.

ART. 2.—(a) The Maritime Zone is under the jurisdiction of the Minister of Marine, who is responsible for the control of the Public Radiotelegraphic Service and who prescribes the rules and regulations for wireless service in this particular zone.

(b) The Minister of Marine shall also undertake the duty of transmitting all information of any nature which may be asked from him by the International Bureau of Berne.

ART. 3.—(a) The Terrestrial Zone is under the jurisdiction of the Minister of the Interior, who controls the Public Radiotelegraphic Service and who prescribes the rules and regulations for wireless in this particular zone.

(b) In special cases when a state of siege is declared, all installations in this zone shall be placed under the control of the War Office.

ART. 4.—Other Executive Offices can order the installation of wireless stations for their exclusive use, but in such cases the working of such installations must be authorised by the Minister exercising control in the respective zones, and the rules and regulations prescribed for the latter must be observed in these particular stations.

ART. 5.—All wireless installations erected in the national territory must observe the international rules and regulations adhered to by the Government of the Republic, and the General Law regulating the Telegraphic Service must be observed in all matters appertaining to the Public Radiotelegraphic Service.

SUB-SECTION 2.

PERMITS FOR THE INSTALLATION OF PRIVATELY OWNED RADIOTELEGRAPHIC STATIONS.

ART. 1.—Law 9127 having been passed with the object of nationalising of the wireless service, the installation of high-powered wireless stations by private individuals or corporations shall only be allowed in the national territory when such installations are destined for inter-continental communication.

ART. 2.—The granting of such concessions as authorised by Art. 1 corresponds to the Minister in whose jurisdiction the new station is to be erected.

ART. 3.—Where the Minister having control over the zone where the wireless installation is to be erected has given his consent, all the rulings of said Ministry, or any other of its decisions regarding the stations directly dependent on the said installation, must be obeyed unquestionably.

ART. 4.—In general it shall be the duty of the Minister of the Interior to negotiate the bases of agreements in course of conclusion with neighbouring countries, and he will communicate with the Minister of Marine the results arrived at in the course of such negotiations, so that the latter may give effect to any such conventions in so far as they

affect his department. The Minister of Marine shall have the right of being consulted in the negotiation of the bases for such conventions.

ART. 5.—No radiotelegraphic (transmitting or receiving) station will be erected without obtaining first the necessary licence from the Minister in whose jurisdictional zone the station is to be established.

ART. 6.—To obtain the licence referred to in Art. 5, the installation must fulfil the following requirements:—

(1) The primary transmitting power must not exceed 50 watts.

(2) The wavelength must not exceed 300 metres in the transmitter.

(3) The receiver may be suitable to receive waves of any length, providing that the Executive Government have no objection thereto.

(4) The installation must not be used for any interchange of messages in the public service. It will be devoted to experimenting, and only when in the judgment of the Government no harm or disturbance would arise from its use to the nearest national stations can the installation send or receive special messages.

ART. 7.—Anyone infringing the rules set out in Arts. 5 and 6 will be penalised in accordance with the penalties established in the General Law relating to the National Telegraph Service.

ART. 8.—Private installations authorised in accordance with Art. 6 must be inspected by the official inspectors, who are entitled to all the information and data they may demand. These installations must be registered and the wireless apparatus must be stamped by an inspector. The Minister exercising jurisdiction in the respective zone can order at any time the closing of authorised private wireless installations.

SUB-SECTION 3.

REGULATIONS AFFECTING ALL INSTALLATIONS ON NATIONAL TERRITORY AND ON BOARD SHIPS.

ART. 1.—The power to be used in all installations on land will be limited to that necessary for communication with the nearest stations in the system. Coast installations which must have high power in order to communicate at long distances are excluded from this limitation.

ART. 2.—(a) All installations open to public service must receive all messages sent by stations under the control of any Ministry or by any of the National Telegraph offices, provided that the regulations established by each administration regarding the radiograms which may go over their lines are complied with at the original stations from which the messages are radiated.

(b) Foreign vessels under the flag of a country which has not adhered to the London Convention will be allowed to communicate with Argentine coast and stationary ship stations, provided the agents representing the Company owning such foreign ships ask for the extension of this privilege and fulfil all the requirements established by the present Regulations and by the London Radiotelegraphic Convention.

ART. 3.—Radiograms will be transmitted in the order of priority established by the Law on National Telegraphs and the Radiotelegraphic Convention, namely:—

(a) Distress calls have absolute priority

upon any other communication; then follow:—

(b) Service notices of whatever origin when referring to "the Safety of Life at Sea" or containing information of an urgent character for navigation.

(c) Messages from the Executive Government.

(d) Service notices from the Radiotelegraphic stations.

(e) Messages from the Ministry of Marine, its dependencies and its fleets.

(f) Service notices from the shipping companies.

(g) Private messages.

ART. 4.—In accordance with Art. 101 of the Law on National Telegraphs, messages belonging to the same category will be transmitted by the station of origin in the order in which they are delivered to this station, and by the relay stations, in the order in which they are received.

ART. 5.—In accordance with Art. 102 of the Law on National Telegraphs, private messages stamped as urgent in the "telegraph" system, should have priority in transmission, even upon messages of a superior category not stamped as urgent.

ART. 6.—Any radiogram referring to the internal service of a fleet, squadron or division in march, will be considered as urgent and transmitted accordingly.

ART. 7.—Every official unprepaid radiogram or telegram sent by Marine officers with authority to do it, will be signed with the corresponding telegraphic address, and such messages will be legalised outside their text with the seal and signature of the competent officer on land or on board.

ART. 8.—The following is a list of Marine Officers who are authorised to send unprepaid radiograms and telegrams, according to the Navy Disciplinary Regulations:—

Secretary-General of the Ministry.

Chief of the Radiotelegraphic Department.

Chief of the Hydrography, Lighthouses and Buoys Department.

Inspector of the Marine Ministry's Dependencies in Tierra del Fuego and Cabo Virgenes.

Director-General of Personnel.

Director-General of Material.

Director-General of Administration.

Prefect-General of Ports.

Prefects of Maritime and River Zones.

Director of the Naval School.

Director of the Training School.

Director of the Mechanics School.

Chiefs of Fleets, Divisions, Squadrons, Light Squadrons or Groups.

Chiefs of Staff of Squadrons and Divisions.

Chiefs of Shipyards and Maritime Zones.

Chief of the Aviation Grounds in "Fuente Barragán."

Commanders of Ships.

Commander of the Marine Depot (*Depósito de Marina*).

Command of Coast Artillery and "Martín García."

Managers of Coast Radiotelegraphic Stations.

Managers of Lighthouses and Director of the "Año Nuevo" Observatory, when addressing the Chief of Hydrography, Lighthouses and Buoys, or the sectional chiefs in his jurisdiction.

Sub-Prefects and their Assistants when

addressing the Prefect-General or the jurisdictional Prefect.

The lists of officers belonging to other branches of national service and who have authority to forward unrepaid messages will be communicated to the Radiotelegraphic Offices when necessary.

ART. 9.—The Manager of a station may demand from any sender of a radiogram proof of his identity before transmitting the message, acting in accordance with Arts. 82 and 83 of the Law on National Telegraphs of 1875.

ART. 10.—In order to improve the service and with a view to regulate the exchange of radiograms between units of the Navy, coast stations, and foreign ships—strictly following the regulations established by the London International Radiotelegraphic Convention of 1912—the Radiotelegraphic Stations belonging to the Navy—whether opened or not to the public—will act in the way hereinafter detailed to make their calls, answers, transmissions, requests of rectification, repeats and notices of reception—viz.:—

1. Calls.

Every call is made up by the sign —●—●—●— followed by the letters of the station to be called, repeated three times, and by the word "de" (—●—●—●—), followed by the call letters of the calling station repeated three times.

Example of a Call.—Station LIA calls station LIC thus: —●—●—●— LIC LIC LIC —●—●—●— LIA LIA LIA.

2. Answers.

The station that is being called answers thus: The sign —●—●—●— followed by the call letters of the calling station, repeated three times; then the word "de" followed once by the call letters of the called or answering station, and ending with the sign —●—●—●— (invitation to transmit).

Example of an Answer.—Station LIC answers its call to station LIA inviting the latter to transmit its communication, thus: —●—●—●— LIA LIA LIA —●—●—●— LIC —●—●—●—

3. How to Transmit a Radiogram.

The following are the elements in which is divided every radiogram:

1. Sign of attention —●—●—●—
 2. Preamble.
 3. Supplementary Service instructions, if any.
 4. Address.
 5. Text of the radiogram.
 6. Signature.
 7. Signal of end of message —●—●—●—
 8. Call letters of the transmitting station.
- If there are several radiograms to transmit these letters will be sent only after the last message.

The Preamble of a radiogram is composed as follows:—

- I. The word "Radio."
- II. Class of the radiogram.
- III. Category of the radiogram. (Class and category are expressed by a group of letters called *prefix*.)
- IV. Name of the office of origin.
- V. Number of the radiogram.
- VI. Number of words.
- VII. Date and hour in which the radiogram was received for transmission.
- VIII. Service instructions.
- IX. Sign —●—●—●— (Double hyphen).

Supplementary service instructions are those which are transmitted upon request from the sender, and are charged for.

The following order will be observed in the transmission of every radiogram:

Preamble:

1. Sign of attention —●—●—●—
2. The word "Radio."
3. Class of the radiogram.
4. Category of the radiogram.
5. Name of office of origin.
6. Number of the radiogram
7. Number of words.
8. Date and hour in which the radiogram was received for transmission.
9. Service instructions.
10. The sign —●—●—●—

Supplementary Service Instructions:

11. Supplementary service instructions (if any).
12. The sign —●—●—●—

Address:

13. The address (which will have at least two words).
14. The sign —●—●—●—

Text:

15. The text of the radiogram.
16. The sign —●—●—●—

Signature:

17. Signature.
18. Signal of end of message —●—●—●—
19. Call letters of the transmitting station.

Examples.—1. At 8.15 a.m. of the 15th of a month was delivered at the TORO station a radiogram for transmission, as follows: Lopez Sarmiento 667 Buenosaires. Send by fast freight 10 cases Viscosine oil. Suárez.

The above radiogram will be transmitted in the following order: —●—●—●— Radio (prefix of class and category) TORO. 175 13 15 8.15 m. —●—●—●— López Sarmiento 667. Buenosaires —●—●—●— Send by fast freight 10 cases Viscosine oil —●—●—●— Suárez —●—●—●— LMP.

2. The Radiotelegraphic installation of "Dársena Norte" receives the following message on the 25th at 8.15 p.m. from Morón for Benítez, steamship Rawson: On arrival you will find letter and documents asked for. Rodríguez." This radiogram will be transmitted thus: —●—●—●— Radio (prefix) Morón 16 14 25 8.15p. —●—●—●— Benítez Steamship Rawson —●—●—●— On arrival you will find letter and documents asked for —●—●—●— Rodríguez —●—●—●— LIA.

3. Example of a radiogram from the ship Cabo Corrientes, on the 15th at 3 p.m., to be transmitted to Berlin, via Monrovia, and reading: Schroeder Uhlundstrasse 35 Berlin. Send motor type DRS 10 HP. Wagner. This message will be transmitted thus: —●—●—●— Radio (prefix) Cabo Corrientes 25 11 15 3 s via Monrovia —●—●—●— Schroeder Uhlundstrasse 35 Berlin —●—●—●— Send motor type DRS 10 HP. —●—●—●— Wagner —●—●—●— LMO.

4. Notice of Reception.

When the receiving station receives a radiogram and has verified the number of words stated in the preamble, notice of reception must be given in this form:

"Call letters of the transmitting station followed by the word *de* (from) followed by its own call letters. Then the letter R, the number of the radiogram and the sign to indicate end of transmission —●—●—●— or end of work —●—●—●—, as the case may be.

Example: —●—●—●— LIA de LMX R 76 —●—●—●—

5. How to ask for a "Repeat."

The method to ask for a repeat will be the following:—

"The characteristics of the transmitting station will be sent followed by the word *de* (from), and then by the characteristics of the receiving station, and the combination QTA followed by the number of the radio."

Example: —●●●●● LIA de LMX QTA 77 —●●●●●

If only a part of the radiogram is to be repeated, the message will be: —●●●●● LIA de LMX QTA 78 desde (from) —●●●●●

Should the receiving station have any doubt as to the radiogram received or the number of its words, a rectification may be requested thus:—

"Sign of attention —●●●●●; call letters of the transmitting station, once; the word *de* (from): call letters of the receiving station; the combination QTC: the number of the radiogram to be rectified and the signal —●●●●●

Example: LMX asks from LIA the rectification of radiogram 71: —●●●●● LIA —●●●●● LMX QTC 71 —●●●●●

Station LIA answers: —●●●●● LMX —●●●●● LIA QTC 71 r z p z v w k r —●●●●● Here the letters and figures r, z, p, z, v, w, k, r are the initial letters of each word and the first figures of each number.

6. How to Express the Number of Words.

When the actual number of words signalled is not the same as the number of words charged for, the fact should be expressed as a common fraction in which the numerator will indicate the number of words charged for and the denominator the actual number of words transmitted.

Take as an example the following radiogram: Alvarez Calle Corrientes 725 Buenosaires. Ship immediately: 100 litres benzine, 5 kilograms oakum, 5 kilograms Viscosine oil Suárez 22/18 (22 —●●●●● 18).

The real number of words in the message is 18, but the three punctuation marks and the underline are counted and charged as words.

7. How to give the Date and Hour.

The date and the hour will be indicated by two groups of figures: the first group will represent the date of the month, and the second the hour and minutes followed by the letter *m* or the letter *s*, as the case may be, meaning *before noon* and *after noon*, respectively.

For instance, in a message received for transmission the 15th of the current month at 4.36 p.m., this information will be given thus: 15 4.36 s.

8. How to Use the Sign —●●●●●

Hereafter the sign —●●●●● will be used to represent the double dash (=), and not as heretofore to represent the letter *elle* (ll). This letter ll will be represented from now on by two consecutive *elles* (ll) (—●●●●● —●●●●●).

9. How to Request a Station to Wait.

When a coast station is not ready to receive a number of radiograms after the preliminary communications from a ship, as detailed in Art. XVIII of the Rules annexed to the London Radiotelegraphic Convention of 1912, the land station will have to instruct the ship to wait, and such instructions will be communicated in the following manner:

—●●●●● LMO —●●●●● LIA —●●●●● —●●●●● 50 —●●●●● 10 —●●●●●

This means that the station LIA acknowledges receipt of communication from station LMO, and using the service TR notation informs LMO that it has 50 words to communicate, and begs the ship station to wait ten minutes. In these communications the figures will be transmitted using the abridged notation.

10. Use of TR Notation.

Service communications will be preceded by the TR notation.

ART. 11.*—When the text of a radiogram is totally or partially in plain language, the following information will be given in the radiogram:—

1. Total number of compound words as a basis for the charge.
2. Number of plain words in plain language or with a conventional meaning.
3. Number of groups of figures or letters, expressed thus:

20/12/6.

This rule applies specially:—

(a) When a radiogram in plain language contains words of more than 15 letters (international system of counting words) or more than 7 syllables (according to our national rule).

(b) When a radiogram in code language contains words with more than 10 letters.

(c) When the radiogram contains groups of figures or letters of more than five characters.

ART. 12.—A radiogram must not contain more than 100 words. If the sender needs more words he must divide his communication in as many messages as necessary to comply with the above rule, and these radiograms will be transmitted alternatively with those from other senders presented for the next turn.

Official unrepaid radiograms must not contain more than 50 words.

ART. 13.—(a) Radiotelegraphic messages transmitted, relayed or received will be kept in the utmost secrecy, as well as the note books, traffic sheets, reports and liquidations of accounts. It is forbidden to divulge the contents of communications intercepted during service hours, even if they do not affect the national public service or the naval service.

(b) If an intercepted radiotelegram contains damaging statements affecting national interests in land or at sea, the information must be communicated at once to the superior of the operator picking up the message, and this operator must keep a memorandum of the text and address of the radiogram concerned.

ART. 14.—It is the duty of every radiotelegraphist to communicate without delay to his superior the contents of intercepted radiograms containing excitations to revolt or affecting the safety of the nation. This information must be transmitted by the superior officer to a competent authority.

ART. 15.—Radiotelegraphic communications, like ordinary telegrams, are confidential: therefore, persons not belonging to the staffs shall not be admitted into the stations.

ART. 16.—In cases referring to the Radiotelegraphic service, not covered by these regulations, the international radiotelegraphic

* This article and the article following would appear to be intended to apply rather to purely Argentine working, as they seem inconsistent with the provisions of the International Telegraph and Radiotelegraph regulations.

conventions and the Law on National Telegraphs will apply. But if a rule or regulation is not found, the case must be submitted in consultation to the nearest (superior) office or to the Radiotelegraphic Department.

To ensure a good service, it is the duty of coast stations to give to ship stations all the information they may require.

ART. 17.—Radiograms will be delivered following the rules contained in Art. 32 of the Law on National Telegraphs.

SUB-SECTION 4.

CHIEF OF THE PUBLIC MARITIME RADIO-TELEGRAPHIC SERVICE.

ART. 1.—The Secretary-General of the Ministry of Marine shall have under his control the Public Radiotelegraphic Maritime Service and his duties will be as follows:—

(a) He shall supervise all coast stations and ship stations after installation, both of national and foreign register, calling at national ports, and shall also supervise all coast stations, as prescribed in Article 2 of Law 9127.

(b) He shall control the service of the said stations and will draft the regulations for same, taking care that the rules herein established and the international Conventions accepted by the National Government are duly fulfilled.

(c) He shall see to it that all regulations concerning rates, discounts and reimbursements, as well as any others that may be later on prescribed by the Post and Telegraph Office regarding the requirements of radiograms relayed to the National Telegraph lines are faithfully complied with.

(d) He shall forward to the Office of Posts and Telegraphs all claims made to the Prefect-General of Ports by Steamship Companies, ship captains or passengers referring to rates, discounts and reimbursements.

(e) He shall issue through the Office of the Prefect-General of Ports the permits for the erection of wireless on board those ships which may have obtained leave to do so in accordance with these Regulations.

(f) He shall issue licences to the wireless telegraphists operating at all stations working within the Maritime Zone, so soon as the conditions affecting such licences have been fulfilled in accordance with these Regulations.

(g) He shall cancel such licences and permits granted to stations and operators within the Maritime Zone as it may, for a good reason, be found necessary to withdraw.

(h) He shall enforce, through the Office of the Prefect-General of Ports, the payment of all fines imposed on shipping companies or ships, and shall direct the deposit of the said fines in the National Bank to the order of the Director of Posts and Telegraphs.

(i) He shall have it in his power to authorise the installation of wireless by private individuals or corporations within the Maritime Zone in accordance with Chapter II, Sub-section 1, Art. 5.

ART. 2.—The head of the Public Maritime Radiotelegraphic Service shall act jointly with the Director of Posts and Telegraphs in the following matters:—

(a) In all matters referring to wireless stations installed on the Maritime Zone.

(b) In all matters referring to rates, discounts and reimbursements of the Public

Radiotelegraphic Maritime Service in order to obtain a monthly settlement of accounts by the shipping companies or ship captains with the Office of Posts and Telegraphs in conformity with the schedules prepared by the latter.

(c) In the investigation of any questions that may arise for consultation from the Wireless International Service. In all such cases, the Office of Posts and Telegraphs shall communicate with the foreign administrations and authorities concerned.

ART. 3.—The Director of Posts and Telegraphs shall deal directly with the Secretary-General of the Ministry of Marine in all cases relating to the Maritime Radiotelegraphic Service.

ART. 4.—The necessary instructions to give effect to the provisions of Art. 1, paragraph (c), and all other regulations concerning the internal management of the radiotelegraphic stations in this jurisdiction, will be issued through the Department of Radiotelegraphic Service. These instructions shall be communicated to the stations by means of private circulars.

SUB-SECTION 5.

THE GENERAL OFFICE OF THE PREFECT-GENERAL OF PORTS.

ART. 1.—The duties of the Prefect-General of Ports will be as follows:—

(a) He shall give effect to the provisions made in Articles 4, 5 and 6 of Law 9127 and shall direct the deposit at the Bank of the "Nación Argentina" of the fines imposed for the non-fulfilment of said provisions. The money so deposited must be placed to the order of the Director of Posts and Telegraphs.

(b) He shall receive from shipping companies, captains or passengers all complaints regarding unsatisfactory service in the coast and ship stations, and shall forward them to the head of the Maritime Radiotelegraphic Service.

(c) Should any complaints be made upon the arrival in port of any vessel, the Prefect shall collate the evidence and forward it to the head of the Naval Radiotelegraphic Service, and he shall act in the same manner should the complaints be made in writing.

(d) He shall prevent the departure of any ship which may have failed to make the necessary deposit at the National Bank (to the order of the Director of Posts and Telegraphs) of the fines imposed in accordance with Article 6 of Law 9127.

(e) Both upon the arrival and departure of merchant ships the Prefect shall have the wireless installations inspected in order to ascertain whether they are in perfect working order and whether the power of the apparatus is that fixed by Law 9127.

ART. 2.—The General Office of the Prefect-General of Ports will refer all matters concerning ship stations to the Director of the Public Maritime Radiotelegraphic Service.

ART. 3.—Besides the inspection and control of ship stations in territorial waters and on craft of all register the general office of the Prefect-General of Ports must attend to the following:—

(1) The dismantling of the transmitting apparatus of the wireless installation as soon as the ship has moored or anchored.

This precaution could be dispensed with, with the consent of the Maritime authority, in the ports of the Southern Coast and in

river ports, where no radiotelegraphic land stations are in existence.

(2) He shall ascertain whether the wireless operator or operators have licences corresponding to the installation they are working, in conformity with Article X of the Service Regulations annexed to the London Convention.

(3) In such cases as those covered by Article XII of the Service Regulations above mentioned, the Prefect-General of Ports shall act jointly with the Director-General of Supplies of the Ministry of Marine in order to give effect to the provisions of the said Article.

ART. 4.—First contraventions of the provisions of Art. 5, paragraph 1, will be recorded by the General Office of the Prefect-General of Ports, and each of those following the first will cause a fine of one hundred pesos, national currency.

SUB-SECTION 6.

COAST STATIONS.

Under the Control of the Head of the Public Maritime Radiotelegraph Service and Open to Public Service.

ART. 1.—The internal service of these stations will be subject to the provisions of these Regulations and those that may be brought into force subsequently.

ART. 2.—Coast stations not open to public service may or may not be shown in the Official Nomenclature as deemed expedient by the Ministry of Marine.

ART. 3.—Radiotelegrams must be deposited by the public at telegraph offices, but radiotelegraphic coast stations subject to the Ministry of Marine will receive direct, and within the regulation hours telegrams presented by the public at such stations when there does not exist a telegraph office in the locality or in the event of such telegraph office being without communication with the remainder of the system.

Exception from this provision is made for private radiotelegrams from the personnel of the Navy and addressed to stations of the Ministry of Marine, and such radiotelegrams, whether or not there is a telegraph office at the place of origin, may be despatched on prepayment of the relative tariff from any radiotelegraph coast station under the control of the said Ministry.

The radiotelegrams referred to in the first paragraph shall follow this route, namely:—

(a) Messages originating from a telegraph office shall continue transmission by the telegraph route as far as the place where is situated the radiotelegraph coast station that is to transmit them to a ship or to the coast station which is nearest that of destination.

(b) Messages handed in by the public at coast stations shall be transmitted by wireless route to the nearest telegraph office having expeditious communication, and thence by the telegraph system to the point of destination or to the other coast station that is to transmit them to the ship station.

(c) Radiotelegrams to ship stations that are within the range of the coast stations from which they originate will be interchanged direct.

With regard to radiotelegrams deposited by the public at coast stations, and destined for a place in the interior of the country or abroad, and those messages which, owing to interruption of the telegraph line with the point of destination, are handed in at a telegraph office for transmis-

sion by wireless route, will be accepted only conditionally.

ART. 4.—Coast stations will accept and retransmit traffic handed over to them by the National Telegraphs, when such traffic cannot reach its destination in due course, by reason of interruption or congestion of its lines. Either of these two circumstances will be communicated directly by the Chiefs of the District to the Officers in Charge of the stations, who will also be advised of the extent of the interrupted sector, or in case of congestion, the number of messages to be retransmitted by the wireless route in order to normalise the traffic. In case of lack of communication between the telegraph office and its head office, the Chief of the former will directly request the co-operation of the interchange radiotelegraph station, making known this circumstance.

In case of interruption or congestion of the lines south of Bahía Blanca, messages from and for Punta Arenas will be retransmitted by stations of the radiotelegraph system only in the event of their destination or origin being any of the offices comprised between Bahía Blanca and Ushuaia.

ART. 5.—If, although there exists at the place where the message is handed in a National Telegraph Office, having efficient communication, or when the message could be retransmitted to destination by the telegraph lines, the sender should, nevertheless, prefer the radiotelegraph route, over the greater part of its transmission, the message will be charged double the ordinary tariff collected by the National Telegraphs in respect of inland telegrams, without prejudice to other taxes that may be applied, calculated according to general rules.

ART. 6.—The men of the Navy shall be able to make use of the wireless system over the greater part of the route from any radiotelegraph station under the control of the Minister of Marine on payment of double the ordinary tariff as mentioned in the previous Article.

Crews and passengers of mercantile vessels of Argentine registry will enjoy the same privilege on payment of the double coast tax.

ART. 7.—Coast stations will not accept from the public messages in secret language unless they have been previously visé by the Chief of the Telegraph Office of the place.

ART. 8.—Messages for the "Press, Stock Exchange and Commercial Centres," will not enjoy the half-rate concession that applies to transmission over the national telegraph lines, if the sender should prefer the radiotelegraph route.

ART. 9.—Public messages received by radiotelegraph stations will be delivered, without exception, to the nearest Post Office for distribution.

ART. 10.—The prefix "D P X" will be employed for those public messages whose senders have paid the double tariff or coast charges indicated in Articles 5 and 6. Such messages will have priority of transmission by the wireless route over other public messages.

ART. 11.—The hours which will be in force at coast stations, as regards attention to the public, will be from 8 a.m. to 8 p.m., both in winter and summer.

ART. 12.—For the supervision of the radiotelegraph service and control of the fulfilment of everything specified in the International Radiotelegraph Convention of London, and of the present regulations, on the part of all radiotelegraph stations, whether ship stations or

coast stations in the maritime zone, the under-mentioned are designated as stations of control:

Dársena Norte will control the port of Buenos Aires and the vicinity.

La Paz will control the port of Rosario and the vicinity.

Río Santiago will control the port of La Plata and the vicinity.

Puerto Militar will control its own port and Bahía Blanca and the vicinity.

Cabo Virgenes will control the south coast.

ART. 13.—In the territories of Santa Cruz and Tierra del Fuego the control over the radiotelegraph service will be exercised by an inspector appointed by the Ministry of Marine.

ART. 14.—For the purpose of accounts, the coast station will be considered as the terminal station in respect of radiotelegrams emanating from the national radiotelegraph service for ship stations, and shall be considered as stations of origin for those messages emanating from ships.

ART. 15.—Coast stations shall accept with absolute priority distress messages made by ships and shall transmit them as "Urgent" messages over the land system.

ART. 16.—Coast stations shall not despatch any official radiotelegram by the lines of the National Telegraphs emanating from vessels or departments of the Ministry of Marine which can reach its destination without such requisite.

Exception is made as regards official urgent radios which may be delayed by interruptions in the radiotelegraph transmission due to atmospheric perturbations or other causes. Nevertheless, according as services may allow they will be transmitted by the wireless route.

ART. 17.—When a vessel of the National Navy shall transmit the "Interruption" signal — • • • — • • • — • • • — repeated several times and followed by her call signal, national merchant vessels and coast stations shall suspend all communication immediately, excepting in cases of shipwreck.

This signal of interruption, which is designated as "Naval Service," shall only be used on the order of the commander of the vessel and shall be employed only in urgent cases that do not permit the normal service wait.

ART. 18.—Apart from cases of shipwreck, the station of Dársena Norte has precedence over the others. When that station transmits the interruption signal, all land stations and ships shall suspend their communications to enable the station of Dársena Norte to work without interruption.

ART. 19.—The radiotelegraph coast stations of the State performing the service of the National Telegraphs shall also observe an internal time table between themselves for the interchange of radios of the public service.

ART. 20.—All national ship and land stations shall suspend their communications during the time that the stations designated for the purpose are transmitting the "Top Radiotelegráfico."

ART. 21.—This decree to be communicated, published, etc., etc.

SUB-SECTION 7.

NATIONAL WARSHIP STATIONS.

ART. 1.—Warship and coast stations shall use for official messages the maximum wavelength possible for their aërials, and should they have to transmit messages to Argentine merchantmen or to foreign merchant steamers they must use the wavelengths specified by the London Convention and by these Regulations.

ART. 2.—In order to avoid difficulties in the general radiotelegraphic service arising from the use by and between Navy units employing Wireless, and which work with the normal wavelength (600 metres)—thus producing interruptions that prevent the reception of other radiograms—this method will be followed, namely:—

1. For Wireless communications in general, between Navy units, their station shall employ the following wavelengths:—

1,000 METRES: Ships *Moreno, Rivadavia, General San Martín, General Belgrano, Pueyrredón, Garibaldi, Buenos Aires, 9 de Julio, Presidente Sarmiento, Pampa, Chaco.*

450 METRES: Ships *Almirante Brown, Libertad, Independencia, Pavand, Rosario, Patría, Córdoba, La Plata, Calamarca, Jujuy, Entre Ríos, Misiones, Corrientes, Guardia Nacional, 1º de Mayo, Ministro Escurrea, Alférez Mackinlay, Ona, Querandi, Asopardo, Piedra Buena, Vicente Fidel López, Uruguay, and Gaviola.*

2. When the distance between ships does not allow of the establishment of wireless communication with the wavelength mentioned above (No. 1) the operator shall use the efficient wavelength that his apparatus may permit.

3. The normal 600 metres wavelength shall be used exclusively for general service between ships and land stations, national or foreign.

4. After the radiotelegraphic communication is established by any means as mentioned above (Nos. 1 and 2), the operator shall endeavour to work, considering the range, with the minimum power required for obtaining effective communication in accordance with the provisions of the London Radiotelegraphic Convention.

5. The synchronisation of the radiotelegraphic stations on board ships of the Navy, shall be controlled and regulated by the Radiotelegraphic Service Department, in accordance with the wavelengths established by Art. 1, and taking into consideration the normal wave of 600 metres.

SUB-SECTION 8.

WIRELESS ON MERCHANTMEN.

ART. 1.—All merchant vessels, whether mechanically propelled or otherwise, carrying fifty or more persons (passengers and crew) must be fitted with a wireless installation in perfect working order, except in the cases referred to in Articles 4, 5 and 6, below.

The above applies to all craft in similar conditions entering or leaving Argentine ports.

ART. 2.—Wireless apparatus in charge of an efficient operator must have at all times a transmitting power of no less than 200 kilowatts for river craft and of no less than 500 for sea craft.

ART. 3.—No ships will be allowed to clear when the above provisions have not been duly complied with, and should captains or ship masters endeavour to avoid or contravene this rule the Superior Port Authority can impose a fine of not less than 1,000 pesos and not exceeding 5,000. Those penalised in that way can appeal to the Federal Court having jurisdiction on the locality where the fault has been committed. The fine will be doubled in cases of repetition of the offence.

ART. 4.—Ships exclusively navigating the rivers of the Republic are exempted from the obligation of carrying wireless on board, but those plying between Argentine and Uruguayan ports on the River Plate and those

employed in the coasting trade must carry radiotelegraphic installations.

ART. 5.—The following are the exceptions to the rule established by Article 1:—

(1) Those ships which only by accident or under exceptional circumstances carry fifty or more passengers, either because the captain has been obliged to get extra help in order to replace the sick members of the crew, or because he has taken aboard the passengers and crew of some vessel in distress.

(2) Those ships on which, by reason of the route they follow or because of the conditions on which they set out to sea, it may be considered that the carrying of a wireless installation would be useless and superfluous.

(3) Those ships where the number of passengers may be raised by exceptional or accidental circumstances to 50 or more, owing to their having received on board these additional passengers in the course of the voyage for the purpose of transshipment, with the additional proviso that such vessels do not go farther than 150 miles from the nearest coast.

(4) Sailing ships of primitive construction such as pontoons and lighters, when it is impossible to fit them with wireless.

ART. 6.—Vessels which have started their voyage without meeting the requirements of these regulations cannot be observed or attended to if, by reason of bad weather or through *force majeure*, they are compelled to seek refuge in Argentine ports.

ART. 7.—All foreign ships carrying wireless installations are divided into three classes according to the classification made regarding ship stations in Article XII of the Regulations annexed to the Radiotelegraphic Convention signed in London on July 5th, 1912. These classes are:—

FIRST CLASS.—Vessels carrying a permanent wireless service.

All vessels fitted to carry 25 or more passengers are included in the *First Class*—

(1) If their average speed be of 15 knots or more.

(2) If they have an average speed of over 13 knots; but only provided they carry 200 or more persons (passengers and crew), and provided also that they traverse a distance of more than 500 nautical miles between two ports of call. These ships, however, may be classified under the second class provided that they maintain a continuous watch.

SECOND CLASS.—Vessels having a limited wireless service.

Those ships fitted to carry 25 or more passengers which for some other reasons may not have been included in the first class are included in this second class.

All ships of the second class must, whilst at sea, keep continuous watch during seven hours every day, and watch also for ten minutes at the beginning of each of the remaining seventeen hours.

THIRD CLASS.—To this class belong those ships, national or foreign, carrying a wireless installation without any fixed working hours or not included in the first and second classes.

The owner or builder of a ship included in the second or third class has the right to demand that in the certificate of safety issued to him mention be made of the fact that the ship belongs to a higher class, provided the vessel fulfils the requirements laid down for the higher class.

ART. 8.—National and foreign ships carrying wireless must keep a constant watch in the following cases:—

(1) Passenger ships running to Montevideo.

(2) All ships belonging to the first class.

(3) Ships belonging to the second class, whenever they are at a distance of over 500 miles from the nearest coast.

(4) (a) Ships carrying more than 50 passengers and which, by reason of their movements, are obliged to navigate at a distance of over 1,000 miles from the nearest coast.

(b) Fishing craft, including whalers, on board of which wireless telegraphy must be carried, are not obliged to keep a continuous watch.

(c) The continuous watch above referred to must be carried out by two or more first-class qualified telegraphists, as provided for in Article X of the Regulations annexed to the Convention.

ART. 9.—Any ship which must carry wireless and which is classified in the first or second class must have an emergency installation, in accordance with Article XI of the Regulations annexed to the Radiotelegraphic Convention.

In every case, the emergency installation shall be placed in its entirety on the upper deck of the ship and should be located as high up as possible.

The emergency installation must have a source of energy of its own, must be of such a nature that it can be set in motion very rapidly, and must be capable to work for a minimum of six continuous hours and possess a range of 150 kilometres.

This emergency installation is not required in the case of those ships whose *normal* installations fulfil all the requirements demanded by this Article (as enumerated in the preceding clause).

The licence referred to in Article IX of the Regulations annexed to the International Radiotelegraphic Convention cannot be granted if the installation fails to comply with the requirements demanded by the said Convention and by the present Regulations.

ART. 10.—All points raised in the Radiotelegraphic International Convention and its Regulations which affect ship stations, the transmission of messages, and the issue of certificates to wireless operators, are governed by the following:—

(1) The Rules laid down in the above-mentioned Convention and its Regulations, as well as all the amending Regulations which may from time to time be substituted for them.

(2) The present Regulations whenever their provisions can be considered as additions to the above.

SUB-SECTION 9.

RULES FOR WIRELESS INSTALLATIONS ON NATIONAL MERCHANTMEN.

ART. 1.—All Shipping Companies whose vessels are included in the Regulations laid down in Wireless Law No. 9127 must obtain a permit from the Ministry of Marine and through the Prefect-General of Ports for the installation of wireless stations on their ships.

ART. 2.—Wireless stations on national ships devoted to the conveyance of passengers will be classified as belonging to the first class, and wireless stations on cargo boats will be included in the second class (Article XIII of the Service Regulations annexed to the Wireless Convention).

When Shipping Companies apply for permission to instal wireless in their vessels they

must indicate the class occupied by such vessels, and this classification must be verified by the Office of the Prefect-General of Ports before forwarding the application to the Secretary-General of the Ministry of Marine.

ART. 3.—As soon as the permit has been granted, and immediately after the stations have been erected on the ship, the company must notify the Prefect-General of Ports, so that the latter may—after previous inspection by the wireless inspector—issue the corresponding licence through the Chief of the Maritime Wireless Service. This licence will be handed over as soon as the charge of 5 pesos (national currency) for the defrayment of expenses has been paid.

ART. 4.—The Ministry of Marine will grant the licence:—

(a) If the wireless installation fulfils all the requirements of the law in the matter of range and also if the installation belongs to a system permitting of its being tuned to the wavelengths specified in the London Wireless Convention, within an approximation of 5 per cent.

(b) If a deposit to the order of the Director General of Posts and Telegraphs has been made in the "Banco de la Nación Argentina" of the amount previously fixed by this office as a guarantee for the exchange of radiograms. This deposit must amount at least to one hundred pesos, national currency.

(c) The depositors shall not dispose of the deposit (as provided in (b)) unless they previously notify the administration that their vessels are going to discontinue their registered service, and that sufficient time has elapsed to effect the final liquidation of accounts for radiograms exchanged.

(d) Stations on board ships from a country with which no agreements have been entered into for the exchange of radiograms (between our stations and its ships), will be subject to the conditions (b) and (c). In this case the deposit must be made, before any service is rendered, by the agents of the shipping company owning the vessel.

ART. 5.—Wireless installations on ships belonging to the national merchant service must be furnished with the following papers:—

(1) The licence authorising the installation.
(2) One copy of the London Wireless Convention.

(3) One copy of the Wireless Law.
(4) One copy of the Wireless Regulations.
(5) The Official List of Wireless Stations, and alphabetical list of call letters.

(6) Radiogram forms.
(7) One copy of the standing wireless rates, which must be kept where it can be plainly seen.

(8) One slate, placed outside the wireless cabin, so that the names of those stations within range may be noted thereon for the information of the public.

ART. 6.—The stations on board national merchantmen must be disposed in such a way that the State's stations may receive the waves emitted by the former.

ART. 7.—Radiotelegraphists are forbidden to operate in unlicensed stations.

It is their duty to report to the Prefect-General of Ports any tentative to compel them to disregard this prohibition.

ART. 8.—(a) When a "licence" is issued the station receives its call letters, which will

be published in the Official List of Radiotelegraphic Stations issued by the Berne International Telegraphic Bureau.

Stations licensed for public service "must not use," not even for private purposes, other call letters than those assigned them by the Director of the Maritime Public Radiotelegraphic Service.

(b) The operators in charge of the stations will be responsible for any infringement of the above provision.

ART. 9.—(a) Operators in charge of public service stations are responsible to the Director of the Maritime Public Radiotelegraphic Service for the fulfilment of the provisions contained in the Regulations in force at the time and in the International Radiotelegraphic Convention.

The manager of a station is the chief of the staff serving in the same, and if it is a ship station the manager is responsible to the ship's captain.

The operator in charge of a ship station owes obedience to the captain, and if the latter gives an order against the rules or the International Convention, the operator has the right, acting with tact and courtesy, to call the captain's attention to the fact, pointing out to him at the same time how to avoid the infringement of the rules in carrying through the order received.

(b) The operator in charge shall keep a "book of orders of the station," the pages of which must be numbered. It is forbidden to detach leaves from this book and to use erasers on its pages.

A record will be kept in this book of all orders received from officers with authority to issue them, such as the ship's captain, his substitute, the inspectors representing a Prefect of Ports, etc. Every order will be marked with a number, and in a marginal note the operator will state the date and hour in which it was received; also the place, whenever possible.

The book of orders will be considered as an official document jointly with the "watch book" (*libro de guardia*). The two books will be referred to in case of a lawsuit originated from infringement of the regulations or through other causes.

Whenever required by a competent authority this book shall be submitted for inspection.

Opposite the order (to this effect), in a marginal note, the operator will record the date and hour in which he complied with it.

(c) The operator in charge is responsible for the "service" of the station; therefore, he must see to it that all measures are taken to insure the most efficient service the class of the station calls for—as given in the licence issued by the Director of the Maritime Public Radiotelegraphic Service.

(d) Only the operator in charge is responsible for the accounts or bookkeeping of the station and, unless express orders to the contrary are given, he must prepare the balance-sheets and vouchers thereof.

ART. 10.—The operators in charge of a radiotelegraphic station where an emergency station has been installed according to specifications in the Convention, must verify the perfect running of the emergency station before weighing anchor. The experiments to be carried in this case will be purely local, being limited to the test of the generator, the oscillating circuit and the receiving apparatus.

However, if the operator in charge is in

doubt as to the range or satisfactory running of the whole set, he may ask any coast station to listen to his call in order to perform any test he may judge necessary. When acting in this way the operator will use the abbreviations given in the international list.

The test will be carried through in this way: the operator will ask for a certain time (*un cierto tiempo*) the transmission of the signal **•••••** in order to verify the receiving set; afterwards, the operator will send the same signal using the emergency transmitting apparatus, thus testing its efficiency and the wavelength.

The operator of the station will record in his "watch book" all the remarks suggested by the test and the result of same. If the emergency station is found deficient in some respect, the operator will report to the captain so that he may give the necessary orders to have it repaired and in working order, according to the International Convention.

ART. 11.—When a national merchant ship happens to enter a zone where naval manœuvres are being performed by men-of-war using their wireless, the merchant ship must ask for a licence from the chief of operations to send her messages to the land stations, and in so doing she must state the approximate time that will be required to transmit the traffic in hand.

In these communications both the man-of-war and the merchant ship will use the prefix "T.R."

ART. 12.—Whenever these Regulations are infringed information about the facts will be gathered, and in view of the evidence fines will be imposed, according to the national and international laws and regulations governing the telegraphic and radiotelegraphic services. The payment of the fines will not prevent further legal action, as may be required by the nature of the fault.

A "licence" may be cancelled if the findings in the summary show the convenience of so doing.

SUB-SECTION 10.

OFFICIAL CLASSIFICATION, RATES, COLLECTIONS, AND ACCOUNTS IN ALL KINDS OF RADIOTELEGRAPHIC STATIONS.

ART. 1.—To make up and liquidate the accounts concerning radiograms received from the public at coast stations, the following method will be observed:

(a) If there is no postal or telegraph office in the locality, the money corresponding to this service will be paid to the Post and Telegraphs Treasury through the Administrative Section under the Director-General of the Ministry of Marine.

(b) If there is a postal or telegraph office in town, the payments referred to in (a) will be made to it, daily, the wireless coast station getting a receipt for every remittance.

(c) In places where there is a telegraph office, the coast station shall receive messages from the public when the former is out of connection with the telegram system, and the tolls collected will be paid by the latter to the telegraph office, as stated in (b).

ART. 2.—Radiograms from the personnel of the national Navy and ships belonging to other State services will be exempted of the tolls caused at the State ship and coast stations, but not of those corresponding to the land lines.

When such radiograms as those referred to in this article do not use land lines, their transmission will be charged according to the lowest (*simple*) telegraph rates.

ART. 3.—The personnel of the Navy shall be able to make use, without charge, of radiotelegraphy for affairs of service connected with their functions, providing that the interchange is effected directly between stations of the Navy and without the intervention of any other system of communication. This class of radiotelegram shall bear the prefix "R.S.," and will not be forwarded without the sanction of the officer in command. As regards transmission, they will take priority over the "D.P." radios.

ART. 4.—The collection of tolls on private radiograms from ships of the Navy or other public services is subject to the following rules:—

(a) Radiograms from the personnel mentioned in Art. 2 and those addressed to any of the national wireless stations to be forwarded by land lines to men in the service, are subject to the ordinary telegraph rates and the amount in full must be paid to the operator or chief of the station, just as telegraphic messages are paid for in land offices. The operator will issue in every instance a receipt of the amount collected.

(b) Every day the operator in charge will hand over to the ship's purser the money received for private messages sent out, and the purser will give a receipt of the amount.

(c) The pursers of ships stationed between La Plata and the Buenos Aires ports will pay out every month to the Arsenal Administrative Department the money received from the operators in charge. This payment to be made according to paragraph (a), Art. 1, of this Sub-section.

(d) The same operation will take effect every month in the arsenal and ships anchored in the military port, where the Administrative Department will hand over the money received directly to the Telegraph office at that port.

(e) In the case of ships out at sea, the deliveries of money will take place as stated in paragraphs (c) and (d), the payments to be made within twenty-four hours of arrival at their jurisdictional port, if such arrival occurs after the day fixed for settlement of accounts.

ART. 5.—Any claim arisen from differences in the accounts submitted will be presented by the Director-General of National Posts and Telegraphs to the Chief of the Maritime Public Radiotelegraphic Service.

ART. 6.—Ships and service sections with wireless stations belonging to Ministries (other than the Interior and Marine) will settle the radiotelegraphic accounts according to agreements they will enter into with the Director-General of Posts and Telegraphs.

ART. 7.—Shipping companies will settle monthly their accounts with the Administration of Posts and Telegraphs. The settlement will be made according to the statement of account that the latter office will prepare and forward to every shipping company.

ART. 8.—Telegraph and radiotelegraph rates at present in force are those published in the pamphlet "National Postal and Telegraphic Schedule of Charges" 1917 edition, and in the "Official List" of International Radiotelegraphic Stations.

National stations will apply the rates therein given.

ART. 9.—With the amount of tolls collected in the public service by the State's and National Shipping Companies' stations (which amounts

are paid to the Administration of Posts and Telegraphs as provided in these Regulations) the following documents will be submitted: the list of radiograms exchanged with the necessary information to identify them, and the original of every message sent, relayed and received.

These originals will be placed in a sealed envelope, to be opened only by the Administration of Posts and Telegraphs.

ART. 10.—One copy of the list (mentioned in Art. 9) shall be sent in the first five days of every month to the Radiotelegraphic Department, Ministry of Marine. Shipping companies' stations shall forward these lists through the office of the Prefect-General of Ports.

ART. 11.—A separate list will be made of the official radiograms exchanged between the Navy units and between these units and the national coast stations, when the last is their final destination. This list will be sent only to the Radiotelegraphic Department, also in the first five days of every month, and must be accompanied by the originals of the radiograms exchanged (received, relayed, and transmitted) as provided by Art. 9.

ART. 12.—Coast and ship tolls will be liquidated between the Director-General of Posts and Telegraphs and the foreign administrations or companies controlling the stations intervening in the exchange of radiograms, according to Art. XIII of International Radiotelegraphic Regulations.

ART. 13.—The tolls collected on account of public service radiotelegrams exchanged direct between ships owned by the same company shall not be paid to the Administration of Posts and Telegraphs, but the corresponding list of messages and their originals shall be supplied as provided above.

ART. 14.—The accounts for direct radiotelegraphic exchange between Argentine merchant ships or between Argentine and foreign ships will be settled between the respective companies, and to this effect in each case the receiving station will make the corresponding charge to the transmitting station, but the list of messages and the originals of the messages exchanged will be supplied by the stations on board national ships.

ART. 15.—The Director-General of Posts and Telegraphs shall include in the official list of telegraphic offices the data *re* national licensed coast and ship stations existing in the country, and the list will be kept for reference and consultation by the public at every telegraph office in the Republic. The necessary information to prepare this list—as detailed below—will be supplied by the Ministry of Marine to the Director of Posts and Telegraphs, viz.:—

(a) *Inland and Coast Stations.*—Name, geographical position as shown by the territorial sub-division of the country, and longitude and latitude of the place.

(b) *Ship Stations.*—Name of the vessel, and—if essential—name of the owner or owners.

(c) Call letters. (Every group of call letters must contain three letters and shall be differently arranged for each station.)

(d) Normal range.

(e) Radiotelegraphic system employed and characteristics of the transmitting set.

(f) The several wavelengths employed by the station. The normal wavelength to be underlined.

(f) Class of service rendered by the station (communication with ships, general public correspondence, private correspondence, long-distance public correspondence, special correspondence, exclusively official, etc.).

(g) Service hours of the station.

(h) The time and how the signals are sent out, and the meteorological notices, when the station attends to this kind of service.

(i) Coast and ship rates.

The list will contain, as well, the information communicated to the Berne Bureau relating to radiotelegraphic stations not opened for general public correspondence.

In designing radiotelegraphic stations, the following abbreviations will be made use of:—

PG—Station open to general public correspondence.

PR—Station open to restricted public correspondence.

P—Private station (*Estación de interés privado*).

O—Station open exclusively to official correspondence.

N—Permanent Service Station.

X—Station without fixed hours service.

In cases of homonymy, the name of a ship station will be immediately followed—in the first column of the list—by the corresponding call letters.

ART. 16.—In the counting of words to collect the tolls, the rules given in the regulations annexed to the Petrograd Convention will be followed.

ART. 17.—The originals of public service radiograms and all documents appertaining to same will be safely kept by the Director-General of Posts and Telegraphs during fifteen months, counting from the month following that in which the originals were received at that office.

ART. 18.—Reimbursements originated by the exchange of radiograms with the State's stations will be settled in accordance with the provisions of the International Telegraphic and Radiotelegraphic Convention.

ART. 19.—In the application of the schedule of charges corresponding to messages issued from or addressed to radiotelegraphic stations established in places where no telegraph office is in existence, such stations will be considered as national telegraph offices and the radiotelegraphic rates will be applied only to messages exchanged with ship stations.

CHAPTER III.

NAVY RADIOTELEGRAPHIC STATIONS SERVICE.

SUB-SECTION I.

STATION'S STAFF—DUTIES AND POWERS.

ART. 1.—The staff in every station will consist of one operator in charge and the number of subordinate trained operators required to keep the watch. The number of these operators will be fixed by the Radiotelegraphic Department.

In case of vacancy or temporary absence from the station of the operator in charge, his place will be filled by the operator of highest category or, between men of the same category, by the senior in the service.

Operators in charge shall depend directly from the signal officers.

ART. 2.—The operator in charge is responsible to the Department or to the signal officers—as the case may be—both for the proper

running and upkeep of the station apparatus and for any lack of attention in the performance of the service. The operator in charge, however, may have the responsibility devolved upon the subordinate who was in the watch at the time the breakdown or inattention took place.

ART. 3.—When the station is short-handed, the operator in charge will do watch duty as the subordinate, but the former will be at liberty to choose the hours for his watch.

ART. 4.—The hours of watch corresponding to each operator will be fixed beforehand, considering the class of service to be rendered and the number of men on the staff of the station.

ART. 5.—Ship commanders or managers of other public services have authority to increase temporarily the staff of the stations depending from them, when, on account of manœuvres or other similar service, they consider it essential to insure efficient communications.

ART. 6.—To define justly the responsibility attaching to each operator in connection with breakdowns in the apparatus or omissions in the fulfilment of duties, each operator on taking up his watch will sign in the watch book an entry stating the condition in which he receives the apparatus, the hour of his coming in and all other particulars that may help later on to establish responsibilities. This entry shall be signed also by the operator leaving the work.

ART. 7.—Every time a watch is relieved the operator going out will communicate to his relief all information in his possession concerning the service and useful in the proper performance of the duties.

ART. 8.—When, on account of atmospheric discharges, it is dangerous to keep the apparatus ready to work, the antenna shall be connected to earth, and this fact will be recorded in the watch book stating the hour in which the interruption took effect and that in which connection for work was re-established. During the period of interruption, the operator shall test the atmospheric conditions every thirty minutes, and he will reconnect the antenna immediately the discharges cease.

ART. 9.—The managers of special services and the commanders of ships shall see that the archives of radiotelegrams—official and private—are kept in due order and with all the information required; also the stub-book of receipts. To this effect the signal officer or the officer in charge of the bookkeeping will inspect the station with due frequency.

ART. 10.—The *Dársena Norte* station is the "Service Central Station," and upon its call the other stations shall stop their communications unless the messages are *very urgent*, in which case the transmission shall be carried on to the end. "Very urgent" messages are those asking for assistance and those transmitting orders from H.E. the President of the Republic, the Minister of Marine and the commanders of fleets engaged in manœuvres.

ART. 11.—Time service in force for coast and fixed ship stations is as follows:—

Dársena Norte	Permanent (N)
Rio Santiago
Faro Recalada	(Recalada
Lighthouse)
	0900—1100,
	1400—1600,
	2000—2400.

Pontón estacionario de Prácticos (Stationary Pilots' Pontoon) " "

Faro Mogotes	(Mogotes	
Lighthouse)	Permanent (N)
Puerto Militar	(Military	
Port)	" "
Comodoro Rivadavia	" "
Cabo Virgenes	" "
Año Nuevo	1800—0600
Rio Grande	0600—1800
Ushuaia	Permanent (N)
La Paz	2400—1200
Posadas	" "
Formosa	" "
Puerto Aguirre	" "
San Julian	Permanent (N)

ART. 12.—Commanders of ships navigating along or towards Argentine coasts will have observed on their "R.T." stations the following hours:—

Ships with three or more radio-telegraph operators	Permanent service.
Ships with two operators	0700—1100
" " "	1400—1800
" " "	2000—2400
Ships with one operator	0800—1100
" " "	1400—1600
" " "	2100—2300

Whenever a complaint is made, a full explanation as to the reasons of delay or other cause of complaint shall be given, and to this effect a record of the facts will be entered in a special Watch Book. This book will be kept by the operator in charge and viséed by the signal officer. Coast stations may call at any hour the ship they want to communicate with. In case of delay, the coast station will regulate its work so as to pick up the ship station at the first opportunity.

Ship commanders may call at any hour the permanent service stations, but, in normal circumstances, they should arrange their calls to other stations in accordance with the latter's hours of working.

Calls for assistance are to be made at any time they are required.

Stations with intermittent service shall attend an urgent call the moment it is heard, whether or not within their regular service hours.

For the purposes of this Article the hour is four hours later than G.M.T.

SUB-SECTION 2.

GENERAL RULES.

ART. 1.—It is absolutely forbidden to the operators to maintain dialogues by wireless; their conversations will, in every instance, be limited to the subjects strictly essential to render a good service.

ART. 2.—Whenever a radiogram is transmitted with a delay of more than thirty minutes after it was handed in, it shall be endorsed with an explanation of the delay which is to be recorded in the watch book.

ART. 3.—When a station calls repeatedly for another and cannot get an answer in more than five minutes, the fact will be recorded in the watch book and also the object of the call. Other stations within the range of the calling station shall record, as well, the call and the omission to answer it. These records will serve to establish the responsibility for possible delays in the transmission or reception of messages.

ART. 4.—When a station "causes a wait" (*da una espera*) of more than ten minutes, the two stations concerned shall record the fact in their respective watch books, the transmitting station giving the classification of the radiogram it has for transmission, and the receiving station the cause of the "wait."

The transmitting station shall remind every ten minutes the receiving station of its being waiting, and the reminders will continue until the radiogram in hand is transmitted.

ART. 5.—Whenever trouble occurs in the receiving apparatus causing a delay of more than ten minutes, a record of the nature of the trouble will be made in the watch book in order to fix responsibilities. The operator in charge will make a similar record whenever he is unable to answer a call through lack of current in the transmitting set, the burning out of a fuse, or other like accident.

ART. 6.—While two stations are in communication, it is absolutely forbidden to the others to interrupt them by calling out a third station, unless the call is to transmit a "very urgent" radiogram or a "general call" from the flagship. However, even in the cases just mentioned the interruption should be made only at the moment the station that is sending messages completes one of them. When this is accomplished the interrupting station shall give the signal of general interruption and the prefix corresponding to either of the very urgent messages above mentioned, which are to have priority in transmission and reception.

ART. 7.—When a ship moors at a port, Navy yard or dockyard, her wireless plant will be closed after a thorough cleaning of its parts.

ART. 8.—To avoid the damages which are likely to occur in wireless stations of resonant spark, on account of the spark gaps being short circuited, the electrodes shall be thoroughly cleaned once a week.

The officer on duty shall be present at the cleaning and will see that it is made properly and thoroughly. To ascertain that the operation has been carried through without impairing the efficiency of the apparatus, the officer will remove the mica washers and will see whether—without them—the contact between each pair of electrodes is perfectly uniform both in the copper rings and the silver discs.

ART. 9.—Radiograms referring to urgent family matters of men in the Navy service, and issued from a Navy ship *Dársena Norte* station, may be sent thence to destination by telephone, if the sender so desires. This will not alter the charges provided the expression "T.C. Naval" follows the signature.

ART. 10.—Arsenal and dockyard commanders shall take care that the radiotelegraph operators under their command attend in the most thorough manner to the cleaning and maintenance in good order of wireless apparatus on board ships anchored therein. The same commanders will see to it that the operators practise with reasonable frequency in sending and receiving messages.

ART. 11.—It is the duty of the staff of a ship station anchored in a Navy yard or military zone to serve in the land stations in the neighbourhood. If one of the latter is closed for repairs, the operators shall report for duty at the station on board the ship appointed to replace the temporarily closed station.

When the number of available operators is rather large, the commander of the Navy yard or the military zone will appoint the hours of service corresponding to each operator.

ART. 12.—Complaints referring to misdirected, altered, or delayed radiograms should be forwarded by the sender of the message to

the captain of the ship whence it was transmitted.

The complaint must contain the number of the radiogram, the hour of transmission, the receiving station, and the name and address of the addressee.

The ship commander will give the necessary instructions to have the information supplied duly checked and all the papers referring to the case shall be sent to the Secretary-General of the Ministry.

Every complaint must refer to one radiogram only.

SUB-SECTION 3.

SPECIAL BOOK-KEEPING OF THE NAVY STATIONS.

ART. 1.—All coast and ship stations shall forward to the Radiotelegraphic Department, Ministry of Marine, in the first five days of every month, two copies of the sheets showing the monthly traffic of both official and public radiograms.

The same stations shall forward, every quarter, a statement of the supplies spent and a requisition of the supplies wanted.

ART. 2.—As often there are divergencies in the international radiotelegraphic service as to the number of words contained in the radiograms sent and received abroad through stations in national men-of-war, these ships shall forward to the Radiotelegraphic Department, Ministry of Marine, an authenticated copy of every message exchanged between them and foreign stations.

Such copies shall be forwarded immediately after the arrival of ships in home waters, so that the Department will be in advance in a position to answer the Administration of Posts and Telegraphs consultations on this subject.

ART. 3.—In all matters relating to management and book-keeping, independent radiotelegraphic stations shall address direct to the Radiotelegraphic Department.

DECREE NO. 1 OF OCTOBER 13, 1919.

Buenos Aires, October 13th, 1919.

The Executive Power of the Nation decrees:

ART. 1.—All restrictions imposed having reference to the use of radiotelegraph installations on merchant vessels are removed.

ART. 2.—Merchant vessels shall not make use of their transmitting apparatus on entering the zone comprised within a radius of five nautical miles of the radiotelegraph stations open to public service, and during such period as they remain in that zone. Nevertheless they shall be able to use their transmitters in case of urgent necessity to make calls for assistance.

ART. 3.—A final period of six months is granted for Argentine merchant vessels to comply with the conditions stipulated by the General Regulations of the Radiotelegraph Service.

ART. 4.—At the General Prefecture of Ports an Office of Radiotelegraph Inspection shall be brought into operation which will see that merchant vessels comply with the stipulations of the International Radiotelegraph Convention of London and the General Regulations as regards the Radiotelegraph Service.

ART. 5.—This decree to be communicated, published, etc., etc.

(Sd.) IRIGOYEN, JULIO MORENO.

DECREE NO. 2 OF OCTOBER 13, 1919.

Buenos Aires, October 13th, 1919.

The Executive Power of the Nation decrees:

ART. 1.—Authorises the "División Servicio Radiotelegrafico" to arrange for the Radiotelegraph Works of the Navy to carry out, on board merchant vessels entering the ports, all work that may be required by the radiotelegraph stations of those vessels.

ART. 2.—On the termination of the work the amount incurred as regards wages and materials with an additional charge of 10 per cent. as compensation for the use of machinery and costs of administration shall be liquidated the amount in question to be paid by the

captain or shipowner before the vessel leaves the port.

ART. 3.—The sums collected in this manner shall be paid over by the "División Servicio Radiotelegrafico" to the Treasury of the General Administrative Authorities, so that in due course they may be paid to the General Treasury of the Nation and credit granted for the items destined for the radiotelegraph stations of the Navy.

ART. 4.—The Radiotelegraph Inspectorate of the General Prefecture of Ports shall make this Decree known to captains and shipowners.

ART. 5.—This decree to be communicated, published, etc., etc.

(Sd.) IRIGOYEN, JULIO MORENO.

ASCENSION ISLAND

THIS isolated island lies, at its nearest point, about 900 miles from the mainland of Africa (Liberia) and possesses something less than 200 inhabitants. The wireless telegraph station belongs to, and is worked by, the Admiralty, but it is open to public correspondence with ships.

COPYRIGHT "GEOGRAPHIA" L^{td} 55 FLEET STREET LONDON E C 4

AUSTRALIA

THE area of the continent itself is 2,948,366 English square miles, whilst the inclusion of the island of Tasmania, which possesses an area of 26,215 square miles, brings the gross superficies to a total of 2,974,581 square miles.

The Government is a Federal Commonwealth Government—the Executive power vested in the Sovereign (acting through the Governor-General) assisted by the Executive Council of seven Ministers of State and such honorary Ministers as may be appointed thereto. The constitution rests on the fundamental law of March 16th, 1898, ratified by the Imperial Parliament on July 9th, 1900, and the Commonwealth was inaugurated January 1st, 1901.

CONTROL AND ORGANISATION.

Originally radiotelegraphy was organised in Australia under the supervision of the Postmaster-General, the Naval Department exercising jurisdiction independently over their own radiotelegraph stations. In 1915 this duplication was abolished; the control throughout the entire Commonwealth being definitely placed in the hands of the Naval Authorities. It is understood, however, that the early transfer of the control of the Commonwealth Radio Service from the Department of the Navy to the Postmaster-General's Department may be expected. The first sets erected were those at Point Lonsdale, in Victoria, and that near Devonport, Tasmania. Both of them date from 1905.

The land stations controlled by the Government are twenty-two in number.

There are no private land stations.

There are a number of ship stations on Government vessels as well as on vessels privately owned.

ADMINISTRATION.

The Act to Regulate Radiotelegraphy in Australasia was passed in 1905. A number of additions and modifications were introduced by Wireless Telegraphy Acts No. 33 of 1915 and No. 4 of 1919, and this amended text will be found below, it being the extant Governing Decree under which wireless is at present administered.

In 1912 the Commonwealth Parliament passed the Navigation Act, wherein is contained a clause which makes it compulsory for ships trading in Australian waters to be fitted with radiotelegraphic apparatus. This is provided for in Section 231 of the Act, and the text of that section will be found below with other information in accordance with the following list.

We append the text of current radiotelegraphic legislation in accordance with the following list.

A—Wireless Telegraph Act, 1905 (No. 8), as amended by Act No. 33 of 1915 and Act No. 4 of 1919.

B—Wireless Telegraph Regulations, 1916 (embodying Amendments made up to Statutory Rule 68 of 1920).

C—Form of Ship Licence.

D—Form of Receiving Licence for Amateurs.

E—Form of Transmitting and Receiving Licence for Amateurs.

F—Navigation Act, 1912 (Sec. 231).

ACT No. 8 OF 1905.

(As amended by the Wireless Telegraphy Acts, No. 33 of 1915 and No. 4 of 1919.)

A 1. *Short Title.*—This Act may be cited as the Wireless Telegraphy Act, 1905.

2. *Interpretation.*—In this Act—
“Australia” includes the territorial waters of the Commonwealth and any territory of the Commonwealth;

“Wireless Telegraphy” includes all systems of transmitting and receiving telegraphic or telephonic messages by means of electricity without a continuous metallic connection between the transmitter and the receiver.

3. *Exemption of Ships of War.*—This Act shall not apply to ships belonging to the King's Navy.

4. *Exclusive Privileges.*—The Minister for the time being administering the Act shall have the exclusive privilege of establishing, erecting, maintaining and using stations and appliances for the purpose of—

(a) transmitting messages by wireless telegraphy within Australia, and receiving messages so transmitted, and

(b) transmitting messages by wireless telegraphy from Australia to any place or ship outside Australia, and

(c) receiving in Australia messages transmitted by wireless telegraphy from any place or ship outside Australia.

5. *Licences.*—Licences to establish, erect, maintain, or use stations and appliances for the purpose of transmitting or receiving messages by means of wireless telegraphy may

be granted by the Minister for the time being administering the Act for such terms and on such conditions and on payment of such fees as are prescribed.

6. *Penalty for Breach of Act.*—(1) Except as authorised by or under this Act, no person shall—

(a) establish, erect, maintain, or use any station or appliance for the purpose of transmitting or receiving messages by means of wireless telegraphy; or

(b) transmit or receive messages by wireless telegraphy.

Penalty: Five hundred pounds, or imprisonment with or without hard labour for a term not exceeding Five years.

Ships fitted with Apparatus for Wireless Telegraphy.—(2) Sub-section (1) of this section shall not, except as prescribed, extend to appliances maintained on any ship, arriving from any place beyond Australia, for the purpose of enabling messages to be transmitted from or received on that ship by means of wireless telegraphy, but all such appliances shall, while the ship is within Australia—

(a) be subject to the control of the Minister for the time being administering the Act; and

(b) only be used by his authority or as authorised by the regulations.

Penalty: Five hundred pounds.

7. *Forfeiture of Appliances Unlawfully Erected.*—All appliances erected, maintained, or used in contravention of this Act or the regulations, for the purpose of transmitting or receiving messages by means of wireless

telegraphy, shall be forfeited to the King for the use of the Commonwealth.

8. *Search Warrants for Appliances Unlawfully Erected.*—(1) If a justice of the peace is satisfied by information on oath that there is reasonable ground for supposing that any appliance is established, erected, maintained, or used in contravention of this Act or the regulations, for the purpose of transmitting or receiving messages by means of wireless telegraphy, he may grant a search warrant to any person.

(2) A search warrant under this section shall authorise the person to whom it is addressed to break and enter any place or ship, where the appliance is or is supposed to be, either by day or by night, and to seize all appliances which appear to him to be used or intended to be used for transmitting or receiving messages by means of wireless telegraphy.

9. *Proceedings in Respect of Offences.*—(1) Proceedings for any offence against this Act may be instituted in any Court of Summary Jurisdiction, and any person proceeded against under this section may be dealt with summarily or may be committed for trial.

(2) The Court in dealing summarily with any accused person under this section may, if he is found guilty of any offence against this Act, punish him by imprisonment with or without hard labour for any period not exceeding six months, or by a penalty not exceeding Fifty pounds.

10. *Regulations.*—The Governor-General may make regulations, not inconsistent with this Act, prescribing all matters which by this Act are required or permitted to be prescribed or which are necessary or convenient to be prescribed for carrying out or giving effect to this Act.

DEPARTMENT OF RADIO SERVICE.

REGULATIONS UNDER THE "WIRELESS TELEGRAPHY ACT, 1905-19."

WIRELESS TELEGRAPHY REGULATIONS.

SHORT TITLE.

B 1.—These Regulations may be cited as the "Wireless Telegraphy Regulations 1916."

DEFINITIONS.

2.—In these Regulations unless the contrary intention appears—

"Australian ship" means a ship registered in Australia;

"British ship" means a British ship other than an Australian ship;

"Foreign ship" means a ship other than an Australian ship or a British ship;

"Harbour" includes any harbour properly so called, whether natural or artificial, or any estuary, navigable river, pier, jetty, or other work in or at which a ship can obtain shelter, or ship or unship goods or passengers;

"Land station" means a station, not being a ship station, for the transmission and receipt of messages by means of wireless telegraphy;

"Ship station" means a ship (not permanently moored) having installed thereon appliances for the transmission and receipt of messages by means of wireless telegraphy;

"Territorial waters" means the territorial waters of the Commonwealth and those of any territory of the Commonwealth, and includes harbours;

"The Act" means the "Wireless Telegraphy Act," 1905-1915;

"The Minister" means "The Minister of State for the Navy";

"Naval Board" means the Naval Board of Administration appointed under the Naval Defence Act;

"The Secretary for the Navy" means the Secretary to the Naval Board of Administration.

3. Repealed.

LICENCES.

4. (i) Licences under section 5 of the Act may be (a) ship licences or (b) experimental and instructional licences. Licences shall be in accordance with the forms prescribed at the end of these Regulations.

(ii) A ship licence shall be granted only in respect of a ship station on an Australian ship.

(iii) An experimental and instructional licence may be granted to technical schools and similar institutions, and to persons for instructional purposes or scientific investigation of wireless telegraphy or wireless telephony phenomena, subject to the applicant producing satisfactory proof of his competency to conduct experiments scientifically.

(iv) A licence shall be for a period of one year from the date thereof, and may be renewed from time to time.

FEES.

5. (i) The fee for a ship licence shall be One pound, and shall be paid in advance.

(ii) The fee for an experimental and instructional licence shall be Two pounds, and shall be paid in advance.

APPLICATION FOR LICENCES.

6. (i) An application for a ship licence must be in writing, and must set out the following particulars:

(a) The name of the ship in respect of which the licence is applied for;

(b) The port in Australia at which the ship is registered;

(c) The system of wireless telegraphy to be used on the ship.

(ii) Before granting the licence the Minister may require the applicant to furnish such additional particulars as he thinks necessary.

(iii) Experimental and instructional licences shall only be granted to applicants who are natural-born British subjects, and who reside in Australia.

(iv) An application for an experimental and instructional licence must be in writing, and must set out the following particulars:—

(a) Name in full, age, residence, previous training and present occupation, nationality, and parents' nationality.

(b) The scientific, technical, practical, or other grounds upon which it is desired to obtain a licence;

(c) Complete diagram of connection and description of the apparatus it is intended to use.

CONDITION AS TO SYNTONY, ETC.

7. Before any licence is granted, the applicant must satisfy the Minister that the wireless telegraphy apparatus or appliances to be worked in pursuance of the licence complies with the regulations for the time being in force governing syntony and wavelength.

8. (i) Every ship licence shall be made out in triplicate. Two parts shall be issued to the licensee, and the other retained in the Department of the Navy.

(ii) Before the licence is issued to the applicant he shall execute the part of the licence to be retained in the Department.

RENEWAL OF A LICENCE.

9. (1) A licence may be renewed by writing thereon or attaching thereto a memorandum stating the period for which it is renewed.

(2) The memorandum of renewal must be signed by the Minister or by the Naval Secretary.

(3) The renewal may be made at any time within one month before or one month after the expiry of the licence.

(4) The memorandum is to be written on each part of the licence, but in the case of the licensee's parts it shall be in the form of an official receipt for the renewal fee signed by the Minister or Naval Secretary, or by any person authorised to receive moneys on behalf of the Department of the Navy. Such receipts are to be attached by the licensee to the parts of the licence in his possession.

REVOCATION OF LICENCE.

10. The Minister may, by notice in writing revoke and determine any licence, on the ground of the licensee having failed to comply with any regulation for the time being in force under the Wireless Telegraphy Act 1905-1919, or on any other ground specified in the licence.

TUNED CRYSTALLITE RECEIVERS.

10A. (1) All vessels licensed under the Wireless Telegraphy Act 1905-1919 of the Commonwealth of Australia and fitted with wireless telegraphy installations operating or trading in the territorial waters of the Commonwealth or adjacent islands under the Commonwealth control shall be equipped with tuned crystallite receivers or receivers of the gas bulb or electrolytic type. Other receivers suitable for connecting to the detector terminals of the "Marconi" multiple tuner may be utilised when fitted with suitable transformer, and provided that the tuning and sensitivity are of equal efficiency to that obtained from a receiver specially designed for use with crystallite detectors.

(2) Vessels affected by this regulation shall take immediate action to comply with same; but the Naval Board may, if circumstances of supplies warrant it, grant an extension of time for the fitting of the apparatus required by this regulation for a period not exceeding three months from the date of the issue of this regulation.

POWERS OF INSPECTION.

11. The Naval Board or any person authorised in writing by the Naval Board may at all reasonable times enter upon any ship or land station on which wireless telegraphy appliances are installed, or are in course of being installed in pursuance of a licence, and may inspect such appliances and the working and user thereof.

COMMUNICATIONS BETWEEN SHIP AND LAND STATIONS.

12. When communications are made by means of wireless telegraphy between a ship (whether British, foreign or Australian) in territorial waters and a wireless telegraph station on land, the rules in force for the working of wireless telegraphy at that station shall be observed.

APPLICATION OF THE RADIOTELEGRAPHIC CONVENTION AND REGULATIONS.

13. The provisions of the Radiotelegraphic Convention and the Service Regulations for the time being in force thereunder, so far as such Convention and Regulations are applicable, shall apply to all wireless telegraphy installations available for the transmission or receipt of private messages, whether installed by the

Commonwealth or under licence, and whether at land stations or ship stations, and to all messages handled by such installations, and every licensee shall comply therewith.

APPLIANCES TO BE WORKED SO AS TO AVOID INTERFERENCE WITH OTHER APPLIANCES.

14. (1) The wireless telegraphy appliances on board any ship (whether an Australian ship, a British ship, or a foreign ship) in territorial waters shall be worked in such a way as not to interrupt or interfere with—

(a) Naval or Military signalling; or

(b) the transmission of messages between other wireless telegraph stations.

(2) In this regulation Naval or Military signalling includes signalling or communicating, by means of any system of wireless telegraphy, by the King's Imperial or Dominion Naval or Military Forces.

APPLIANCES NOT TO BE WORKED WHILE SHIP MOORED TO ANY WHARF OR PIER.

15. Except by permission of the Naval Board, the wireless telegraphy appliances on board any Australian ship, British ship, or foreign ship (other than a ship of war) shall not be worked or used while the ship is moored to any wharf or pier in Australia or any territory of the Commonwealth.

APPLICATION OF DEFENCE REGULATIONS TO FOREIGN SHIPS OF WAR IN HARBOURS.

16. The use of wireless telegraphy appliances on board any foreign ship of war while in any harbour in Australia or any territory of the Commonwealth, shall be subject to such rules (whether prohibitive or regulative) as the Governor-General may think fit to make.

POWERS OF GOVERNOR-GENERAL IN EMERGENCIES.

17. If at any time an emergency has arisen in which it is expedient that the Commonwealth Government should have control over the transmission of all messages by wireless telegraphy, the Governor-General may by notice in the *Gazette* prohibit for such period as he thinks necessary the use of wireless telegraphy on board foreign ships in territorial waters.

CONTROL OF COMMUNICATIONS AND APPLIANCES IN EMERGENCIES.

18. (1) In case of emergency, the Naval Board or any officer in command of any ship of war of His Majesty's Navy (whether Imperial or Dominion), or any officer in command of any part of the Defence Force, may—

(a) take possession of any wireless telegraph appliances installed on any ship in pursuance of a licence, and use such appliances for the King's service; or

(b) place any person in control of any such appliances; or

(c) direct the licensee or person in charge of such appliances to submit to him all or any messages tendered for transmission or received by means of such appliances; or

(d) stop or delay or direct the licensee or person in charge of such appliances to stop or delay the transmission or delivery of any such messages or to deliver them to him; or

(e) direct the licensee or person in charge of such appliances to comply with all such directions as he thinks fit to give with reference to the transmission or receipt of messages by means of such appliances.

(2) Every licensee and every person in charge of any wireless telegraphy appliances installed in pursuance of a licence shall comply with this

regulation, and all directions issued in pursuance thereof.

(3) Reasonable compensation shall be payable to the licensee for any damage to the appliances arising in consequence of the exercise of the powers conferred by this regulation.

(4) The Minister may notwithstanding anything contained in a licence issued to a licensee under the Wireless Telegraphy Regulations 1916 by order published in the *Gazette*, prohibit for such time as he directs any licensee from communicating with any radiotelegraph station licensed by, or belonging to, or in any country which is at war with His Majesty the King or the possessions thereof.

(5) Any order under sub-regulation (4) of this regulation may prohibit all communications whatever, or may prohibit communications to particular stations or under special circumstances.

OPERATORS' PROFICIENCY CERTIFICATES.

19. (1) Every ship station in respect of which a licence is issued must be operated by a person or persons holding a certificate of competency or certificates of competency issued by the Naval Board after examination, or by the Postmaster-General of the United Kingdom, or by the proper authority in any part of the British Empire.

(2) Certificates of competency shall only be issued to natural-born British subjects, both of whose parents are natural-born British subjects:

Provided that—

(a) a certificate of competency shall not be issued to any person who, or either of whose parents, has at any time been a subject of a country with which the United Kingdom is now at war; and

(b) in the case of a person who, or either of whose parents, has, at any time, been a subject, or a citizen, as the case may be, of a country which is an ally of Great Britain in the present war, or which has remained neutral during the present war, a certificate of competency may be issued or withheld by the Naval Board as the Naval Board determines according to the merits of the case.

(2A) Certificates of competency shall be of two classes, namely:—

(a) first class—issued to persons over eighteen years of age capable of receiving and transmitting by sound at a speed which must not be less than twenty words per minute; and

(b) second class—issued to persons over eighteen years of age capable of receiving and transmitting by sound at a speed which must not be less than twelve words per minute.

(3) A fee of Ten shillings shall be paid by the candidate on each occasion on which such candidate is examined. A certificate of competency may be issued at a charge of Five shillings to each candidate who satisfactorily passes the prescribed examination, and in the event of a certificate being lost a fee of Ten shillings shall be paid for the first copy of such certificate, One pound for the second copy, and Two pounds for any subsequent copies, provided that the Naval Board may authorise the issue of a duplicate or copy of a certificate without charge where it has been shown that the original certificate has been lost or destroyed in circumstances over which the holder had no control.

In case of failure a candidate shall not be re-examined in any system or under any circumstances until after the lapse of three months.

(4) If a person to whom a certificate of competency has been issued by the Naval Board—

(a) is convicted of a criminal offence; or

(b) is, on account of incompetence, or for any other reason, considered by the Naval Board to be unsuitable to continue to hold the certificate,

the Naval Board may withdraw, cancel, or suspend the certificate.

USE OF WIRELESS TELEGRAPHY FOR MILITARY PURPOSES.

20. These regulations shall not prevent the use, without licence, by the military authorities of wireless telegraphy for military purposes. Provided that each wireless telegraphy installation (other than a mere temporary installation) to be used shall be authorised in writing by the Naval Board.

CHARGES.

21. The total charges for messages transmitted and received for any duly authorised Wireless Station within the Commonwealth or licensed under the Wireless Telegraphy Act 1905-1915 shall include:—

(a) the coast charge which belongs to the coast station;

(b) the ship charge which belongs to the ship station;

(c) the charge for transmission over the lines of the telegraph system (where necessary); and

(d) delivery charges (where necessary).

22. The rates for messages transmitted to or received from ship stations shall be as follows:—

(1) For ordinary messages—

(a) Coast station transmitting or receiving charge—

(i) Radiotelegrams to or from ships licensed in Australia or New Zealand, 3d. per word;

(ii) Radiotelegrams to or from other ships, 6d. per word.

(b) Ship station transmitting or receiving charge—

(i) Radiotelegrams to or from ships licensed in Australia or New Zealand, 2d. per word;

(ii) Radiotelegrams to or from other ships, not exceeding 4d. per word.

(c) Land line charge 1d. per word.

(2) For press messages—

(a) Coast station transmitting or receiving charge—

1½d. per word.

(b) Ship station transmitting or receiving charge—

Not exceeding 4d. per word, as determined by the ship authorities concerned;

(c) Land line charge, ½d. per word, odd fractions of one penny to be reckoned as one penny.

(3) For messages to or from ships of the British or Australian Navies—

(a) For official messages—

(i) There shall be no coast station charge.

(ii) There shall be no ship station charge.

(iii) Land line charge, 1d. per word.

(b) For private messages—

The rates and conditions shown in sub-regulation (1) of this regulation shall apply.

(4) For messages consisting of reports to Lloyd's agents concerning marine casualties and overdue vessels:—

(a) Coast station charge, 6d. per word.

(b) Land line charge, 1d. per word.

The charges for these messages shall be collected from the addressee.

(5) The charge for relaying radiotelegrams, irrespective of the number of coast stations concerned in the relaying, shall be:—

(a) When the ships of origin and of destination are both licensed in Australia or New Zealand, 4d. per word;

(b) When only one of the ships concerned or when neither of the ships concerned is licensed in Australia or New Zealand, 7d. per word.

23. (1) The rates for messages exchanged between stations established on the Australian mainland or in Tasmania and stations established on islands within the Commonwealth Administration or between any stations established on such islands except Flinders Island and King Island shall be—

(a) For ordinary messages one penny per word per radio station involved, plus ordinary land line charges for telegrams within the Commonwealth.

(b) For press messages (except Port Moresby and Samarai) (per station involved)—

	s.	d.
Not exceeding 25 words	1	3
Exceeding 25 but not exceeding 50	2	6
Exceeding 50 but not exceeding 100	5	0
Every additional 50 words or portion of 50 words	2	6

plus ordinary land line charges for press telegrams within the Commonwealth.

(c) For press messages to and from Port Moresby and Samarai (per station involved)—

	s.	d.
Not exceeding 25 words	0	7½
Exceeding 25 but not exceeding 50 words	1	3
Exceeding 50 but not exceeding 100 words	2	6
Every additional 50 words or portion of 50 words	1	3

plus ordinary land line charges for press messages within the Commonwealth.

(2) The rates for messages exchanged between stations established on the Australian mainland or in Tasmania and stations established on King and Flinders Islands shall be—

(a) For ordinary messages one halfpenny per word per radio station involved, with a minimum of One shilling per message plus ordinary land line charges for telegrams within the Commonwealth;

(b) For press messages (per station involved)—

	s.	d.
Not exceeding 25 words	0	7½
Exceeding 25 but not exceeding 50 words	1	3
Exceeding 50 but not exceeding 100 words	2	6
Every additional 50 words or portion of 50 words	1	3

plus ordinary land line charges for press telegrams within the Commonwealth.

(3) For messages exchanged between stations established on the Australian mainland or in Tasmania at times when the local telegraph offices are closed, the rates shall be 3d. per word plus the ordinary land line charges for telegrams within the Commonwealth, for such land line handling as is involved.

(4) For press messages exchanged between stations established on the Australian mainland or in Tasmania at times when the local telegraph offices are closed, the rates shall be 1d. per word plus the ordinary land line charges for press telegrams within the Commonwealth, for such land line handling as is involved.

(5) The rates for the radiotelegraphic trans-

mission of deferred and week-end telegrams shall be one-half and one-quarter of the ordinary rates respectively.

(6) Delivery charges, if any, shall in all cases be paid by the addressee.

24. Repealed.

25. The total charge for messages transmitted to or from ships shall be paid by the sender.

PRESS RADIOTELEGRAMS FOR PUBLICATION ON SHIPS.

26. (1) Press radiotelegrams for publication on ships shall be addressed to the commander of a ship, or to a newspaper published on board a ship, and shall bear in the address the words "for publication," which words shall be charged for at press rates.

(2) The information contained in such press radiotelegrams must either be published in a ship's newspaper or posted on a ship's public notice board.

(3) Press radiotelegrams shall, subject to this regulation, comply with the provisions of Articles 64 and 65 of the detailed regulations attached to the International Telegraph Convention.

REFUNDS.

27. The full charge for a radiotelegram will be refunded when such radiotelegram is rendered useless through a fault of the telegraph service, and the full charge, less land-line charges, will be refunded when a radiotelegram cannot be delivered on account of the ship of destination having passed out of range.

TRANSMISSION OF SHIPPING INTELLIGENCE BY TELEPHONE.

28. Information received at a coast station from vessels at sea, indicating the noon or midnight position, will be communicated by telephone to the owners or agents of such vessels on payment of One shilling per communication.

OCEAN FORECASTS AND WEATHER REPORTS.

29. Ocean forecasts sent by the Commonwealth Meteorologist will be transmitted from radiotelegraph stations owned, operated, and maintained by or on behalf of the Minister to vessels at sea and weather reports received at such radiotelegraph stations from vessels at sea, and addressed to the Commonwealth Meteorologist, will be transmitted, on payment of the following charges:—

For each communication not exceeding 20 words, 2s.; for each additional word, 1d.; plus one penny per word land line charge.

REPEAL.

30. All regulations previously made under the Wireless Telegraphy Act 1905-1919, and in force at the commencement of these Regulations, are hereby repealed save as to any right, privilege, or obligation acquired, accrued, or incurred thereunder.

SHIP'S LICENCE. FORM OF LICENCE.

Dated 19

Commonwealth of Australia.
THE MINISTER FOR THE NAVY
to

C

LICENCE TO ESTABLISH A WIRELESS TELEGRAPH SHIP STATION.

To all to whom these presents shall come, I the Honourable the Minister for the Navy of the Commonwealth of Australia
SEND GREETING :

graph Regulations" mean respectively the International Convention of St. Petersburg, dated the 10th-22nd July, 1875, and the Service Regulations made thereunder, and include respectively any modifications of the Convention or Regulations made from time to time.

The expression "the Radiotelegraphic Convention 1912" means the Convention signed at London on the 5th day of July, 1912, and the Service Regulations made thereunder, and includes any modification of the Convention or Regulations made from time to time.

The expression "coast station" means a wireless telegraph station which is established on land or on board a ship permanently moored, and which is open for the service of correspondence between the land and ships at sea.

The term "ship station" means a wireless telegraph station established on board a ship which is not permanently moored.

2. The licensed apparatus shall not be used by the licensee or by any other person, either on behalf or by permission of the licensee, for the transmission or receipt of messages except messages authorised by this licence.

3. (1) The licensee shall not by the transmission of any message by means of the licensed apparatus or otherwise by the use of the licensed apparatus interfere with naval signalling.

(2) Stations using wavelengths longer than those set apart for naval purposes shall not emit any subsidiary waves or harmonics likely to interfere with signalling or the commercial wavelengths or naval wavelengths in the vicinity.

(3) If the Admiralty or the Minister for the Navy is of opinion that the working of the licensed apparatus specified in the First Schedule hereto is inconsistent with the free use of naval signalling, the licensee shall when required in writing by the Minister for the Navy so to do, close the said station.

(4) These provisions for the protection of naval signalling shall be construed to be without prejudice to the generality of any other provisions of this licence.

4. For the purpose of this licence, the licensee shall observe the International Telegraph Convention and the International Telegraph Regulations so far as the said Convention and Regulations are capable of being applied to wireless telegraphy in common with ordinary land and submarine telegraphy.

5. The licensee shall observe the provisions of any Regulations from time to time made under the Wireless Telegraphy Act 1905-1915 so far as the same are applicable to the licensee.

6. The licensee shall observe the provisions of the Radiotelegraphic Convention 1912.

7. The licensee shall comply with all such directions and observe all such rules as may be given or made by the Minister for the Navy from time to time for the purpose of preventing interference with the working of any other wireless telegraph station and for enabling the messages exchanged by means of the licensed apparatus to be distinguished from those emanating from any other wireless telegraph station.

8. The licensed apparatus shall not, without the consent of the Minister for the Navy, be altered or modified in respect of any of the particulars mentioned in the Schedules hereto.

9. The apparatus shall include such emergency installation as may be required according to the

class of the ship station under the provisions of Article XI of the Service Regulations annexed to the Radiotelegraph Convention 1912.

10. The licensee shall at all times indemnify the Minister for the Navy against all actions, claims, and demands which may be brought or made by any corporation, company, or person in respect of any injury arising from any act licensed or permitted by these presents.

11. (1) Subject to the provisions of this licence, the licensee shall transmit messages by means of the licensed apparatus on equal terms without favour or preference, whether as regards rates of charge, order of transmission, or otherwise. Provided always that signals of distress and messages in connection therewith shall receive priority over all other messages and that the order of transmission of such other messages shall be governed by the International Telegraph Regulations.

(2) In respect of messages transmitted on behalf of His Majesty's Government or the Government of the Commonwealth the licensee shall charge rates not in excess of half of the rates charged to the ordinary public.

12. The licensee shall, so far as possible, receive from ships and light stations all requests for assistance and all signals of distress, and shall answer such requests and signals and retransmit them with the least possible delay to the proper authorities by means of the licensed apparatus or any other means in the power of the licensee.

13. The licensed apparatus at the said ship station shall be worked only by a person or persons holding a certificate or certificates of competency issued by the Minister for the Navy or by the Postmaster-General of the United Kingdom. Certificates of competency shall be granted only to persons who satisfy the Minister for the Navy that they possess the requisite technical proficiency as regards operating and knowledge of the regulations governing signalling, and shall be in such form and subject to such conditions as the Minister for the Navy shall from time to time prescribe.

14. The licensee shall not divulge to any person (other than properly authorised officials of His Majesty's Government or the Government of the Commonwealth or a competent legal tribunal) or make any use whatever of any message coming to the knowledge of the licensee and transmitted by naval signalling or by any system of wireless telegraphy provided or maintained by or for the purposes of the Postmaster-General or any Department of His Majesty's Government or the Government of the Commonwealth, or by any licensee of the Minister for the Navy (other than the licensee).

15. The licensee shall keep full accounts records, and registers of all messages transmitted by means of the licensed apparatus, and in such registers each of such messages shall be accompanied by its identifying number and date and full particulars of its place of origin and of ultimate destination, and such further particulars as the Minister for the Navy shall from time to time reasonably require to be shown, messages on His Majesty's service being in such registers distinguished from other messages. The licensee shall preserve all used message forms, written and printed, and transcripts of messages, and all other papers for such period as is from time to time prescribed by the Radiotelegraphic Convention 1912, and in default of any provisions on the subject in the said Convention for such period as is from time to time prescribed by the International Telegraph Regulations, and such

registers and message papers shall be open to the inspection of the Minister for the Navy or his officers thereto authorised at the head office of the licensee in between the hours of 10 a.m. and 5 p.m. on every day, except Sunday or a Statute or general holiday.

15. The Minister for the Navy and any agent authorised in that behalf in writing by him may at all reasonable times enter upon the ship station hereby licensed for the purpose of inspecting, and may inspect any apparatus fixed or being in such station for the purpose of sending and receiving messages by wireless telegraphy, and all other telegraphic instruments and apparatus fixed or being in such station, and the working and use of such apparatus and telegraphic instruments.

17. The licensee shall carry on every ship at which a ship station is established under this licence a print or copy of the licence certified under the hand of an appropriate officer of the Minister for the Navy to be a true copy, and also such documents as may be prescribed by the Minister for the Navy for the purpose of enabling the licensee to communicate with coast stations in accordance with the Radiotelegraphic Convention 1912.

18. (1) The licensee shall pay to the Minister for the Navy for and in respect of the licence hereby granted a fee of One pound per annum.

(2) The fee payable under this licence shall be payable before the issue of the licence, and the fee payable upon the renewal of the licence shall be payable before such renewal.

19. Except with the consent in writing of the Minister for the Navy, the licensee shall not assign, underlet or otherwise dispose of or admit any other person or body to participate in the benefit of the licence powers or authorities hereby granted.

20. (1) If and whenever an emergency shall have arisen in which it is expedient for the public service that His Majesty's Government shall have control over the transmission of messages by the licensed apparatus, it shall be lawful for any officer in command of any ship of war of His Majesty's Navy to cause the licensed apparatus, or any part thereof, to be taken possession of in the name and on behalf of His Majesty and to be used for His Majesty's service and subject thereto for such ordinary services as to the said officer may seem fit, and in that event any person authorised by the said officer may enter upon any ship on which any such apparatus is installed and take possession of the said apparatus and use the same as aforesaid.

(2) Any such officer may in such event as aforesaid, instead of taking possession of the licensed apparatus as aforesaid, direct and authorise such persons as he may think fit to assume the control of the transmission of messages by the licensed apparatus, either wholly or partly, and in such manner as he may direct, and such persons may enter upon any ship on which any apparatus is installed accordingly, or the said officer may direct the licensee to submit to him or any person authorised by him all messages tendered for transmission or arriving by the licensed apparatus, or any class or classes of such messages to stop or delay the transmission of any messages, or deliver the same to him or his agent, and generally to obey all such directions with reference to the transmission of messages as the said officer may prescribe, and the licensee shall obey and conform to all such directions.

(3) The licensee shall be entitled to reasonable compensation for any damage to the licensed apparatus arising in consequence of the exercise of the powers conferred by this clause.

21. In any of the following cases (that is to say):—

(a) In case of any sum of money which ought to be paid by the licensee to the Minister for the Navy, under or by virtue of these presents, shall be in arrear and unpaid for one calendar month after the time at which the same ought to be paid under or by virtue of the covenants herein contained;

(b) In case of any breach, non-observance, or non-performance by or on the part of the licensee of any of the covenants (other than a covenant for the payment of money) or conditions herein contained, and on the part of the licensee to be observed and performed; or

(c) In case the licensee fails to comply with any regulation for the time being in force under the Wireless Telegraphy Act 1905-1915;

then and in any such case the Minister for the Navy may by notice in writing revoke and determine these presents, and the licence, powers, and authorities hereinbefore granted, and thereupon these presents and the said licence, powers, and authorities shall absolutely cease, determine, and become void but without prejudice to any right of action or remedy which shall have accrued or shall thereafter accrue to the Minister for the Navy under the covenants on the part of the licensee herein contained.

22. Nothing in these presents contained shall prejudice or affect the right of the Minister for the Navy from time to time to establish, extend, maintain, and work any system or systems of telegraphic communication (whether of a like nature to that hereby licensed or otherwise) in such manner as he shall in his discretion think fit neither shall anything herein contained prejudice or affect the right of the Minister for the Navy from time to time to enter into agreements for or to grant licences relative to the working and use of telegraphs (whether of a like nature to those hereby licensed or otherwise) or to the transmission of messages in any part of the Commonwealth or any Territory under the control of the Commonwealth by means of wireless telegraphy, or by any other means with or to any person or persons whomsoever upon such terms as he shall in his discretion think fit. And (save as in this licence expressly provided) nothing herein contained shall be deemed to authorise the licensee to exercise any of the powers or authorities conferred on or acquired by the Minister for the Navy by or under the Post and Telegraph Act 1901-1910 or the Wireless Telegraphy Act 1905-1915.

23. Any notice, request, or consent (whether expressed to be in writing or not) to be given by the Minister for the Navy under these presents may be under the hand of the Minister for the Navy or any Minister or officer authorised by the Minister for the Navy to act on his behalf, and may be served by sending the same in a registered letter addressed to the licensee at the usual or last-known place of residence or business of the licensee, and any notice to be given by the licensee under these presents may be served by sending the same in a registered letter addressed to the Naval Secretary at his official address within the Commonwealth.

SCHEDULE I.

PARTICULARS OF THE SHIP STATION REFERRED TO IN THIS LICENCE.

Name of ship on which Station is established.	Class of ship under Radiotelegraphic Convention.	Nature of services performed.	Hours of service.	Normal Range of signalling in nautical miles.		Character of apparatus		Power.	If alternator is used. Number of cycles per second.
				By night.	By day.	System of Radiotelegraphy and characteristics of the system of emission.	Wavelength in metres.

FORM OF RECEIVING LICENCE FOR AMATEURS.

DNo. _____
Dated _____ 19____

COMMONWEALTH OF AUSTRALIA.

LICENCE TO USE WIRELESS TELEGRAPHY OR TELEPHONY FOR EXPERIMENTAL PURPOSES.

To all to whom these presents shall come, I the Honourable the Minister or Member of the Executive Council for the time being administering the Wireless Telegraphy Act 1905-1919 send greeting.

Whereas
of
in the State of
(hereinafter called "the licensee") is desirous of establishing, erecting, maintaining, and using a system of wireless telegraphy or telephony as defined in section 2 of the Wireless Telegraphy Act 1905-1919 with the sole object of conducting demonstrations or experiments in wireless telegraphy or telephony. And whereas by reason of the provisions of the Post and Telegraph Act 1901-1916, and of the Wireless Telegraphy Act 1905-1919, it is unlawful to establish, erect, maintain, or use any station or appliance for the purpose of transmitting or receiving messages by means of wireless telegraphy or telephony except under and in accordance with a licence

granted in that behalf by the Minister or Member of the Executive Council for the time being administering the Wireless Telegraphy Act 1905-1919, and it is also unlawful, save as in the said Acts provided, to transmit telegrams or other communications by telegraph within the Commonwealth of Australia:

And whereas the licensee has made application for this licence;

Now I, the Minister or Member of the Executive Council for the time being administering the Wireless Telegraphy Act 1905-1919 aforesaid, in pursuance of the Wireless Telegraphy Act 1905-1919 and in exercise of all powers and authorities enabling me in this behalf, do hereby grant to the licensee from the date of these presents until these presents are determined as hereinafter provided licence and permission—

(i) To establish, erect, maintain, and use at the station specified in the first and second schedules hereto, appliances for the purpose only of receiving messages by means of wireless telegraphy or telephony (hereinafter called "the licensed appliances") provided that the appliances installed at the station shall be of the character specified in the said first and second schedules; and

(ii) To receive messages by means of wireless telegraphy or telephony at the said station from any experimental station provisionally authorised or fully licensed by the Minister.

Provided that the licensed appliances shall be worked and the messages shall be received solely for the purpose of conducting experiments in wireless telegraphy or telephony, and for no other purpose whatever.

And I do hereby declare that the said licence and permission is granted on and subject to the following conditions and provisions:—

1. In these presents (and in the schedules hereto) the following words and expressions shall have the several meanings hereinafter assigned to them unless there be something, either in the

subject or context, repugnant to such construction (that is to say):—

(1) The expression "wireless telegraphy" has the same meaning as in the Wireless Telegraphy Act 1905-1919.

(2) The terms "telegraph" and "telegraph line" have the same meanings as in the Post and Telegraph Act 1901-1916.

(3) The expression "naval signalling" means signalling by means of any system of wireless telegraphy or telephony between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and Naval Stations or between a ship of His Majesty's Navy or a Naval Station, and any other wireless telegraph or telephone station, whether on shore or in any ship.

(4) The expression "His Majesty's Navy" or "His Majesty's ships" includes ships being part of the Naval Forces of any part of His Majesty's Dominions.

(5) The expression "Australia" includes the territorial waters of the Commonwealth of Australia and of any territory of the Commonwealth of Australia.

(6) The expression "military signalling" means signalling by means of any system of wireless telegraphy or telephony between two or more sets of appliances for wireless telegraphy or telephony operated by or on behalf of the Military Forces of the Commonwealth of Australia or between one such set of appliances and any other wireless telegraph or telephone station.

(7) The expression "Minister" means the Minister or Member of the Executive Council for the time being administering the Wireless Telegraphy Act 1905-1919.

2. The licensed appliances shall not be used by the licensee or any other person either on behalf or by permission of the licensee for the receipt of messages except messages authorised by this licence.

3. The licensee shall observe the provisions of any regulations from time to time made under the Wireless Telegraphy Act 1905-1919 so far as the same are applicable to the licensee.

4. (a) The licensed appliances shall not without the previous consent in writing of the Minister be altered in respect of any of the particulars mentioned in the first and second schedules hereto.

(b) The licensee shall at all times indemnify the Commonwealth of Australia and the Minister against all actions, claims, and demands which may be brought or made by any corporation, company, or person in respect of any injury arising from any act licensed or permitted by these presents.

5. Neither the licensee nor any person acting on his behalf or by his permission shall divulge to any person (other than properly authorised officials of the Commonwealth of Australia or a competent legal tribunal), or make any use whatever of any message coming to the knowledge of the licensee or any such person as aforesaid and transmitted by naval or military signalling or by any system of wireless telegraphy or telephony provided or maintained by or for the purposes of the Minister or any Department of the Commonwealth of Australia or by any licensee of the Minister.

6. The licensee shall not deliver or cause to be delivered to any person any messages received by him by wireless telegraphy or telephony unless the transmission or delivery of such message has been approved by the Minister or by

an officer duly authorised by him to approve thereof.

7. Officers of the Royal Australian Naval Radio Service and persons thereunto authorised by the Minister may from time to time and at all reasonable times enter upon the station or other premises in the possession or occupation of the licensee for the purpose of inspecting and may inspect any appliances fixed or being in such places respectively for the purpose of receiving messages by wireless telegraphy or telephony and all other telegraphic or telephonic instruments and appliances fixed or being in such stations respectively and the working and the user of such appliances and telegraphic or telephonic instruments respectively.

8. (a) All appliances used or intended to be used under this licence shall be so established, erected, maintained, and used as not either directly or by reason of the working or user thereof to interfere with the efficient or convenient maintenance working or user of any telegraph line of the Postmaster-General which may from time to time exist or to expose any such line to risk of damage or to risk of interference with the efficient or convenient working or use thereof.

(b) In case any telegraph line of the Postmaster-General shall be damaged or the efficient working or use thereof shall be wholly or partially interrupted or otherwise interfered with and the Chief Electrical Engineer for the time being of the Postmaster-General's Department shall certify in writing under his hand that such damage interruption or interference has been caused directly or indirectly by any appliances used under this licence, or by anything done by or on behalf or with the permission of the licensee in relation thereto, the licensee shall on demand pay to the Postmaster-General all costs that shall be reasonably incurred by him in repairing such damage and in removing or altering such telegraph lines so as to restore the same to efficient working order and in adding thereto or substituting therefor either temporarily or permanently any other telegraph line if the said Chief Electrical Engineer shall certify that such addition or substitution is reasonably required.

(c) For the purpose of this Article, the expression "telegraph line" has the same meaning as in the Post and Telegraph Act 1901-1916 and the expression "telegraph line of the Postmaster-General" includes a telegraph or telephone line belonging to or worked by the Postmaster-General or constructed or maintained by him for any Department of the Commonwealth of Australia or other body or person.

9. The licences powers and authorities hereby granted shall not except with the previous consent in writing of the Minister be assigned transferred sub-let or otherwise disposed of or dealt with and the licensee shall not except with a like consent allow any other person or body to participate in any manner whatsoever in the benefits of such licences powers or authorities.

10. (a) If and whenever, in the opinion of the Minister, an emergency shall have arisen in which it is expedient that His Majesty the King shall have control over the station or premises specified in the first and second schedules hereto and the appliances and instruments thereon it shall be lawful for the Minister to call upon the licensee to hand over to him on behalf of His Majesty the King such station premises appliances and instruments or any part or parts thereof and if the licensee shall comply with such demand the Minister or any person thereunto authorised by him may enter upon such

station or premises and take possession of and use the same together with all appliances and instruments thereon.

(b) The Minister shall during the period the possession and use of the said station premises appliances and instruments are retained on behalf of His Majesty the King reimburse to the licensee all wages and salaries paid by the licensee to persons employed in connection with the said station or premises provided that the employment of such persons is necessary for the proper upkeep of the said station or premises and provided further that such wages or salaries are at the same rates as previously paid by the licensee for similar services.

(c) In the event of the licensee refusing to hand over on demand the said station or premises and the appliances and instruments thereon the Minister may immediately thereupon cancel this licence without prejudice to any steps the Governor-General in Council may think fit to take to obtain possession of such station premises appliances or instruments.

11. The technical details of the herein licensed station are contained in the first schedule hereto, and the complete scheme of connections authorised to be employed is shown in the second schedule hereto.

12. (a) The licensee shall pay to the Minister for and in respect of licence hereby granted a fee of Two pounds (£2) for each year or part of a year the licence is in force in respect of the station at which the licensed apparatus is installed.

(b) The fee shall be payable to the Minister annually in advance.

13. The Minister may at any time in his absolute discretion give notice in writing to revoke and determine these presents and to cancel the licence or permission hereby given at the end of twenty-four hours from the time of service of such notice and at the expiration of that period the licence or permission hereby granted shall cease and determine accordingly but without prejudice to any remedy of the Minister under any covenant or provision herein contained on the part of the licensee to be observed and performed.

14. In the event of these presents and the licence or permission hereby given being revoked and determined by the Minister under the power hereinbefore contained or any other power here-

unto enabling him the licensee shall not be entitled to any compensation or damages by reason of the determination.

15. Nothing in these presents contained shall prejudice or affect the right of the Commonwealth of Australia from time to time to establish erect extend maintain and use any system or systems of telegraphic or telephonic communication (whether of a like nature to that hereby licensed or otherwise) in such manner as it shall in its discretion think fit neither shall anything herein contained prejudice or affect the right of the Commonwealth of Australia from time to time to enter into agreements for or to grant licences relative to the working and user of telegraphs or telephones (whether of a like nature to those hereby licensed or otherwise) or the transmission of messages in any part of Australia by means of wireless telegraphy or telephony or by any other means with or to any person or persons whomsoever upon such terms as it shall in its discretion think fit and (save as in this licence expressly provided) nothing herein contained shall be deemed to authorise the licensee to exercise any of the powers or authorities conferred on or acquired by the Postmaster-General by or under the Post and Telegraph Act 1901-1912 or by the Minister under the Wireless Telegraphy Act 1905-1919.

16. Any notice request or consent (whether expressed to be in writing or not) to be given by or for the Minister under these presents may be under the hand of the Secretary for the time being to the Department being administered by the Minister and may be served by sending the same by registered letter addressed to the licensee at the usual or last known place of residence or business of the licensee and in such case the time of service shall be deemed to mean the time when in the ordinary course of post it would have been delivered to the licensee at such place and any notice to be given by the licensee under these presents may be served by sending the same by registered letter addressed to such secretary at his official address within the Commonwealth.

In witness whereof the Minister or Member of the Executive Council for the time being administering the Wireless Telegraphy Act 1905-1919 has hereunto set his hand and seal the day and year first hereinbefore written.

COMMONWEALTH OF AUSTRALIA.

E LICENCE TO USE WIRELESS TELEGRAPHY OR TELEPHONY FOR EXPERIMENTAL AND INSTRUCTIONAL PURPOSES.

To all to whom these presents shall come, I, the Honourable the Minister or Member of the Executive Council for the time being administering the Wireless Telegraphy Act 1905-19 send greeting:

Whereas
of
in the State of
(hereinafter called "the licensee"), is desirous of establishing, erecting, maintaining, and using a system of wireless telegraphy or telephony as defined in section 2 of the Wireless Telegraphy Act 1905-1919, with the sole object of conducting demonstrations or experiments in wireless telegraphy or telephony: And whereas by reason of the provisions of the Post and Telegraph Act 1901-1916 and of the Wireless Telegraphy Act 1905-1919 it is unlawful to establish, erect, maintain, or use any station or appliance for the purpose of transmitting or receiving messages by means of wireless telegraphy or telephony except under and in accordance with a licence granted in that behalf by the Minister or member of the Executive Council for the time being administering the Wireless Telegraphy Act 1905-1919, and it is also unlawful, save as in the said Acts provided, to transmit telegrams or other communications by telegraph within the Commonwealth of Australia:

And whereas the licensee has made application for this licence:

Now I,
the Minister or Member of the Executive Council for the time being administering the Wireless Telegraphy Act 1905-1919 aforesaid, in pursuance of the Wireless Telegraphy Act 1905-1919, and in exercise of all powers and authorities enabling me in this behalf, do hereby grant to the licensee from the date of these presents until these presents are determined as herein-after provided, licence and permission—

(i) To establish, erect, maintain, and use at the station specified in the first and second schedule; hereto appliances for the purpose of *transmitting and receiving messages* by means of wireless telegraphy or telephony (hereinafter called "the licensed appliances"), provided that the appliances installed at the station shall be of the character specified in the said first and second schedules, and operated in accordance with the conditions specified.

Provided that the licensed appliances shall be worked and the messages shall be transmitted and received solely for the purpose of conducting demonstrations in wireless telegraphy or telephony at public lectures or conducting experiments in wireless telegraphy or telephony for the advancement of science and for no other purpose whatever.

And I do hereby declare that the said licence and permission is granted on and subject to the following conditions and provisions, which may be altered, added to, or modified hereafter to meet public interests or requirements or emergencies.

1. In these presents (and in the schedules hereto) the following words and expressions shall have the several meanings hereinafter assigned to them unless there be something, either in the subject or context, repugnant to such construction (that is to say):—

(1) The expression "wireless telegraphy"

has the same meaning as in the Wireless Telegraphy Act 1905-1919.

(2) The terms "telegraph" and "telegraph line" have the same meaning as in the Post and Telegraph Act 1901-1916.

(3) The expression "naval signalling" means signalling by means of any system of wireless telegraphy or telephony between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and naval stations, or between a ship of His Majesty's Navy or a naval station and any other wireless telegraph or telephone station, whether on shore or on any ship.

(4) The expression "His Majesty's Navy" or "His Majesty's ships" includes ships being part of the Naval Forces of any part of His Majesty's Dominions.

(5) The expression "Australia" includes the territorial waters of the Commonwealth of Australia and of any territory of the Commonwealth of Australia.

(6) The expression "military signalling" means signalling by means of any system of wireless telegraphy or telephony between two or more sets of appliances for wireless telegraphy or telephony operated by or on behalf of the Military Forces of the Commonwealth of Australia, or between one such set of appliances and any other wireless telegraph or telephone station.

(7) The expression "Minister" means the Minister or Member of the Executive Council for the time being administering the Wireless Telegraphy Act 1905-1919.

2. The licensed appliances shall not be used by the licensee or any other person either on behalf or by permission of the licensee for the transmission or receipt of messages except messages authorised by this licence.

3. The licensee shall observe the provisions of any regulations from time to time made under the Wireless Telegraphy Act 1905-1919 so far as the same are applicable to the licensee.

4. (a) The licensed appliances shall be so worked as not to interfere with the working of any wireless telegraph or telephone station established in Australia by or for the purposes of the Minister for the Navy or any Department of the Commonwealth of Australia, or for commercial purposes, and in particular with the transmission or receipt of any messages between or at wireless telegraph or telephone stations established as aforesaid on land and wireless telegraph or telephone stations established on ships at sea. On no account shall His Majesty's ships be called by means of the licensed appliances.

(b) With a view to preventing such interference as aforesaid the licensee and every person acting on his behalf or by his permission shall comply with all directions which shall be given to the licensee by the Minister or prescribed by the Minister with respect to avoiding interference between one wireless telegraph or telephone station and another.

(c) The licensed appliances shall not without permission, in writing, from the Minister, or an officer thereunto authorised by him, be altered in respect of any of the particulars mentioned in the first and second schedules hereto.

(d) The licensee shall at all times indemnify the Commonwealth of Australia and the Minister against all actions, claims, and demands which may be brought or made by any corporation, company, or person in respect of any injury arising from any act licensed or permitted by these presents,

5. (a) The licensee shall not (either by himself or by any person acting on his behalf or by his permission), by the transmission of any message by means of the licensed appliances or otherwise by the use of the licensed appliances, interfere with naval or military signalling.

(b) Whenever the operators of the said station of the licensee perceive, through the medium of the appliances used by them, that naval or military signalling is proceeding, they shall refrain from using the licensed appliances until all indication that naval or military signalling is proceeding shall have ceased.

(c) These provisions for the protection of naval or military signalling shall be construed to be without prejudice to the generality of any other provisions of this licence.

6. Neither the licensee nor any person acting on his behalf or by his permission shall divulge to any person (other than properly authorised officials of the Commonwealth of Australia or a competent legal tribunal), or make any use whatever of any message coming to the knowledge of the licensee or any such person as aforesaid, and transmitted by naval or military signalling or by any system of wireless telegraphy or telephony provided or maintained by or for the purposes of the Minister for Navy or any Department of the Commonwealth of Australia or by any licensee of the Minister other than the licensee.

7. Officers of the Royal Australian Naval Radio Service and persons thereunto authorised by the Minister may from time to time and at all reasonable times enter upon the station or other premises in the possession or occupation of the licensee, for the purpose of inspecting, and may inspect any appliances fixed or being in such places respectively for the purpose of sending and receiving messages by wireless telegraphy or telephony and all other telegraphic or telephonic instruments and appliances fixed or being in such stations respectively and the working and the user of such appliances and telegraphic or telephonic instruments respectively.

8. (a) All appliances used or intended to be used under the licence shall be so established, erected, maintained, and used as not either directly, or by reason of the working or user thereof, to interfere with the efficient or convenient maintenance, working, or user of any telegraph line of the Postmaster-General which may from time to time exist, or to expose any such line to risk of damage or to risk of interference with the efficient or convenient working or use thereof.

(b) In case any telegraph line of the Postmaster-General shall be damaged or the efficient working or use thereof shall be wholly or partially interrupted or otherwise interfered with, and the Chief Electrical Engineer for the time being of the Postmaster-General's Department shall certify in writing under his hand that such damage, interruption, or interference has been caused directly or indirectly by any appliances used under this licence, or by anything done by or on behalf or with the permission of the licensee in relation thereto, the licensee shall on demand pay to the Postmaster-General all costs that shall be reasonably incurred by him in repairing such damage and in removing or altering such telegraph lines so as to restore the same to efficient working order, and in adding thereto or substituting therefor either temporarily or permanently any other telegraph line, if the said Chief Electrical Engineer shall certify that such addition or substitution is reasonably required.

(c) For the purpose of this Article, the expression "telegraph line" has the same meaning as in the Post and Telegraph Act 1901-1916, and

the expression "telegraph line of the Postmaster-General" includes a telegraph or telephone line belonging to or worked by the Postmaster-General or constructed or maintained by him for any Department of the Commonwealth of Australia or other body or person.

9. Except with the consent in writing of the Minister the licensee shall not assign, underlet, or otherwise dispose of or admit any other person or body to participate in the benefits of the licences, powers, or authorities hereby granted or any of such licences, powers, or authorities.

10. (a) If and whenever, in the opinion of the Minister, an emergency shall have arisen in which it is expedient that His Majesty the King shall have control over the transmission and receipt of messages by the licensed appliances, it shall be lawful for the Minister to call upon the licensee to hand over to him on behalf of His Majesty the King so much of the licensed appliances as is within Australia, or any part thereof, and if the said licensee shall comply with the demand the Minister or any person authorised by him may enter upon and take possession of the station specified in the first and second schedules and use the same together with all appliances and instruments thereon.

(b) The Minister shall, during the period the possession and use of the said station, appliances, and instruments are retained on behalf of His Majesty the King, reimburse to the licensee all wages and salaries paid by the licensee to persons employed in connection with the said station, provided that the employment of such persons is necessary for the proper upkeep of the said station, and provided further that such wages or salaries are at the same rates as previously paid by the licensee for similar services.

(c) In the event of the licensee refusing to hand over the said station and appliances on demand, the Minister may immediately thereupon cancel this licence without prejudice to any steps the Governor-General in Council may think fit to take to obtain possession of the said station and appliances.

11. The technical details of the herein licensed station are contained in the first schedule hereto; and the complete scheme of connections authorised to be employed is shown in the second schedule hereto.

12. (1) The licensee shall pay to the Minister for and in respect of the licence hereby granted a fee of Two pounds (£2) for each year or part of a year the licence is in force in respect of the station at which the licensed apparatus is installed.

(2) The fee shall be payable to the Minister annually in advance.

13. The Minister may at any time in his absolute discretion by notice in writing revoke and determine these presents and cancel the licence or permission hereby given at the end of twenty-four hours from the time of service of such notice, and at the expiration of that period the licence or permission hereby granted shall cease and determine accordingly, but without prejudice to any remedy of the Minister under any covenant or provision herein contained on the part of the licensee to be observed and performed.

14. In the event of these presents and the licence or permission hereby given being revoked and determined by the Minister under the power hereinbefore contained or any other power thereunto enabling him, the licensee shall not be entitled to any compensation or damages by reason of the determination.

15. Nothing in these presents contained shall

prejudice or affect the right of the Commonwealth of Australia from time to time to establish, erect, extend, maintain, and use any system or systems of telegraphic or telephonic communication (whether of a like nature to that hereby licensed or otherwise) in such manner as it shall in its discretion think fit, neither shall anything herein contained prejudice or affect the right of the Commonwealth of Australia from time to time to enter into agreements for or to grant licences relative to the working and user of telegraphs or telephones (whether of a like nature to those hereby licensed or otherwise) or the transmission of messages in any part of Australia by means of wireless telegraphy or telephony or by any other means with or to any person or persons whomsoever, upon such terms as it shall in its discretion think fit, and (save as in this licence expressly provided) nothing herein contained shall be deemed to authorise the licensee to exercise any of the powers or authorities conferred on or acquired by the Postmaster-General by or under the Post and Telegraph Act 1901-1916 or by the Minister by or under the Wireless Telegraphy Act 1905-1919.

16. Any notice, request, or consent (whether expressed to be in writing or not) to be given or

made by or for the Minister under these presents may be under the hand of the Secretary for the time being of the Department being administered by the Minister, and may be served by sending the same by registered letter addressed to the licensee at the usual or last-known place of residence or business of the licensee, and in such case the time of service shall be deemed to mean the time when in the ordinary course of post it would have been delivered to the licensee at such place; and any notice to be given by the licensee under these presents may be served by sending the same by registered letter addressed to such secretary at his official address within the Commonwealth of Australia.

17. The licensee may communicate with any experimental radiotelegraph station provisionally authorised or fully licensed by the Minister for experimental purposes, providing that such communication does not interfere with the conduct of W/T signalling.

In witness whereof the Minister or Member of the Executive Council for the time being administering the Wireless Telegraphy Act 1905-1919 has hereunto set his hand and seal the day and year first hereinbefore written.

SCHEDULE I.
CHARACTER OF APPLIANCES.

Name of Licensee and Address of Station.	Description of Transmitting Appliances.	Description of Receiving Appliances.	Wavelength to be employed in Transmitter.	Maximum Watt energy permitted to be employed in Transmitter.
1.	2.	3.	4.	5.
Type of aerial, height, construction				
Nature and voltage of primary power ..				
Transformer; ratio of windings				
Spark gap				
Particulars of transmitting oscillator				
Condenser—Capacity of				
Form of coupling				
Details of earth connections				

SCHEDULE II.

Complete scheme of connections and aerial system authorised to be employed in the herein licensed station.

This drawing, purely diagrammatic, shows the circuits authorised to be employed in both the transmitter and receiver.

Signed, sealed, and delivered by the Minister or Member of the Executive Council for the time being administering the Wireless Telegraphy Act 1905-1919 in the presence of—

This licence is accepted by me under the provisions and terms and on the conditions above set out.

Signed, sealed, and delivered by the said licensee in the presence of—

NAVIGATION ACT.

F The Commonwealth Parliament passed in 1912 a Navigation Act which contains a clause making it compulsory for ships trading in Australian waters to be equipped with apparatus for wireless telegraphy. This matter is dealt with in section 231 of the Act, and the text of the section given below is as under :—

EXTRACT FROM NEW NAVIGATION ACT, 1912.

DIVISION VI.

231. (1) Except as prescribed, every foreign-going ship, Australian trade ship, or ship engaged in the coasting trade, carrying fifty or more persons, including passengers and crew, shall before going to sea from any port in Australia be equipped with an efficient apparatus for wireless communication in good working order in charge of one or more persons holding prescribed certificates of skill in the use of such apparatus.

(2) For the purposes of this section apparatus for wireless communication shall not be deemed to be efficient unless :

(a) It is capable of transmitting and receiving messages over a distance of at least 100 miles, day and night.

(b) The person controlling the operator undertakes in writing to the Minister to exchange, and does, in fact, exchange, as far as may be physically practicable (of which the master shall be the judge) messages with shore or ship stations using

similar or other systems of wireless communication; and

(c) There is provided, in connection with the apparatus, and ready for use whenever from any cause the ordinary supply of electrical power is not available, a battery of accumulators of such capacity as to insure for a period of at least six hours communication of the efficiency prescribed in paragraph (a) of this sub-section.

(3) The equipment shall, if so prescribed, include a silent chamber for the receipt of messages.

(4) The master of a ship required by this section or the regulations to be equipped with wireless telegraphy apparatus shall not take her to sea, and the owner of a ship required to be so equipped shall not permit her to go to sea, unless the requirements of this section have been complied with.

PENALTY: One Thousand Pounds.

(5) The regulations may prescribe the times and hours during which an operator shall be in attendance on the apparatus, ready to receive or transmit messages.

(6) Except as otherwise prescribed, the provisions of this section shall not apply to ships plying exclusively between ports in Australia less than two hundred miles apart.

(7) The Governor-General may make regulations in accordance with the provisions of any International Convention to which the United Kingdom is a party relating to the use of wireless telegraphy on ships, and such regulations may be in addition to, or in substitution either wholly or in part for the provisions of this section.

AUSTRIA

THE republic of German-Austria forms only a very small part of the erstwhile Austro-Hungarian Monarchy, being bounded on the north by Czecho-Slovakia and Germany; on the east by Czecho-Slovakia and Hungary; on the south by Jugo Slavia and Italy; and on the west by Switzerland.

CONTROL.

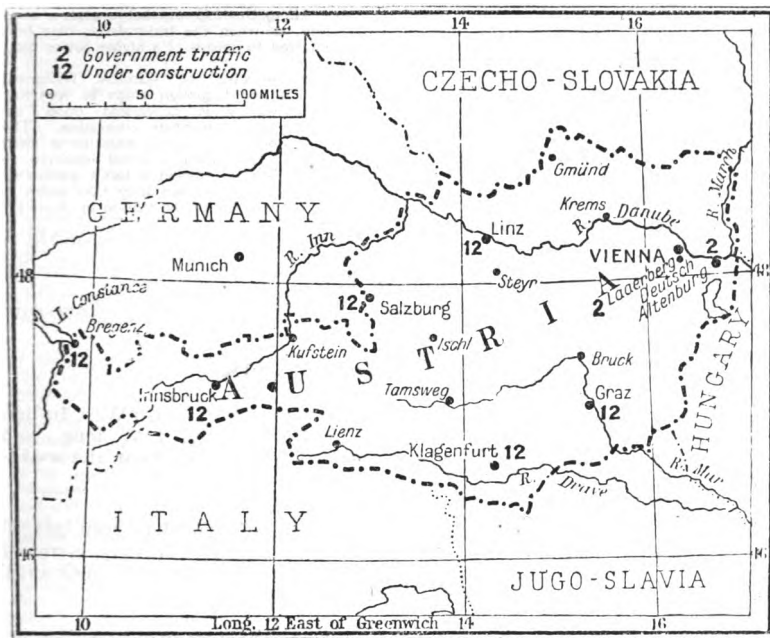

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
Mr. Konrad Hoheisel .. Sektionschef Emil Fodrich	Director-General of Posts and Telegraphs .. Chief of Section VII for Telegraphs, Telephones and Pneumatic Postal Affairs, Public Department of Communications	Vienna. Vienna, A. Borse- platz 1.
Ministerial Councillor Friedrich Teufenstein.	Chief of the Telegraph Department	Vienna.

ORGANISATION.

In Deutsch-Altenburg a 25 kw. transmitting installation was erected in the year 1915, and was instituted as a temporary station for general working. Further, there was available as a reserve a 5 T V installation. As a permanent station the building of a 45 kw. transmitting station in Deutsch-Altenburg was completed in August, 1919, and it started working at that date. The 5 T V station still continues in existence as a reserve station.

At present the Austrian Telegraph Administration possesses a long distance radio station in Deutsch-Altenburg and also one at Laaerberg. The latter is on the Poulsen System. There is also at Laaerberg a receiving

station with Braun frame receivers. These stations are all under the control of Section VII of the Public Department of Communications.

In addition to the above the erection of radio stations at Graz, Lintz, Salzburg, Klagenfurt, Innsbruck and Bregenz is contemplated so that a land radio service may be maintained in Austria.

For the forwarding of correspondence only the radio installations of the State Administration are used in Austria. The other installations, for which concessions have been granted, serve either for experimental purposes or for the testing of radio installations of private firms.

ADMINISTRATION.

The issue of regulations relative to wireless telegraphy in connection with aviation, time, weather, and meteorological reports is under consideration. It is understood that these rules are in preparation, but so far it has not been possible to obtain copies.

The following decree regulates the administration of wireless telegraphy in the Republic:—

A—Decree of Ministry of Commerce, 7th January, 1910.

A The following Decree of the Ministry of Commerce, dated January 7th, 1910, is concerned with wireless telegraph stations in the Austrian Empire, on board Austrian ships, and on ships of foreign nationality in Austrian territorial waters:—

(1) In accordance with a High Decree of Parliament of January 16th, 1847, and the Decree of the Ministry of Commerce, dated April 28th, 1905, the erection and working of Wireless Telegraph stations in the Austrian Empire and on Austrian ships is a State concession to acquire which a written application (liable to Stamp Duty) containing a description

of the station and a diagram of connections, must be submitted.

(2) The choice of system, apparatus, and fixtures, as well as the establishment of coast and land rates within the limits of the Wireless Telegraph Agreement of 1909, and the supplemental regulations are the prerogative of the Ministry of Commerce.

(3) The general regulations for Wireless Telegraph stations on board ships are shown below.

(4) Wireless Telegraph stations on board ships must fulfil the following conditions:—

(a) They must be of equal technical effi-

ciency to systems other than that adopted in the stations, and they must be able to inter-communicate with other systems.

(b) The system adopted must be one of "syntonisation."

(c) The speed of transmission and reception must not, under normal circumstances, be less than twelve words (each of five letters) per minute.

(d) The power possessed by the apparatus must not exceed, in normal conditions, 1 kilowatt. A greater power can be used when the ship is under an obligation to exchange messages at a longer distance than

100 kilometres from the nearest coast station, or when the transmission can only be effected by means of a higher power than specified.

(5) The working of Wireless Telegraph stations on board foreign ships in Austrian territorial waters is dependent upon the previous grant of a State concession. This regulation does not apply to warships or ships in distress. If a foreign vessel employs its Wireless Telegraph station without authorisation, the State authorities may take steps to prevent the working of the station in Austrian territorial waters.

AZORES

(See PORTUGAL.)

BAHAMA ISLANDS

THE Bahamas (or Lucayos) are an archipelago of the British West Indies, lying between $21^{\circ} 42' - 27^{\circ} 34'$ N. lat. and $72^{\circ} 40' - 79^{\circ} 5'$ W. long., and extending from the coast of Florida on the north-west to Haiti on the south-east.

CONTROL AND ORGANISATION.

There is but one radio station in the Colony, and that has been located in Nassau, New Providence. It was installed on August 28th, 1913, is owned by the Colony, and controlled under the authority of the Governor in Council. It is operated by the Telegraph Department.

OFFICIAL CONTROLLING WIRELESS TELEGRAPHY.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
P. H. Burn	Superintendent and Electrical Engineer ..	Nassau.

ADMINISTRATION.

The Radiotelegraph Act, 1913, regulates the administration of wireless telephony.

A—Radiotelegraphic Act, 1913.

B—Rules made thereunder.

AN ACT

A To amend the Law relating to the Telegraph Department of the Colony. (Assented to on July 7th, 1913.)
May it please the King's Most Excellent Majesty that it may be enacted and be it enacted by his Excellency George Basil Haddon-Smith, Esquire, Companion of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief in and over the Bahama Islands, the Legislative Council and Assembly of the said Islands, and it is hereby enacted and ordained by the authority of the same as follows:—

1. This Act may be cited as The Telegraph Department Act, 1913.

2. (1) The Telegraph Department shall consist of the Officers set out in the First Schedule to this Act. They shall be appointed by the Governor and shall hold office during pleasure and shall receive annually the respective salaries at the amounts and in the manner set out in the First Schedule to this Act. Provided that the persons holding such

offices at the commencement of this Act shall continue to discharge the duties of such offices and to receive the emoluments thereof without the necessity of new appointment and their services under this Act shall be deemed to be in continuance of their services under any other Act for the purposes of any Act relating to pension or leave of absence or sick leave. Provided also that Patrick Henry Burns, the present holder of the office of Superintendent of Telegraphs and Electrical Engineer, shall continue to receive a salary at and after the rate of £400 a year.

(2) The annual increase of salary provided for in the First Schedule to this Act in the cases of the Clerk and the Operators shall be granted solely at the discretion of the Governor in Council and shall not be granted by him unless and until the Superintendent of Telegraphs and Electrical Engineer certifies that the officer eligible for the increase of salary is thoroughly efficient and reliable in the discharge of the duties of his office, and has discharged such duties in a highly satisfactory manner. Provided that in the case of the present holder

of the office of Clerk the salary of that officer may be increased annually by sums not exceeding £10.

(3) In case of emergency the Governor may, with the approval of the Executive Council, appoint temporarily assistant operators under such terms and conditions and at such salaries as the Governor in Council may prescribe and determine, and any such salaries shall be paid out of the Treasury by warrant in the usual manner. Provided that no such appointment shall be for a longer period than six months.

(4) The Superintendent of Telegraphs and Electrical Engineer may with the approval of the Governor in Council, select and train such number of probationers, being British subjects, as the Governor in Council may determine with a view to the subsequent employment of such probationers under this Act if occasion

shall so require and the Governor in Council shall think fit. No probationer shall be entitled to any payment.

3. No person other than a British subject shall be appointed to any office under this Act.

4. Any person appointed under this Act shall, in addition to any oath required by any Act, take such oaths of secrecy as may be prescribed by any Rules made under The Telegraph Acts 1891 to 1913.

5. The Acts set out in the Second Schedule to this Act shall be and the same are hereby repealed to the extent mentioned in the third column thereof.

6. This Act shall not come into operation unless and until the Governor notifies by Proclamation that it is His Majesty's pleasure not to disallow the same.

SCHEDULE.

REPEALS.

Regnal Year and Chapter.	Short Title.	Extent of Repeal.
55 Vic. c. 1	"The Telegraph Act, 1891" ..	Section 9; the words, "the payment of operators and assistants."
55 Vic. c. 4	"The Telegraph Amendment Act, 1892"	Section 7.
58 Vic. c. 32	"The Retrenchment Act, 1895" ..	Section 1, the words and figures, "Superintendent of Telegraphs, £250."
2 Ed. VII, c. 12 ..	"The Telegraph Clerk's Salary Act, 1902."	The whole Act.

RULES MADE BY THE GOVERNOR IN COUNCIL ON THE 3RD DAY OF NOVEMBER, 1913, UNDER THE AUTHORITY OF THE TELEGRAPH ACTS 1891 TO 1913.

B Paragraphs 1-14 inclusive refer solely to the wired telegraph system.

15. The radiotelegraph system shall be operated under the rules contained in the "Detailed Service Regulations" appended to the International Radiotelegraph Convention signed at London on the 5th day of July, 1912.

A copy of such "Detailed Service Regulations" shall be kept on file in the telegraph offices.

16. All apparatus for radiotelegraphy on board a merchant ship in the territorial waters of the Colony shall be worked in such a way as not to interfere with

(a) Naval signalling, or

(b) the working of any radiotelegraph station lawfully established, installed or worked in the Colony or the territorial waters thereof and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between radiotelegraph stations established as aforesaid on land and radiotelegraph stations established on ships at sea.

17. No apparatus for radiotelegraphy on

board a merchant ship shall be worked or used whilst such ship is in the territorial waters of the Colony, except with the special or general permission in writing of the Governor.

18. Rules 16 and 17 shall not apply to the use of radiotelegraphy for the purpose of making or answering signals of distress.

19. If at any time in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by radiotelegraphy the use of radiotelegraphy on board merchant ships whilst in the territorial waters of the Colony shall be subject to such further rules as may be made by the Governor in Council from time to time and such rules may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

20. The master of any merchant ship on board of which apparatus for radiotelegraphy shall be worked or used contrary to these Rules shall on summary conviction before a Magistrate be liable to a penalty of £200 and

in default of payment to be imprisoned for a period of twelve months.

TARIFF OF CHARGES.

21. From New Providence to the American Coast ninepence-halfpenny a word, plus the charges over the lines of other telegraph administrations, as published in the tariff book of the Western Union Telegraph Company, a copy of which shall be kept on file in the telegraph offices.

From New Providence to radio ship stations, threepence for each word, plus the rate charged by the ship station.

A "Deferred Message Service" at half the ordinary charge per word is in effect between the Bahamas and certain other countries.

A list of such countries and a copy of the rules governing this class of message shall be kept on file in the telegraph offices.

Made by the Governor in Council this 3rd day of November, 1913.

By order,

W. B. HADDON SMITH, Captain.
Clerk to the Executive Council.

BAHREIN ISLANDS

(See PERSIA.)

• BARBADOS

(See map on p. 311.)

BARBADOS (latitude 13° 4' N. and longitude 59° 37' W.) is the most easterly of the West Indian Islands. Its superficial area is reckoned at 166 square miles, or rather more than that of the Isle of Wight. It fell first under British rule in 1605 and has so remained ever since, recording the fact in its most favoured epithet, "Ever British."

CONTROL AND ORGANISATION.

Wireless telegraphy in this Colony owes much to a wireless club formed amongst a number of young Barbadians. Starting with some home-made apparatus, whose aerials were supported on bamboo poles, the local radiotelegraphic station, after the commencement of the late war, developed rapidly, assisted by a private subscription list, which was headed by the Governor and Members of the Legislative Council.

Practical demonstration of its utility became so unmistakable that it has now assumed the form of a regular two-kilowatt installation, maintained for defence purposes, but affording every facility (compatible with military considerations) to merchants and shipping agents. The station is worked in accordance with the International Radiotelegraphic Convention.

This constitutes the only land station in Barbados, and is worked under Government control.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
Lieutenant-Engineer E. F. S. Bowen.	Superintendent of Public Works	Barbados.
Sergt. A. D. V. Chase ..	In charge of Wireless Station	Barbados.

The question of the transmission of weather signals is under consideration, but no rules affecting aviation have, so far, been considered.

ADMINISTRATION.

Wireless telegraphy in Barbados is worked under three Acts and one set of regulations, the Barbados Wireless Act of 1905, two Amending Acts, passed in 1913 and 1917, and a number of rules made under these latter acts.

As these are quite distinct, we publish their respective texts below :—

A—Wireless Act, 1905 (confirmed 1908).

B—Wireless and Submarine Telegraph (Amendment) Act, 1913.

C—Wireless and Submarine Telegraph (Amendment) Act, 1917.

D—Rules made under the 1913 and 1917 Acts.

WIRELESS ACT, 1905 (CONFIRMED 1908).

A 1. This Act may be cited as the Wireless and Submarine Telegraph Act, 1905.

2. (1) The West India and Panama Telegraph Company shall not lay down or maintain a new telegraph cable nor shall any other company or person lay down or maintain any telegraph cable upon the foreshore and bed of the sea except under and in accordance with an Act of the Legislature.

(2) A person shall not establish any wireless telegraph station, or instal or work any apparatus for wireless telegraphy in any place in this island except under and in accordance with an Act of the Legislature.

(3) If the West India and Panama Telegraph Company lays down or maintains a new telegraph cable or if any other company or person lays down or maintains any telegraph cable upon the foreshore or bed of the sea without the authority of an Act of the Legislature in that behalf, the company or person shall be liable, on conviction before a Police Magistrate to a penalty not exceeding £100, and shall forthwith remove the telegraph cable, and if the telegraph cable be not removed within one day after such conviction the company or person shall be liable to a penalty not exceeding £50 for each day thereafter during which the company or person shall fail to remove the telegraph cable. Provided, that the Governor-in-Executive Committee may at any time after the expiration of one day from the date of the conviction cause the same to be removed and destroyed.

(4) If any person establishes a wireless telegraph station without the authority of an Act of the Legislature in that behalf, or instal or works any apparatus on any place in this island for wireless telegraphy without such authority in that behalf, he shall be liable, on conviction before a Police Magistrate, to a penalty not exceeding £100, and further be liable to forfeit any apparatus for wireless telegraphy installed or worked without such authority.

(5) If a Police Magistrate is satisfied by information on oath that there is reasonable ground for supposing that a wireless telegraph station has been established without legal authority in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place within his jurisdiction without such authority in that behalf, he may grant a search warrant to any police officer named in the warrant, and a warrant so granted shall authorise the officer named therein to enter and inspect the station or place and to seize any apparatus which appears to him to

have been used, or intended to be used, for wireless telegraphy therein.

(6) No proceedings shall be taken under any of the provisions of this section except by order of the Governor.

WIRELESS ACT, 1913.

Passed on April 11th, 1913.

B 1. This Act may be cited as the Wireless and Submarine Telegraph (Amendment) Act, 1913 (1913-16).

2. (1) *Making of Rules and Regulations.*—The Governor-in-Executive Committee may from time to time make rules and regulations governing the use of wireless telegraph apparatus on merchant ships, British or foreign, while in the territorial waters of this Colony.

(2) *Ratification.*—Such rules and regulations when sanctioned by both Houses of the Legislature and assented to by the Governor, shall come immediately into operation and shall have the same force and effect as if the same had been herein expressly enacted.

(3) *Penalties.*—If the master of such ship or any person on board such ship commits a breach of any of these rules and regulations :—

(a) The ship shall be subject to a maritime lien in favour of His Majesty the King, his heirs and successors, for a sum of one hundred pounds, and the amount so charged may be sued for and recovered in the Colonial Court of Admiralty;

(b) The ship may be detained by force if necessary by the Harbour and Shipping Master or his chief clerk, with the aid of the harbour police, until payment of the lien aforesaid or until arrested under process of the Colonial Court of Admiralty;

(c) The master of such ship shall be liable to a penalty not exceeding fifty pounds.

(d) The person committing the breach shall be liable to a penalty not exceeding fifty pounds.

3. (1) *Special Orders.*—In any case of urgency which is not provided for in the rules and regulations, the Governor may make any special order, and such order shall come immediately into operation and shall have the same force and effect as if the same had been herein expressly enacted.

(2) *Penalties.*—If the master of such ship or any person on board such ship commits a breach of any special order, the ship shall be subject to the maritime lien imposed by section 2 of this Act for the amount therein mentioned and may be detained as is therein provided, and the master, and the person committing the breach, shall be liable to a penalty not exceeding fifty pounds,

AN ACT

C To amend the Wireless and Submarine Telegraph Amendment Act, 1913. (1913-16.)

Be it enacted by the Governor, Council, and Assembly of this island, and by the authority of the same, as follows:—

1. This Act may be cited as the Wireless and Submarine Telegraph (Amendment) Act, 1917.

2. The Wireless and Submarine Telegraph (Amendment) Act, 1913, is hereby amended by inserting the words "and yachts" immediately after the words "merchant ships" in line three of subsection 1 of section 2 thereof, and the word "ship" wherever occurring in the subsequent parts of the Act shall be construed as including a yacht.

3. The Regulations made under the authority of the said Act by the Governor-in-Executive Committee on the thirty-first day of July, nineteen hundred and thirteen, shall apply to yachts as fully and in the same manner in all respects as they do to merchant ships.

RULES MADE BY THE GOVERNOR IN EXECUTIVE COMMITTEE UNDER SECTION 2 (1) OF ACT 1913-16, ON JULY 31ST, 1913, CONFIRMED AUGUST 11TH, 1914.

D 1. All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of the Colony

shall be worked in such a way as not to interfere with (a) Naval signalling or (b) the working of any wireless telegraph station lawfully established, installed, or worked in the Colony or the territorial waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used whilst such ship is in any of the harbours of the Colony except with the special or general permission of the Colonial Secretary of the Colony.

3. If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in the territorial waters shall be subject to such further rules as may be made by the Governor from time to time, and such rules may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

4. These Regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

BASUTOLAND

(See SOUTH AFRICA, UNION OF.)

BASUTOLAND, an inland native territory of South Africa lying between 28° 45' and 30° 40' S. latitude, and a longitude of 27° 0' and 29° 30' E., is governed by a resident Commissioner under the direction of the High Commissioner for South Africa and located at Maseru, its principal town. The latter high official possesses legislative authority which is exercised by proclamation. The "Territory" covers an area of 11,716 square miles, and has been directly under the authority of the Crown since 1884; it forms an irregular parallelogram on the north-east of the Cape Colony, and the seven districts into which it is divided bear the reputation of including the finest agricultural and pastoral land in South Africa.

ADMINISTRATION.

In 1904 a proclamation was issued, which we print below, making provision for the working of wireless telegraphy within the territory, but at present there are no wireless stations.

A—Proclamation making provision for Wireless Telegraphy.

A PROCLAMATION. No. 5 of 1904.

By His Excellency the High Commissioner for South Africa.

Whereas it is expedient to make provision for the working of wireless telegraphy within the territory of Basutoland;

Now therefore by virtue of the powers in me vested I do hereby proclaim, declare and make known as follows:

1. No person shall establish or use any apparatus or installation for the transmission of messages or other communications by means of electrical energy without the aid of wires without having previously obtained a licence as hereinafter provided.

2. (1) It shall be lawful for the Resident Commissioner to authorise the issue of a licence for either of the purposes mentioned in section 1 and to revoke the same at any time, and there shall be payable in respect of such licence the sum of one hundred pounds.

(2) Every such licence shall be deemed to be granted upon such terms and conditions as the High Commissioner may from time to time prescribe by notice in the *Gazette*.

3. Any person who shall establish or use or attempt to establish or use any such apparatus or installation as is mentioned in section 1 in contravention of the provisions of this Proclamation shall be liable upon conviction to a penalty not exceeding two hundred and

fifty pounds and in default of payment to imprisonment with or without hard labour for a period not exceeding three months and in case of a second or subsequent conviction to a penalty not exceeding five hundred pounds or in default of payment to imprisonment with or without hard labour for a period not exceeding six months.

4. This proclamation shall take effect from the date of its publication in the *Gazette*.

Given under my hand and seal at Johannesburg this twenty-fourth day of February, One thousand nine hundred and four.

MILNER,

High Commissioner.

BELGIAN CONGO

(See page 513 and map on page 120.)

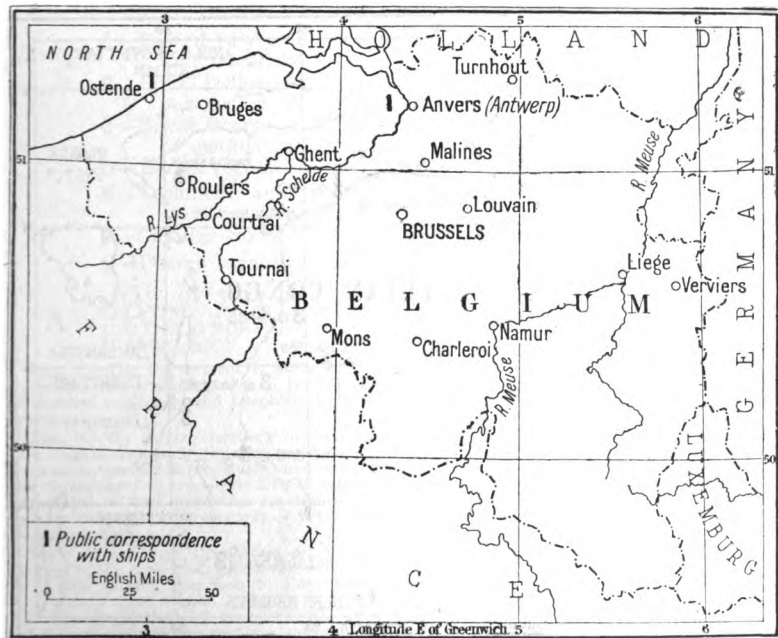

BELGIUM

BELGIUM, after being joined with Holland from 1815, formed itself into an independent State in 1830, under Prince Leopold of Saxe-Coburg, who ascended the throne on July 21st, 1831. According to the constitution of that date, Belgium is "a Constitutional Representative and Hereditary Monarchy," the legislative power being vested in the King, the Senate and the Chamber of Representatives. The present King Albert, born on April 8th, 1875, succeeded his uncle on December 17th, 1909.

The total area of the kingdom was estimated before the war at 11,373 square miles, and was divided into nine provinces, the capital city being Brussels. At the Paris Peace Conference the territory of Eupen, Malmedy and Moresnet was allotted to Belgium.

CONTROL.

Wireless telegraphy in Belgium is under the control of the Telegraph and Telephone Administration, which forms one of the departments of the Ministry of Railways, Marine, Posts and Telegraphs.

COPYRIGHT "GEOGRAPHIA LTD 55, FLEET STREET, LONDON E.C.4"

For technical purposes the Administration is divided into two departments and six districts. Each district, administered by an engineer-in-chief and assisted by a principal engineer and other engineers, includes several sections or special technical services.

Mr. R. Corteil	Chief Engineer, Wireless Technical Service	Do.
Mr. Van Heemstée	Assistant Engineer, Wireless Technical Service	Do.
Mr. C. Caenepenne	Assistant Engineer, Wireless Technical Service	Do.

ORGANISATION.

In 1901, when wireless was still in its infancy, trials were made between La Panne and a Belgian mail boat, to which trials, Mr. A. Roosen, Director-General of Telegraphs; Mr. Pierard, Director-General of Marine; and Mr. E. Pierard, Director of the Telegraph Administration, devoted all their attention, and contributed to the application and development of wireless in Belgium.

The results obtained having been adjudged sufficiently satisfactory for the establishment of wireless between the mail boats and the Belgian coast, provision was made in 1902 for the installation of a coast station at Nieuport

(Bains), and of ten stations on the mail boats, for the purpose of increasing the security of navigation of these ships. This was the first public wireless service inaugurated on any ship afloat.

As progress was made in the domain of wireless, experiments were undertaken to establish the value of improved methods and new apparatus. These trials led in 1909 to plans for completely reorganising the original installations. Subsequently, modifications were introduced at Nieuport (Bain) and to the mail boat installations.

The application of wireless in Belgium is perforce limited, on account of the small extent of territory affected, the necessity of avoiding interference with the stations in neighbouring countries, and the network of existing telegraph lines and other apparatus for speedy communication.

A temporary station is in operation at the waterworks at Ostend, until the new Ostend station is ready, and is fitted with a 5 kw. Marconi musical spark installation, as well as with a 1 kw. C.G.R. installation.

Another station is in operation at the Pilot House at Antwerp, fitted with a 1 kw. S.F.R. installation. This station will shortly be provided with a 10 kw. musical spark set. A private coast station for the Pilot Service is in contemplation.

Provision is being made for the installation of radiogoniometric stations on the Belgian coast.

The new steam pilot boats will be equipped with wireless telegraphy also lightships and Government tugs. The North Sea survey ship, *Ville d'Anvers* already has a wireless installation in operation.

An intercontinental station is projected in Western Belgium, and tenders have been invited. An European station is also to be established.

ADMINISTRATION.

The administration of Wireless Telegraphy in Belgium is regulated by a Law and Royal Decrees, which are reprinted below :—

- A—Law of July 10th, 1908, regulating the use of wireless telegraphy and telephony.
- B—Royal Decree of October 19th, 1908, regulating the application of charges on wireless messages.
- C—Royal Decree of November 3rd, 1913, regulating the conditions of installation and the working of wireless stations.
- D—Decree regulating ships' licences, September 10th, 1918.
- E—Technical and administrative regulations relating to ship stations, October 15th, 1918.*
- F—Circular No. 1 of October 18th, 1918, addressed to shipowners.
- G—Decree regarding Amateur Wireless Installations.

A 1. LAW OF JULY 10TH, 1908, RELATING TO TELEGRAPHY AND TELEPHONY BY ETHER TRANSMISSION.

ART. 1.—The Government is authorised to undertake the establishment and transmission of wireless telegraphy and telephony by ether waves.

ART. 2.—On Belgian territory or on board of a Belgian steamer or vessel no one is allowed without authorisation previously obtained from the Government to erect, establish or cause to be erected or work apparatus for radio transmission capable of carrying out or prejudicing communications.

Each infraction of the clauses of the provisions of the present Article involves liability to a fine varying from 200 to 2,000 francs,

* The Regulations of October 15th, 1918, are specially adapted for wartime, and will soon be modified to suit peace conditions.

together with imprisonment varying from eight days to a year, or either of these penalties alternatively. Such infringement will carry the additional penalty of confiscation for the benefit of the State of the apparatus and all other objects specially designed for their working. Moreover, the Law Officers shall be able to order suspension in the carrying out of the confiscation of all apparatus and other objects or of a part thereof by placing them in temporary sequestration for a term which may be fixed by the tribunal. This sequestration shall be raised if the interested party or his legal representative shall obtain authorisation to make use of the apparatus. In default of such authorisation, the confiscation of his effects shall take place immediately on the expiry of the term fixed under the judgment, unless the competent Minister shall authorise the delinquent either to destroy the apparatus or to transfer its possession to a duly authorised concessionaire.

The preceding arrangements shall apply even

in case of acquittal of the accused, when it has been established that the apparatus and other objects giving rise to the prosecution come under the category covered by the two first paragraphs of the present Article.

ART. 3.—The Government shall fix the rates, as well as the rules of administration and order relative to radiotelegraphy and telephony. Infringement shall be punished in accordance with the penalties established by the law of March 6th, 1908.

ART. 4.—The authorisations referred to in Art. 2 are granted by the Minister exercising jurisdiction over the telegraphic and telephonic services in agreement with the other ministers affected. They shall specifically enumerate their duration, the conditions of installation, use of apparatus, charges where such are made, royalties payable to the public treasury, penalties for infringement and all other limiting conditions, dictated by the interests of public order, as well as by the security and defence of the realm. In the event of infringement of the conditions of authorisation, the latter may be withdrawn by the Minister who granted it. Nevertheless, no royalty can be claimed when it has been proved to the satisfaction of the Minister in Charge of the granting of authorisations that the applicant has no other object than that of experimenting with or making use of the apparatus for his private purpose without making any charge whatsoever.

ART. 5.—No one can establish or work on board a foreign ship or vessel apparatus for radio transmission which can carry out or prejudice radiotelegraphic or radiotelephonic communication, so long as the ship, or vessel, is located in Belgian Territorial Waters, if its action be not in accord with the prescribed regulations set out in Art. 3. The competent Minister may at any time forbid the use of apparatus, or lay down with regard thereto such measures of precaution, supervision and control as he judges necessary.

All infringements of the regulations of the present Article are liable to a fine of 100 to 500 francs. The Law Officers may order the sequestration of apparatus, and of all other objects specifically adapted to their working, for the duration of the stay of the aforesaid vessel in Belgian waters. Such sequestration may be annulled if the interested party obtain from the competent Minister an authorisation to make use of the apparatus in question.

If, after the annulment of the sequestration, the interested party commits a fresh infraction of the conditions laid down, the fine may be doubled and the apparatus and other objects confiscated for the benefit of the State.

ART. 6.—If for any cause, either by reason of public order or the security and defence of the realm, the Government shall judge necessary to suspend the whole, or part of the service, the concessionaire shall be obliged to obey the first instructions given him to that end.

In the same circumstances the competent Minister may either order the apparatus to be put out of action or sequestered, or he may put the apparatus in the hands of his own agents instead of those of the concessionaires. These measures shall be taken for the duration of the period judged necessary by the Government and shall give rise to no claim for indemnification at the hands of the State.

ART. 7.—The penal laws relative to wireless telegraphy and telephony are applicable to

governmental radiotelegraphy and telephony, as well as to such installations and services as have been duly authorised for public communication.

ART. 8.—The Government may designate the functionaries who shall be sworn in as officers of judiciary police for the investigation of the infringer relative to wireless telegraphy and telephony. The official reports drawn up by these functionaries shall be considered correct until they are proved otherwise.

The above-mentioned functionaries shall take precedence, so far as infringements relative to wireless telegraphy and telephony are concerned, over all other officers of judiciary police, with the exception of the Public Prosecutor and the Police Magistrate.

ART. 9.—When there are found to be sufficient traces of the existence of wireless telegraph or telephone installations not regularly authorised or employed, the police magistrates shall visit the localities in which the aforesaid installations shall be presumed to exist, in order to make all necessary investigations into the truth of the allegations, even although it may be necessary to secure access to private property for that purpose.

He may take with himself one or more experts or functionaries sworn in in accordance with the terms of the preceding Article.

He may either effect himself or cause to be effected, by any and all of the officers of the judiciary police, seizure or dismantlement or temporary sequestration of the apparatus set up or employed without regular authorisation, as well as that of all other objects subject to confiscation in accordance with the terms of Arts. 2 and 5 heretofore set out.

ART. 10.—The State undertakes no responsibility for the service of communication by radiotelegraphic or radiotelephonic means.

ART. 11.—The present law shall come into operation the day after its publication.

B 2.—ROYAL DECREE OF THE 19TH OCTOBER, 1908, RELATING TO CHARGES FOR RADIO-TELEGRAMS.

Royal Decree authorising the Minister of Railways, Posts and Telegraphs to settle the amount of charges fixed when necessary in the authorisation for delivery by application of Articles II and IV of the Law of the 10th July, 1908, relating to wireless telegraphy and telephony by ether transmission.

In view of the Law of the 10th July, 1908, relating to wireless telegraphy and telephony:

In view of the International Radiotelegraphic Convention concluded at Berlin in 1906 and the further Acts which complete it:

and
Inasmuch as it is desirable to simplify—so far as charges are concerned—the formalities which appertain to the delivery of Acts authorising the establishment and working of ether transmission, at the suggestion of our Minister of Railways we hereby agree:

Sole Article.—Within the limits fixed by the International Convention relating to Radiotelegraphy and Telephony, our Minister of Railways, Posts and Telegraphs is hereby authorised to settle the amount of charges, when such arise, in the authorisations which he is empowered to issue under the authority of Articles II and III of the Law of the 10th July, 1908.

Given at Laeken, the 29th October, 1908.

(Sgd.) LEOPOLD.

C 3.—ROYAL DECREE OF THE 3RD NOVEMBER, 1913, RELATING TO THE CONDITIONS UNDER WHICH WIRELESS TELEGRAPHY SHALL BE INSTALLED AND WORKED.

In view of Art. III of the Law of 10th July, 1908, which authorises the Government to settle the rules of administration and police relative to radiotelegraphy and telephony:

In view of the Law of 6th March, 1908, relating to the penalties incurred by contravention of general measures of interior administration, as well as to the penalties which may be inflicted under the rules laid down by provincial and communal authorities:

and

In view of the proposal of our Minister of Marine, Posts and Telegraphs, we have settled and hereby decree:

ART. 1.—On Belgian territory and on board ships or vessels of Belgian nationality, every and each proposal for the installation of apparatus for ether transmission, capable of assisting or prejudicing the transmission or reception of radiotelegraphic or radiotelephonic signals, as well as all proposals for modification in their employment, and also every and each proposal for the erection or modification of an installation which has already been duly authorised, ought to be submitted to the Department of Marine, Posts and Telegraphs as a preliminary to their starting operations.

Any request for authorisation must indicate the character of the installation, the object of its use, so far as concerns wireless stations on board ship, tariff of charges proposed, detailed list of the apparatus and of the methods of working, wavelengths, hours of watch, and generally all information of a character such as will facilitate detailed examination of the scheme. There shall be moreover thereon set forth the steps it is proposed to take to prevent interference with the service of other official or authorised stations.

ART. 2.—Such authorisations are issued subject to the reservations and conditions which may be judged necessary in the interests of the convenience and defence of the realm, including the safeguarding of public and service messages.

ART. 3.—A new authorisation becomes necessary:

1. If the station has not been installed or modified and put in working order within the period fixed by the Decree of Authorisation.

2. If it has been put in working order or made use of under the conditions other than those set out in the Decree of Authorisation.

ART. 4.—Installations not regularly authorised which shall have been set up previous to the coming into force of the present Decree shall not be privileged thereby: their service must be suspended and a request for authorisation applied for under the conditions and forms set out under Article I of the present Decree.

ART. 5.—On entering into Belgian territorial waters foreign ships fitted with wireless installations capable of assisting or prejudicing transmission or reception of radiotelegraphic or radiotelephonic signals shall cease communication with any neighbouring stations other than the nearest State stations. They shall announce their presence to these coastal stations and await authorisation or invitation to communicate either with the aforesaid or some other coastal station.

The preceding arrangements shall not apply to foreign ships and vessels, provided that previous to their entering within Belgian territorial waters they shall have been provided under order of the competent Belgian Minister with his special and regularly accredited permit for communication. They shall not interfere in any way with distress signals or the answers to distress signals emanating from other ships or vessels.

To sum up: Foreign ships and vessels are enjoined from the time of their entering into Belgian territorial waters to cease all working which may prejudice the communications of any radiotelegraphic or radiotelephonic stations whatsoever.

ART. 6.—On Belgian territory and within Belgian territorial waters as well as on board Belgian ships and vessels located in foreign waters, duly appointed delegates of the Government shall have free access at all hours of day and night, in accordance with Article VIII of the Law of 10th July, 1908, to all ships, vessels and steamers on which regularly authorised installations may be working, or for which a communicating permit has been granted. The owners, managers, charterers, commanders, agents, masters, and personnel are enjoined to facilitate by every possible means the duties of verification and control vested in these delegates.

ART. 7.—The owners, managers and charterers are civilly responsible for the payment of fines decreed against their commanders, directors, agents, masters, or personnel. Our Minister of Marine, Posts and Telegraphs is charged with the execution of the present Decree.

ART. 8.—The present Decree shall come into force the day after its publication dated Brussels, 3rd November, 1913.

D 4.—DECREE OF THE 10TH SEPTEMBER, 1918, RELATING TO SHIPS' LICENCES.

Albert, King of the Belgians, to all here present and to come, greeting.

In view of Art. 26 of the Constitution which confers the exercise of legislative power on the Ruling Sovereign, in concert with the Chamber of Representatives and the Senate; and in view of the impossibility of assembling the Legislative Chambers.

Under the advice of our Minister of Railways, Marine, Posts and Telegraphs, and Foreign Affairs, and in conjunction with our Ministers united in Council we have decreed and do decree.

ART. 1.—On and after 15th October, 1918, it is enacted that before starting from either a Belgian port or a port belonging to an allied or neutral nation of Belgium, sea-going vessels engaged, or that may become engaged wholly or partially in commercial transport, must be furnished with a licence issued in the name of the Minister of Railways, Marine, Posts and Telegraphs, by the Director-General of Marine or by his representative.

ART. 2.—Other requests for licences must come from the ship owner or charterer or their agents and must be set out in writing in conformity with the provisions of a model approved by Ministerial decree.

ART. 3.—Every licence shall be issued for one or several voyages or for a limited period. Any licence given for more than a single voyage is always liable to cancellation.

ART. 4.—A licence will be refused whenever the authority entrusted with the investigation of the request shall judge that the vessel may—so far as the itinerary or conditions of shipment are concerned—be utilised in a manner more convenient for national interests than it would be if the voyage were carried out under the arrangements set forth in the application, or when such a voyage as that therein set forth would unduly expose the vessel to the risks of war, which the national interests demand shall be avoided.

ART. 5.—A licence shall be also refused if the authority entrusted with the investigation of the request shall judge that by its general condition, or that if its engines, fittings, means of defence, or composition of personnel, the vessel is insufficiently well-found with regard to safety for the voyage for which the licence is being requested.

ART. 6.—Marine Commissioners, Consuls, and Agents designated for that purpose by the authority entrusted with the consideration for the request for licence, shall have the right of access at all times and in all places on board of Belgian sea-going vessels with the object of investigating whether the aforesaid vessel fulfils the conditions necessary for the granting of a licence or whether the conditions under which the licence may have already been granted are well and duly carried out.

Every owner, charterer, or master is enjoined to give the aforementioned officials every necessary aid in the discharge of their duties.

ART. 7.—The Marine Commissioner in Belgian ports and the Belgian Consul in foreign ports may, without prejudice to Art. 9 of the Decree of the 2nd February, 1916, withdraw the permission to navigate from any vessel not furnished with a licence or which shall navigate in violation of the conditions of the present Decree.

They shall be able to arrest, or have it put under arrest by the local authorities—the ship may even be prohibited from putting to sea.

ART. 8.—In the event of violation of the regulations of the present Decree, the Marine Commissioner or the Council shall draw up a circumstantial indictment, every item of which shall hold good until disproved. A copy of this indictment will be sent within 24 hours to the captain of the ship.

ART. 9.—The captain, shipowner, or charterer, who may at any time have been guilty of an offence against the regulations of the present Decree, shall be liable to imprisonment varying from a week to two years, together with a fine varying from 26 frs. to 2,000 frs., or, alternatively one of these penalties. Confiscation of the ship will be enforced, and if enforcement be not possible, the tribunal shall substitute therefor the payment of a fine equal to the value of the vessel.

If there be any extenuating circumstances, the confiscation of the vessel, or the payment of a sum equal to its value, may be obviated in consideration of a payment of some sum less than its value.

ART. 10.—All the provisions of Section I of the Penal Code apply to the infringement of regulations set out in the present Decree.

ART. 11.—Any individual, Belgian or foreign, who shall commit outside the Royal domains, an offence against the present Decree, can be proceeded against in Belgium. If he does not appear, judgment may be passed in default.

ART. 12.—So far as the present Decree is concerned, by "captain" may be understood

any person who exercises the captain's function on board.

We hereby promulgate the present Decree and order that it shall be sealed with the State Seal and published in the *Moniteur*.

Given at our Headquarters,
10th September, 1918.
Sealed (ALBERT).

REGULATIONS RELATING TO TECHNICAL CONDITIONS, INSTALLATION, UPKEEP, SURVEY AND TRAFFIC OF RADIOTELEGRAPHIC STATIONS ON BOARD BELGIAN VESSELS.*

Dated 15th October, 1918.

ART. 1.

Systems of Radiotelegraphic Apparatus.

The choice of wireless apparatus and arrangements to be employed is left open under the express reservation of parliamentary approval, by the Department of Railways, Marine, Posts and Telegraphs of Belgium, which is entrusted with the supervision and control of Radiotelegraphic Installations on board Belgian ships.

Account will be principally taken of the efficiency of the system from all points of view, including the reliability of machines and apparatus, facilities for supervision, for the upkeep of the station, for the replacement of apparatus or parts which may be damaged.

It is extremely desirable, however, that choice should be made of a system with a musical note. Such a kind of note will be obligatory for vessels plying in tropical zones.

ART. 2.

Construction of Radiotelegraphic Installation (Conditions to be fulfilled).

Installations must fulfil the conditions laid down in the Radiotelegraphic Convention of London, 1912, and the supplements thereto, modified by the present code of Rules and later on by subsequent regulations.

(a) *Principal Transmitting Station.*—Radiotelegraphic installations must be able to transmit by day, from one ship to another of the same class, signals which can be clearly read under normal circumstances and conditions at the minimum distance laid down hereafter.

200 nautical miles (about 1,852 metres) for vessels of 6,000 tons and upward.

100 nautical miles for vessels of 3,000–6,000 tons.

75 nautical miles for vessels of 1,500–3,000 tons.

40 nautical miles for vessels of less than 1,500 tons.

Special conditions with regard to range may be imposed for vessels devoted partly, or wholly, to long distance passenger traffic, or such vessels as ply under special traffic conditions.

With the object of enabling the operator to keep himself effectively in touch with, and to regulate the working of the transmitting station, and the energy radiated therefrom by the antennæ-earth circuits, there shall be supplied an unshunted thermal ammeter, specially adapted for measuring currents of high frequency.

* These Regulations are specially adapted for wartime, and will soon be modified to suit peace conditions.

It must be possible to pass rapidly from a wavelength of 600 metres to that of 300 metres and vice versa.

(b) *Apparatus for Syntonisation and Reception.*—Besides the regulating arrangements relative to the reception of wavelengths of 600 metres or less (see Service Regulation annexed to the London Convention of 1914, Art. 7, Section C), the apparatus must allow for reception, with a margin of insurance against interference of transmissions operated on a wavelength up to 3,000 metres.

Use must be made of sensitive and very stable detectors specially adapted for the reception of musical notes.

The reception apparatus must include at least two detectors.

Arrangements must be made for avoiding any induction due to badly established electric circuits, or to any other cause which may tend to obscure faint signals.

Some suitable arrangement must ensure the silence of receiving telephones during transmission, whether the latter is being made through the main station, or the emergency set.

A suitable and conveniently placed buzzer must be carried for the verification of the satisfactory working of the different circuits of the reception apparatus and of the detectors.

(c) *Emergency Transmitting Gear.*—Every board-ship station, whatever may be the constitution of its principal Transmitting Station, must include an emergency set, in conformity with Art. 11 of the Regulations of Service appended to the International Radiotelegraphic Convention of London, with the object of ensuring the possibility of reception when the current of the ship's generator fails, or some mischance puts the principal station out of action.

This emergency set must of necessity be actuated by an accumulator battery with a sufficient capacity and of at least 24 volts. If, however, the principal transmitting station carries an accumulator battery suitably equipped and located, this battery or a part thereof, may serve as the source of energy of the emergency gear.

The emergency set must have a minimum range of 80 nautical miles for vessels of 6,000 tons and upward; or for those of smaller tonnage, partly or solely engaged in long distance passenger service; of 50 nautical miles for vessels of 1,500–6,000 tons which do not come under the above-mentioned category; of 30 nautical miles for vessels of less than 1,500 tons.

When the emergency set includes an induction coil it must be possible to utilise it: (a) for transmitting by direct excitation (plain aerial); (b) for the emission of syntonised and slightly damped waves obtained by feeding the condenser of the primary oscillating circuit of the principal set from the secondary of this coil.

The above apparatus must allow of a rapid change from one of these methods of transmission to the other.

All arrangements must be made so that the emergency set may be put into action instantaneously.

ART. 3. *Antennæ.*

(a) *General Conditions.*—Antennæ must always be maintained in perfect condition, not only with regard to rigidity but also with regard to electrical resistance.

All the connections of antennæ must be rigidly soldered with the greatest care. Soldering must

be carried out with resin to the exclusion of all liquid which might act on metal.

Every precaution must be taken that no strain be put upon a soldered joint, or upon any part which has been heated.

The same precautions must be taken in the case of a broken connection.

Besides the principal antennæ which is in everyday use, there shall be carried on board a single-strand antenna in reserve as well as a small emergency antenna.

(b) *Principal Antenna.*—This must be of a multiple-stranded type strongly fixed.

This antenna must be furnished with straying guides suitably insulated, with their ends attached to the yards in order to avoid shifting under wind-strain or the motion of the ship.

(c) *Reserve Single Strand Antenna.*—In order to afford a temporary stopgap when the principal antenna has been badly damaged by bad weather and when circumstances render reconstruction impossible for some little while, and with the object of carrying on a makeshift radiotelegraphic service, every vessel must carry a single strand reserve antenna of a convenient shape and size. This antenna shall be stretched on a special support furnished with its own insulator—constructed of an unbreakable and elastic material like rubber or caoutchouced rope—and placed in the wireless cabin ready for the operator's use.

The two masts intended to serve as supports shall be furnished each with a reserve block fixed as high as possible and with a continuous halliard serving exclusively for the haulage of the single strand antenna. These blocks and gear for the spare set must always be maintained in perfect order.

(d) *Emergency Set.*—Experience has shown that the explosion of a torpedo or a mine fairly frequently entails the fall of a mast, and consequently tears down the antennæ at the same time, thus preventing the vessel from sending out wireless calls for aid.

In order to neutralise the consequences of such a mishap every ship must be furnished with a small emergency antenna *totally separate from the masts.*

This antenna must be multiple stranded with the object of ensuring a sufficient sending range. It may be of a prismatic or cylindrical type with four or six strands (of the pattern usually spoken of as "sausage"); it shall be fixed by the aid of blocks, say, on one side to the top of a funnel and on the other to the apex of a small spar attached to the wireless cabin or the wheel house, etc.

This antenna should be given as much extension, both from the point of view of capacity and height, as it is practically possible under the circumstances. In the neighbourhood of a funnel it would not be possible to use for its fixture either blocks, insulators or fastening material which might be affected by heat or steam such as ropes, ebonite, rubber, etc.). This emergency antenna must be permanently fixed on the exterior to an insulator with a special lead-in of a type similar to the insulator of the main antenna. Every care must be taken to ensure the practicability of its being instantly connected with the apparatus for transmission and reception in the interior of the cabin.

(e) *Mast Stays.*—The metal stays of masts and other gear, arranged more or less parallel and at a short distance from the strands of the antennæ, must be effectively broken by insulators of high mechanical strength in such a way as to avoid any appreciable absorption of energy.

(f) *Tension of Antenna Stays*.—Care should be taken against stretching the stays too tightly so as to avoid antennæ being torn away in consequence of severe vibrations of the mast-head caused by explosion, collision, etc.

ART. 4.

Electric Generating Group.

Every electric generating group must be constructed and arranged so as to maintain continuous service.

(a) *Ship's Regular Generators*.—If there be machinery on board for lighting the ship, etc., it can equally well serve for supplying energy to the wireless station, provided that when all the apparatus for which it is normally employed is being served there remains an ample supply of electric power for working the radiotelegraphic installation.

(b) *Special System*.—For this purpose it is necessary to choose a very rigid system of construction which is not liable to derangement by powerful shocks and which can be quickly connected up. No systems of electro generation shall be allowed which do not possess a minimum power of $2\frac{1}{2}$ kw. with compound excitation on the dynamo, machines of less power not being of the requisite robust qualities. A power of $2\frac{1}{2}$ kw. must be exclusively reserved to the wireless station and contingently to the lighting of the wireless cabin. In the interests of the safety of the ship the electric generating group must be placed as far as possible in the upper part of the machinery room, or, if it consists of an internal combustion motor, in the immediate neighbourhood of the wireless telegraph station, but so situated that working does not interfere with the operator.

(c) *Working*.—The electric generating system shall work continuously throughout the voyage and the current must be always at the disposal of the operator.

In every gang of engineers one of them must be specially told off to conduct and maintain the electric generating system, and this duty must not in any case fall upon the operators.

(d) *Voltmeter*.—The switchboard belonging to the electric generating system must include an absolutely reliable voltmeter and ammeter.

ART. 5.

Location of the Wireless Telegraph Station—Cabin.

(a) *Location*.—The wireless station must be installed whenever possible on the upper bridge, not too much towards the stern of the ship because the revolutions of the screw produce vibrations which hinder the reception of feeble signals. As far as possible a location shall be chosen free of smoke-stacks, chains, metallic fittings and, as far as possible, out of reach of the waves.

(b) *Cabin*.—This must be solid and well built, perfectly watertight and of a sufficient size to comfortably contain the apparatus, and to serve in case of need as quarters for the operators, besides being sufficiently sound-proof to allow of the reception of faint signals.

The motor alternator system of the sending station must be enclosed in a cupboard sufficiently sound-proof to prevent the noise made by its revolutions interfering with reception; the latter ought to be possible without involving any stoppage of the generating machine.

It is advisable to quarter the operating staff in the wireless cabin. This arrangement allows

of the most rapid action in the case of mishap and consequently affords greater security.

If circumstances do not permit operators to have their bunks made up in the wireless cabin, choice shall be made for their location in a position as near as possible to the wireless station and on one of the upper decks.

The cabin must be fitted with an emergency lighting system independent of the ship's electric generating set, petrol lamps, candles, etc. The operator must always have ready to hand means for getting a light. A ship's lantern must be at the disposal of the operator in the wireless cabin, so that in case of need he may proceed during the night to overhaul the exterior apparatus.

Arrangements should be made that no light can, during the night, filter through to the outside, when the doors of the wireless cabin are opened. (Thick black curtains should be used or automatic light stoppers, operating as soon as the doors are opened.)

The wireless cabin shall be fitted with a ship's chronometer which must always show Greenwich mean time. (G.M.T.)

Easy and rapid access to the roof of the wireless cabin must be provided by an iron ladder so as to enable ready verification of antennæ connections, lead-in insulators, etc.

It has been observed that submarines when bombarding a vessel generally endeavour to destroy the wireless cabin at the first opportunity. These cabins are conspicuous on account of the outline formed by the insulators leading down from the antenna. It will be found an excellent precaution to hide these insulators by (e.g.) awnings which follow the contour of the cabin and overlap its roof.

(c) *Means of Communication*.—The operator must not leave the wireless cabin and abandon his listening-in, in order to receive a communication from the officer on watch, or in order to hand to him a message which he has received, or to ask for current, etc.

It is equally necessary that a third party shall not intervene in the transmission of these messages, such a course being always liable to lead to dangerous errors.

A telephone or speaking tube must therefore be erected between the wireless cabin and the bridge.

If the operators have their bunks fitted in a place apart from the wireless cabin, an electric bell shall be installed in their state room with a push in the wireless cabin, so as to give the radiotelegraphist on duty an opportunity of summoning his colleague.

If there be only a single operator, and if he sleeps in a separate cabin, an electric bell shall be installed in that cabin with a push on the bridge, so as to give the officer on watch means for calling the operator when the latter is not on duty.

All these means of communication must invariably be kept in perfect working order.

ART. 6.

Technical Conditions of Installation.

(a) *Erection and Fitting*.—The rapid execution of erection under present conditions must not interfere with the elementary precautions of assuring the efficient working of the wireless station and providing against risks of short-circuiting and fire.

The connections must also be carefully made by means of a flexible cable insulated by two layers of vulcanised rubber, the whole covered with lead, with an insulation resistance of at least 600 megohms per kilometre. This cable shall moreover be mechanically protected by

a tube of iron or steel in every part where it is exposed to deteriorating influences.

A special line leading from the switchboard of the electric generating group shall furnish power to the wireless station. No other circuit must be connected up with this line except, in cases of emergency, a lighting circuit for the wireless cabin. Fuses must in this case be inserted in order to protect the lamp or lamps. A bi-polar interrupter and contact-breaker must be placed :

(a) In the machine-room, on the switch board of the electric system in the special circuit serving the wireless station.

(b) Within the wireless station itself in the circuit carrying the continuous current.

(c) Within the wireless cabin in the alternating current circuit at the ends of the alternator.

In the case of the two contact-breakers placed in the continuous feed circuit, the one on the switchboard of the electric generating system, and the other in the wireless cabin, the former must be considerably stronger than the latter in order to avoid its replacement with fusible material when faulty manipulation (or some accident to the wireless instruments) results in the melting of the fuses in the wireless cabin.

The switchboard of the wireless station shall be fitted with the necessary measuring instruments for observing the working of the machines and the wireless apparatus.

Nevertheless, it is permissible to replace continuous and alternating current voltmeters on this switchboard by pilot lamps of appropriate voltage.

The continuous current voltmeter—or the pilot lamp which takes its place—must give the operator constant opportunity for assuring himself that the generator is in working order and that there is no interruption in the circuit which feeds the wireless station.

(b) *Machines—Low Frequency Circuit.*—These machines and this apparatus must be very carefully insulated between the windings and between the windings and the frame. They must be submitted to a test for dielectric strength under a continuous voltage of 1,000 volts applied for five minutes when cold.

(c) *High Tension Apparatus.*—The insulation must have and must preserve a high degree of efficiency. This apparatus must be able to stand the following test: The sending station must be operated with the antenna circuit disconnected, and with each terminal of the secondary of the transformer earthed in turn for a period of five minutes, together with its core and metallic casing. Both machines and instruments must be effectively protected against any excess of strain due to the high frequency circuits.

(d) *Accumulator Batteries.*—It is strictly forbidden to switch any circuit whatsoever—lighting, ventilating, etc., on to the accumulator batteries of the principal set, or on to the battery of the emergency set, or to transfer any units of the battery elsewhere; these must never be used, for instance, for lighting purposes during a temporary stoppage, etc.

The only allowable exception consists of the connecting on to the battery of the principal set—if such a source of supply be utilised for that set—a pilot lamp of 20 watts at the maximum which takes the place of a voltmeter. Any such lamp must be protected by a special double-pole fuse.

No pilot lamp may under any circumstances be fitted on the battery of the emergency set.

Operators are held personally responsible for any misuse of their batteries.

The batteries of accumulators must always be kept completely charged during the voyage. This complete charging must be effected before departure, and if necessity arises they must be re-charged every day, or every other day according to the amount of use that has been made of them.

The accumulator switchboard must include :

(a) An ammeter showing the strength of the charging and discharging currents.

(b) A well-calibrated voltmeter connected to the terminals of the battery.

So far as the battery of the emergency set is concerned it is always permissible to omit the ammeter when the charging current is automatically limited to one or two values determined by the introduction of fixed resistances in the circuit.

Since the battery of the emergency set is very seldom at work care must be taken to ensure its maintenance in good order.

For this purpose a special apparatus must be provided for discharging the battery through a resistance.

This discharge shall be carried out at Ports of Call, and care must be taken immediately afterwards to re-charge the battery completely.

Steps shall be taken to make sure of the preservation in good order of the batteries during the periods when the ship's dynamo has stopped working.

(e) *Syntonsisation.*—Regulations against sending out signals in the larger number of allied ports and in certain neutral ports plainly renders difficult a proper tuning up of the ship's station after installation.

Nevertheless, it is easy to effect an approximate syntonsation without infringing the above-mentioned regulations by simply exciting the aerial with the help of a suitable buzzer. It is, therefore, formally recommended that this buzzer tuning method shall be used after installation, preparatory to the operation being completed after the ship has left the port. The operator will be guided in these tests by the reading of his antenna ammeter.

This syntonsation must be made for each of the two regular wavelengths (300 and 600 metres) and for each of the three antennæ, the regular, the single strand, and the emergency.

Tables clearly indicating the different tuning adjustments must be posted up in the cabin in clear view of the operator.

(f) *Plans of the Connections—Working Arrangements.*—Amongst the documents carried by the station, there must be included detailed plans of the connections of the installations and of all the apparatus, with the object of helping operators in looking for and rectifying any faults that may occur.

Radiotelegraphists must thoroughly understand the working of their station. They must practice themselves in establishing instantly, and without experimentalisation the necessary connections for bringing into action the emergency set, the emergency aerial, different wavelengths, etc.

ART. 7.

Operating Personnel.

(a) *Nationality.*—The Belgian Government established on the 4th May, 1917, the following regulations concerning the nationality of the operating staff:—

(1) The radiotelegraphic stations of Belgian ships must be served, in principle, by operators of Belgian nationality.

(2) In default of Belgian operators the owners of stations may, at their own responsibility, and with the previous authorisation of the Belgian Government, have recourse to subjects of Allied nationality to the exclusion of neutral subjects, until they have been able, with as little delay as possible, to replace them by Belgian subjects.

(3) It is only quite exceptional that a neutral operator may, under any circumstances, be allowed to fill a post on board. A specific request must be made in advance, if need be by telegram, and the owner of the station must furnish detailed references. He will be held responsible for any acts that may be committed by this employé.

In any case, any such authorisation will be valid solely for a single trip.

Demands for emergency authorisation must, if need arise, be addressed to: The Administrator of Belgian State Telegraphs, Radiotelegraphic Service, 15, Place de l'Hôtel-de-Ville, Le Havre, France. The telegraphic address of which is: Service Radiotelegraphique Etat Belge, Le Havre.

(b) *Qualification.*—Every operator, whatever may be his nationality, in service on board Belgian ships must possess the Belgian Radiotelegraphic operating licence of the first class, and have a good working knowledge of English.

(c) *Physical Qualifications.*—The special character of the service in times of war constitutes a complete bar against the employment of any operator not completely robust, or in full possession of all his limbs, or in fine anyone who is not physically perfect.

(d) *Disciplinary Measures.*—If an operator gives cause for any reasonable complaint on the part of the Belgian, or Allied Authorities, on the part of the owner of the ship, of the captain, of the owner of the station, etc., with regard to any misdemeanours committed in the course of the execution of his service, he may be disqualified, either temporarily or for the duration of the war, his licence being suspended for the period of his disqualification. A notice thereof will be sent to the Minister of the Interior if the individual so affected proceeds to appeal. If he has been suspended without pay from his functions as Radiotelegraphist on board Belgian ships he will immediately be placed at the disposal of the military authorities.

Operators are, moreover, subject to the Disciplinary and Penal Code of the Mercantile Marine.

ART. 8. *Organisation of the Service.*

(a) *Listening-in.*—During the whole length of the voyage listening-in must be completely continuous. This can only be assured by relays of two operators in watches of four hours on and four hours off. The operator on watch may not even temporarily quit his post in case of urgent need without having been replaced by his colleague not on duty. Nevertheless, if the supply of qualified operators belonging to Belgian, or Allied nations shall be temporarily insufficient, the owner of the ship may be exceptionally authorised to have the service carried on by a single operator. This latter must in that case so organise his listening-in as to receive all the war warnings which may affect the navigation of the ship, as well as radiotelegraphic time-signals at least once in the 24 hours.

Such an authorisation as this must be applied for to the Department of Railways, Marine, Posts and Telegraphs. The person so applying

must state the probable period which will elapse before he can recruit or train a second operator.

(b) *Carrying out of the Service.*—For the carrying out of the Radiotelegraphic Service operators are placed under the supreme authority of the commander of the vessel.

They are strictly forbidden to send out signals of any sort, or to answer a signal, even one of distress, without the authorisation or instructions of the officer on watch. They must never answer any station utilising the Telefunken system. No Allied vessel possesses a set of this type.

All transmission—obviously cases of distress excepted—must be made with the smallest amount of power compatible with the circumstances, so as to reduce as far as possible the zone in which the signals may be picked up by enemy sets, thus enabling them to determine the position of the ship.

All executive messages relating to navigation, as well as all distress signals, must be brought with all speed to the knowledge of the officer on watch *exactly as they stand*; the operator must never undertake to judge whether a message of this kind does, or does not, affect the navigation of his ship, the commander alone is the arbiter in such a matter.

Itinerary.—The operator on watch must make himself acquainted with the itinerary, the position and the course of the ship.

(c) *Duty in case of Distress.*—In the case of accident, explosion, etc., the operator, or operators, must immediately test their instruments to see if they are still in good working order. If the current of the ship's generator has failed they must switch on, without loss of time, the connections of the emergency set and test their antennæ. If the principal antenna be out of order, and if time presses, they must link up their gear with the emergency antenna, taking care to free it, whenever necessary, from all metal contact which may earth it, or from the principal antenna.

A trial with the auxiliary coil with direct excitation (plain aerial) will immediately inform the operator with regard to the quality and insulation of the antenna.

In a word, he must act in accordance with circumstances, so as to be able to send out his signal with the smallest possible delay; the gain of a few seconds may save the lives of all the passengers. It is only if the captain considers that sufficient time is available, and if the emergency antenna be not in sufficiently good order, that the operator may proceed to repair the principal antenna, switch on the single strand antenna, or even erect a make-shift antenna.

As soon as a set is ready to send, he must advise the captain and ask for orders, getting them *confirmed in writing*, and these orders must be followed exactly.

It is the paramount duty of the radiotelegraphist not to abandon his post so long as there is any possibility of sending or receiving; unless the commander has given him the order to do so in view of the imminent abandonment of the ship.

(d) At sea the operator must be ready at any moment to send out signals of distress with the smallest possible delay and with the maximum of energy and efficiency that the circumstances permit; he will make his arrangements accordingly. Thus for instance in the event of damage being done to the aboard-ship generator or to the principal set the emergency gear must be put into working operation.

No distress call may be radiated without the express order of the commander of the ship. It is absolutely necessary that the operator should remain collected at the critical moment of action, mishap or an attack. Upon him may depend the lives of all the passengers to say nothing of his own as well as the preservation of the ship and its freight.

He must never lose sight of the fact that it is useless to send out a distress signal without its being accompanied by the name of the ship in full and as exact an indication as possible of its position. The form of the distress call must follow strictly the instructions of the Naval Authorities in charge of all commercial ships.

Every positional error or change of position must also be radiated.

If an operator receives no answer to his distress calls he must repeat them with intervals of listening-in, and on each emission must recapitulate all the needful particulars. Should the operator conclude that his appeals are vain he should send out a new series of calls after having proceeded in the following manner. Considerably amplify the coupling between the primary oscillation circuit and that of the antenna so as to obtain an impure badly tuned and more damped emission, which stands the chance of affecting the reception of a larger number of stations and consequently of being picked up. It must be remembered, however, that the range of such an emission is less than that of a properly syntonised call. Recourse may also be had on occasions to the emergency gear with induction coil acting on a plain aerial.

Ship's Register.

(c) On every ship the operators should keep a register with numbered pages in which they will progressively enter the following particulars—showing the time in G.M.T. and the name of the operator on watch:—

(1) The start and finish of the watch of each operator as well as any interruptions, their duration and their cause.

(2) Any faults which may occur in the transmitting or reception gear, any lack of current, etc.

The nature and the cause of these mishaps must figure in the report, as well as the duration of the resulting interruption.

(3) The result of the periodic experiments conducted or some mention of the reason for which they have not been made.

(4) A record of all communications carried on with foreign stations and which did not affect their own ship.

It will suffice to make a simple record which will allow later on of these communications being reconstituted and identified. For example:—

17 h. 53 ABC de XYZ—27 mots code mqzr dpyr....

17 h. 56 XYZ demande repetition depuis bdpr, etc., etc.

(5) The complete text of all messages received regarding the navigation of the ship and communicated to the officer on watch.

(6) All distress calls picked up.

(7) The exact text of every message sent.

(8) If possible and if stations permit, in the case of accidents enter all details relative to the execution of the radiotelegraphic service (distress calls, replies, steps taken for safety, etc.).

An operator is forbidden to enter in the steamship register any translation into plain language of a coded text. His register must,

moreover, be verified and checked every day by the commander of the ship.

This register being by its nature essentially confidential must only be handed over to the Belgian and Allied authorities.

In the event of disaster operators must endeavour to save their ship's register, and if there be any risk of its falling into enemy hands they must throw it into the sea.

Account of Accident.

(f) In the event of its being necessary to abandon ship, or if the operator or operators are able to preserve their steamship register, they must address it to the Administration of Belgian Telegraphs at Havre through the intermediary of a Belgian Consul residing in the neighbourhood of the port at which they are disembarked. This register must not be sent by post. Whether the register has been sent or not, the operator (or operators) must in addition indite with as little delay as possible a report giving, with specific mention of dates and times, every detail relating to the execution of the radiotelegraphic service both before and after the accident (distress calls, life-saving procedure, etc.).

Mention must be made of what has happened to the ship's register, and if circumstances permit this report must be submitted by the operator, or operators, to the captain for his signature and he will make thereon any observations which he thinks fit. This document shall then be addressed by registered post to: l'Administration des Télégraphes belges Ministères belges, Le Havre (France).

Allocation of Operators.

(g) In the interest of the security of navigation it is well to maintain as far as possible the allocation of an operator to a specific ship or at all events to ships which ply under the same conditions, *i.e.*, between the same ports or countries.

Regard may be had for the purpose of this rule to temperaments in certain cases; for instance, it is advisable to consider the necessity of relieving operators navigating in tropic seas after long enforced idleness of a ship, or after illness, accident, leave, etc.

Confidential Character of Wireless Messages.

(h) Every operator must have taken the oath of observing the most absolute secrecy with regard to wireless communication under the penalty of Articles 149 and 150 of the Belgian Penal Code.

The attention of operators is expressly directed to the point that in time of war any detail relating to the radiotelegraphic service is of a character essentially confidential; every indication relative to the manner of framing and transmitting certain messages, to the presence of certain ships, to the routes followed, to convoys and their escorts, to distress calls, to sinking, etc., *in fine* everything which concerns navigation, must remain absolutely secret.

Every indiscretion coming to the ears of the enemy may have the most serious consequences.

The utmost discretion is therefore necessary, and more particularly in neutral countries and in the presence of neutral subjects—including amongst them their wireless men.

ART. 9.

Maintenance and Investigation.

Operators are responsible for the maintenance of radiotelegraphic installations. The

commander of the ship must accord them the help of the personnel on board necessary for the investigation and upkeep of antennæ apparatus, etc.

Every part of the radiotelegraphic installation must be constantly maintained in perfect order, special care being given where such parts are subject to high tension.

Periodic Tests.

(1) Twice a day, morning and evening, a test shall be carried out of the principal transmitting set and of the emergency set in local circuit; that is to say, the antenna being disconnected. This test (signals or continuous sending) shall last for the length of time which the operator judges necessary to make sure that all is in order.

(2) Every unnecessary message is forbidden on the high seas. In order to make certain of the satisfactory working of the station (including radiation and insulation of antennæ) opportunity shall be taken at the moment of starting the voyage for proceeding rapidly and at irregular intervals to the following emission tests.

Choice must be made of a time when the traffic between neighbouring stations is small and care must be taken not to choose the hours when war warnings are being issued. These tests shall be reduced in duration to the minimum. They shall proceed as follows:

(a) With the principal set on the principal antenna send out a call of a few seconds; the deviation of the amperemeter of the antenna will allow an operator to judge immediately if the installation be working well (it is unnecessary to keep up this sending until the needle of the apparatus becomes absolutely motionless). (b) With the coil of the emergency set excite the principal antenna in plain aerial; a long white spark strong and crackling will indicate that the insulation of the antenna is good, the emission of short sending will suffice. (c) Make the same test to verify the insulation of the emergency set.

(3) Make a daily verification of the spare detector.

In case of any parts of a machine or apparatus being found to be out of order take steps to remedy this at once. Never leave it over for later on.

ART. 10.

Spare Material—Gear.

(a) *Spare Material.*—The Radiotelegraphic Station must contain the following material:—

(1) A complete transmitting condenser (primary circuit) of a fixed capacity and ready for service.

(2) An aerial lead-in insulator (or a spare tube).

(3) Antenna wire, insulators and accessories in sufficient quantity for the construction of a new main antenna.

(4) A telephone with double headgear and two leads.

(5) A galvanometer for the testing of circuits.

(6) Various wires and ropes.

(7) Various accessories and spare parts, etc.

(b) *Gear and Tools.*—The operators must have at their disposal an ample supply of tools, especially such as are necessary for soldering antennæ and apparatus; their tool chest must contain *inter alia* a hydrometer for verifying the density of the accumulator electrolyte, and a portable and accurate voltmeter graduated from zero to 3 or 4 volts in order to measure the individual cell voltages.

ART. 11.

Special Arrangements.

On board ships coming under this category absolutely special precautions must be carried out.

The wireless cabin must *de rigueur* be located on the upper deck and built in such a way as to be distinct and airy; the insulation of the antennæ and of the metallic stays must, moreover, receive special attention.

Supplementary precautions may be imposed in accordance with circumstances.

ART. 12.

Various Arrangements.

Modifications to Installations.—Ship installations must not be modified without the previous assent of the Department of Railways, Marine Posts and Telegraphs.

Nevertheless, in case of partial (or total) incapacity for working, a new installation may be temporarily erected, provided that it conforms with the conditions imposed for the authorised station.

A new request for authorisation must be sent in without delay, wherein shall be set forth the necessity for having carried out any modification of the installations approved.

The licensee of a board-ship station (*i.e.*, the holder of an authorisation to instal, or of a sea-going radio licence) is obliged at all times to follow the instructions given by the Department of Railways, Marine, Posts and Telegraphs, in whose control are vested all ships' stations, and to carry out within the specified times all modifications or additions which are judged necessary, not only with regard to installations and apparatus but also with regard to the manning, qualification and service of the operating personnel.

At need, the Department above mentioned shall carry out, or cause to be carried out, at the expense of the owner, all testing, repair, modification, or addition of which the execution is judged necessary to ensure good working of the installations or the safety of the ship, without any responsibility under this heading being incurred by the State.

Lifebells.—The wireless cabin, whether or no it serves as the operators' state room, must contain for each of the radiotelegraphists a lifebelt of an efficient and approved type.

Other life-saving apparatus of the same character shall be at the disposal of operators in the places in which they are located if they do not sleep in the wireless cabin.

These life-saving appliances must be always kept in perfect order.

ART. 13.

Measures of Discipline and Control.—The officials of the Belgian Government duly appointed for that purpose have, at all times of the day or night, not only in Belgian territorial waters, but outside those waters, as well as on board Belgian vessels in foreign ports, free access to the installations of the authorised ship station and free disposal of the documents relating to the service of that station.

The owner (that is to say, the holder of an authorisation for installation or of a radiotelegraphic licence) as well as his representative, employees, charterers, captains, officers, operators, masters and personnel are bound to facilitate by every means the work of supervision and control vested in these officials.

Under its controlling rights, the Department of Railways, Marine, Posts and Telegraphs

may demand that the wireless register of the ship be forwarded to it.

Access to the Wireless Cabin.—Access to the wireless cabin is strictly forbidden to the personnel of the ship, except in such cases where access is necessary for the purposes of duty; and the same interdiction applies to any foreigner with the exception of the authorised naval authorities of Allied Powers.

In the absence of the radio officers, the cabin must be locked up after the windows have been closed on the inside, the key shall be handed to the commander of the ship or, in his absence, to the chief officer.

INFORMATION TO BE FURNISHED IN THE REQUESTS FOR AUTHORISATION APPERTAINING TO RADIOTELEGRAPHIC STATIONS.

ART. 14.

Applications to be sent, under registered cover, to the Minister of Belgian Railways, Marine, Posts and Telegraphs, at Sainte-Adresse, Seine-Inférieure, France.

(a) *Where a Ship is not already furnished with Wireless:*—

Applicant.—Social status, name, Christian names; address in Belgium; present address.

Ship.—Name, method of propulsion (steamer, sailing vessel, motor launch), net tonnage, speed, business, itinerary, whether carrying passengers regularly or occasionally; whether on occasion freighted with volatile and inflammable goods.

System of Apparatus.—What system of apparatus do you purpose installing on board your ship? Name and address of the supplier of the installation and apparatus. Name and address of the exploiter of the station.

Nature of the Installations.—Here give a description of the various parts and arrangements of the proposed installation, with plans or the connections and apparatus.

[N.B.—Descriptions and plans must be of such a character as to indicate whether the proposed installations conform to the prescribed conditions.]

The power available at the terminals of the wireless alternator (voltage and current); frequency of current.

Number of sparks per second.

Minimum range by day of the stations as estimated by the supplier.

Constitution of the emergency set.

Accumulator battery of the emergency set, number of cells, type, voltage, capacity, in ampere-hours.

Does the sending set include a battery of accumulators?

Number of cells, voltage capacity in ampere-hours.

Antenna.—The form and approximate dimensions of the main antenna. How is it proposed to instal the emergency antenna? Where will it be fixed? Its shape and approximate dimensions.

Electric Generating System.—If an electric generating system exists on board, show what kind of motor it carries (steam, petrol, etc.).

Power, voltage, and method of excitation for the dynamo.

The power available for feeding the wireless station.

Where is this electric generating system located?

If it is necessary to instal a special electric generating system:—

Name and address of the firm which supply it.

A description and plan of the system, type of motor (steam, petrol, etc.).

Power, voltage and method of exciting the dynamo.

Erection of the Station.—Where is it planned to instal:—

(a) The wireless cabin (are you constructing a special cabin or are you adapting one already existing)? On what deck? In what place? (Here add a plan and elevation.)

(b) The accumulator battery.

(c) The electric generating system (if a separate system is necessary).

(d) Operators' quarters.

Operating Personnel.—What qualified persons have you available to work your station?

Time for Erection.—How long a period do your suppliers need for the delivery of the material and for installing it on board your vessel?

About what time and in what port will this installation be set up?

The Proposed Signalling Arrangements.—Call letters—normal range in nautical miles. Wireless system and the character of emission. Wavelengths. Nature of services. Hours of service.

Board-ship charges: per word in francs.

Board-ship charges: minimum per radio-telegram in francs.

(b) *Where a vessel is already furnished with a wireless station that requires modification or completion in conformity with the stipulations of the present regulation.*

Applicant.—Social status, name and Christian names; address in Belgium; present address.

Ship.—Name, method of propulsion (whether steamer, sailing boat or motor-launch), net tonnage, speed, nature of traffic, itinerary; whether it regularly or occasionally carries passengers; whether on occasion freighted with volatile and inflammable articles.

System of Apparatus.—What is the system of apparatus installed on board your ship? Name and address of the supplier and of the installer of this apparatus. Name and address of the exploiter of the station.

Nature of the Installations.—Add a description of the various parts and make-up of the existing installation with a plan of its connections and apparatus.

What are the modifications you propose introducing to put it in accord with the conditions of the present regulation?

[N.B.—Descriptions and plans must allow of its being seen whether the installation and proposed modifications are in conformity with the new conditions laid down.]

Power available at the terminals of the alternator (voltage and current); frequency of the current.

Number of sparks per second.

Minimum range by day of the existing station.

Is there an emergency set? What is its constitution?

The accumulator battery of the emergency set, the number of cells, type, voltage, and capacity in ampere-hours.

Does the principal set include an accumulator battery?

Number of cells, type, voltage, and capacity in ampere-hours.

Antenna.—Form and dimensions of the principal antenna.

How is it proposed to instal the emergency antenna?

Where will it be fixed? The form and approximate dimensions thereof.

Electric Generating System.—What sort of motor does it carry (steam, petrol, etc.)?

Power, voltage and method of exciting the dynamo.

What is the power available for feeding the wireless installation?

Is the electric generating set installed to serve solely the wireless station? Or is it to supply the lighting of the ship, electric motor-pumps, ventilators, etc.?

Where is the electric generating system installed? On what deck?

Location of the Station.—Where is it proposed to instal:

(a) The wireless cabin: on what deck? at what point? (Include here diagrams in plan and elevation.)

(b) The accumulator battery of the emergency set, as well as that of the principal transmitting set (if it carries one)?

(c) Operators' quarters?

Operating Staff.—What qualified persons have you at your disposal for working the station?

If you have on board only a single Belgian operator, how soon can you arrange to have the station worked by a second Belgian radiotelegraphist, or provisionally by one of Allied nationality?

Time Occupied by the Modifications.—How long do you estimate your suppliers and workers will take in modifying and completing your installations to accord with the conditions of this new regulation?

About what date and in what port will these modifications probably be carried out?

F APPLICATION OF THE DECREE OF THE 10TH SEPTEMBER, 1918, RELATIVE TO SHIPS' LICENCES,

CIRCULAR NO. I.

The attention of shipowners is directed to the fact that in pursuance of Article V of the Decree of the 10th September, 1918, relating to shipping licences, Belgian vessels of 1,500 tons or over must be fitted with a radiotelegraphic station for the transmission and reception of ether messages through the agency of a competent personnel. The erection of these stations, their constitution, their operation, their supervision, etc., are regulated by international agreements and by Belgian laws and regulations in matters of radiotelegraphy.

With as little delay as possible, and at latest before the 15th November, 1918, every owner of a vessel liable to the above-mentioned obligation must, in conformity with Article I of the Royal Decree of November, 1913, deposit under registered cover, addressed to the Department of Railways, Marine, Posts and Telegraphs of the Belgian State, located at Sainte-Adresse, Seine Inferieure, France, a request for authorisation to instal a radiotelegraphic station.

ONE SEPARATE REQUEST MUST BE MADE FOR EACH VESSEL.

Directions with regard to the particulars necessary to be furnished in such requests for authorisation will be found at the close of the administrative regulations affecting wireless telegraphy, dated 15th October, 1918.

The Department of Railways, Marine, Posts and Telegraphs, having regard to national interests and to the arrangements concerning apparatus and operators, shall settle the order in which vessels shall be fitted with their

radiotelegraphic station and shall assign to each one of them the date at which it shall be completely installed and in a perfect condition for working.

The attention of shipowners is specially directed to the conditions of Articles 1 and 2 of the Royal Decree of the 3rd November, 1919, which will be very strictly enforced. The authorisation for making installations must be obtained before any measure can be taken by the interested parties with the object of initiating the work.

A radiotelegraphic licence shall be granted to the owner of a vessel when the installations have been recognised as conforming to the conditions imposed. This licence will be granted for one or several voyages, or for a certain fixed period. It will be cancelled if it be established at any moment that the installations have not been set up and worked in accordance with the conditions stipulated in the licence or in a later regulation.

The licensee (one who benefits under an authorisation for a wireless installation or of a radiotelegraphic licence) shall be bound at all times to follow the instructions given him by the Department of Railways, Marine, Posts and Telegraphs, and must carry out within the specified period all modifications or additions which are judged necessary, both with regard to installations and apparatus, so far as concerns its material, and the qualification and service of the operating staff.

Whenever needful the above-mentioned Department shall initiate, or shall cause to be initiated, at the cost of the licensee, any verification, repair, modification or addition which may be judged necessary to ensure the satisfactory working of the installations or the security of the ship without involving any responsibility therefore on the part of the State.

Except with special permission previously obtained, board-ship stations must be worked by specialised operators of Belgian nationality. Telegraph Administration.

No. 1665 R.

Dated at Havre, 21st October, 1918.

CIRCULAR LETTER TO SHIPOWNERS WHOSE VESSELS ARE ALREADY FITTED WITH A RADIOTELEGRAPHIC STATION.

GENTLEMEN.—Article V of the Decree of the 10th September, 1918, relating to ships' licences makes the granting of these permits subject to certain conditions affecting the manning and conditioning of the ship.

The Circular No. 1 addressed to shipowners has brought to your notice that, in conformity with Article V above, every Belgian seagoing vessel above 1,500 tons net must be fitted with a radiotelegraphic station in charge of a competent staff.

You will have found annexed to the Circular in question the text of certain arrangements which regulate the erection, working and conduct of the stations.

The Decree shall come into force on the 15th October, 1918. A certain amount of delay will be allowed you for modifying the radiotelegraphic installations already in existence on board Belgian vessels and to complete the engagement of the operating staff in accordance with the stipulations of the Belgian administrative regulations with regard to radiotelegraphy under date of the 15th October, 1918.

On the expiry of these delays all wireless authorisations or licences issued previously will expire and be cancelled.

Kindly forward with as little delay as possible and at latest by the 15th November, 1918, under registered cover, addressed to the Department of Railways, Marine, Posts and Telegraphs, located at Sainte-Adresse, Seine Inférieure, France, a fresh request for authorisation with regard to radiotelegraphy. *A separate request must be made for each ship.*

Directions as to particulars you are required to furnish in your request for authorisation will be found at the close of the Administrative Regulations dated 15th October, 1918.

After examining your request I will let you know the length of time granted you for installing and working your present station under the rules newly imposed.

A fresh radiotelegraphic licence will be granted to the ship as soon as we have verified that these conditions are fulfilled.

In order to guard against mistakes and loss of time, all correspondence relating to radiotelegraphic installations (requests for particulars, personnel, licences, etc.) must be addressed directly to:

Service de Radiotélégraphie de l'Etat Belge
Administration des Télégraphes,
15, Place de l'Hôtel de Ville,
LE HAVRE (France);

and telegrams to:

Service Radiotélégraphique Etat Belge
LE HAVRE (France).

Please acknowledge receipt of this letter.

Your obedient servant,
(Sgd.) Belgian Inspector-General of
Telegraphs for Minister of
Marine, Posts and Telegraphs.

MINISTERIAL DECREE REGARDING AMATEUR WIRELESS INSTALLATIONS.

THE MINISTER OF RAILWAY, MARINE, POSTS
AND TELEGRAPHS.

DECREES:

G The conditions regulating the establishment and the working of receiving wireless stations are fixed in accordance with the following:—

ART. 1.—Requests for authorisation must be addressed to the Director-General of Telegraphs and Telephones at Brussels.

The person making the request must indicate the precise place and functions of the proposed station and must furnish for approval a description of the apparatus.

The applicant must prove if such should be the case that he is of Belgian nationality.

ART. 2.—Authorisation is granted:—

(a) By the Director-General of Telegraphs and Telephones when the applicant be of Belgian nationality.

(b) By the Minister of Railways, Marine, Posts and Telegraphs to whom the request should be transmitted by the Director-General with his advice, if the applicant be a foreign subject.

ART. 3.—The station authorised will be utilised exclusively for reception of time and weather signals; the transmission of any other electrical signal is formally prohibited.

The use of amplifying valves is not allowed. However, the Administration of Telegraphs and Telephones may, in certain particular cases, which must be submitted for approval and after enquiry and examination of the reasons given by the applicant, grant an authorisation to use such apparatus under conditions to be determined by the Administration.

ART. 4.—Under the penalty of immediate withdrawal of the authorisation, the applicant must scrupulously observe, and cause others to

so observe, the secrecy of any information which is not intended for public use.

The contents of radiotelegrams other than meteorological telegrams which will eventually be received by the Postal Authorities, must be neither written nor divulged to anyone outside the officials appointed by the Administration of Telegraphs and Telephones, or of the judicial authority. The withdrawal of the authorisation as a result of a contravention of this Law, will be eventually carried out without prejudice to the applicant of any punishment provided for by Law.

ART. 5.—The applicant is forbidden to receive any payment or remuneration whatsoever for the reception of information by means of the station authorised.

ART. 6.—The Government reserves to itself the right to examine installations authorised. When necessary the applicant will grant to the duly commissioned delegates of the Government free access to the said installations, and will facilitate by every means in his power such examination by the delegates.

ART. 7.—The applicant alone is responsible for all consequences whatsoever, resulting from the present authorisation, not only from the point of view of mistakes which may be made, but also in regard to all matters connected with patent rights or of any other rights of a third party. The responsibility of the State is, and will remain, entirely separate in connection with the present authorisation.

ART. 8.—The applicant is held responsible for notifying the Director-General of Telegraphs and Telephones of all alterations which he proposes to make to his apparatus. This must not be changed without the previously obtained consent of the Administration of Telegraphs and Telephones.

This administration may, however, at any time, and for whatever cause, suspend or revoke the authorisations granted, without the payment of any indemnity whatsoever, or without giving any reason for such suspension or revocation.

This permission neither includes any privilege either for this particular authorisation or for any subsequent authorisation of the same nature.

It is not transferable without the express permission in writing of the Administration of Telegraphs and Telephones.

At the request of the Administration of Telegraphs and Telephones the applicant must immediately place his apparatus out of working order.

ART. 9.—The applicant must hold himself responsible for all expenses and charges whatsoever, occasioned by permission granted to him.

ART. 10.—The applicant will pay a fixed annual fee of 20 francs for every authorised receiving station.

The first payment will be made before obtaining the authorisation; it will cover the remainder of any year from the day of the authorisation to the following December 31st.

Subsequent fees will be paid during the month of January of each year. No refund will be made by the Treasury no matter for what reason the use of the apparatus previously authorised be discontinued.

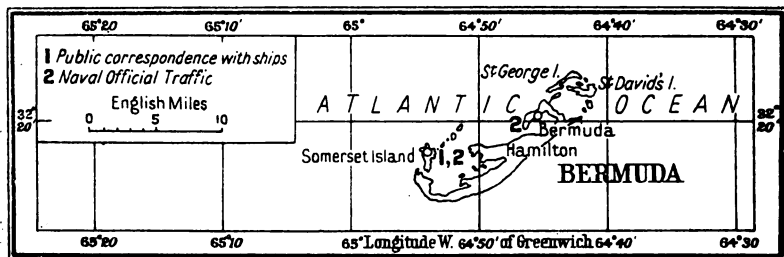

This applies equally in the case of the station being discontinued by order of the Administration of Telegraphs and Telephones.

ART. 11.—Stamp Duties and subsequent Registration Fees will be charged to the applicant.

Done at Brussels, August 7th, 1920.
(Signed) P. POULLET,
The Minister.

BERMUDAS (THE)

A BRITISH Colony with representative Government, consisting of a group of 360 small islands (about 20 inhabited) the Bermudas lie 520 miles east of North Carolina and 677 distant from New York. They are noted for their climate and scenery and constitute a favourite winter resort for Americans. The area is a little under 20 square miles, and the capital city is Hamilton.

ADMINISTRATION.

There are two wireless stations working in the Colony. Wireless telegraphy is administered under the following enactments:—

A—The Wireless Telegraph Act, 1903.

B—The Wireless Telegraph Act, 1909.

THE WIRELESS TELEGRAPH ACT, 1903.

A From and after the passing of this Act it shall not be lawful for any person in these islands to transmit or receive messages across the seas (by an Act of 1910 this was amended by the addition of the words "or between places in these islands") by means of any wireless telegraph, or to install, erect, construct, establish, or maintain in these islands any instrument, apparatus, or other thing for the purpose of transmitting or receiving such messages, unless such person shall hold a written licence from the Governor authorising the same, and such licence shall be in force and unrevoked; and any person who shall offend against the provisions of this enactment shall be liable, on summary conviction before any two justices, for a first offence to a penalty not exceeding £25, and for a second or subsequent offence to a penalty not exceeding £100.

2. Any licence issued by the Governor under this Act may at any time be revoked by him by a written notice given to the person to whom such licence was issued, or by the publication of such revocation in the *Gazette*, and after such revocation such person shall not be entitled to any privilege or protection by virtue of such licence.

3. Any licence under this Act may be issued subject to such conditions and restrictions as the Governor may from time to time consider desirable in the public interest.

4. If any Justice of the Peace shall be satisfied from the information on oath of any credible person that there is good reason to believe that any of the provisions of the first section of this Act have been or are being violated, he may issue a search warrant to any constable or constables authorising and

requiring him or them, with or without assistants, at any hour of the day or night to enter into, and go through and search, inspect and examine any premises where such violation is suspected to have been or to be committed for the purpose of ascertaining whether such violation has been or is being committed; and if, upon such search, any instrument, apparatus, or other thing apparently used, or capable of being used, for the purpose of transmitting or receiving messages across the sea by wireless telegraphy shall be found, it shall be lawful for such constable or constables to seize and carry away, or otherwise to secure the same: and if, upon a hearing before any two Justices of the Peace, they shall adjudge and determine that any such instrument, apparatus, or other thing, has been used, or is capable of being used, for either of the purposes aforesaid, they may adjudge the same to be forfeited, and such forfeiture may be in addition to any penalty which may be imposed on any person under this Act in respect of such instrument, apparatus, or other thing.

5. Any instrument, apparatus, or other thing which shall be adjudged to be forfeited under the provisions of this Act shall be sold or otherwise disposed of in such manner as the Governor shall direct, and if sold the net proceeds of such sale shall be paid into the public treasury, after payment thereof of such reward, if any, as the Governor shall award to the informer, or to any constable or constables executing the search warrant under which such articles were seized.

6. This Act shall continue in force until and throughout the last day of December, 1907. (By the *Wireless Telegraphy Act Continuing Act, 1907*, the Act of 1903 is continued in force indefinitely.)

THE WIRELESS TELEGRAPH ACT,
1909.

B The Governor having informed the Legislature that a despatch has been received from the Secretary of State for the Colonies drawing attention to the desirability of making Regulations as to the use of Wireless Telegraphy apparatus on merchant ships, whether British or foreign, while in the territorial waters of these islands, it was deemed expedient to confer on the Governor in Council the power to make such Regulations as may be necessary for the purpose aforesaid, and the following Act came into force in March, 1909:—

1. It shall be lawful for the Governor in Council to make regulations as to the use of wireless telegraph apparatus on merchant ships, whether British or foreign, while in the territorial waters of these islands, for preventing such apparatus being worked so as to interfere with naval signalling, or with the working of any wireless telegraph station lawfully established or worked in these islands, or with the transmission of messages between any such station and ships at sea.

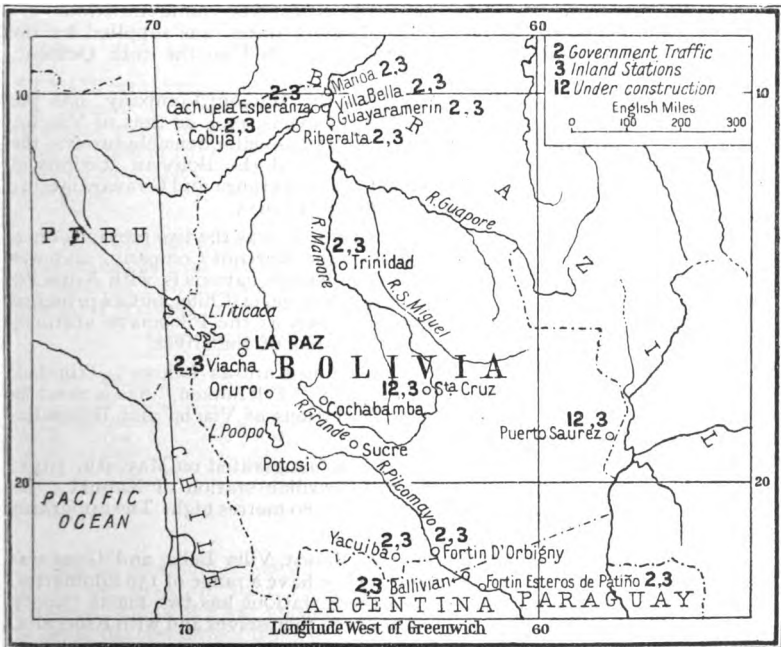

2. If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships, whilst in the territorial waters of these islands shall be subject to such further regulations as may be made by the Governor from time to time, and such regulations may prohibit or regulate such use in all cases, or in such cases as may be deemed desirable.

3. Any regulations made under this Act may impose fines for any breach thereof not exceeding £20 for a single offence, and not exceeding £5 a day for a continuing offence, and such fines shall be recoverable with costs in any Court of Summary Jurisdiction consisting of any two Justices of the Peace.

4. All regulations made under this Act shall become operative on the date of their publication in the *Gazette*, or on such later date as shall be fixed by the regulations or the purpose.

BOLIVIA

THIS State possesses no seaboard, and, therefore, no maritime stations. The total area of the Republic is reckoned at 703,421 square miles. Geographically it lies between latitude 8° and 23° S., its longitude extending from 57° 30' to 73° W. The population is estimated at about two and a half millions. Lake Titicaca, a wonderful stretch of water, about 150 miles in

COPYRIGHT GEOGRAPHICAL LITHO 55 FLEET STREET LONDON E.C.4.

length and breadth and 12,545 feet above the level of the sea, marks the boundary between Bolivia and Peru, and still forms an important means of communication between the countries, although the most direct means of transit consists of the railway between Arica (Peru) and La Paz, the capital of Bolivia.

The Government consists of a President, two Vice-Presidents and five Ministers of State.

CONTROL.

Wireless telegraphy forms at present a branch of the Posts and Telegraphs, which is administered by the State.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
Mr. Isaac Cariaga Lanza ..	Minister of Government and Public Works	La Paz
Mr. R. Villalobos	Director-General of Posts and Telegraphs	La Paz
Mr. Humberto Asin	Chief of Radiotelegraphic Service	La Paz

ORGANISATION.

Bolivia entered the International Telegraphic Convention on June 1st, 1907, in the fourth category, and gave in its adherence to the International Radiotelegraphic Convention on October 29th, 1915.

At present the following stations are in operation: The station of Viacha, which owing to its proximity to the capital is the first or central station of the Republic. The power is 15 kilowatts, it has four masts of 80 metres each, the working range is 1,200 kilometres during the day, it communicates with the Peruvian stations of Lima and Cachendo, and with the Bolivian stations of Riberalta, Yacuiba, Trinidad, whilst its communications are received at all offices of the Republic. The apparatus was supplied by the Marconi Company, and the service was inaugurated on the 20th October, 1916.

The station of Riberalta, installed by the Marconi Company, has the same power, the same height and number of masts, etc., as that of Viacha, communicating with the Brazilian stations of Porto Velho, Sena Madureira, the Peruvian stations of Yquitos and Cachendo, and the Bolivian stations of Viacha, Cobija, Trinidad, Villa Bella, Cachuela Esperanza and Guayaramerin; the station has been in operation since October, 1915.

The station of Yacuiba, also, is of the same type as the two previous ones. The work was commenced by engineers of the Marconi Company, and was concluded in August, 1915. Its service with foreign nations is with Asuncion (Paraguay), and it also communicates with Antofagasta (Chile), but its principal aim is to communicate with the stations known as the Pilcomayo stations, so named from their being situated on the banks of that river.

The other stations in order of importance are as follows: Trinidad, the power of which is 6 kilowatts, and system "Telefunken," has a mast 80 metres high, and communicates with the stations of Viacha and Riberalta. It was installed in 1919.

Cobija.—The service of this station was inaugurated on May 4th, 1919; it communicates with Riberalta and the Brazilian station of Xapury. Its power is 5 kilowatts, and it is fitted with a mast 80 metres high. The apparatus was supplied by the Marconi Company.

The stations of Cachuela Esperanza, Manoa, Villa Bella and Guayaramerin are of the "Telefunken" system. They have a range of 150 kilometres, their power is 4 kilowatts, and each of these stations has two masts twenty metres in height. They communicate between themselves and with Riberalta, and were opened in January, 1920.

Laws and Regulations—Borneo (British)

The stations called the Pilcomayo stations are installed at the military forts of Ballivian, D'Orbigny and Esteros. That of Ballivian is first which was installed in the Republic, the date being February 21st, 1917. The system of the three stations is the "Telefunken," and their power is (six-tenths of a kilowatt) in the primary, notwithstanding which they communicate perfectly at a distance of 380 kilometres, by day, although in this district there is 90 per cent. of high wood. The height of the masts is 20 metres each, there being two masts to each station.

At each of the 15 kilowatt stations, which intercommunicate, a chief has been appointed who supervises the personnel of the neighbouring stations of lesser power, for which it has been necessary to create three divisions, which have received the names of Northern, Central and Southern Radiotelegraph Zones. Included in the first are the stations of Cobija, V. Bella, Cachuela Esperanza, Manoa and Guayaramerin, the chief of which stations is stationed at Riberalta; to the second zone, viz., the Central zone, belongs only Trinidad, having Viacha as its central station, and finally Yacuibá which is the chief station of the Southern zone, in which are included the stations of Ballivian, Fort D'Orbigny and Esteros. Frequently this last mentioned zone is called the Chaco zone.

A radiotelegraphic school was established during 1917 in La Paz, under the direction of Mr. Asin, the Superintendent of Radiotelegraphy. There are no wireless clubs or societies in the Republic.

ADMINISTRATION.

At present no special laws or regulations have been passed for the administration of wireless, but a Bill for that purpose is in course of being drafted.

BORNEO (BRITISH) **Protectorate of Sarawak**

THIS semi-independent State lies on the north-west coast of the island of Borneo. Its seaboard is 400 miles, its area 50,000 square miles. The romantic story of how the present hereditary dynasty was initiated under Raja Brooke in 1842 is too well known to need repetition. It is now a British Protectorate, the Civil Service being composed of British officials selected by the Raja.

CONTROL.

The wireless department is in the sole charge of the Post Office, the Postmaster-General having been appointed "Manager" in August, 1916, and the stations having been opened for general use in April, 1917. There are four land stations in Sarawak, all directly controlled by the Government.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
Mr. J. R. Barnes	Manager	Kuching.
Mr. P. E. Cox	Assistant Engineer	Do.
Mr. C. S. Were	Chief Operator	Do.
Mr. H. G. Gray	Second Operator	Do.
Mr. J. M. Hoover	Sub-Manager, Sibü Station	Sibü.

ORGANISATION.

Radio communication was instituted by the Government for public and official use in April, 1917. The chief station is at Kuching, the capital of Sarawak, and is of 8 kw. normal. Sub-stations are situated at Miri, Sibü, and Sadong, the two former being of $2\frac{1}{2}$ kw., and the latter $\frac{1}{2}$ kw. The "Compagnie Générale de Radiotélégraphie, Paris," system is employed throughout. An

additional station will shortly be erected at Bintulu. All sub-stations communicate direct with Kuching, and the latter with Singapore. All stations are also open for ship communication daily from 0700 to 1700, but special watches for ships will shortly be instituted at the following hours: 0900 to 0920, 1200 to 1220, 2100 to 2120. There is one experimental station belonging to the manager at Kuching; other experimental or amateur stations are allowed, provided the wavelength does not exceed 400 metres.

ADMINISTRATION.

There are no regulations obliging ships trading in Sarawak waters to be fitted with wireless.

British North Borneo

British North Borneo occupies the northern part of the Island of Borneo. The interior is mountainous, Mount Kinabalu being 13,455 feet high, but most of the surface is jungle. Total area 31,106 square miles; coast line 900 miles.

The territory is under the jurisdiction of the British North Borneo Company, being held under grants from the Sultans of Brunei and Sulu (Royal Charter in 1881). The territory is administered by a Governor (appointed with the approval of the Secretary of State) in Borneo and a Court of Directors in London, appointed under the Charter. On May 12th, 1888, the British Government proclaimed a formal protectorate over the State of North Borneo.

CONTROL.

OFFICIALS CONTROLLING WIRELESS TELEGRAPH OPERATORS.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
Mr. C. F. Newton Wade, A.M.I.R.E.	Postmaster-General and Superintendent of Telegraphs	Jesselton.
Mr. H. A. Dabell	Assistant Postmaster and Assistant Super- intendent of Telegraphs	Sandakan.

ORGANISATION.

Radiotelegraph intercommunication is maintained by four 5-kilowatt Government stations situated at Jesselton, Sandakan, Kudat and Tawau respectively. The Siemens Quenched Spark system is employed throughout. The Sandakan station was the first erected in the State and completed in October, 1913. The conditions of working are, as in most tropical countries, not altogether good, owing to the strong electrical disturbances and the mountainous country which is covered with dense jungle. The four stations have, however, maintained an uninterrupted day service since their erection.

ADMINISTRATION.

Wireless telegraphy is administered in accordance with the provisions of the following ordinance:—

A—Wireless Telegraphy Proclamation, 1914.

WIRELESS TELEGRAPHY PROCLAMATION, 1914.

A British North Borneo has been included as a party in the International Radiotelegraphic Convention.

The following proclamation controls the use of wireless telegraphy:—

1. This proclamation may be cited as "The Wireless Telegraphy Proclamation, 1914," and shall come into force upon the publication thereof in the *Gazette*.

2. (i.) In this proclamation the expression "wireless telegraphy" means any system of communication by telegraph as defined by "The Telegraph Proclamation, 1901," without the aid of any wire connecting the points from

and at which the messages or other communications are sent and received:

The expression "locally owned ship" means a ship owned wholly by the Government or by bodies corporate established under and subject to the laws of this State, and having their principal place of business within this State.

(ii.) Nothing in this proclamation shall prevent any person from making or using apparatus for actuating machinery or for any purpose other than the transmission of messages.

3. The Governor may, whenever he shall deem it expedient to do so, license the establishment of any wireless telegraph station, or the installation or working of any apparatus for

wireless telegraphy, in any place in this State or on board any locally owned ship.

4. (i) No person shall establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place in this State or on board any locally owned ship except under and in accordance with a licence granted in that behalf by the Governor.

(ii.) Every such licence shall be in such form and for such periods as the Governor may determine, and shall contain such terms, conditions and restrictions on and subject to which the licence is granted as the Governor shall consider desirable in the public interest.

5. (i) Any person establishing a wireless telegraphy station without a licence in that behalf, or installing or working any apparatus for wireless telegraphy without a licence in that behalf, shall be liable to a fine not exceeding one thousand dollars or to imprisonment of either description for a term not exceeding twelve months, and in either case be liable to forfeit any apparatus for wireless telegraphy installed or worked without a licence, provided that no proceedings shall be taken against any person under the proclamation except with the previous sanction of the Governor.

(ii) On being satisfied by information on oath that there is reasonable ground for believing that a wireless telegraph station has been established without a licence in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any ship within the jurisdiction without a licence in that behalf, a magistrate may grant a search warrant to any police officer to enter and inspect the station, place, or ship, and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

6. (i) The Governor may make and, when made, vary or cancel rules more particularly for all or any of the following matters:—

(a) For prescribing the form and manner in which applications for licences under the proclamation are to be made;

(b) For prescribing the fees payable on the grant of any licence;

(c) For regulating the manner in which apparatus for wireless telegraphy on board a merchant ship, whether a locally owned ship or a British or a foreign ship, in the waters of this State shall be worked so as to prevent the interference with naval signalling or the working of any wireless telegraph station lawfully established, installed, or worked in this State or the waters thereof, and so as not to interrupt or interfere with

the transmission of any wireless messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea;

(d) For prohibiting, except with the special or general permission of the Superintendent of Telegraphs, the working or using of any apparatus for wireless telegraphy on board a merchant ship, whether a locally owned ship or a British or a foreign ship, whilst such ship is in any of the harbours of this State;

(e) For prohibiting or regulating, in case at any time in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that the Government should have control over the transmission of messages by wireless telegraphy on board merchant ships, whether locally owned ships or British or foreign ships, in the waters of this State, the use of wireless telegraphy on board such ships while in such waters by such further rules as the Governor may see fit to make from time to time, either in all cases or in such cases as may be deemed desirable;

(f) And generally for the more effectual carrying out of the provisions of this proclamation.

(ii) No rules made in respect of the matters described in paragraphs (c), (d), and (e) of sub-section (i) shall apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

7. On an application for a licence proving to the satisfaction of the Governor that the whole object of obtaining the licence is to enable him to conduct experiments in wireless telegraphy, a licence for that purpose shall be granted to such applicant, subject to such special terms, conditions, and restrictions as the Governor may think proper that such licence shall not be subject to any rent or royalty.

8. (i) Every omission or neglect to comply with, and every act done or attempted to be done contrary to, the provisions of the proclamation, or of any rule made thereunder, or in breach of the conditions and restrictions subject to or upon which any licence has been issued, shall be deemed to be an offence against, not otherwise specially provided for, the offender shall, in addition to the forfeiture of any articles seized, be liable to a fine not exceeding five hundred dollars.

(ii) All convictions, forfeitures, and fines under this proclamation, or any rules made thereunder, may be had and recovered before the Court of a Magistrate of the First Class.

BRAZIL

THE great Republic of Brazil extends on both sides of the Equator. With regard to latitude it stretches between 4° 22' N. and 33° 45' S., whilst with regard to longitude it lies within the limit of 34° 40' and 73° 15' W. It covers an area estimated at 3,298,870 square miles, and abounds in natural wealth of every description. Originally a colony of "Britain's oldest ally," the most cordial relationship between Brazilians and British is traditional with both nations.

CONTROL.

The radiotelegraphic stations of the country are exclusively under the control of the Government, and their administration is regulated by the Minister of Public Works with respect to installations of a civil character,

and by the Ministers of State for War and the Navy with respect to installations destined for national defence and the services of the military and naval forces.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Dr. Pires do Rio	Minister of Public Works	Ministerio da Viacao.
Dr. Antonio Nogueira Penido	Director General of Telegraphs	Reparticao Geral dos Telegraphes.
Dr. Francisco Bhering ..	Sub-Director Technical Department ..	Do.
Dr. Ferreira Chaves ..	Minister of Marine	Ministerio da Marinha
Admiral Max de Frontine..	Chief Naval Staff	Do.
Capt. Tenente Mario De- barros Barreto	Chief Naval Radio Service	Do.
Dr. Pandia Calogeras ..	Minister of War	Ministerio da Guerra.

N.B.—The Radiotelegraphic Service of the Army is directed by an officer of the 1st Battalion of Engineers.

By Decree No. 13124 of August 7th, 1918, stations under the Ministry of Public Works were transferred to the Ministry of Marine for War purposes, but it has been arranged for these stations to revert to the Ministry of Public Works.

ORGANISATION.

There are no private, experimental or amateur wireless installations; all have been abolished by order of the Government. There are no wireless societies, clubs or publications. The only company manufacturing *wireless apparatus* in Brazil is Marconi's Wireless Telegraph Company, Limited, Rio de Janeiro, which company also conducts a wireless school. The Telegraph Department have established an official School of Radiotelegraphy. This school will not be open for some time. Dr. Francisco Bhering, Sub-Director of the Telegraph Department and a professor of the Polytechnic Engineering School, has been appointed first Director. One of the salons has been given the name of Marconi, in honour of the great inventor. Another salon bears the name of Morse.

According to the latest information available (December 31st, 1919) the following constitute the number of stations at present working:—

LAND STATIONS.

Coast Stations	28
Stations for Internal Communication only ..	10
(There are no privately owned Land Stations.)	

SHIP STATIONS.

Naval vessels	30
Merchant vessels	119

ADMINISTRATION.

The following laws and regulations govern the administration of wireless in the Republic:—

A—Extract from Act relating to the Brazilian Merchant Service.

B—Extract from Law No. 2,719 of December 31st, 1912.

C—Law 2,738 of January 4th, 1913.

D—Decree 10,689 of January 14th, 1914.

E—Regulation.

F—Form of Licence.

G—Decree No. 3,296 of July 10th, 1917.

H—Extracts from Decree No. 3,316 of August 16th 1917.

I—Project No. 367 of 1919.

It must be noted that "D," although passed by Congress and signed by the President of the Republic, would not appear to have yet come into active operation in its entirety. It will be observed, for instance, that the Decree gives permissive power to the Government to allow Private Corpora-

tions and the Authorities of the States comprising the Republic to erect stations within certain limitations. The later Decree, lettered "G" seems to contemplate the suspension of this power and possibly of some other provisions also.

A ACT RELATING TO THE MERCHANT SERVICE.

The following Articles refer to Wireless Telegraphy:—

ART. 159.—Those boats must without exception be provided with radiotelegraphic apparatus, approved by the General Direction of Telegraphs, with the necessary power to allow of communication with the wireless stations in the zones in which they trade, when:

(a) they carry passengers and are employed in the coastal trade, of any description whatsoever, and have a registered tonnage of over 300 tons, and for those boats employed in river trade having a registered tonnage of over 500 tons.

(b) They are only employed in the coastal trade as cargo boats, but carry over 30 (thirty) souls all told.

ART. 160.—After the promulgation of this regulation, no ship shall be registered by any Port Authority if it has not complied with the regulations of the preceding Article, the licence to navigate being refused to any ship which, within one year from the date of the promulgation of this regulation, shall not have fulfilled the depositions set forth herein.

LAW NO. 2,719.

DECEMBER 31ST, 1912.

B The above Law fixes the Coast Tax at 6 francs for a telegram up to 10 words, and 60 centimes for each extra word. Included in the rate is the transmission between a coast station and the telegraph stations to which the wireless station is directly joined up.

There is a land telegraph charge (via National lines) of 25 centimes a word without minimum on telegrams destined to telegraph stations which are not directly connected up with a coast station.

For telegrams exchanged between Brazilian coast stations and ships flying the Brazilian flag the ship tax has been fixed at 240 reis a word with a minimum of 10 words, the coast tax at 400 reis a word with a minimum of 10 words, and the land telegraph charge (if any) at 200 reis a word without a minimum.

LAW NO. 2,738.

JANUARY 4TH, 1913.

C A new wireless district was created by the above Law, with a credit of 732 contos, to include the Acre, Amazonas, and Para wireless stations, and these stations have since been taken over by the Telegraph Department and opened to public traffic.

DECREE NO. 10,689.

JANUARY 14TH, 1914.

D Approves the regulations governing the national wireless system.

The President of the Republic of the United States of Brazil, using the authority granted to him by Section 1 of Art. 48 of the Constitution, hereby decrees:

Sole Article.—The regulations for the national wireless service revised by the combined Civil and Military Technical Committee issued together with the present decree, signed

by the Ministers of State for the Affairs of Roads and Public Works and for the Affairs of the War and Marine, as hereby approved by virtue of Articles 18 and 19 of Law No. 2,050 of the 31st December, 1908.

Rio de Janeiro, 14th January, 1914, 93rd of Independence and 26th of the Republic.

HERMES R. DA FONSECA

José Barboza Gonçalves.

Alexandrino Faria de Alencar.

Vespasiano Gonçalves de Albuquerque e Silva.

REGULATIONS.

FOR THE NATIONAL WIRELESS TELEGRAPHIC SERVICE REFERRED TO IN DECREE NO. 10,689 OF THIS DATE.

(Revision of 1913.)

CHAPTER I.

E *Wireless telegraphic system and organization of the respective stations.*
WIRELESS TELEGRAPHIC SYSTEM.

ART. 1.—The wireless telegraphic system shall consist of the fixed stations erected on the coast and on the islands and in the interior of the Republic depending upon the Ministries of Roads and Public Works, of Marine and War and of mobile stations existing in ships navigating under the Brazilian flag.

ART. 2.—The fixed stations shall constitute five groups, to wit:

1. International service by land or oversea.
2. Ocean service.
3. River or fluvial service.
4. Frontier or border service.
5. Inter-State service.

Sole Paragraph.—The wireless telegraphic and telephonic service over Brazilian territorial waters is under the exclusive control and supervision of the Federal Government.

ART. 3.—The mobile stations dependent upon the different departments of the administration interested in each shall constitute other groups intended for the purposes of the travelling service in general, and shall be formed according to the requirements of each department.

Sole Paragraph.—Carts, aeroplanes and airships when fitted with wireless telegraphic and telephonic stations shall constitute the object of provisional instructions issued by the Combined Technical Committee in regard to their class.

ART. 4.—The States in the establishment or authorisation of the inter-State service shall have in view the provisions set forth in the Convention of Berlin, 1906, and maintained in the London Convention, 1912, as regards the obligation assumed by the Union that it would impose the fulfilment of the international provisions upon such private enterprises as might be authorised either to establish or to operate coastal wireless telegraphic stations open to the public service between the land and the ships at sea, or authorised to establish and operate wireless telegraphic stations open or not to the public correspondence on board any ships sailing under the flag of the said nations. This provision must therefore be complied with in the three cases of the carrying out of works which are defined by law as being under administration, by contract and by concession.

ART. 5.—The Federal Government reserves for itself, in a general manner, the inter-State service, in accordance with section 4 of Article 9 of the Federal Constitutional Law, and due to the fact that all the States and the Acre Territory are provided, without exception, with Federal telegraph services with or without wires.

Sole Paragraph.—The communication between any points situated on inter-State border zones, whenever they shall not cause any losses whatsoever to the Federal Services, may be authorised by the States interested with the approval of the Union previously granted by means of temporary permission without privilege, provided the development of the national telegraph system be protected.

ART. 6.—The fixed federal stations, besides the ordinary inter-communications, must attend to the mobile stations not only on any craft navigating on the rivers and the ocean, but also to those placed on carts and others intended for the service of the Army and for public works in general.

Sole Paragraph.—Whenever the service of the fixed intra-State stations shall have to reach beyond the border of the States it shall be turned over to the Federal fixed stations specially such messages as may be intended for the fluvial correspondence.

ART. 7.—The fixed and movable stations of the Ministries of War and Marine shall comply, as far as possible, with the same regulations governing the fixed and movable stations depending upon the Ministry of Roads and Public Works and upon the States, as also with the provisions set forth in the International Conventions and Regulations in force.

Sole Paragraph.—The naval stations and those belonging to the Army shall, nevertheless, be always obliged to comply with the provisions of Articles 8 and 9 of the London Convention dated 1912, and that of Berlin dated 1906—i.e., they shall, as far as possible, avoid disturbing the service of the other stations of the same kind, and shall receive with absolute priority the signals of distress.

ART. 8.—It shall be the duty of the stations constituting the national system depending upon the Ministry of Roads and Public Works, the Ministry of War and the Ministry of Marine and upon the States to prefer normally the watch service having in view any disasters on the seas or the rivers and other accidents, in accordance with Art. xxi, as regards preference, and Art. xxxii regarding the hearing during three minutes after every period of 15 minutes of transmission (International Radiotelegraphic Regulations of 1912).

Section 1.—The stations depending upon the Ministry of Roads and Public Works and upon the States are intended for the service of public correspondence in general, between the land and the ships at sea, and the rivers, as also overland or any special services pertaining to public administration.

Section 2.—The Army and Navy stations are intended for the official correspondence, and, without prejudice to such services, for private correspondence of their crews and men (soldiers).

Section 3.—Stations intended for traffic of public messages in general must give preference to the messages from the naval stations and of the Army. Correspondence with the military stations can only be preferred by the service of distress.

ART. 9.—Naval stations although erected for strategical purposes of the defence of the country along the ocean rivers, the borders of navigable rivers or on board ships, and notwithstanding that the fixed stations of the Army shall be intended for the purpose of assisting in the military exercises or in the defence of the nation—they may nevertheless, whenever the Government may deem it convenient, be authorised to take care of the public service in general. In such cases these stations shall during that period be entirely subject to the provisions of the regulations in force.

Sole Paragraph.—The stations on the borders, over and above the strategical use they may have, shall also serve as exchange stations for the international overland service with the bordering republics whenever it may be convenient.

ART. 10.—Out of the total number of stations of the wireless telegraph system a certain number shall be selected to take care of the general hour service in accordance with the International Convention of Paris and with the Regulations for the interior service approved by the Department of Agriculture, Industry and Commerce. (Decree No. 10,546 of the 5th November, 1913.)

Sole Paragraph.—The stations at Noronha, Rio de Janeiro, Trinidad and Juncão (in the State of Rio Grande do Sul) shall transmit message of the hour to the sea and inland as provided by the Conference of Paris, 1912.

ORGANISATION OF THE WIRELESS TELEGRAPH STATIONS.

ART. 11.—The name of fixed coastal station shall be given to all wireless telegraph stations established on firm land or on board ships permanently anchored near the coast or yet on the islands near the coast.

ART. 12.—The name of boat station shall be given to those stations of wireless telegraphy established on board a merchant ship or a man-of-war not permanently anchored.

ART. 13.—The name of fixed station simply shall be given to all and any wireless telegraph stations established on firm land and proposed to handle traffic between fixed points or between the land and ships sailing on the rivers.

Sole Paragraph.—All fixed wireless telegraph stations, coastal or otherwise, shall be connected by wires to the ordinary stations of the General Telegraph Department or to stations of other telegraph lines, provided this connection shall be deemed useful for the service, practically possible and economically convenient.

ART. 14.—The stations in general shall be organised under the following conditions:

1. In accordance with the progress of science and technics by selecting for the purpose as far as possible the most perfect apparatus;

2. By providing them with the necessary material capable of insuring a continuous service inclusively at the boat station by providing them with reserve plants (Art. XI of the International Regulations, 1912);

3. By providing them with the necessary staff capable of insuring a continuous service, the operators to possess certificates of their professional capacity, whether they be employed at the fixed stations or at the stations on board ship (International Regulations, 1912, Art. X; International Regulations, 1906, Art. VI, section 5).

ART. 15.—The stations shall be classified

according to the energy irradiating from their antennæ, rather than according to their reach as main stations and stations of the first, second and third classes.

Section 1.—Main stations are those stations irradiating 25 kilowatts or more of oscillatory energy;

Section 2.—Stations of the first class are those stations irradiating from 10 to 25 kilowatts exclusive;

Section 3.—Stations of the second class are those stations irradiating from 5 to 10 kilowatts exclusive;

Section 4.—Stations of the third class are those stations irradiating from one to five kilowatts exclusive. Stations irradiating less than one kilowatt shall be classed as third-class auxiliary stations.

Art. 16.—The employment of the wave compartments shall be subject to the International Regulations (Arts. II, III, IV, XXXV, section 2) of London; nevertheless for inland service this may be governed by local convenience and traffic.

Section 1.—For the ordinary ocean service (2nd group of stations), intended for the purpose of public messages in general, two wave compartments of 300 metres and of 600 metres shall be admitted; one of these, however, shall be indicated in the International Nomenclature as being the normal law wavelength of the station.

Section 2.—In special cases the stations of the ordinary ocean service shall be allowed to employ a wave of 1,800 metres, in accordance with the provisions of *section 2* of Art. XXXV of the International Regulations.

Section 3.—Wave compartments below 600 metres, those of 300 metres excepted, and compartments of more than 1,600 metres will be admitted for employment for the large ocean service for messages other than public messages in general.

Section 4.—Stations intended for the sole purpose of irradiating signals to determine the position of ships shall employ waves of not more than 150 metres.

Section 5.—Every station on board ship shall be established in such a way that it will be capable of utilising, in transmitting and receiving, waves of 600 metres and of 300 metres, the former being the normal extent of the wave.

Section 6.—Every station on board ship shall be established in such a way that it will be capable of receiving calls transmitted with the normal wave.

Section 7.—Waves of less than 600 metres, those of 300 metres referred to in *section 5* excepted, shall only be admitted for use by ships subject to previous authority of the Government and in special cases.

Section 8.—Ships of light tonnage materially unable to transmit with a 600 metres wave shall be admitted to utilise exclusively the 300 metres wave; they shall nevertheless maintain their plant in a condition at any time to receive messages by means of the normal 600 metres wave.

Section 9.—In the event of difficulty of communication and in order to avoid momentary interference, a regulation length of wave may be employed other than the normal length; the normal length shall, however, be resumed when the momentary difficulties to traffic shall cease.

Section 10.—Naval stations and the stations of the Army shall transmit by means of waves of such length as shall as far as possible avoid

their services interfering with the service of public traffic in general. Such lengths, for instance, as 200 metres, 300 metres, and 1,200 metres approximately.

GENERAL TECHNICAL COMMITTEE.

Art. 17.—The localisation, the establishment, and the traffic of fixed wireless telegraph stations under the control of the Departments of Road and Public Works, of War and of Marine and of the different States shall, in every case, be considered by the Combined Technical Committee in view of their utility in regard to trade, to shipping and to the defence of the national territory, so as to conciliate in the best possible manner the interests of each.

Sole Paragraph.—In grading the power of each station the provisions of Decree No. 10,090 of February 1st, 1913, shall be observed.

Art. 18.—Whenever the civil and military authorities directly interested shall have to make scientific or technical experiments in wireless telegraphy or telephony they shall in the first place notify their intention to the Combined Technical Committee for the purpose of co-ordinating and obtaining the best possible advantage out of the combined efforts of those Departments of which the members of the Committee are the delegates.

Section 1.—With the exception of the Federal and State authorities, no other authorities or private parties shall be allowed to make experiments or to erect and equip for purposes of experiments or for tuition wireless telegraph or telephone stations unless they shall first obtain the authorisation of one of the departments of the Administration according to each case, after hearing the Combined Technical Committee.

Section 2.—The Combined Technical Committee shall be informed by the Departments interested of the results obtained with the different types of apparatus or systems of erection employed by the different stations under operation.

Section 3.—It shall pertain to the Combined Technical Committee to consider the complaints of a technical nature relative to the working of the different stations when informed by the Federal Departments and the administrations of the different States, by Private Enterprises or by Foreign Powers.

Section 4.—In the cases where the experiments of wireless telegraphy or telephony shall pertain to the initiative of the Combined Technical Committee by proposal made to any of the Departments of the Administration interested therein, the expense shall be for account of the Department having ordered such experiments.

Art. 19.—The Government shall take action in accordance with the laws in force with regard to ordinary telegraph matter against all those who shall operate wireless telegraph or telephone plants without permission, whether publicly or under concealment.

Sole Paragraph.—The fault to which this article refers shall in time of disturbance of the public order or of war be considered respectively as an act of resistance against the public authorities or as spying.

Art. 20.—Whether the Government may be obliged to maintain wireless telegraph stations for the public service in general in fortified places, whether of the Army or of the Navy, the matter will be considered by the Combined Technical Committee, in order to avoid prejudice in any way to the military services.

Section 1.—The stations to which this article refers shall be in time of peace operated by civilians, and in time of disturbances of the public order or of war by military operators.

Section 2.—While on duty in fortified quarters, whether of the Navy or of the Army, the civil employees shall be under the military rule.

ART. 21.—In case of interruption to the service of the overland telegraph lines the wireless telegraph stations shall take care of the telegraph service of the section where the interruption has occurred, without prejudice, however, to the "watch" and "ocean" services.

Section 1.—The military stations of the Navy and of the Army shall also undertake to forward the ordinary telegraphic service if they are situated in the section where the interruption has occurred, and are also to do so without prejudice to the military service.

Section 2.—The stations established along the rivers Parana, Uruguay and São Francisco shall, when necessary, serve as exchange stations between the borders and the coast.

Section 3.—For the better co-ordination of the services the Combined Technical Committee shall keep up to date the plan of the whole system referred to in Decree No. 10,090 of February 1st, 1913, so as to be able to be supplied to the interested authorities, whether federal or of the States.

GENERAL TELEGRAPH DEPARTMENT.

ART. 22.—The establishment and operation of the wireless telegraph and telephone stations intended for the service of the public in general and other services depending upon the Department of Roads and Public Works shall be pertinent to the General Telegraph Department.

Section 1.—The same department shall also centre in its hands all matters concerning the collection of taxes and administrative connections with foreign wireless telegraph services and with the International Office at Berne.

Section 2.—It shall see that the International Regulations for the transmission of commercial messages from the stations on board merchant ships are properly observed.

Section 3.—It shall exercise the supervision of private enterprises operating in wireless telegraphy and telephony.

Section 4.—It shall have the power to train wireless telegraph operators in accordance with the regulations in force by administering to them theoretical and specially practical tuition (Articles 271, 367 and 337 of the Regulations of 1911 in force) and awarding them the certificates referred to in the International Regulations (Art. X of 1912) and in the present Regulations (Art. 14, section 3).

Section 5.—Certificates of wireless telegraph operators awarded by the Institutions of Higher Studies and by the private professional schools shall be acknowledged by the Government after the approval of the Combined Technical Committee.

Section 6.—For the purposes of the experiments referred to in sub-section *d* of Art. 19 of Law No. 2,050 of the 31st December, 1908, and which may interest the Department of Roads and Public Works, a credit shall be reserved out of the appropriation for "wireless telegraph services."

ART. 23.—In military wireless telegraphy the same procedure shall be adopted as for civil wireless telegraphy in so far as the tuition of the wireless telegraph operators is con-

cerned, so that the programmes being formed on a common basis the certificates may also be considered as equivalent.

ART. 24.—Bearers of certificates of qualification awarded by the schools referred to in Arts. 22 and 23 alone shall be admitted to take charge or to serve as employees of the wireless telegraph stations, whether fixed or movable, civil or military, belonging to or authorised by the Government.

Section 1.—The provisions contained in Art. X of the International Regulations of 1912, extended by the provisions of Art. VI of the International Regulations of 1906 relative to the professional qualification of wireless telegraph operators shall be strictly observed.

Section 2.—The programmes and the course of proceedings at the schools shall be subject to the approval and supervision of the Combined Technical Committee in order to ensure the compliance with the provisions of the present regulations concerning the matter.

ART. 25.—Authorisations, permissions and licences for the establishment and operation of wireless telegraph and telephone services whether in the territory of the Union or of the different States shall be subject to the provisions in force relative to the ordinary telegraphic services. The new services are already placed on a like footing with the ordinary service, under the International provisions already approved by Congress, and by a decree of the executive power dated November 27th, 1911, issued under No. 9,148 as per sole paragraph of Art. 2 thereof.

ART. 26.—Telegraph stations erected on board merchant ships and ships of the coastal trade as referred to in Art. 173 of the Regulations approved by Decree No. 10,524 of October 23rd, 1913, shall be subject to the international provisions contained in Arts. IX and XI of the Regulations of London.

Section 1.—Licences for the establishment of the stations shall be applied for before the Department of Roads and Public Works to which it shall pertain to exercise the supervision referred to in Arts. IX, X, XI and XII of the Regulations of London.

Section 2.—The supervision of the stations erected on board ships as referred to in the last preceding article shall be under the care of the General Telegraph Department, to which the Department of Roads and Public Works shall give notice of the licences given.

Section 3.—Licences shall be given under the form hereunto appended.

Section 4.—The initials or indexes of calls from the stations on board national ships possessing the necessary licences shall be given by the General Telegraph Department in accordance with the provisions of the International Regulations in force (Section 2 of Art. V), and in accordance with the notices issued by the International Office at Berne.

Section 5.—With regard to infringements and penalties occurring in view of the licences given to ships and certificates of operators, the provisions of Arts. IX and XII of the Regulations of London shall be strictly enforced.

ART. 27.—The stations on board merchant ships or men-of-war shall be classed by the Government in three different classes which shall be expressed on the licences in the case of merchant ships, viz. :—

1. Stations with permanent service (N).
2. Stations with a limitation of service.
3. Stations not charged with special obligations (X).

The stations of the first class shall maintain continuous watch. The stations of the second class shall be permanently attend during the time of service, and out of this time of service during the first ten minutes of each hour. The stations of the third class shall not be subject to a regular service of attention (Art. XII, section 3, of the Regulations of London).

ART. 28.—Stations on board national ships must, and stations on board foreign ships may, communicate free of charge once a day to the fixed stations the meteorological bulletins for the Directorate of the Meteorological Service.

Section 1.—The ships shall also receive communication of the bulletins of the Meteorological Service that might interest navigation.

Section 2.—If the ships request the Meteorological Service to transmit to them meteorological information, the communications shall be made by means of taxed service advices, and the taxes shall be charged to the account of the ships to which such messages were transmitted.

Section 3.—Communication regarding the weather involving information relative to precautions to be taken against danger shall be transmitted free of charge and urgent.

ART. 29.—All wireless telegraph stations without exception, whether fixed or movable, shall keep a book of entries in which, besides the messages exchanged, note shall be taken of the commencement and winding up of the services when the case is not of a permanent service, of accidents that may have occurred, of difficulties of communication, damages to the apparatus, etc.; in short, of all details of the service.

Sole Paragraph.—The said stations shall also possess schematic charts of the ocean or of the rivers for the purpose of registering the position of the movable stations.

ART. 30.—The provisions of the international regulations concerning wireless telegraphy and of the Regulations of the General Telegraph Department shall apply respectively to foreign and home relations. In the home service the provisions of the present regulations for wireless telegraphy shall prevail over such provisions of the regulations of the General Telegraph Department as may be contrary thereto.

Sole Paragraph.—The provisions contained in military regulations and interesting wireless telegraph service in general shall be communicated to the General Telegraph Department by the Combined Technical Committee.

CHAPTER II.

Manner of Wording and Depositing Wireless Messages.

ART. 31.—Wireless telegraph messages shall contain as first word of the preamble the indication of the service "radio" (see Arts. XIV and XV of the Regulations of London).

Section 1.—The text of wireless messages may be in any one of the languages admitted by the International Telegraph Regulations for the time being in force (Revision of Lisbon, Art. 8, section 2).

Section 2.—Wireless messages made up by means of the International Code of Signals, designed under the index P R B, shall be transmitted to their destination untranslated.

Section 3.—Cases of doubt in the matter of traffic shall be considered and decided by the General Telegraph Department.

CHAPTER III.

Transmission of Wireless Messages, Calls, General Provisions for Traffic.

Consult International Telegraph Regulations of 1908, Art. LXII, Chapter 12, corresponding to Art. 9 of the Convention of St. Petersburg. Consult also Chapter 6 of the International Wireless Telegraph Regulations, 1912.

TRANSMISSION.

ART. 32.—For the transmission on wireless messages, the signals used shall be those of the International Morse Code.

Sole Paragraph.—Telegraphic sign shall be transmitted in accordance with the provisions and rules established by the regulations in force issued by the General Telegraph Department. (Consult Regulations of Lisbon, Chapter 10, Art. XXII.)

ART. 33.—Ships in distress shall employ the signal S O S, which shall be repeated at fixed intervals accompanied by the necessary information.

Upon noticing the signal of distress any and every station shall immediately interrupt the correspondence in hand, which shall not be resumed until the station shall have ascertained that the communication by the call for assistance is concluded.

Section 1.—Stations noticing a call for assistance shall observe the indication supplied by the ship making the call, not only in the order of communications but also in the termination thereof.

Section 2.—Whenever a series of calls for assistance shall be accompanied by the indexes of call from a certain station, this latter station alone shall be expected to attend, unless, however, the said station shall not reply.

In the absence of indication of a certain station, any station noticing the call for assistance shall be under the obligation to reply.

Section 3.—Wireless telegraph messages from or relative to ships in distress shall have preference above all others.

ART. 34.—In giving or requisitioning explanations in regard to wireless telegraph services, the different stations shall make use of the signals contained in the list appended to the present regulations and to the International Regulations, 1912.

ART. 35.—In transmitting wireless telegraphic messages all the special indexes contained in the International Telegraph Regulations, revised in Lisbon, shall not be admitted; only those indexes contained in the International Wireless Telegraph Regulations of London, Art. XXXVIII, shall be admitted.

Section 1.—With regard to wireless telegraphic messages for transmission by express, when the expenses shall have been collected from the receiver, the General Telegraph Department shall establish special instructions which shall be notified to the International Office.

Section 2.—It will be permitted to make special indication relative to the number of days during which wireless telegraphic messages shall have to remain in deposit at a coastal station awaiting the passage of the ship for which they are intended.

ART. 36.—As between any two stations wireless telegraphic messages of the same class shall be transmitted separately and alternately or by series of various messages according to the indication of the coastal station, on con-

dition that the time for transmission of each series shall not be more than 15 minutes.

Section 1.—Before commencing to exchange correspondence the coastal station shall advise the station on board ship whether the transmission will be made alternatively or by series. Then the coastal station shall commence transmitting or notify its readiness to receive.

Section 2.—The transmission of each wireless telegraphic message shall be preceded by the signal $\bullet \bullet \bullet \bullet$ and terminated by the signal $\bullet \bullet \bullet \bullet$ followed by the index of the sending station and of the signal $\bullet \bullet \bullet \bullet$. In the case of a series of messages, the index of the sending station and the signal $\bullet \bullet \bullet \bullet$ shall only be given at the end of the series.

Section 3.—Wireless telegraph messages shall be transmitted in the following order:—

- (a) Messages of the State.
 - (b) Messages of the Service.
 - (c) Private urgent messages, but only in respect of their course over the overland lines.
 - (d) Ordinary private messages.
- (Compare Regulations of Lisbon, Art. XXXII.)

CALLS.

ART. 37.—The control of the service on the stations on board ships lying within the maximum reach of any coastal station shall be exercised by the latter.

Section 1.—Stations on board ship and also limited coastal stations shall conform with the instructions received from the permanent station.

Section 2.—The permanent coastal station shall attend and cause attention to be given to ships on the point of leaving the zone of their common reach, having in view the position, direction and speed of the said ships.

Section 3.—The permanent coastal station shall have authority to transmit orders for silence; the station on board ship shall thereupon cease transmitting ordinary messages until it shall be allowed to continue.

Section 4.—Besides in the case of traffic conveniences, silence may be imposed in view of the provisions of Art. 45 of the Regulations of London (hour service).

Section 5.—Any station proposing to transmit with high power shall first issue three times the sign of attention, M I M ($\bullet \bullet \bullet \bullet$), using the lowest power necessary to reach the neighbouring stations. It shall not commence transmitting with high power before 30 seconds after having issued the sign of attention.

Section 6.—Whenever any one coastal station shall receive calls from several stations on board ships at one time it shall decide as to the order in which those stations shall be admitted to transmit.

In taking this decision the coastal stations shall have in view simply the necessity of permitting any one station interested to exchange the greatest possible number of wireless messages.

Section 7.—In the event of any one station failing to attend to the calls issued three times with an interval of 2 minutes, the said calls shall not be renewed before a further interval of 15 minutes, and even so when the station having made the call shall be certain that there is no other wireless telegraphic communication under way.

ART. 38.—In general it is the station on board ship that calls up the coastal station, whether there be wireless messages for transmission or not.

Section 1.—The station on board ship shall not call up the coastal station, chiefly in the

zones of a heavy traffic, before it comes within a distance of $\frac{1}{2}$ of the normal reach of the latter.

Section 2.—Before proceeding to make calls, the coastal station or the station on board ship shall regulate to the highest sensitive point possible their receiver system, and ascertain that no other correspondence is being held within the zone of reach; when they shall proceed otherwise, upon remarking any disturbances of correspondence the coastal station or the station on board ship shall immediately cease calling, unless they shall find that the calls are not apt to disturb the communications under way.

Section 3.—On the other hand, the coastal stations or the stations on board ship when answering calls made upon them shall take the same precautions.

Section 4.—If notwithstanding these precautions the transmission of any wireless telegraphic message shall be interfered with, the call should cease for the traffic of public correspondence. This station, in making the request, shall indicate the approximate duration of the delay.

Section 5.—The station on board ship shall inform the coastal station to which it shall have signalled its presence the moment at which it shall have to interrupt communications and the time during which this interruption shall last.

Section 6.—The station on board ship shall only be allowed to make calls upon the next coastal station in cases where, owing to difficulties of traffic, it shall not have been possible to establish correspondence with the preceding station, out of whose reach it has just come.

Section 7.—In making calls the station shall employ the normal wave of the station on which they shall have to call.

Section 8.—All stations shall seek to transmit by using the lowest possible intensity.

ART. 39.—The call shall be composed of the signal K A ($\bullet \bullet \bullet \bullet$) of the index of the station upon which the call is made, issued three times, that of the preposition "from" (de) followed by the index of the transmitting station, repeated three times.

Section 1.—The station called upon shall reply by transmitting the signal $\bullet \bullet \bullet \bullet$ followed by the index of the corresponding station repeated three times; of the proposition "from" (de) and of the signal K ($\bullet \bullet \bullet \bullet$) (invitation to transmit).

Section 2.—Stations wishing to entertain correspondence with ships, but not knowing the names of such as may be within their reach, shall employ the signal of investigation ($\bullet \bullet \bullet \bullet$).

Section 3.—The provisions of the present article and of section 1 shall also apply for transmission of the signal of investigation and the reply to the said signal.

GENERAL PROVISIONS.

ART. 40.—Transmissions exchange between stations on board ship shall be effected in such a way that they shall not interfere with the services of the coastal stations, and the latter shall have the right of priority for public correspondence.

ART. 41.—As soon as the coastal station shall have answered the call, the station on board ship shall supply the details hereunder stated in the event of there being messages for transmission; these details shall likewise be supplied on demand by the coastal station:

(a) Approximate distance in nautical miles from the ship to the coastal station;

(b) The position of the ship, indicated in a concise form adequate to the circumstances of each case;

(c) The name of the next port of call of the ship;

(d) The number of wireless messages if of normal length (20 words) and the number of words in case of exceptionally long messages;

(e) The speed of the ship expressed in nautical miles when the coastal station shall require this information expressly.

Section 1.—On answering the coastal station shall inform the number of wireless messages or the number of words to be transmitted to the station on board, as the case may be; it shall also indicate the order in which the transmission shall be effected.

Section 2.—In case the transmission cannot be effected immediately, the coastal station shall inform the station on board of the probable time it shall have to wait, and in case this delay shall be more than ten minutes shall also give the reasons therefor. The station on board ship shall await the invitation to transmit K (— — — —).

Section 3.—In the event of a station on board ship being called up and being unable to receive momentarily, it shall advise the station from which the call is made of the approximate time it shall have to wait.

Section 4.—In the case of exchange of correspondence between two stations on board ships, it shall pertain to the station on which the call is made to determine the order of transmission.

Art. 42.—Whenever a wireless message shall contain more than 40 words, the sending station shall interrupt transmission by means of the signal UD (interrogation) (— — — — —) after each series of 20 words more or less, and shall not continue transmitting until it shall have received from the receiving station the repetition of the last word properly understood followed by the signal above referred to, or, if the reception was satisfactory, then followed by the signal — — — —.

Sole Paragraph.—In case of transmission by series, the notice of reception shall be given after each message.

Art. 43.—When the signals become doubtful it will be well to exert the best efforts to conclude transmission.

For this purpose the message shall be transmitted three times at the most, on demand of the receiving station.

Section 1.—If notwithstanding this treble transmission the signs shall still be unintelligible, the message shall be cancelled.

Section 2.—If the receipt advice is not received, the transmitting station shall make a fresh call on the receiving station. If no answer is made after the third call the transmission shall not proceed.

In this case the sending station shall have the faculty to obtain the receipt advice through another wireless telegraph station by utilising in case of necessity the overland lines.

Art. 44.—When the receiving station shall be of opinion that, notwithstanding a defective reception, the message can be delivered, it shall insert at the end of the preamble the service remark "reception doubtful," and shall forward the message.

Sole Paragraph.—In the event of the telegraph lines being utilised the General Telegraph Department shall recover the taxes in accord-

ance with the provisions of Art. XLII of the Regulations of London. But if the station on board shall subsequently transmit the message to another coastal station, the G.T.D. shall recover taxes relative to one sole transmission.

Art. 45.—Receipt notices shall be given in the manner determined by the index of the sending station and followed by the index of the receiving station.

Section 1.—The end of the service between any two stations shall be indicated by both by means of the signal — — — — — followed by their indexes respectively.

Section 2.—Ships not possessing indexes shall substitute the sign by their own name in full.

Art. 46.—Coastal stations whose service shall not be of a permanent nature shall not be permitted to wind up their service until they shall have transmitted their messages to the ships within their reach, not until they shall have received from the ships all the messages announced.

Sole Paragraph.—These provisions shall also apply in cases where ships shall notify their presence before the work of station is definitely ended.

Art. 47.—In transmitting messages from a station on board ship to a coastal station the date and hour of presentation at the station on board shall be included in the preamble.

Sole Paragraph.—In cases of re-transmission the coastal station shall cause to appear as of the station of origin the name of the ship from which the message was originally sent, and also, if possible, the name of the ship having served as intermediary, if any.

Art. 48.—In transmitting, receiving, verifying the words, repetitions and doubtful cases, the proceedings shall be in accordance with the provisions and rules in force for ordinary traffic as contained in the Regulations of the General Telegraph Department, 1911, and in the International Telegraph Regulations (1908).

Art. 49.—The sender shall have the right to indicate the number of days, but not more than 30 days, during which the telegram shall remain in deposit for transmission at the first opportunity to its destination.

Section 1.—The indication "radio in deposit" shall be reckoned as one word.

Section 2.—After the delay indicated shall have expired, or when the coastal station shall have acquired a certainty that the ship is already beyond the reach of the next coastal station, it shall advise the sender of the fact.

Art. 50.—In the national service, as well as in the international service, the provisions of Art. VI of the Wireless Telegraph Regulations of London as hereunder shall strictly apply—viz. :—

(1) Exchange of superfluous signals or words shall not be allowed.

(2) Tests and exercises shall only be admitted when not interfering with the service of other stations.

(3) Tests to be effected with wavelengths other than those admitted for public correspondence and with the lowest possible energy.

Art. 51.—The dangerous parts of the apparatus in the different stations shall be determined by means of plainly visible marks, and if necessary they shall even be covered up in order to avoid contact with the operators or visitors.

Art. 52.—The address of wireless messages for transmission to shipping shall be as com-

plete as possible. They shall contain obligatorily the following:—

(a) Name and qualification of the addressee, with full information, if any;

(b) Name of the ship exactly as contained in the first column of the nomenclature;

(c) Name of the coastal station exactly as contained in the nomenclature.

Section 1.—The name of the ship may be substituted by an indication of the route followed by the ship and determined by stating the port of origin or of destination or any other equivalent reference, at the risks and for account of the sender.

Section 2.—The name of the ship exactly as contained in the first column of the nomenclature shall in every case, and notwithstanding its length, be reckoned as one sole word when contained in the address.

Section 3.—The sender shall indicate the name of the coastal station through which the message is to be transmitted to the ship.

ART. 53.—Transmission to the stations on board ship as a rule shall only be effected when the ships on passing by call on the coastal station within their reach.

Sole Paragraph.—In wireless messages transmitted from on board ship the name of the coastal station shall appear in the preamble beside the name of the ship from which it was originally sent and followed by the name of the intermediary ship, if any; also the date and hour of presentation to the station on board ship.

ART. 54.—As a rule the stations on board should transmit their messages to the nearest coastal station.

Section 1.—The sender on board ship shall have the option of choosing the coastal station through which he desires his message to be forwarded. In this case the ship's station shall wait until the station selected shall be the nearest coastal station.

Section 2.—On the borders of the neighbouring Republics the transmission referred to in the last preceding paragraph may be made by a coastal station situated farther off. For this purpose it shall become necessary for such coastal station to be situated in the country of destination of the message and for the ship from which the message was sent to sail under the flag of the same country. (*ART. XXXV, section 2, of the International Regulations of London.*)

Section 3.—In cases where the stations on board ship shall be in a position to choose between different coastal stations situated at approximately equal distances, then they shall give preference to the coastal station established in the country of destination of the message or serving for the normal transit of wireless messages sent thereinto.

CHAPTER V.*

(* There would appear to be some clerical error here, either on the part of the draftsman of the Law or the translator. The Law, however, as it stands in our text is complete: the error resides in the consecutive numbering of the chapters.—EDITOR.)

ART. 55.—The tax of one wireless telegraphic message shall consist of the following, as the case may be:

1. The coastal tax, due to the coastal station.

2. The ship's tax, due to the ship's station.

3. The tax due for transmission over the telegraphic lines, reckoned according to the common practice.

4. The transit taxes of the coastal stations or of the intermediary ships and the taxes relative to the special services demanded by the sender.

ART. 56.—The entire amount of the tax shall be recovered from the sender with the exception of the following:—

1. The express rates (*ART. LVIII, section 1, of the Telegraph Regulations, revised in Lisbon*).

2. The amount of the taxes applicable on such reunions or alterations of words, not allowed, as may be detected by the station of destination (*ART. XIX, section 9, of the Telegraph Regulations*).

These taxes shall be recovered from the receiver or addressee.

Sole Paragraph.—Stations on board ship should possess the necessary tariffs enabling them to supply these provisions, and they shall receive them in due course from the General Telegraph Department. They shall, however, have the faculty to consult the coastal stations with regard to the taxation of wireless messages, in case they do not themselves possess the necessary information for the purpose.

ART. 57.—The General Telegraph Department shall organise instructions relative to the taxation of the wireless messages, and shall in so doing consider carefully the various cases of the traffic. These instructions shall be distributed among the parties interested in the matter.

Sole Paragraph.—The said department shall further organise instructions for the keeping of proper accounts in order to facilitate and simplify the extraction of the different accounts.

CHAPTER VI.

ACCOUNTS.

ART. 58.—Coastal and ship's taxes shall not be considered in the accounts provided for under the International Telegraph Regulations. Accounts relative to these taxes shall be settled by the administration of each one of the countries interested.

Section 1.—If the coastal stations shall be independent of the Department of Roads and Public Works, the accounts shall be made up by the General Telegraph Department and communicated by the said department to the interested parties, whether public administrations or private parties.

Section 2.—In cases where the coastal station shall be under the control of the private enterprises, the holder thereof shall have the right to arrange his accounts directly with the interested parties (*ART. XLI, section 1, of the Radiotelegraphic Convention of London*) without the interference of the General Telegraph Department.

ART. 59.—It shall pertain to the General Telegraph Department to make arrangements with private enterprises operating wireless telegraph plants in the country whether by means of fixed or movable stations, for the establishment of mutual traffic and for the eventual settlement of accounts in accordance with the provisions of *ART. XLII* and paragraphs of the Regulations of London.

ART. 60.—It shall pertain to the Department of Roads and Public Works to make special arrangements with the neighbouring republics whether directly with their respective Governments or with private parties established and operating therein, for the purpose of establishing mutual traffic and adopting the provisions relative to keeping of accounts (*Regulations of London, ART. XLII, section 4*).

CHAPTER VII.

QUALIFICATIONS OF WIRELESS OPERATORS.

(Compare Art. 10 of the Regulations of London, 1912, and Art. 6, section 3, of the Regulations of Berlin, 1906.)

Art. 61.—Certificates of qualification of operators intending to work at the fixed and movable wireless telegraph stations which shall be issued by the official schools or by private schools acknowledged by the Government in accordance with the present regulations shall attest the professional standing of the operators with regard to:

(a) Transmission and reception by the ear of messages drawn up in plain language with the Morse International alphabet at the rate of 20 words per minute at least—each group of five letters counting as one word.

(b) Regulation of the apparatus and acquaintance with their work. This preparation should embrace the study of the most common systems, chiefly of those systems employed in the Brazilian system of wireless telegraphy.

(c) Acquaintance with the provisions of the Conventions and Regulations and of the rules applicable to the exchange of wireless and ordinary telegraphic communications.

Art. 62.—In passing their examinations the candidates for certificates shall:

(a) Operate ordinary transmission with the Morse during five minutes consecutively, at a minimum rate of 20 words per minute, each group of five letters counting as one word.

(b) Receive and hear legibly, at the same rate mentioned above, with the aid of a double telephone receiver mounted to the head in the ordinary manner for reception in wireless telegraphy.

(c) Understand the simple diagrams of the electrical connections of the apparatus used in the system adopted for the examination.

(d) Enumerate the principal parts of the apparatus stating the use thereof, in such a way as to demonstrate that they would be capable of mounting the apparatus with the assistance of the diagrams.

(e) Mention the accidents occurring more frequently, and the means usually employed to repair them.

(f) Explain what is to be done in order to pass from one wavelength to another in transmitting or in receiving.

(g) Effect (1) regulations and adjustments; (2) alteration of wavelengths; (3) reduction and increase of transmission energy; (4) investigation of accidents and remedies therefor.

Art. 63.—There shall be two classes of certificates: first and second class. The sole difference between these two classes of certificates shall be in respect of speed of transmission and of reception: first-class certificates shall correspond to a rate of 20 words, at least, per minute; those of the second class shall correspond to a speed ranging between 12 and 19 words per minute.

Art. 64.—In the wireless telegraph stations on board ship due regard will be paid to the provisions of Art. X of the International Regulations of London relating to the utilisation of operators holding certificates of the first and second classes.

Sole Paragraph.—In the fixed stations service shall be assumed at least by two operators

holding certificates of the first class; holders of certificates of the second class shall be admitted as assistants. Only in cases of urgency may transmissions be effected by non-certificated operators.

Art. 65.—With a view to the preparation of wireless telegraph operators the Government shall have the power, subject always to the provisions of the Organic Law of Tuition, to grant subventions to private schools in order to facilitate the preparation of these operators in the capital of the Republic and in the different States.

Sole Paragraph.—For the official schools whether civil or military, the Government shall have the power to contract, either in the country or abroad, qualified persons for the purpose of administering practical tuition.

Art. 66.—The certificates shall testify to the professional standing of the wireless telegraph operators in accordance with the provisions of Arts. 61, 62 and 63, and shall contain a statement to the effect that the holder thereof shall keep the secrecy of correspondence in accordance with the national and international prescriptions.

Art. 67.—Certificates awarded by private schools must be registered at the Department of Roads and Public Works, where they will be attested by the Government in accordance with the requirements of the present Regulations and of the International Regulations, Art. 10.

Rio de Janeiro, January 14th, 1914.

FORM OF LICENCE.

(Coat of Arms).

REPUBLIC OF THE UNITED STATES OF BRAZIL—
DEPARTMENT OF ROADS AND PUBLIC
WORKS.

F LICENCE for the establishment and operation of wireless telegraph stations on board ships in accordance with Arts. 9 and 13 of the International Regulations of London, and with Art. 173 of Decree No. 10,524 of October 23rd, 1913, referring to merchant and coast trade navy.

Licence is given by the Department of Roads and Public Works to.....
.....
during the period of two years as from the present date, to—

I.—Establish and operate on board the steamship.....one wireless telegraph station of the system known as..... subject to the following conditions: (1) the station to be established shall comply with the specifications hereunto appended; (2) the apparatus shall be syntonised; (3) the apparatus shall be capable of supporting traffic by means of waves of 300 and of 600 metres and other lengths not greater than 600 metres, the use of which may be authorised by the Government; (4) the speed of transmission and of reception of wireless messages under normal circumstances shall not be lower than 12 words per minute, counting five letters to the word.

II.—Transmit and receive wireless messages by means of the station licensed for establishment on the said ship and of the stations established on board other ships and of the fixed stations; all in accordance with the regulations in force.

The present licence is granted subject to the following conditions:—

1. The licensed station shall be operated

solely by the licensee or by another person duly authorised by law.

2. The operators shall not interfere with the signals from the stations of the Army and of the Navy; they shall observe the Conventions and Regulations in force, and they shall further transmit wireless messages, on a footing of equal treatment, without favours or preferences.

3. The operators shall whenever possible receive from ships and lighthouses all calls for assistance and signals of distress, and shall answer such signals and forward them with the least possible delay to the proper authorities, either by means of his own station or through other stations or yet by another means.

4. The station shall only be operated by a holder of a certificate awarded by the Government as provided for in the National Wireless Telegraph Regulations in force.

5. The licensee and his operators shall keep complete secrecy of the wireless telegraphic correspondence in general, whether transmitted to his station or received for transmission to others.

6. Licensee shall keep proper accounts of the traffic of his station and keep on file all the messages transmitted and received by the said station, each message to bear a number of identity, the date and note of origin and destination. He shall keep all the messages received and transmitted for the period of time stipulated in the International Regulations. The archives may be inspected by the General Telegraph Department whenever it may be deemed convenient.

7. The licensee shall make arrangements by entering into a contract with the General Telegraph Department with regard to the accounts of traffic between the coastal stations and the stations licensed hereby.

8. The General Telegraph Department through one of its delegates may, at any time, inspect the station licensed hereby, and examine the apparatus and the station in general and in every detail.

9. Licensee shall keep at the station licensed hereby the present licence or a certified copy of same; also all printed matter necessary for the traffic in accordance with the Convention and Regulations in force.

10. This department of the Administration shall have the power to interrupt the present licence in case of non-observance or failure on the part of licensee to comply with the clauses hereinabove stipulated.

The station authorised by the present licence shall be employed in the service of in accordance with section 3 of Art. 13 of the International Regulations of London, 1912.

WIRELESS LAW NO. 3,296.

JULY 10TH, 1917.

G The National Congress resolves:—
ART. 1.—The service of radiotelegraphs (telegraphs without wires) in the territories and territorial waters of Brazil is exclusively within the sphere of federal Government.

Sole Paragraph.—The service of radiotelegraphy comprises also radiotelephony (telephones without wires).

ART. 2.—The establishment and exploitation of radiotelegraph stations are within the sphere of the Ministry of Public Works, in respect to its application of a civil character and the Ministries of War and Marine in reference to its applications destined to national defence and to the service of the Army and Navy.

Sole Paragraph.—The three above-mentioned Ministries will enter into an agreement in respect to the localities in which must be established the stations necessary for commerce, for navigation and for the defence of the national territory.

ART. 3.—The Government may give permission to third parties, nationals, without monopoly whatsoever, to instal or work one or more high-power stations in suitable places on the littoral; under the terms of the International Regulations concerning wireless telegraphy and also the Brazilian regulations which are in force for the execution of the same service; for the exclusive purpose of establishing inter-oceanic and inter-territorial communications with corresponding stations in other countries.

PAR. 1.—These stations must be linked with the National Telegraphs, by whose intermediary shall be collected and distributed the international radiotelegraphic service to and from Brazil in such a manner that the Government shall receive the terminal rate in force.

PAR. 2.—The rights that are conferred and the disposals contained in this article may only be used by the Government after the conclusions adopted in respect to this subject by the International Pan-American Convention, which at the recent conference in Buenos Aires was arranged should be held at Washington in 1917.

ART. 4.—The States within the area of their territories which are not yet served by telegraphs with or without wires, and may wish to establish radiotelegraphic stations, shall interest the Department of Telegraphs to instal and work them, debiting the respective costs against such States, and for the purposes of the adjustment of the accounts shall be considered as mutual traffic administrations with the Department.

ART. 5.—The National shipping companies whose steamers have accommodation for more than 50 passengers and whose voyages are longer than 150 miles from the port of origin of its ships and the site of the registered office of the company must instal on board of such steamers a radiotelegraphic station with a minimum range of 100 nautical miles, which shall be worked by an operator who holds a certificate of fitness granted by competent authority. The installations on board shall be provided with emergency apparatus and battery which will permit a continuation of the service in case of the failure of supply of electrical energy by the generators that depend on the main installation.

ART. 6.—Foreign ships will be permitted within or without the territorial waters of Brazil to use the radiotelegraphic stations which they have mounted on board to correspond with the coastal stations erected by the Department of Ways and Public Works previously being authorised by the same Ministry or the

Department to this end and subject to the prescriptions and regulations governing this service.

Paragraph.—Foreign warships will be licensed by the authority designated by the Minister for Marine.

ART. 7.—The establishment and working of the coastal radiotelegraphic stations and others of a civil character in the interior of the country will be entrusted to the Department of Telegraphs, to which will fall the duty also of the superintendence and carrying out of all the service of fiscalisation in relation to the employment of this kind of telegraph system by the State by national shipping companies whether by fixed or moving stations and the execution of administrative acts, the promulgation of the dates of openings, the range and the class of each station and the inauguration of proceedings relative to misdemeanours committed against this branch of the service.

Sole Paragraph.—The said Department shall create a special section to which shall be entrusted the management of the service, and also it shall form a school of radiotelegraphy and it shall have authority to contract within or without the country with a professional teacher to take charge of the said school. The only persons qualified or admissible for the personnel of the said radiotelegraphic stations shall be nationals, holders of a certificate of competency issued by the above school, or by other holders of diplomas, admitted to work in the country.

ART. 8.—All the radiotelegraphic stations that were established in Brazilian territory and on board of national ships and on board of foreign ships whilst they remain or navigate on the rivers or territorial waters of Brazil, and claim to establish communication with the national stations for this purpose authorised, must be subject to the rules and regulations of the interior and international services that may be in force.

ART. 9.—Radiotelegraphic correspondence is authorised between national mercantile ships and also between them and foreign ships that possess radiotelegraphic stations aboard as well as between the said ships and the Brazilian coast stations dependent upon the Ministry of Public Works.

ART. 10.—Whatever concession to persons for the establishment of a radiotelegraphic service or whatever authorisation given to use the respective apparatus installed on board foreign ships may be revoked if they do not comply with the rules and regulations or if the Ministries of Marine and War judge it necessary for the security of the country or its defence.

ART. 11.—When the civil or military Federal authorities dependants of the Ministries referred to in Art. 2 have to make scientific or technical experiments in radiotelegraphy they must give notice to the Ministries to which they depend, and when they make experiments on behalf of functionaries of other Ministries, then they must give notice to the Ministry of Ways and Works.

ART. 12.—No other besides the Federal authorities may make experiments or establish experimental radiotelegraphic stations without previous permission of the Ministry of Ways and Public Works, who can give the same with the restrictions and cautions necessary for the security and interests of the State and the efficiency of the traffic of the official stations.

ART. 13.—All the rules and regulations of the Department-General of Telegraphs shall

apply to the service of radiotelegraphy with reference to the secrecy to telegrams and as to damages caused to the stations or their material

ART. 14.—The Government will proceed in the terms of the legislation in force against those who, without permission, exploit, whether publicly or clandestinely, a radiotelegraphic service, and in time of the disturbance of public order or external war these offences shall be classified and punished in the first case as an act of resistance to constituted authority and in the last case as an act of spying.

ART. 15.—Those coastal and interior radiotelegraphic stations which are dependencies of the Ministry of Ways and Public Works, and not reserved for special purposes, will be open for public correspondence.

Sole Paragraph.—No responsibility will be accepted by the radiotelegraphic service for errors of the service or faulty delivery of telegrams, in the terms of Art. 41 of the regulations revised in London.

ART. 16.—Any Brazilian radiotelegraphic station, whether civil or military, terrestrial or marine, will be obliged to give preferential attention to calls for succour that are received by them.

ART. 17.—In all radiotelegraphic stations the public service shall have preference to private service, save in cases of *force majeure* (accidents and calls for succour).

ART. 18.—Whatever be the object for which radiotelegraphy be established the respective services shall be organised in a form not to cause disturbance to other radiotelegraphic stations, and the respective Ministries shall in all cases adopt provisions and rules necessary to such end.

ART. 19.—Radiotelegrams proceeding from a ship which flies a flag of a non-adherent country to the regulations upon radiotelegraphs of the Convention of London as well as those addressed to ships of such countries shall be transmitted by Brazilian stations only in cases where the respective country has previously declared that it will conform to those rules and regulations in the adjustment of accounts.

ART. 20.—When the Ministries of Marine or War have to establish radiotelegraphic stations for special ends in strategic points and fortified places on land or sea, they will proceed in agreement with each other and with the Ministry of Ways and Public Works when choosing of the site and deciding upon the manner of carrying out the work, to the end that they shall not interfere with their mutual traffics.

These stations may be worked by telegraphists of the civil administration.

Whilst civil functionaries man the stations established in strategic or fortified places they shall be subject to military regime.

ART. 21.—All coastal radiotelegraph stations worked by the Department of General Telegraphs must receive and transmit meteorological observations, and there must be provided installations at one or more stations of the apparatus necessary to transmit time signals in the manner established by the Time Conference held in Paris in October, 1912.

Sole Paragraph.—The national ships provided with apparatus for wireless telegraphy and the foreign ships in the same condition can signal to the coast stations when they are within reach of them their observations about the weather, which will be communicated to the Meteorological Observatory of Rio de Janeiro,

and to the ships, on the other hand, will be communicated the observations from that Observatory.

ART. 22.—To the radiotelegraphic service of Brazil are applicable the International Radiotelegraphic Convention held in London and the rules which may be laid down for the execution of the present law.

ART. 23.—The adjustment of accounts shall be made six-monthly between the Department General of Telegraphs and the agencies of the companies of national and foreign ships, and in their absence with the administrations to which those ships are attached in accordance with what is established by Art. XLII of the International Regulations (revised in London).

ART. 24.—The call letters of the stations on board the national war and merchant ships will be distributed by the Department of General Telegraphs in accordance with the series of indicators reserved for Brazil by the Secretary of the International Union of Telegraphs of Berne.

ART. 25.—The radiotelegraphic stations in the interior of the country shall be established and worked by the Department of General Telegraphs, organising proper radiotelegraphic districts in regions where there are none, connecting them with the telegraphic service by means of wired lines and working with a parallel service of wired telegraphs.

ART. 26.—Annuling all whatsoever acts in this connection effected by the Government prior to the promulgation of the present law.

ART. 27.—It shall be the sphere of the Ministry of Ways and Public Works to make provision for the establishment and initiation of an international radiotelegraphic service and with the adjoining countries as well as the drawing up of the basis of a definite agreement and referendum to the National Congress.

ART. 28.—All previous acts to the contrary are revoked.

DECREE No. 3,316.

(Extract from.)

H Included in a Finance Bill, passed by Congress, signed and put into operation by the President of the Brazilian Republic on August 16th, 1917; we find a clause dealing with wireless telegraphy which authorises the Government to—

"Complete the services of Telegraphy, Radiotelegraphy and Telephony, to establish all the communications necessary for Military and Naval service."

The final clause of this same Act makes the following provision, which would appear likely to have some special reference to Decree No. 3296 of the 10th July, 1917: "Revoke all dispositions to the contrary."

PROJECT No. 367. 1919.

I For the organisation of the Radiotelegraph Service of the National Army.

The Radiotelegraph Service of the Army was created in 1914, and includes all the fixed radiotelegraph stations belonging to the Ministry of War, with a cadre of 30 radiotelegraphists for the purpose of operating them.

The Director of this service is a first lieutenant of the first Battalion of Engineers.

The cadre comprises 10 radiotelegraphists of the first and 20 of the second class.

From 1914 to the present time no modification has been made in the organisation of this important service, the regular working of which requires remodelling for the improvement of the technical conditions, in view of the extent it has assumed by reason of the acquisition of field radiotelegraph material, and the ever increasing employment of this means of communication between the various sections of the army.

The original organisation no longer satisfies the present radiotelegraphic requirements as regards field and fixed stations.

The recent acquisition of 16 field stations has brought with it the necessity for equipping them with qualified radiotelegraphists in order to ensure their perfect working and maintenance.

It is evident that these radiotelegraphists must possess certificates of competency, issued by the School of the General Administration of Telegraphs, or by other schools also authorised to work in the country, in conformity with the legislation in force.

Furthermore, the maintenance of radiotelegraph material renders necessary the establishment of a complete depot for the repair of any damage and the adjustment of apparatus.

To meet all these exigencies I propose the following:

PARLIAMENTARY BILL.

The National Congress decrees:

ART. 1.—The Radiotelegraph service of the Army is composed of:

(a) Fixed radiotelegraph stations of the National Army.

(b) A radiotelegraph school similar to the School of the General Administration of Telegraphs, to prepare, theoretically and practically, the necessary radiotelegraphists for the service of the fixed stations and the field stations of all arms.

(c) A material depot to supply all stations.

ART. 2.—The direction of the radiotelegraph service will devolve upon the Commander of the first battalion of engineers, who will have as auxiliaries two subaltern officers of the Engineers.

ART. 3.—The school of Radiotelegraphy will work in the first Battalion of Engineers.

ART. 4.—The following shall be the personnel of the radiotelegraph service:

7 radiotelegraphists of the first class and 14 of the second class for the fixed stations.

1 assistant administrative technician, first-class radio.

1 assistant of the radiotelegraph school, of the first class.

1 assistant instructor of the military school, of the first class.

1 first-class radiotelegraphist at the school of aviation.

6 officers in charge of field stations, radios of second class.

2 second-class radiotelegraphists in the school of aviation.

1 second sergeant electrical mechanic, one chief mechanic and three soldier auxiliaries, for the workshops and depots.

ART. 5.—For the organisation of the workshops, depots and radiotelegraph school, the Government shall be authorised to spend the amount of 20:000\$000, and an annual allowance of 4:000\$000 to meet the expenses of maintenance, repairs and cleaning of material, and minor expenses.

ART. 6.—The auxiliaries of the director of the radiotelegraph service shall be the supplementary cadre of the Engineers.

ART. 7.—Radio telegraphists of the first class shall receive the pay of "Sargento ajudante," those of the second class shall receive the pay of first sergeant, plus the daily allowance of \$5000.

ART. 8.—Auxiliaries shall receive the pay of their class, plus a daily allowance of \$3000, and shall be appointed by competitive examination.

ART. 9.—The number of radiotelegraphists

of the first and second classes is subject to variation according to the number of stations in operation, in the ratio of one of the first class and two of the second class for each station.

ART. 10.—The Government shall pass this Bill into law.

ART. 11.—All provisions to the contrary are hereby revoked.

Sala das Sessões, 22nd September, 1919.

OCTAVIO DA ROCHA.

BRITISH EAST AFRICA

(See KENYALAND COLONY.)

BRITISH GUIANA

THIS Colony, which includes the counties of Demerara, Essequibo and Berbice, lies on the north-east coast of South America, and has a total area of 90,277 square miles. The Government is administered by a Governor with a Court of Policy consisting of fifteen other members, seven official and eight elected.

CONTROL AND ORGANISATION.

Both the ownership and working of all radiotelegraphic stations are vested in the Government. Only one station is open for public correspondence with ships.

ADMINISTRATION.

The administration of wireless telegraphy is carried out under the following regulations:—

A—The Telegraphic Ordinance, 1903.

B—Ordinance No. 7 of 1910.

A This Ordinance may be cited as "The Telegraph Ordinance, 1903."

2. In this Ordinance "telegraph" means an electric, galvanic, or magnetic telegraph, and includes appliances and apparatus for transmitting or making telegraphic, telephonic or other communication by means of electricity, galvanism or magnetism, whether the same be transmitted by means of wires or cables or without wires or cables.

3. The Governor-in-Council shall have the exclusive privilege of establishing, maintaining and working telegraphs between the Colony and places outside of the Colony.

Provided that the Governor-in-Council may grant a licence on such conditions and in consideration of such payments as he thinks fit, to any person, company or body corporate, to establish, maintain or work a telegraph between the Colony and any place or places outside the Colony; and

Provided that nothing in this Ordinance shall apply to or in any way affect the rights already granted to the West India and Panama Telegraph Company, Limited, under any Ordinance or Ordinances passed before the Commencement of this Ordinance.

ORDINANCE No. 7 of 1910.

B 1. (1) A person shall not establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place or on board any British ship registered in the Colony, except under and

in accordance with a licence granted in that behalf by the Governor-in-Council.

(2) A person shall not work any apparatus for wireless telegraphy installed on any merchant ship (whether British or foreign) whilst that ship is in the territorial waters of the Colony, otherwise than in accordance with regulations made in that behalf by the Governor-in-Council, and the Governor-in-Council may, by any such regulations, impose penalties recoverable summarily for the breach of any such regulations, not exceeding fifty dollars for each offence, and may provide for the forfeiture on any such breach of any apparatus for wireless telegraphy installed or worked on such ship.

(3) If any person establishes a wireless telegraph station without a licence in that behalf, or instals or works any apparatus for wireless telegraphy without a licence in that behalf, he shall be guilty of a misdemeanour and be liable on summary conviction thereof to a penalty not exceeding fifty dollars, and, on conviction on indictment, to a fine not exceeding five hundred dollars, or to imprisonment, with or without hard labour, for a term not exceeding twelve months, and in either case be liable to forfeit any apparatus for wireless telegraphy installed or worked without a licence.

(4) If a Justice of the Peace is satisfied by information on oath that there is reasonable ground for supposing that a wireless telegraph

COPYRIGHT: "GEOGRAPHIA" LTD 55 FLEET STREET, LONDON E.C. 4.

station has been established without a licence in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any merchant ship within his jurisdiction without a licence in that behalf or contrary to the provisions of the regulations made under sub-section two of this section, he may grant a search warrant to any police officer or any officer appointed in that behalf by the Governor or the Postmaster-General and named in the warrant, and a warrant so granted shall authorise the officer named therein to enter and inspect the station, place or ship and to seize any apparatus which

appears to him to be used or intended to be used for wireless telegraphy therein.

(5) The expression "wireless telegraphy" means any system of communication by telegraph without the aid of any wire connecting the points from and at which the messages or other communications are sent and received: Provided, That nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

2. This Ordinance may be cited as the Wireless Telegraphy Ordinance, 1910.

BRITISH HONDURAS

THE Crown Colony of British Honduras lies in Central America within $18^{\circ} 29' 5''$ to $15^{\circ} 53' 55''$ N. latitude and $89^{\circ} 9' 22''$ to $88^{\circ} 10'$ W. longitude. Its extreme length and breadth are 174 miles and 68 miles respectively; it abuts on the Atlantic, and is bounded on the north by Yucatan (Mexico), on the west and south by Guatemala, and on the east by the Caribbean Sea. The total area is about 8,598 square miles.

CONTROL.

Wireless telegraphy has seen some developments here since its first introduction, and both the ownership and working of the one radiotelegraphic station are vested in the Government. An experimental licence has been granted to S. John's Roman Catholic College in Form 2 issued by H.B.M. Postmaster-General in 1905. The Belize wireless station is open for continuous ship service, receiving calls on a 600 and answering on a 1,000 metre wave. Commercial traffic is also handled for the United States and the

United Kingdom, through the United Fruit Company's relay station at Swan Island (*see map of West Indies, under Leeward Islands*). The local toll of the station is ten cents per word. The through rate to any point in the United States is 35 cents per word and to the United Kingdom 62 cents per word.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Mr. Gerald S. W. Smith ..	Colonial Postmaster ..	Belize.
Mr. James Owen Hall ..	Superintendent of Wireless Telegraphs ..	Do.

During the war no privately owned apparatus was allowed in the colony, but laws are being prepared for the regulation thereof in accordance with the London Convention of 1912.

ADMINISTRATION.

Wireless telegraphy in British Honduras is regulated by Chapter CXCI of the Consolidated Laws of British Honduras (revised edition), the text of which will be found below.

A—Consolidated Law.

B—Schedule.

C—Licence to use Wireless Telegraphy for Experimental Purposes.

CHAPTER CXCI OF THE
CONSOLIDATED LAWS OF BRITISH
HONDURAS (REVISED EDITION).

TO REGULATE WIRELESS TELEGRAPHY.

A 1. *Interpretation.*—In this chapter "Wireless Telegraphy" means any system of communication by telegraph without the aid of any wire connecting the points from and at which the messages or other communications are sent or received: Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

2. *Licence to instal, &c., Wireless Telegraphic Apparatus.*—(1) A person shall not establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place or on board any ship registered in the Colony except under and in accordance with a licence granted in that behalf by the Governor.

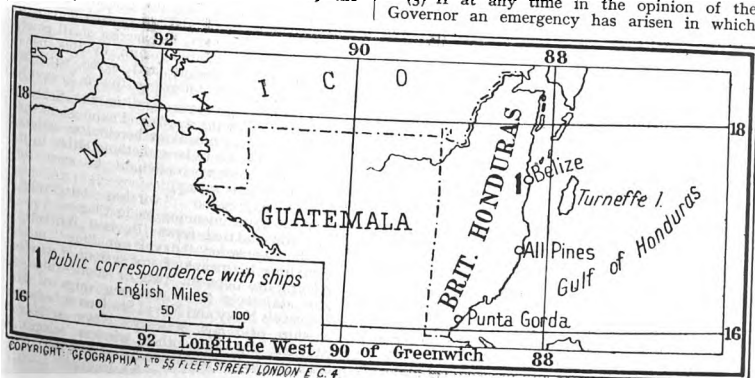

(2) Every such licence shall be in such form and for such period as the Governor may determine and shall contain the terms, conditions and restrictions on and subject to which it is granted.

3. *Apparatus not to be worked on merchant ship except in accordance with regulations.*—A person shall not work any apparatus for wireless telegraphy installed on any merchant ship, whether British or foreign, while that ship is in the territorial waters of the Colony, otherwise than in accordance with regulations under this chapter.

4. *Regulations.*—(1) The Governor may from time to time make regulations for carrying into effect the purpose of this chapter, and such regulations shall on publication in the *Gazette* have the same effect as if enacted in this chapter.

(2) The regulations in the schedule to this chapter shall have effect except in so far as they may be amended or rescinded by regulations made under the authority of this section.

(3) If at any time in the opinion of the Governor an emergency has arisen in which

it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in the territorial waters of the Colony shall be subject to such further regulations as may be made by the Governor from time to time, and such regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

5. *Search Warrants.*—If a District Commissioner is satisfied by information on oath that there is reasonable ground for suspecting that a wireless telegraph station has been established without a licence in that behalf or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any merchant ship contrary to the provisions of this chapter or of any regulations made under this chapter, or of any licence granted under this chapter, he may grant a search warrant to any police officer or any person appointed in that behalf by the Superintendent of Police and named in the warrant and a warrant so granted shall authorise the police officer or person named therein to enter and inspect the station, place or ship and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

6. *Penalty for contravention of chapter.*—(1) Any person who shall offend against any provision of this chapter or any regulations made thereunder shall be liable on summary conviction for every such offence to a fine not exceeding two hundred and fifty dollars, and upon such conviction the Court may order that any apparatus for wireless telegraphy in connection with which the offence was committed shall be seized and forfeited.

(2) *Procedure.*—Proceedings shall be taken before the District Commissioner for the Belize District on the complaint of the Superintendent of Police or of any person thereto authorised by him in writing, and the procedure shall be the same as the procedure for the time being in force in respect of offences punishable on summary conviction.

SCHEDULE—Section 4 (2). REGULATIONS.

B i. All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of the Colony shall be worked in such a way as not to interfere with

(a) Naval signalling, or

(b) the working of any wireless telegraph station lawfully established, installed or worked in the Colony or the territorial waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

ii. In these regulations "Naval signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and Naval Stations, or between a ship of His Majesty's Navy or a Naval Station and any other wireless telegraph station whether on shore or on any ship.

iii. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in any harbour or bay of the Colony except with the special or general permission of the Governor.

iv. For the purpose of any proceedings under

these regulations the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship.

v. Any summons or other document in any proceedings under these regulations shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in command or charge of the ship.

vi. These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

EXPERIMENTAL FORM 2.

Dated

LICENCE TO USE WIRELESS TELEGRAPHY FOR
EXPERIMENTAL PURPOSES.

This Indenture made the
day of _____ One thousand
nine hundred and _____

between the Colonial Secretary of the Colony of British Honduras on behalf of the Government of British Honduras of the one part and (hereinafter called "the licensee") of the other part.

Whereas the licensee is desirous of establishing installing and working an amateur wireless telegraph apparatus for demonstration purposes with the sole object of giving instruction in the Science Classes of Saint John's College;

And whereas by reason of the provisions of Chapter 199 of the Consolidated Laws (Revised Edition) it is unlawful to establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place except under and in accordance with a licence granted in that behalf by the Governor and it is also unlawful save as in the said Law provided to transmit wireless telegrams within the Colony;

And whereas at the request of the licensee the Governor has agreed to grant to the licensee the licence powers and authorities hereinafter expressed and contained for the period upon the terms and subject to the stipulations and conditions hereinafter appearing;

Now this Indenture witnesseth that in consideration of the premises and of the matters hereinafter appearing it is hereby agreed and declared between and by the parties hereto and the licensee (as to the covenants and agreements hereinafter contained on his part) doth hereby covenant and agree with the Colonial Secretary and the Colonial Secretary (as to the covenants and agreements hereinafter contained on his part) in exercise of all powers and authorities enabling him in this behalf doth hereby covenant and agree with the licensee in manner following (that is to say):—

i. In these presents (and in the Schedule hereto) the following words and expressions shall have the several meanings hereinafter assigned to them unless there be something either in the subject or context repugnant to such construction (that is to say):—

The expression "wireless telegraphy" has the same meaning as in Chapter 199 of the Consolidated Laws (Revised Edition).

The expression "naval signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy between ships of His Majesty's Navy and Naval Stations or between a ship of His Majesty's Navy or Naval Station and any other wireless telegraph station whether on shore or on any ship.

The expression "the Admiral's" means the Commissioners for executing the office of Lord High Admiral of the United Kingdom of Great Britain and Ireland.

2. Subject to the provisions of this Indenture the licensee shall during the term or period commencing on the and terminating on the have licence and permission from the Colonial Secretary—

to establish instal and work at the station specified in the Schedule hereto apparatus for wireless telegraphy (hereinafter called "the licensed apparatus") provided that the apparatus installed at such station shall be of the character specified in the said Schedule.

3. The licensed apparatus shall not be used by the licensee or by any person either on his behalf or by his permission for any purpose except for the purpose of conducting experiments in wireless telegraphy.

4. (1) The licensed apparatus shall be so worked as not to interfere with the working of any wireless telegraph station established in the Colony or the territorial waters abutting on the coasts thereof and in particular with the transmission or receipt of any messages between or at any wireless telegraph station established as aforesaid on land and wireless telegraph stations established on ships at sea.

(2) With a view to preventing such interference as aforesaid the licensee and any person acting on his behalf or by his permission shall comply with all directions which shall be given to the licensee by the Colonial Secretary with respect to avoiding interference between one wireless telegraph station and another.

(3) The licensed apparatus shall not without the consent in writing of the Colonial Secretary be altered in respect of any of the particulars mentioned in the Schedule hereto.

5.* (1) The licensee shall not (either by himself or by any person acting on his behalf or by his permission) by the transmission of any message by means of the licensed apparatus or otherwise by the use of the licensed apparatus interfere with naval signalling.

(2) Whenever the operators at the station of the licensee perceive through the medium of the instruments used by them that naval signalling is proceeding they shall refrain from using the licensed apparatus until all indication that naval signalling is proceeding shall have ceased.

(3) The licensee and any person acting on his behalf or by his permission shall if so required in writing by the Colonial Secretary cease to use the licensed apparatus.

(4) If the Colonial Secretary is of opinion that the working of the licensed apparatus at the station specified in the Schedule hereto is inconsistent with the free use of naval signalling the licensee shall when required in writing by the Colonial Secretary close the said station.

(5) These provisions for the protection of naval signalling shall be construed to be without prejudice to the generality of any other provisions of this indenture.

6. Neither the licensee nor any person acting on his behalf or by his permission shall divulge to any person (other than properly authorised officials of His Majesty's Government or a competent legal tribunal) or make any use whatever of any message coming to the knowledge of the licensee or any such person as aforesaid and transmitted by naval signalling or by any

system of wireless telegraphy provided or maintained by the Government of the Colony.

7. The Colonial Secretary and his engineers and agents may from time to time and at all reasonable times enter upon the station or other premises in the possession or occupation of the licensee either solely or jointly with any other person or persons for the purpose of inspecting and may inspect any apparatus fixed or being in such places respectively and the licensee shall afford all requisite and proper facilities for such inspection and shall secure to the Colonial Secretary the right for the purpose aforesaid of entry from time to time into and on such station and premises as may be in the possession or occupation of any person or persons other than the licensee.

8. All apparatus used or intended to be used under this license shall be so erected fixed placed and used as not either directly or by reason of the working or user thereof to interfere with the efficient or convenient maintenance working or user of any telegraphic line of the Colony.

9. If and whenever in the opinion of the Governor an emergency shall have arisen in which it is expedient for the public service that His Majesty's Government shall have control over the transmission of messages by Wireless Telegraphy it shall be lawful for the Governor by warrant under his hand to direct and cause the licensed apparatus to be taken possession of in the name and on behalf of His Majesty.

10. The Colonial Secretary may at any time with the Governor's approval give notice in writing to determine these presents and the license or permission hereby given at the end of one calendar month from the date of such notice and at the expiration of that period the license or permission hereby granted shall cease and determine accordingly but without prejudice to any remedy of the Colonial Secretary under any covenant or provision herein contained on the part of the licensee to be observed and performed.

11. In case of any breach non-observance or non-performance by or on the part of the licensee of any of the covenants or conditions herein contained and on the part of the licensee to be observed and performed the Colonial Secretary may by writing revoke and determine these presents and the licence powers and authorities hereinbefore granted and each and every of them and thereupon these presents and the said licence powers and authorities and each and every of them shall absolutely cease determine and become void.

Provided always that no such revocation or determination as aforesaid shall prejudice or affect any right of action or remedy which shall have accrued or shall thereafter accrue to either of the parties hereto under the covenants herein contained.

12. Any notice request or consent (whether expressed to be in writing or not) to be given by the Colonial Secretary under these presents may be served by sending the same by registered post letter to the licensee and any notice to be given by the licensee under these presents may be served by sending the same by registered post letter addressed to the Colonial Secretary.

(1)	(2) — miles	(3) Current and Voltage ..	(4) Batteries.

BRITISH NORTH BORNEO

(See BORNEO, BRITISH.)

BRITISH SOMALILAND

THE Somali coast, lying south of the Red Sea, and stretching from Lahadu to Bandar Ziyava (49° east longitude), is administered by a British Commissioner. Egyptian control ceased in 1884, and the territory then fell under the administration of the Indian Government. It was taken over by the Foreign Office on October 1st, 1898, and was transferred to the Colonial Office on April 1st, 1905. The area comprises about 68,000 square miles, which support a population of about 300,000 Mohammedans, mainly nomadic, except on the coast, where British occupation has brought into existence some fair-sized towns supporting an urban population. The boundary has been settled by agreement between France, Italy, and Abyssinia. The chief ports are Berbera, Bulhar, and Zeila.

CONTROL.

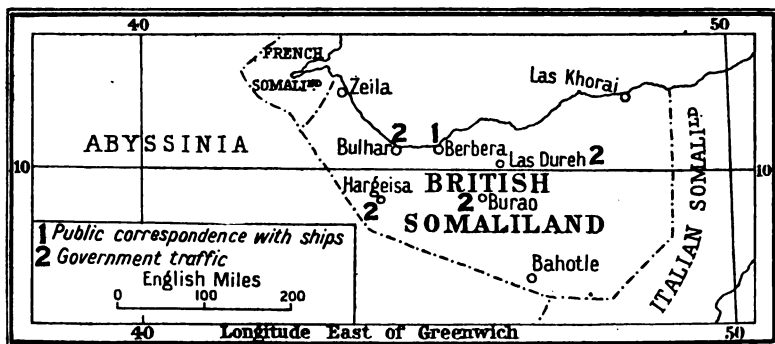

The control of wireless telegraph operations is vested in the Posts and Telegraphs Department.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Mr. W. D. Lacey	Director, Posts and Telegraphs	Berbera.
Mr. C. V. Magill	Assistant Director of Posts and Telegraphs ..	Do.
Mr. A. J. S. Culpeper ..	Superintendent of Telegraphs	Do.
Mr. H. C. Johnson	Engineer	Do.

ORGANISATION.

Originally radiotelegraphy was introduced, and the Protectorate placed in telegraphic communication with the outside world, more with a view to administrative than commercial purposes. The first stations were erected in 1910 at Berbera and Aden (on the Asiatic coast), the latter being in telegraphic communication with the Eastern Telegraph Company's Aden Station.

COPYRIGHT, "GEOGRAPHICA" LTD 55 FLEET STREET LONDON E.C. 4.

Subsequently other stations were erected, at Bulhar (1913), at Burao (1916), at Las Dureh (1918), and at Hargeisa (1919).

Burao is military headquarters, Las Dureh is an outpost station on the edge of Mulla's country and proved most useful by giving the camel corps information of a dervish raid which enabled the retreat to be cut off. Las Dureh communicates directly with Berbera and Burao.

A new station has been erected at Hargeisa, 110 miles S.W. of Berbera, for inferior working. Hargeisa is a District Commissioner's headquarters which is now in direct communication with Berbera and Burao.

Bulhar station has been temporarily closed.

Mobile stations are projected for Zeila and Las Khorai on the coast.

The latest available statistics enumerate: Six land stations (including Aden) (fixed) directly controlled by Government, and one portable land station (a $\frac{1}{2}$ kw. camel pack set) also under Government control. Internal communication is on a 900-metre wave to avoid interference in the Gulf of Aden.

ADMINISTRATION.

The first Ordinance to regulate radiotelegraphy in the Somaliland Protectorate was passed in 1908. It was called Ordinance No. 6 of 1908, and enacted that the full control of radiotelegraphy should be vested in the Commissioner, and any person contravening his regulations should be liable on conviction to a fine not exceeding £100 or imprisonment for 12 months, together with confiscation of his apparatus. A new Ordinance repealing the above was passed in 1913, and appears *in extenso* below. This constitutes the extant governing decree under which wireless is at present administered.

We append the text of the following:—

A—Wireless Telegraphy Ordinance, 1913.

B—Regulations thereunder.

ORDINANCE.

A 1. This Ordinance may be cited as "The Wireless Telegraphy Ordinance, 1913."

2. In this Ordinance "Wireless Telegraphy" means any system of communication by telegraph without the aid of any wire connecting the points from and at which messages or other communications are sent or received. Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

3. (1) A person shall not establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place or on board any ship registered in the Protectorate, except under and in accordance with a licence granted in that behalf by the Commissioner.

(2) Every such licence shall be in such form and for such period as the Commissioner may determine, and shall contain the terms, conditions and restrictions on and subject to which it is granted.

4. A person shall not work any apparatus for wireless telegraphy installed on any merchant ship, whether British or foreign, while that ship is in the territorial waters of the Protectorate, otherwise than in accordance with regulations under this Ordinance.

5. (1) The Commissioner may from time to time make regulations for carrying into effect the purposes of this Ordinance, and such regulations shall on publication have the same effect as if enacted in this Ordinance.

(2) The regulations in the schedule to this Ordinance shall have effect in so far as they may be amended or rescinded by regulations made under the authority of this section.

(3) If at any time, in the opinion of the Commissioner, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in the territorial waters of the Protectorate shall be subject to such further regulations as may be made by the Commissioner from time to time, and such regulations may prohibit or regulate such

use in all cases or in such cases as may be deemed desirable.

6. If a Magistrate is satisfied by information on oath that there is reasonable ground for suspecting that a wireless telegraph station has been established without a licence in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any merchant ship without a licence in that behalf or contrary to the provisions of any regulations made under this Ordinance, or of any licence granted under this Ordinance, he may grant a search warrant to any Police Officer or any person appointed in that behalf by the District Commissioner and named in the warrant, and a warrant so granted shall authorise the Police Officer or person named therein to enter and inspect the station, place or ship, and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

7. (i) Any person who shall offend against any provision of this Ordinance or any of the regulations made thereunder shall be liable on summary conviction for every such offence to fine not exceeding rupees seven hundred and fifty, and upon such conviction the Court may order that any apparatus for wireless telegraphy in connection with which the offence was committed shall be seized and forfeited.

(2) Proceedings shall be taken before the District Court, and the procedure shall be the same as the procedure for the time being in force in respect of offences punishable on summary conviction.

8. The Wireless Telegraphs Ordinance, 1908, is hereby repealed.

SCHEDULE.—SECTION 5 (2).

REGULATIONS.

B i. All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of the Pro-

tectorate shall be worked in such a way as not to interfere with—

(a) Naval signalling, or

(b) The working of any wireless telegraph station lawfully established, installed or worked in the Protectorate or the territorial waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless stations established on ships at sea.

ii. In these regulations "Naval Signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and Naval Stations, or between a ship of His Majesty's Navy or a Naval Station and any other wireless telegraph station whether on shore or on any ship.

iii. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in any harbour or bay of the Protectorate, except with the special or general permission of the Commissioner.

iv. For the purpose of any proceedings under these regulations the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship.

v. Any summons or other document in any proceedings under these regulations shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in command or charge of the ship.

vi. These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

BULGARIA

(See map opposite.)

BULGARIA, which, until the advent of the late war, constituted one of the most important of the Balkan States, is still in so unsettled a state that it is not possible to give any particulars relating to wireless telegraphy, but it is hoped in our next issue that it may be possible to print the text of any laws or regulations governing the administration of wireless in that country.

CONTROL.

OFFICIAL CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Mr. Nicholas Startcheff ..	Director General of Posts, Telegraphs and Telephones.	Sofia.

As far as is known only one fixed station exists, viz., at Varna, and this communicates with ships.

BURMA

(See INDIA.)

COPYRIGHT GEOGRAPHIA L^{td} 55/FLEET STREET LONDON E.C.4

CANADA

THE Dominion of Canada possesses a land area of 3,603,910 miles. It was originally discovered by Cabot, in 1497, then settled by the French in the seventeenth century, and finally annexed to the British Empire in 1763. Its establishment as a Dominion dates from July 1st, 1867. The executive power is vested in a Governor-General appointed by the Sovereign and aided by a Privy Council.

CONTROL.

The Marconi Company is the only commercial concern manufacturing and operating wireless telegraph apparatus in Canada.

Certain of the East Coast Stations which were taken over and operated by the Department for Naval Purposes during the war were handed back to the Marconi Wireless Telegraph Company on the following dates:—

North Sydney - December 5th, 1918 | Sable Island - January 14th, 1919
Camperdown - January 8th, 1919 | Cape Sable - April 1st, 1919

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
The Hon. Mr. C. C. Ballantyne ..	Minister of Marine and of the Naval Service	Department of Naval Service, Ottawa, Ont.
Mr. G. J. Desbarats, C.M.G. ..	Deputy Minister of the Naval Service	Department of Naval Service, Ottawa, Ont.
Lieut.-Commander C. P. Edwards, O.B.E.	Director, Government Radiotelegraph Service	Department of Naval Service, Ottawa, Ont.
Mr. W. A. Rush	Division Superintendent, Government Radiotelegraph Service	Department of Naval Service, Ottawa, Ont.
Mr. E. J. Haughton	Division Superintendent, Government Radiotelegraph Service	Department of Naval Service, Ottawa, Ont.
Mr. J. H. Thompson	Chief Engineer, Government Radio Telegraph Service	Department of Naval Service, Ottawa, Ont.

ORGANISATION.

According to the latest available information there are 563 radiotelegraph installations classified as follows :—

Coast Stations	44
Government Ship Stations	51
Licensed Ship Stations	145
Licensed Public Commercial Stations	2
Licensed Private Commercial Stations	11
Licensed Radiotelegraph Schools	17
Licensed Experimental Stations	9
Licensed Amateur Experimental Stations	281
Direction Finding Stations	3
Total	563

The first wireless station was erected by the Marconi Wireless Telegraph Company for the Government at Fame Point, Quebec. This station was erected in July, 1904, and during the same summer stations were erected at Heath Point, Anticosti, and Point Amour, Labrador, and on the Island of Belle Isle at the Atlantic entrance to the Straits of Belle Isle. The programme of construction was carried on almost without a break, and, as will be noted in the above table, there are now (excluding 3 Direction Finding Stations) 44 coast stations in Canada.

The Department requires that all those entering the Radiotelegraphic Service as operators should pass a proficiency examination to determine their qualifications prior to acceptance, and announces that applications for entry as operators in the Radiotelegraph Service should be addressed to—

“ The Deputy Minister,
Naval Service Department,
Ottawa.”

All operators in the employment of the Department of the Naval Service who were enlisted in the R.N.C.V.R. during the late war, were demobilised on June 30th, 1919, on which date the Radiotelegraph Service reverted to a civilian basis.

ADMINISTRATION.

Radiotelegraphy in the Dominion was, until 1913, regulated by a section of the Telegraphs Act. This is now replaced by the Act which was assented to on June 6th, 1913, and revised in February, 1920. This is reprinted in the following pages. As matters at present stand, we may usefully divide the rules governing the administration and procedure as far as wireless telegraphy is concerned into the following :—

- A**—The Radiotelegraph Act, Chapter 43 of the 1913 Statute.
- B**—Regulations issued by the Governor-in-Council.
- C**—Regulations issued by the Minister of the Naval Service.
- D**—Extract from Air Regulations, 1919.
- E**—Limited coast station licence.
- F**—Public commercial licence.
- G**—Private commercial licence.
- H**—Experimental licence.
- I**—Amateur experimental licence.
- J**—Ship licence.
- K**—Training school licence.
- L**—Circular to shipmasters.

AN ACT RESPECTING RADIOTELEGRAPHY STATUTES, 1913, CHAPTER 43.

A His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. This Act may be cited as the Radiotelegraph Act.

2. In this Act, unless the context otherwise requires—

(a) "Minister" means the Minister of the Naval Service;

(b) "radiotelegraph" includes any wireless system for conveying electric signals or messages including radiotelephones;

(c) "coast station" means any radiotelegraph station which is established on land or on board a ship permanently moored and which is used for the exchange of messages and electric signals with ships at sea;

(d) "land station" means any radiotelegraph station or installation of radiotelegraphic apparatus which is not a coast station or a ship station;

(e) "ship station" means any radiotelegraph station established on board a ship which is not permanently moored.

3. No person shall establish any radiotelegraph station or instal or work any radiotelegraph apparatus in any place in Canada or on board any ship registered in Canada except under and in accordance with a licence granted in that behalf by the Minister.

4. From and after the first day of January, nineteen hundred and fourteen, no passenger steamer, whether registered in Canada or not—

(a) licensed to carry fifty or more persons, including passengers and crew, and going on any voyage which is or which includes a voyage of more than two hundred nautical miles from one port or place to another port or place; or,

(b) licensed to carry two hundred and fifty or more persons, including passengers and crew, and going on any voyage which is or which includes a voyage of more than ninety nautical miles from one port or place to another port or place; or,

(c) licensed to carry five hundred or more persons, including passengers and crew, and going on any voyage which is or which includes a voyage of more than twenty nautical miles from one port or place to another port or place

shall leave or attempt to leave any Canadian port unless such steamer is equipped with an efficient radiotelegraph apparatus, in good working order, capable of transmitting and receiving messages over a distance of at least one hundred nautical miles by night and by day, and in charge of a person fully qualified to take charge of and operate such apparatus.

2. The owner, master or other person in charge of any passenger steamer which leaves or attempts to leave any Canadian port contrary to the provisions of this section shall, on summary conviction, be liable to a fine not exceeding one thousand dollars and costs, and such fine and costs shall constitute a lien upon such passenger steamer.

(3) This section shall not apply to passenger steamers plying on the rivers of Canada, including the River St. Lawrence as far seaward as a line drawn from Father Point to Point Orient, or on the Northumberland Straits, or on the Georgian Bay, or on the lakes of Canada other

than Lakes Ontario, Erie, Huron and Superior, and the provisions of paragraph (c) of sub-section 1 of this section shall not apply to steamers making voyages on Lakes Ontario, Erie, Huron and Superior, the regular route for which is not at any point more than seven miles from the shore.

(4) This section shall not apply to steamers calling at Canadian ports solely for the purpose of obtaining bunker coal or provisions for the use of such steamer, or through stress of weather, or for repairs.

5. All persons operating land or cable telegraph lines shall transmit all messages destined to or coming from ship stations via coast stations under such rules as may be made by the Board of Railway Commissioners for Canada.

6. No one shall be employed as a radiotelegraph operator at any coast or land station unless he is a British subject, and all radiotelegraph operators at shore or land stations, or on ship stations on board any vessel registered in Canada, shall take and subscribe a Declaration of Secrecy in the form set forth in the Schedule to this Act, before a judge of any court, a notary public, a justice of the peace or a commissioner for taking affidavits, having authority or jurisdiction within the place where the oath is administered.

(2) Every person who has made the Declaration of Secrecy and who, either directly or indirectly, divulges to any person, except when lawfully authorised or directed so to do, any information which he acquired by virtue of his employment, is guilty of an offence and shall be liable on summary conviction to a penalty not exceeding one hundred dollars and to imprisonment for a term not exceeding six months.

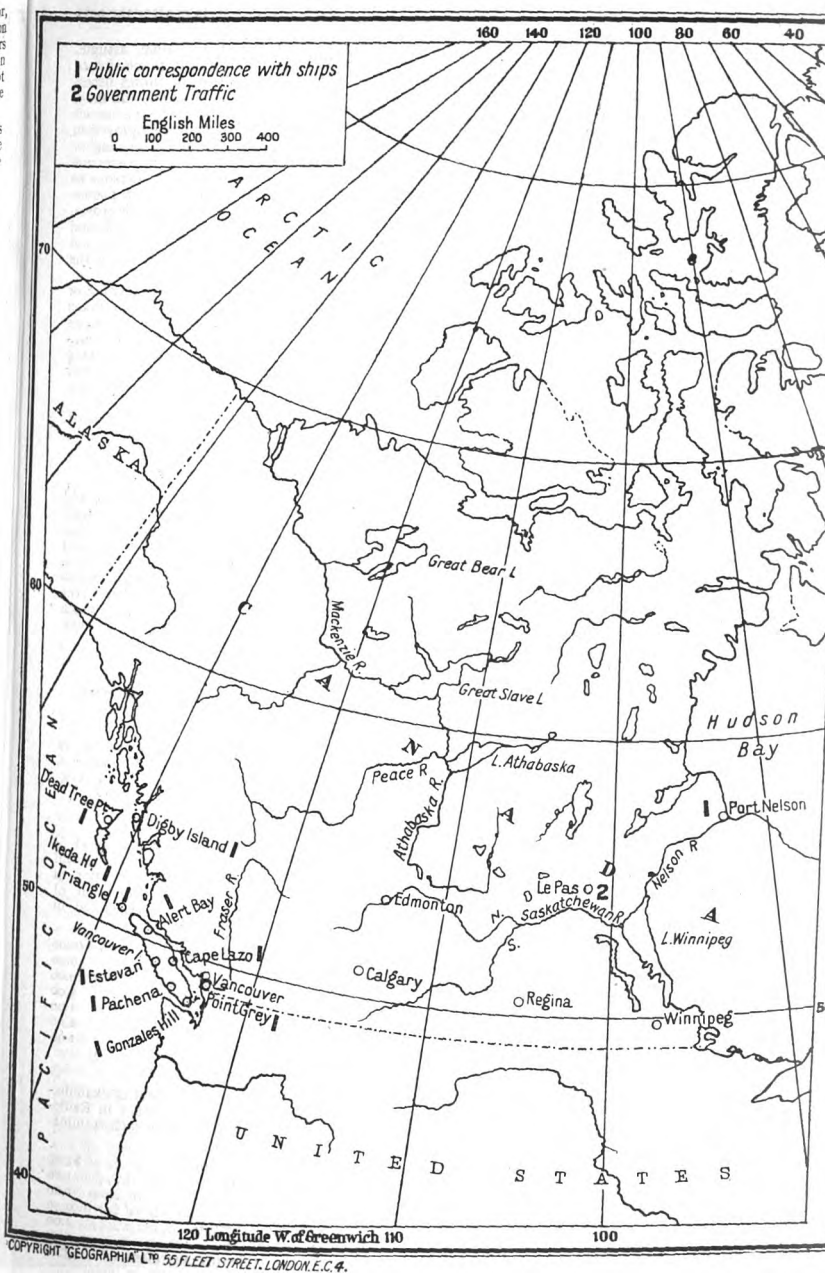

7. Any person who sends or transmits or causes to be sent or transmitted any false or fraudulent distress signal, message, call or radiogram of any kind, or who without lawful excuse interferes with or obstructs any radio-communication, shall be guilty of an offence and shall be liable on summary conviction to a penalty not exceeding five hundred dollars and costs or six months' imprisonment.

8. If a justice of the peace is satisfied by information on oath that there is reasonable ground for supposing that a radiotelegraph station has been established without licence in that behalf, or that any apparatus for radiotelegraphy has been installed or worked in any place or on board any ship registered in Canada within his jurisdiction without a licence in that behalf, he may grant a search warrant to any police officer or any officer appointed in that behalf by the Minister and named in the warrant.

(2) A warrant so granted shall authorise the officer named therein to enter and inspect the station, place or ship and to seize any radiotelegraph apparatus which appears to him to be there used or intended to be there used for radiotelegraphy.

9. Every one who establishes a radiotelegraph station or installs or works any radiotelegraph apparatus in violation of the provisions of this Act, or of any regulation made hereunder, shall be liable on summary conviction to a penalty not exceeding fifty dollars, and on conviction on indictment to a fine not exceeding five hundred dollars and to imprisonment for a term not exceeding twelve months, and in either case shall be liable to forfeit to His Majesty, any radiotelegraph apparatus installed or worked without a licence.

(2) No proceedings shall be taken against any

person under this section, except by order of the Minister.

10. The Governor in Council may—

(a) prescribe the tariff of fees to be paid for licences and for examination for certificates of proficiency held and issued under the provisions of this Act;

(b) accede to any international convention in connection with radiotelegraphy, and make such regulations as may be necessary to carry out and make effective the terms of such convention and prescribe penalties recoverable on summary conviction for the violation of such regulations; provided that such penalties shall not exceed five hundred dollars and costs;

(c) make regulations for the censorship and controlling of radiotelegraph signals and messages in case of actual or apprehended war, rebellion, riot or other emergency.

11. The Minister may make regulations—

(a) prescribing the form and manner in which applications for licences under this Act are to be made;

(b) classifying ship, coast and land stations and prescribing the type and range of the regular equipment and the emergency equipment to be installed in the several classes of stations;

(c) defining the different kinds of licences that may be issued, their respective forms and the several periods for which they shall continue in force;

(d) prescribing the conditions and restrictions to which the several licences shall respectively be subject;

(e) prescribing the different classes of certificate of proficiency and the class of certificate necessary to qualify persons as operators for the several classes of ship, coast and land stations;

(f) for the examination of persons desiring to obtain certificates of proficiency as radiotelegraph operators and to determine the qualifications in respect of age, term of service, skill, character and otherwise to be required for such certificates;

(g) prescribing the watches to be kept by operators and the number of operators to be maintained and kept at the different classes of ship, coast and land stations;

(h) for the inspection of radiotelegraph stations;

(i) to provide how radiotelegraph apparatus installed upon any foreign or British ship (whether such British ship is registered in Canada or elsewhere) shall be operated while such ship is within the territorial waters of Canada;

(j) to compel all radiotelegraph stations to receive, accept, exchange and transmit signals and messages with such other radiotelegraph stations and in such manner as he may prescribe

(k) for the effective carrying out of the provisions of this Act.

(2) The Minister may, by regulation, authorise the imposition of a penalty not exceeding fifty dollars and costs or three months' imprisonment for the violation of any regulation made under this section, and any such penalty may be recovered upon summary conviction.

12. All regulations made under the provisions of the two sections immediately preceding shall be published in *The Canada Gazette*, and shall be laid before both Houses of Parliament within ten days after the publication thereof if Parliament is then sitting, and if Parliament is not

then sitting, then within ten days after the next meeting thereof.

13. His Majesty may, at any time, assume, and for any length of time retain, possession of any radiograph station and of all things necessary to the sufficient working thereof, and may, for the same time, require the exclusive service of the operators and other persons employed in working the same; and the person owning or controlling the station shall give up possession thereof, and the operators and other persons so employed shall, during the time of such possession, diligently and faithfully obey such orders, and transmit and receive such signals, calls and radiograms as they are required to receive and transmit by any duly authorised officer of the Government of Canada.

(2) If the Minister and the person owning or controlling any radiotelegraphic station taken possession of by the Crown under the provisions of this section cannot agree as to the compensation to be paid by the Crown for such taking possession, the Minister shall refer the matter to the Exchequer Court of Canada for adjudication.

14. Part IV of the Telegraphs Act is repealed.

SCHEDULE.

DECLARATION OF SECRECY.

I, A. B. solemnly and sincerely promise and declare that I will faithfully and honestly fulfil the duties which devolve upon me as radiotelegraphic operator, and that I will not, either directly or indirectly, divulge to any person, except when lawfully authorised or directed so to do, any information which I acquire by virtue of my employment as such operator, or which may come to my knowledge through the operation of any radiotelegraphic installation.

Declared before me at

this day of 19 [Signature of declarant.]

REGULATIONS.

B APPROVED BY THE GOVERNOR IN COUNCIL AND ISSUED IN ACCORDANCE WITH SECTION 10 OF THE RADIOTELEGRAPH ACT, CHAPTER 43, STATUTES, 1913.

FEES FOR LICENCES.

1. The annual fees to be paid in respect of licences issued by the Minister of the Naval Service, for the installation and operation of radiotelegraph stations in the Dominion of Canada, or on board any ship registered in Canada, shall be as follows:—

1. Limited Coast stations	\$10.00
2. Public Commercial stations	50.00
3. Private Commercial stations	10.00
4. Experimental stations	5.00
5. Amateur Experimental stations	1.00
6. Technical or Training School stations	1.00
7. Ship stations	1.00

FEES FOR EXAMINATIONS.

2. The fees to be paid in respect of examinations for "Certificates of Proficiency in Radiotelegraphy" shall be as follows, for each examination or re-examination:—

1. Extra First-class certificate	\$1.00
2. First-class certificate	1.00
3. Second-class certificate	1.00
4. Third-class certificate	0.50
5. Experimental certificate	1.00
6. Amateur certificate	Nil.
7. Emergency certificates, any class	5.00

LONDON CONVENTION.

3. (i) The provisions of the International Radiotelegraph Convention of London, 1912, and of the regulations annexed thereto, shall be observed by all "coast stations" established in Canada, and by all "ship stations" on board any vessel registered in Canada.

(ii) *Penalty.*—Any person who installs or works any radiotelegraph apparatus at any of the above-mentioned stations in violation of this regulation, shall be liable on summary conviction to a fine not exceeding five hundred dollars (\$500) and costs.

CONTROL OF STATIONS IN CASE OF EMERGENCY.

4. (i) *Coast and Land Stations.*—If, and whenever in the opinion of the Minister an emergency shall have arisen in which it is expedient for the public service that the Government shall have control over the transmission of messages by the apparatus of any coast or land station, it shall be lawful for the said Minister, by warrant under his hand, to direct and cause so much of the apparatus, as is within Canada or the territorial waters thereof, or any part of the apparatus, to be taken possession of in the name and on behalf of His Majesty and to be used for His Majesty's Service and subject thereto for such ordinary services as to the said Minister may seem fit, and in that event, any person, authorised by the said Minister, may enter upon the stations, offices and works of any coast or land station or any of them and take possession thereof and use the same as aforesaid.

(ii) The Minister may, when he considers such an emergency as aforesaid to have arisen, instead of taking possession of such coast or land station, direct and authorise such persons as he may think fit to assume the control of the transmission of messages by the apparatus of such station, either wholly or partly and in such manner as he may direct, and such persons may enter upon the station premises accordingly, or the said Minister may direct the owner or his representative to submit to him or any person authorised by him all messages tendered for transmission or arriving by the apparatus or any class or classes of such messages, to stop or delay the transmission of any messages or deliver the same to him or his agent, and generally to obey all such directions with reference to the transmission of messages as the said Minister may prescribe, and the owner or his representative shall obey and conform to all such directions.

(iii) The Minister may, when he considers such emergency as aforesaid to have arisen, close any coast or land station and cause the removal therefrom of the apparatus or any part thereof.

5. (i) *Ship Stations.*—If, and whenever, in the opinion of the Minister, an emergency shall have arisen in which it is expedient for the Public Service that the Government shall have control over the transmission of messages by the apparatus of a radiotelegraph station on board any Canadian registered vessel, it shall be lawful for the said Minister, by warrant under his hand, to direct and cause the apparatus or any part thereof to be taken possession of in the name and on behalf of His Majesty and to be used for His Majesty's Service and, subject thereto, for such ordinary services as to the said Minister may seem fit, and in that event, any person authorised by the said Minister may enter upon any ship station and take possession thereof and use the same as aforesaid.

(ii) When the Minister considers such an emergency as aforesaid to have arisen, he may,

instead of taking possession of such ship station, direct and authorise such persons as he may think fit to assume the control of the transmission of messages by the apparatus of such station, either wholly or partly, and in such manner as he may direct, and such persons may enter upon the station premises accordingly or the said Minister may direct the owner or his representative to submit to him or any person authorised by him all messages tendered for transmission or arriving by the apparatus or any class or classes of such messages, to stop or delay the transmission of any messages or deliver the same to him or his agent, and generally to obey all such directions with reference to the transmission of messages as the said Minister may prescribe, and the owner or his representative shall obey and conform to all such directions.

NAVAL MINISTER'S REGULATIONS.

C ISSUED BY THE MINISTER OF THE NAVAL SERVICE IN ACCORDANCE WITH SECTION II OF THE RADIOTELEGRAPH ACT, CHAPTER 43, STATUTES 1913.

LICENCES.

1. *Application for Licence.*—Application for licences to instal and operate radiotelegraph equipments at any point in the Dominion of Canada or on board any ship registered therein, must be made to the Deputy Minister of the Department of the Naval Service, Ottawa, on the "Application for Licence" form, provided for that purpose, copies of which may be obtained on application to the above-mentioned Department.

2. *Classes of Licences.*—The following classes of licences will be issued:—

COAST STATIONS—

1. Limited Coast station.

LAND STATIONS—

2. Public Commercial station.
3. Private Commercial station.
4. Experimental station.
5. Amateur Experimental station.
6. Technical or Training School station.

SHIP STATIONS—

7. Ship station.

3. *Duration of Licences.*—Licences will be valid for one year, commencing on April 1st and expiring on March 31st of the following year. All licences issued during the year automatically expire on March 31st, unless otherwise specified in the licence.

4. *Limited Coast Licences.*—Limited coast licences will only be granted with respect to stations in localities not served by a regular Government coast station; such stations will be allowed to undertake a limited correspondence with ships at sea determined by the object of such correspondence. They must exchange public messages with such ship, coast and land stations as are designated in the licence, but with no other stations whatsoever.

For ship to shore working they must be operated in accordance with the provisions of the International Radiotelegraph Convention, and they must employ such wavelengths below 600 metres or above 1,600 metres as are specified in the licence.

The watches to be maintained and the number and class of operators to be carried are to be as specified in the licence, the regular form of which is annexed hereto. (Form No. W. 42.)

5. *Public Commercial Licences.*—Public commercial licences will be granted to land stations

open for public correspondence with certain other land stations designated in the licence, and may use such wave-lengths, within the following limits, as are specified therein:—

Below 200 metres.

" 450 "

Above 1,900 "

The watches to be maintained and the number and class of the operators to be carried are to be as specified in the licence, the regular form of which is annexed hereto. (Form No. W. 18.)

"6. (i) *Private Commercial Licences*.—Private commercial licences will be granted to land stations to be operated in connection with the private correspondence of the licensee. Such stations will be limited to certain specific services which will be defined in the licence. Such stations shall not exchange messages with stations other than those specified in the licence, and except in the special case provided for in Section 2 of this Regulation, no tolls shall be levied or collected on account of any business transacted, or messages sent to or from the station. This class of station may use such wavelengths, within the limits prescribed, in Regulation No. 5, as are specified in the licence. The watches to be maintained and the number and class of operators to be carried shall be as specified in the licence, the regular form of which is annexed hereto. (Form No. 43.)

(ii) In the case of private commercial stations established at points not provided with any other means of rapid communication, such as telegraph or telephone, or in the case of interruption to such service, the Minister may prescribe that the licensed station must accept messages to and from the public, and communicate with such stations as may be designated. In this event, the licensee shall be entitled to collect a toll for the handling of such public correspondence, the amount of such toll to be as approved by the Board of Railway Commissioners and as specified in the licence.

(iii) The Minister at his discretion may authorise the licensed station to communicate with certain specified ship stations when such ship stations are within certain areas or localities to be specified in the licence. Messages handled with such ships must be limited exclusively to the business of the licensee, no coast station charge shall be levied in respect of such message."

7. *Experimental Licences*.—Experimental licences will be granted to stations intended for experimental purposes and operated with a view to the advancement of the art of radiotelegraphy. Applicants for such licences must state their technical attainments and the general lines on which they propose to pursue their investigations. It should be observed that the fact that the applicant desires to conduct experiments with his equipment does not justify or require a licence of this class, as most experiments can be conducted under the "Amateur Experimental Licence" by the use of an artificial aerial.

In addition to the provisions contained in the regular form of experimental licence annexed hereto (Form No. W. 20), the following special regulations will apply to all experimental stations.

SPECIAL REGULATIONS FOR EXPERIMENTAL STATIONS.

8. Applicants for an experimental licence must state in their application what wave-

length they desire to use; the following lengths being available—

Below 200 metres.

" 450 "

Above 1,900 "

In special cases and for short periods the Minister shall have power to permit the use of 300, 600 and 1,800 metres for the purpose of testing or demonstrating commercial apparatus, such permission to be given by letter under his hand.

9. The station is strictly limited to the use of such wavelength or wavelengths as are specified in the licence.

10. When transmitting on wavelengths of 100 metres or less the station must be worked by a person holding an amateur experimental certificate of proficiency (see Regulation No. 97), and when transmitting on wavelengths greater than 100 metres it must, if it be within the range of any commercial or coast station, be worked by a person holding either a "First-class," "Second-class," or "Experimental" certificate of proficiency in radiotelegraphy. (See Regulations Nos. 93, 94 and 96.)

11. The power used, measured at the terminals of the transformer, must not exceed $\frac{1}{2}$ kw.

In special cases, however, such as that of a commercial company desirous of testing and demonstrating apparatus, or stations so far removed from any commercial station or route of navigation as to preclude any possibility of interference, the Minister may at his discretion permit the use of greater powers than $\frac{1}{2}$ kw.

12. The waves omitted must be as little damped as possible, and in no case shall the logarithmic decrement of a complete oscillation exceed two-tenths. The coupling between the primary and secondary of the oscillation transformer shall not be closer than that which gives a difference of five per cent. between the mean wavelength and either of the two waves emitted by the coupled circuits.

13. A distinctive call signal will be allotted to each station, commencing with a figure, e.g., 3 A A, etc., which signal shall be sent not less than three times at the termination of every transmission.

14. The regulations of the International Radiotelegraph Convention must, where applicable, be observed at the station.

15. The station, when operating, must listen for the signal "STP" which will indicate that an experimental station is interfering with commercial business.

The latter signal will only be made use of by certain authorised Government stations and will not be used unless absolutely necessary. The signal "STP" will, whenever possible, be preceded by the call signal allotted to the experimental station to which the interference is attributed and will be followed by the call signal of the Government station. On receipt of the "STP" signal, experimental stations will absolutely cease to operate until the Government station gives the signal "Cancel STP."

16. The aerial must be connected to the transmitting apparatus only when actual communication is in progress or when measurements are being taken. At all other times, such as when the spark is being tested or sending is being practised, the aerial must be disconnected.

17. When the licensed station is in the vicinity of a commercial station it should be connected with the local telephone exchange so

that instant communication may be established in case of interference.

18. *Amateur Experimental Licences.*—Amateur experimental licences will be granted to small stations used for instruction, experimental purposes, or amusement by persons relatively inexperienced in operating.

In addition to the provisions contained in the regular form of amateur experimental licence annexed hereto (Form No. W. 44), the following special regulations will apply to all amateur experimental stations.

SPECIAL REGULATIONS FOR AMATEUR EXPERIMENTAL STATIONS.

19. At amateur experimental stations the power used measured at the terminals of the transformer must not exceed $\frac{1}{2}$ kw.

20. The wavelengths which may be used vary with the distance between the licensed station and any commercial coast or land station or a route of navigation as follows:—

For Transmission—

Class 1.—Stations located within 5 miles of a commercial coast or land station or a route of navigation, shall not use a transmitting wavelength greater than 50 metres;

Class 2.—Stations located more than 5 but less than 25 miles from a commercial coast or land station or a route of navigation, shall not use a transmitting wavelength greater than 100 metres;

Class 3.—Stations located more than 25 but less than 75 miles from a commercial coast or land station or route of navigation, shall not use a transmitting wavelength greater than 150 metres;

Class 4.—Stations located more than 75 miles from a commercial coast or land station or route of navigation, shall not use a transmitting wavelength greater than 200 metres.

21. In cases where transmitting apparatus is installed the natural wavelength of the aerial and the length of the emitted waves must be as specified in the licence; in general this wavelength will be the maximum allowable under Regulation No. 20.

22. In cases where no transmitting apparatus is installed on the station, no limit is placed on the length of the aerial which may be used provided it is employed for the purpose of reception only.

23. The station must be worked by a person holding an amateur experimental certificate of proficiency (see Regulation No. 97).

24. The waves emitted must be as little damped as possible, and in no case shall the logarithmic decrement of a complete oscillation exceed two-tenths. The coupling between the primary and secondary of the oscillation transformer shall not be closer than that which gives a difference of 5 per cent. between the mean wavelength and either of the two waves emitted by the coupled circuits.

25. A distinctive call signal will be allotted to each station, commencing with a figure, e.g., 3 A, etc., which signal must be sent not less than three times at the termination of every transmission.

26. The regulations of the International Radiotelegraph Convention must, where applicable, be observed by the station.

27. The station must take every precaution to prevent interference with the working of other stations.

28. The station, when operating, must listen or the signal "STP" which will indicate that

an amateur experimental station is interfering with commercial business.

29. The latter signal will only be made use of by certain authorised Government stations and will not be used unless absolutely necessary. The signal "STP" will, whenever possible, be preceded by the call signal allotted to the amateur experimental station to which the interference is attributed and will be followed by the call signal of the Government station. On receipt of the "STP" signal, all amateur experimental stations will cease to operate until the Government station gives the signal "Cancel STP."

30. The aerial must be connected to the transmitting apparatus only when actual communication is in progress or when measurements are being taken. At all other times, such as when the spark is being tested or sending is being practised, the aerial must be disconnected.

31. When the licensed station is in the vicinity of a commercial station it should be connected with the local telephone exchange so that instant communication may be established in case of interference.

32. *Technical and Training School Licences.*—Technical and training school licences will be granted to stations intended for educational purposes; they will be afforded every facility for the work they propose to undertake compatible with any special local conditions such as the existence of a commercial or coast station in their vicinity; in general they will be subject to the same conditions as amateur experimental and experimental stations.

33. *Ship Station Licences.*—Ship station licences will be granted to stations on British ships registered in Canada.

The regular form of the licence is annexed hereto. (Form No. W. 19.)

CLASSIFICATION OF SHIP STATIONS.

Ship Stations will be classified as follows:—

34. *Class 1.*—All "sea-going" passenger vessels registered in Canada with an average speed of 15 knots or more, carrying 50 or more persons and plying between ports more than 200 miles apart; also all "sea-going" passenger vessels registered in Canada with an average speed of 13 knots or more, carrying 200 or more persons and plying between ports more than 500 miles apart.

35. *Class 2a.*—All "sea-going" passenger vessels registered in Canada affected by the provisions of Section 4 of the Radiotelegraph Act, which do not come under Class 1.

Class 2b.—All vessels registered in Canada plying on "coasting voyages" or on the "inland waters" of Canada which are affected by the provisions of Section 4 of the Radiotelegraph Act.

36. *Class 3.*—All vessels registered in Canada not affected by the provisions of Section 4 of the Radiotelegraph Act, but which have been voluntarily equipped with radiotelegraph apparatus.

The terms "sea-going," "coasting voyage," and "inland waters" are to be as defined in Section 72 of the Canada Shipping Act, Chapter 113, R.S. 1906.

REGULAR EQUIPMENT.

37. *Vessels in Class 1.*—The regular radiotelegraph equipment must have a minimum range of 100 nautical miles at all hours of the day and night with a similar equipment, on a similar vessel and with all Canadian Government coast stations.

38. The normal wavelength of the emitted wave must be 600 metres; in addition the set must be capable of being operated on a wavelength of 300 metres, and means are to be provided whereby a quick change-over from one wavelength to the other may be effected.

39. In the case of small vessels on which it is materially impossible to use a transmitting wavelength of 600 metres, 300 metres may be employed; such ship stations, however, must be fitted with a receiver capable of tuning up to a 600 metre wavelength and the watches must be maintained on that wavelength.

40. The logarithmic decrement of a complete oscillation must not exceed two-tenths (0.2).

41. The power used by the transmitter, measured at the terminals of the generator of the station, must not, under normal circumstances, exceed 1 kw., except in the special case provided for in Article 35, paragraph 2, of the International Radiotelegraph Convention of London, 1912.

42. In the case of equipments using a power of more than 50 watts, an arrangement must be provided whereby several ranges, each less than the normal range, may be speedily obtained, the shortest range being, approximately, 15 nautical miles.

43. The use of "plain aerial" except in cases of distress or in installations using a power of less than 50 watts, is prohibited.

44. *Vessels in Class 2.*—Regulations No. 37 to No. 43, inclusive, shall apply to the equipments on vessels in Classes 2a and 2b.

45. *Vessels in Class 3.*—Regulations No. 38 to No. 43, inclusive, shall apply to equipments on vessels in Class 3.

EMERGENCY EQUIPMENTS.

46. *Class 1.*—Every vessel in Class 1 must carry an emergency source of power, instantly available, which shall be capable of operating the equipment for six hours, under normal conditions, with a minimum range of 80 nautical miles.

47. *Class 2.*—Vessels in Classes 2a and 2b must carry a similar source of power with the exception that the minimum normal range of the equipment is reduced to 50 nautical miles.

48. *Class 3.*—Vessels in Class 3 will not be required to carry emergency sets.

49. *Emergency Equipments Generally.*—(1) The emergency equipment in its entirety must in all cases be placed in the upper part of the ship, as high as practicably possible and in a position of the greatest safety.

(2) The emergency equipment may take the form of complete transmitter. Storage battery sets, of sufficient capacity to operate the regular radiotelegraph equipment of the vessel for the specified time, are, however, strongly recommended.

(3) A plain aerial transmitter may be installed as an emergency equipment, provided (subject to the provisions of Regulation No. 43) the use of the same is confined exclusively to distress calls.

(4) Regulations No. 46 to No. 49, inclusive, will become effective on and after December 1st, 1914.

50. *Spare Parts.*—Every ship station shall carry a reasonable number of spares of such parts of both the main and emergency radiotelegraph equipment as are subject to undue wear, deterioration, or liability to accident.

51. *Certificate of Inspection.*—The radiotelegraph installation on all British vessels registered

in Canada will be subject to inspection by an officer of the Department of the Naval Service at least once a year, who, if the apparatus is found to comply with the terms of the Radiotelegraph Act and the regulations issued thereunder, shall issue to the vessel a "Radiotelegraph Inspection Certificate" certifying that the equipment has been duly inspected and that it complies with the provisions of the licence issued therefor by the Minister of the Naval Service, such certificate to be posted in the radiotelegraph cabin.

52. *Time.*—Radiotelegraph stations on vessels plying on the West Coast shall observe Pacific time, and those on the Great Lakes and East Coast Eastern Standard time.

WATCHES.

53. *Vessels in Class 1.*—A constant watch must be maintained at the radiotelegraph stations on all vessels in Class 1 (Regulation No. 34) whilst they are en route, and two operators, holding first-class certificates, must be carried on such vessels.

54. *Vessels in Class 2a.*—A constant watch from 8 a.m. to 3 p.m. and a watch during the first ten minutes of every other hour of the day must be maintained at the radiotelegraph stations on all vessels in Class 2a (Regulation No. 35) whilst they are en route; the ten-minute watch may be maintained by an operator holding a "Second-class Certificate of Proficiency," or by a person holding a regular "Third-class Certificate."

55. *Vessels in Class 2b.*—Watches as herein-after specified in Regulations No. 57 to No. 67, must be maintained at the radiotelegraph stations on all vessels in Class 2b, whilst they are en route.

56. (1) *Vessels in Class 3.*—No fixed watches need be maintained at radiotelegraph stations on vessels in Class 3 (Regulations No. 36) when plying on a coasting voyage or on the Great Lakes on the runs specified in Regulations 57 to 62.

(2) Vessels in Class 3 plying on transoceanic voyages, and carrying one operator, must keep watches as specified in Regulation 56a.

56a. Vessels carrying one operator, and plying on runs not covered by Sections 57 to 62, must whilst en route maintain watches as follows:—

Belt A.—East Atlantic and European.

From Long. 30° W. to Long. 30° E., including Baltic, Mediterranean and Black Seas.

0800 to 1000
1200 to 1400
1600 to 1800
2000 to 2200 G.M.T.

Belt B.—Indian Ocean.

From Long. 30° E. to Long. 90° E., including Red Sea and Persian Gulf.

0000 to 0200
1200 to 1400
1600 to 1800
2000 to 2200 G.M.T.

Belt C.—Australasian (Western).

From Long. 90° E. to Long. 160° E.

0000 to 0200
0400 to 0600
1200 to 1400
2000 to 2200

Belt D.—Australasian (Eastern).

From Long. 160° E. to Long. 140° W.

0000 to 0200
0400 to 0600
0800 to 1000
2000 to 2200 G.M.T.

Belt E.—East Pacific.

From Long. 140° W. to the Western Coast of America, thence southward along Long. 70° W.
0000 to 0200
0400 to 0600
1600 to 1800
2000 to 2200 G.M.T.

Belt F.—West Atlantic.

From Eastern Coast of America, and Long. 70° W. (South of Cape Horn) to Long. 30° W.
0000 to 0200
1200 to 1400
1600 to 1800
2000 to 2200 G.M.T.

PACIFIC COAST.

57. Class 2b—Local Coasting Runs.—Vessels in Class 2b, when plying on ferry or local runs between any ports in British Columbia south of Queen Charlotte Sound or between any ports in the above province north of that Sound and not steaming for more than 16 hours in any day, must, whilst en route, maintain watches during the following periods:—

7.30 a.m. to 8.00 a.m. and the last half-hour of every hour until 8.00 p.m.
9.30 p.m. to 10.00 p.m.
11.30 p.m. to 12.00 midnight.
3.30 a.m. to 4.00 a.m.
5.30 a.m. to 6.00 a.m.

In the case of vessels affected by Sub-section (c) of Section 4 of the Radiotelegraph Act (500 persons)—ports more than 20 miles apart, the above watches need only be kept whilst the boats are en route between ports more than 20 miles apart.

58. Vessels in Class 2b, when plying on ferry or local runs between any ports in British Columbia south of Queen Charlotte Sound or between any ports in the above province north of that Sound and steaming for more than 16 hours in any one day, must, whilst en route, maintain watches as prescribed in Regulation No. 57, with the exception that a watch may be maintained from 1.30 a.m. to 2.00 a.m. instead of from 3.30 a.m. to 4.00 a.m., and no watch need be kept between the hours of 2.00 a.m. and 9.30 a.m.

59. Class 2b—Coasting Vessels Plying North and South.—Vessels in Class 2b plying on runs between ports in British Columbia south of Queen Charlotte Sound and ports in the same province north of that Sound, or *vice versa*, must, whilst en route, maintain watches during the following periods:—

7.30 a.m. to 8.00 a.m.
10.30 a.m. to 11.00 a.m.
1.30 p.m. to 2.00 p.m.
4.30 p.m. to 5.00 p.m.
7.30 p.m. to 8.00 p.m.
10.30 p.m. to 11.00 p.m.

If, during these periods, the vessel is in the immediate vicinity of any place mentioned in the lists given in Regulations 60 and 61, communication must be established with the coast station shown, or should the vessel reach such vicinity out of the above periods the ship station must call such coast station until communication is established or it becomes out of range.

60. North Bound:—

GREAT LAKES AND EAST COAST.

62. *Class 2b—Vessels Plying on the Great Lakes and on Coasting Voyages on the East Coast.*—Vessels in Class 2b plying on voyages of more than 300 miles between terminal ports on the Great Lakes or East Coast must maintain watches whilst en route as follows :—

7.00 a.m. to 7.30 a.m.

10.00 a.m. to 10.30 a.m.

1.00 p.m. to 1.30 p.m.

4.00 p.m. to 4.30 p.m.

7.00 p.m. to 7.30 p.m.

10.00 p.m. to 10.30 p.m.

Communication must also be established with each coast station when abeam, irrespective of whether such position is reached during the above periods or not.

63. Vessels in Class 2b, plying on voyages of less than 300 miles but more than 50 miles between terminal ports and not steaming for more than 16 hours out of the 24, must maintain watches whilst en route as follows :—

8.00 a.m. to 8.30 a.m. and the first half-hour of every hour until 8.30 p.m.

10.00 p.m. to 10.30 p.m.

12.00 p.m. to 12.30 p.m.

4.00 a.m. to 4.30 a.m.

6.00 a.m. to 6.30 a.m.

64. Vessels in Class 2b, plying on voyages of less than 300 miles but more than 50 miles between ports and steaming for more than 16 hours in any one day, must, whilst en route, maintain watches as prescribed in Regulation No. 63, with the exception that 2.00 a.m. to 2.30 a.m. is substituted for 4.00 a.m. to 4.30 a.m., and no watch need be kept between the hours of 2.30 a.m. and 10.00 a.m.

66. Vessels in Class 2b plying on voyages of less than 50 miles between terminal ports and not steaming more than 10 hours out of the 24 must, whilst en route, maintain a constant watch.

67. Vessels in Class 2b plying on voyages of less than 50 miles between terminal ports and steaming for more than 10 hours in the 24 must, whilst en route, maintain watches as prescribed in Regulation No. 64.

OPERATION.

68. *Power Available.*—Power for the operation of the main equipment shall be available during the periods a watch is being maintained under Regulations No. 53 to No. 67.

69. *Control of Ship Stations.*—The operation of the radiotelegraph station on any vessel shall be under the supreme control of the master of such vessel.

70. *Censorship by the Master of a Vessel.*—The master of a vessel shall have the right to censor all messages addressed to or transmitted by a radiotelegraph station on board his vessel, but such master shall not divulge to any person (other than the properly authorised officials of the Government or a competent legal tribunal), or make any use whatever of any message coming to his knowledge through the exercise of such censorship, nor shall the master or any operator divulge to any person (other than the properly authorised officials of the Government or a competent legal tribunal), or make any use whatever of any message (other than a message of distress) coming to his knowledge and not intended for the said station.

71. *Form W. 40.*—A copy of Form W. 40 must be posted in every radiotelegraph station; these forms may be obtained from the Deputy Minister of the Naval Service on request.

72. *Secrecy of Messages.*—No message shall be delivered, or its contents divulged, to any person except the addressee, his or her accredited agent, or such properly authorised persons as are essential for the forwarding of such message to its destination.

73. *Superfluous Signals.*—The transmission of superfluous signals by any ship or coast station is absolutely prohibited; trials and practices are forbidden except under such circumstances as to preclude the possibility of interference with other stations.

74. *Profane Language.*—No person shall transmit or make a signal containing profane words or language.

OPERATORS.

75. *Operators.*—The apparatus of all coast,

land or ship stations must only be worked by persons holding regular Certificates of Proficiency in Radiotelegraphy, and who have subscribed to a Declaration of Secrecy, as prescribed in Section 6 of The Radiotelegraph Act.

76. British Subjects.—ALL OPERATORS on coast, ship or land stations must (subject to the provisions of Regulation No. 88) be British subjects, and the different classes of stations must be worked by operators holding Canadian "Certificates of Proficiency" (subject to the provisions of Section 77) not inferior to those hereinafter specified in Regulations No. 80 to 86, for the respective classes of stations.

77. Ship Stations.—The holders of Certificates of Proficiency in Radiotelegraphy issued in accordance with the provisions of the International Radiotelegraph Convention by His Majesty's Postmaster-General, the Administration of any British self-governing Dominion or Colony, or the Government of India, will (subject to the provisions of these regulations) be entitled to act as radiotelegraph operators on any Canadian vessels.

78. Certificates of Proficiency.—The following Certificates of Proficiency in Radiotelegraphy are issued by the Department.

Ship Stations—

- (1) First-class Certificate.
- (2) Second-class Certificate.
- (3) Third-class (Watcher's) Certificate.
- (4) Emergency Certificate.

Land and Coast Stations—

- (5) Extra First-class Certificate.
- (6) First-class Certificate.
- (7) Second-class Certificate.
- (8) Third-class (Water's) Certificate.
- (9) Emergency Certificate.
- (10) Experimental Certificate.
- (11) Amateur Experimental Certificate.

79. Emergency Certificates.—In case of emergency in which it is impossible for an operator to attend a regular examination, the Minister may hold an emergency examination and shall have power to issue emergency certificates of any class. Such certificates shall not be valid for more than six months.

Any person holding an emergency certificate of proficiency must promptly apply for permission to attend an examination as provided by Regulation 87, and when notified of the date and place of examination he is hereby further required to attend a regular examination for a certificate of proficiency within the requirements of Regulations 89 to 97 inclusive, and the said emergency certificate shall expire and cease to be of effect on the day on which the result of such regular examination is published.

OPERATORS TO BE CARRIED.

80. Ships in Class 1.—Ships in Class 1 must carry two operators holding First-class Certificates.

81. Ships in Class 2a.—Ships in Class 2a must carry two operators, one First-class and one Second-class, or one First-class and one Third-class.

82. Ships in Class 2b.—Ships in Class 2b must carry one First-class operator.

83. Ships in Class 3.—Ships in Class 3, if they undertake public correspondence, must carry one First-class operator or, if their service is limited exclusively to the ship's business, one Second-class operator.

84. Coast Stations.—(1) All public coast stations open for public correspondence and maintaining a constant watch must carry

three operators, each of whom must hold a Canadian First-class Certificate of Proficiency. The Minister shall, however, have power in special cases to permit the employment of other persons on such stations for the purpose of maintaining the constant watch above mentioned, provided such persons are capable of transmitting and receiving in the Morse Code at a speed of twenty words a minute, as prescribed in Sub-sections (a) and (b) of Regulation No. 89 and provided the station is in charge of an operator holding a First-class Certificate of Proficiency.

(2) This regulation will become effective on and after the 1st of January, 1915.

85. All other coast stations shall carry such operators holding such certificates as are specified in the licence issued for the station under Regulation No. 4.

86. Land Stations.—Land stations (commercial, experimental, etc.) shall carry such operators holding such certificates as are specified in the licence issued for the station under Regulations Nos. 5, 6, 7, 18 or 32, according to the classification of the station.

EXAMINATION FOR RADIOTELEGRAPH CERTIFICATES OF PROFICIENCY.

87.—Applications.—Applications for permission to attend examinations for any certificate of proficiency must be made to the Deputy Minister of the Naval Service on the special form provided for that purpose (W. 13). The date and place of examination will be notified to the candidate as soon as possible after receipt of the application.

PERSONS ELIGIBLE TO ATTEND EXAMINATION.

88. (a) No person shall be permitted to attend examination for any class of certificate of proficiency in radiotelegraphy.

(i) who is not a natural born British subject;

(ii) who has at any time been of enemy nationality;

(iii) whose parents or either of them have at any time been of enemy nationality.

Provided, however, that any naturalised British subject who has not or whose parents or either of them have not at any time been of enemy nationality may be admitted to examination if his application be approved by the Minister of the Naval Service.

(b) Candidates for examination for first-class certificates of proficiency must be not less than eighteen years of age.

(c) For the purposes of this regulation a person shall be deemed to be of enemy nationality if he has at any time been a subject of a State with which Great Britain has been at war within the period of ten years immediately preceding the date of this regulation. (October 15th, 1919.)

SHIP STATIONS.

89. First-class Certificate.—Candidates for first-class certificates will be examined in the following subjects:—

(1) Transmission and reception at a speed of twenty words a minute;

(2) Adjustment, care and operation of apparatus;

(3) The regulations applicable to the exchange of radiotelegraph traffic.

The examination will consist of two sections "Practical" and "Written":—

"Practical" Section.

(a) To send on an ordinary radiotelegraph

key for five consecutive minutes at not less than the prescribed speed (viz., twenty words a minute, five letters being counted as one word); the accuracy of signalling, the correct formation of the letters, and the correctness of spacing will be taken into account.

(b) To receive and write legibly for not less than five consecutive minutes at the prescribed speed from signals received on a double headgear telephone receiver as ordinarily used for radiotelegraph reception.

(c) To connect up the apparatus with the help of a diagram of connections.

(d) To name the principal parts of the apparatus.

(e) To mention the most common faults which develop in the apparatus of the set in which he is being examined and the means usually taken to remedy them.

(f) To trace, locate, and remedy several such faults.

(g) To adjust the apparatus after it has been placed out of adjustment.

(h) To change the wavelength of the transmitter from 300 to 600 metres and *vice versa*.

(i) To reduce or increase the transmitting power.

"Written" Section.

(j) To complete a diagram of connections of the set in which the candidate is being examined.

(k) To answer seven technical questions on the equipment, including storage battery and emergency set, if any.

(l) To answer nine questions on the methods of handling radiotelegraph messages and the regulations applicable to the exchange of radiotelegraph traffic and communications as set out in the latest edition of the British Postmaster-General's Handbook and the service regulations annexed to the International Radiotelegraph Convention in force; the questions will also include the counting, checking and computation of tolls on three test messages. The candidate will also be required to have a thorough knowledge of the use of the "C.P.R.," "Western Union," and "G.N.W." tariff books and the "Official List of Radiotelegraph Stations" issued by the International Telegraph Bureau. Given these books, he will be required to compute the charges on a test message from any ship *via* any Canadian coast station to any telegraph office in the world.

90. Second-class Certificate.—Candidates for second-class certificates must pass a satisfactory examination on all the subjects prescribed for the first class, with the exception that the minimum speed of transmission and reception is reduced to twelve words a minute. Holders of this certificate will only be allowed to operate stations on ships in Classes 2a and 3, as specified in Regulations Nos. 81 and 83.

91. Third-class Certificate.—Third-class (Watcher's) certificate will authorise the holder to work at one station only, the name and call signal of which will be designated in the certificate.

* The "Postmaster-General's Handbook for Wireless Telegraph Operators" and the "International Radiotelegraph Convention of London" referred to in this section may be obtained from the department of the Naval Service, Ottawa, for the sum of 20 cents and 10 cents each, respectively, post free.

The examination will be practical and *viva voce* and the candidate will be required:—

(1) To distinguish from other signals the call signal of the station designated in the certificate, when it is repeated several times, at the rate of ten words a minute;

(2) To distinguish from other signals the distress call "SOS" when it is repeated several times, at the rate of ten words a minute;

(3) To adjust the receiver for incoming signals on the wavelength normally used;

(4) To test the detector with a buzzer or other testing appliances and to adjust it for the efficient reception of signals on the normal wavelength.

COAST AND LAND STATIONS.

92. Extra First-class Certificate.—Candidates for Extra First-class Certificates, in addition to taking a thorough examination on the subjects set out in sections (c) to (l) of Regulation No. 89, will be required:—

"Practical" Section.

(a) To send and receive in the International Morse Code for five minutes at a speed of not less than twenty-five words a minute, under the conditions prescribed in sections (a) and (b) of Regulation No. 89;

(b) To trace, locate and remedy faults in standard radiotelegraph installations, of not less than five kilowatt power, including valve detector, gasoline engines, D.C. and induction motors and to adjust the same for efficient operation.

(c) The practical use of a wavemeter.

"Written" Section.

(d) To answer seven questions on the principles governing the working of radiotelegraph installations, internal combustion engines and dynamo electric machinery, as used in connection with radiotelegraph installations;

(e) To answer seven questions on the International Radiotelegraph Convention and regulations annexed thereto, the Regulations issued by the Minister of the Naval Service and the procedure governing the obtaining of bearings from Direction Finding stations, the general organisation of a radiotelegraph service, including the procedure followed in connection with the transfer of business to and from land lines and the handling of radiotelegraph abstracts and accounts.

The holder of an extra first-class certificate will be authorised to operate on any Canadian coast, land or ship station.

93. First-class Certificate.—The examination for the first-class coast certificate will be similar in all respects to that for the first-class ship station certificate, with the exception that the candidate will be required to have a knowledge of the care and operation of gasoline engines.

94. Second-class Certificate.—The examination for the second-class coast certificate will be similar to that for the first class, with the exception that the minimum speed of transmission and reception is reduced to twelve words a minute.

95. Third-class Certificate.—The examination for the third-class coast certificate will be similar to that for the third-class ship certificate.

96. Experimental Certificate.—Candidates for an experimental certificate will be required:—

"Practical" Section.

(a) To send on an ordinary radiotelegraph key for five consecutive minutes at a speed of not less than twelve words a minute, five letters being counted as one word; the accuracy of signalling, the correct formation of the letters, and the correctness of spacing will be taken into account;

(b) To receive and write legibly for not less than five consecutive minutes at a speed of not less than twelve words a minute, five letters being counted as one word, from signals received on a double headgear telephone receiver as ordinarily used for radiotelegraphic reception, and to distinguish the signals "SOS," "STP," and his own call signal from among other signals, when sent at a speed of twenty words a minute;

(c) To reduce the transmitting power;

(d) To change the wavelength of the transmitter within the limits prescribed in the licence issued for the station;

(e) To adjust the apparatus after it has been placed out of adjustment.

"Written" Section.

(f) To complete a diagram of connections of the set in which the candidate is being examined;

(g) To answer seven technical questions on the equipment, including storage battery and emergency set, if any;

(h) To answer nine questions on the procedure governing the handling of radiotelegraph messages and the regulations applicable to the exchange of radiotelegraph traffic and communications, particularly as set out in part 5, sections 60 to 91 of the Postmaster-General's Handbook for Wireless Telegraph Operators, section 6, articles 20 to 35 of the regulations annexed to the International Radiotelegraph Convention, and the Minister's Regulations applicable to the operation of experimental stations.

***97. Amateur Experimental Certificate.**—Candidates for an amateur certificate will be examined in the adjustment and operation of the apparatus they propose to operate and will be required to have a satisfactory knowledge of the departmental regulations governing the working of amateur experimental stations (Regulations No. 19 to No. 31), and those annexed to the International Radiotelegraph Convention of London, applicable to and working of stations generally, particularly section 6, articles 20 to 35, entitled "Transmission of Radiotelegrams."

The examination will be practical and *viva voce*, and the candidates will be required to send and receive in the International Morse Code at a speed of not less than five words a minute and to distinguish from other signals the signals "SOS," "STP," and the call signal of his station when repeated several times at a speed of ten words a minute.

EXAMINATIONS GENERALLY.

98. Places at which examinations will be held.—Examinations will generally be con-

* The "Postmaster-General's Handbook for Wireless Telegraph Operators" and the "International Radiotelegraph Convention of London" referred to in this section may be obtained from the Department of the Naval Service, Ottawa, for the sum of 20 cents and 10 cents each, respectively, post free.

ducted at the Department of the Naval Service, Ottawa; special arrangements will, however, be made where circumstances permit for holding an examination at any radiotelegraph station or any technical school of telegraphy at which suitable apparatus is provided for the purpose.

99. The certificates of proficiency will indicate the system or systems of radiotelegraphy under which the candidate's examination was conducted.

100. **Failure to Pass.**—In case of failure a candidate will not ordinarily be re-examined until after the lapse of three months. An additional fee will be payable in respect of the further examination.

101. **Suspension of Certificate.**—Should it be proved to the satisfaction of the Minister that the holder of a "Certificate of Proficiency" has wilfully or negligently failed to comply with the provisions of the International Radiotelegraph Convention and Regulations, or of these regulations, or of any other regulations which may be issued from time to time for his guidance, the certificate may, at the discretion of the Minister, be suspended or cancelled.

INSPECTION OF STATIONS.

102. **Inspection.**—Any duly authorised officer of the department may, from time to time, and at all reasonable times, enter upon any coast, land or ship station, within the jurisdiction of Canada, for the purpose of inspection, and may inspect any apparatus fixed or in use in such station, for the purpose of sending and receiving messages by radiotelegraphy and all other telegraphic instruments and apparatus fixed or being in such station, also the working and user of such apparatus and telegraphic instruments, and all books and papers used in connection with the operation of such station. His authority will be in the form of a letter signed by the Deputy Minister of the Department of the Naval Service.

OPERATION OF SHIP STATIONS WITHIN THE TERRITORIAL WATERS OR HARBOURS OF CANADA.

103. **Ship Stations in Territorial Waters.**—*The Radiotelegraph Stations on board ships (other than H.M. ships of war or Canadian Government vessels) shall not be worked while such ships are within the Territorial Waters of Canada, unless specific permission is granted therefor by the controlling Canadian coast stations for the locality, and then only provided such working does not interfere with the operation of any coast station established in Canada, and that the provisions of the Radiotelegraph Convention of London, 1912, and the Service Regulations annexed thereto are strictly observed.*

104. **Ship Stations in Harbours.**—(a) The Radiotelegraph Stations on board ships (other than H.M. ships of war or Canadian Government vessels) shall not be worked whilst such ships are within a harbour of the Dominion of Canada, except as follows:—

(i) When direct communication between a ship in harbour and the shore is forbidden for quarantine or other special reasons, her radiotelegraph apparatus may be worked for one half hour after arrival and for one half hour before departure from such harbour.

(ii) For the purpose of making or answering signals of distress.

(b) For the proper enforcement of the above, ships in Canadian harbours shall, if so instructed by a Canadian Government

Radiotelegraph Inspector, or other properly authorised officer, completely disconnect the aerial wires from their radio apparatus, the ends of such wires being suspended entirely clear of the radiotelegraph cabin, in such a manner as to show they are properly disconnected.

105. *Penalty*.—Any person who violates any of the provisions of these regulations shall be liable on summary conviction to a penalty not exceeding fifty dollars and costs or three months' imprisonment.

EXTRACT FROM AIR REGULATIONS, 1919.

110. "No person shall instal or work a radiotelegraph or telephone apparatus in any aircraft primarily registered in Canada, except in accordance with the terms of a licence granted by the Minister of the Naval Service, and no person shall work any radiotelegraph or telephone apparatus on any aircraft, except in accordance with the provisions of the International Radiotelegraph Convention and the Service Regulations annexed thereto."

W. 42.

LIMITED COAST STATION LICENCE. Licence No.

Date 19

DOMINION OF CANADA.
LICENCE TO USE RADIOTELEGRAPHY.

Issued in accordance with the provisions of the Radiotelegraph Act, Chapter 43, Statutes 1913, and the Regulations of the Minister made thereunder.

The herein named resident of hereinafter called the licensee, is hereby licensed to establish and operate a radiotelegraph coast station situated at for the term of one year commencing on the first day of April, 19 and terminating on the thirty-first day of March, 19 , and to instal and operate at such station the apparatus mentioned in the schedule hereto, on payment of the sum of ten dollars (\$10), being the licence fee for the privilege above named.

This licence is subject to the Act and Regulations above referred to and to the following terms, conditions and restrictions:—

1. In this licence the term "Minister" means the Minister or the Deputy Minister of the Naval Service for the time being.

2. (i) The licensee shall not establish, instal, or work any apparatus for radiotelegraphy, except the apparatus hereinafter called "the licensed apparatus," specified in the said schedule hereto, nor use wavelengths other than those specified therein.

(ii) The use of the licensed apparatus shall except in cases of distress, be limited to the exchange of messages with such stations, vessels or lines of vessels as are specified in the schedule.

(iii) No tolls, fees, or other consideration shall be received, levied, or collected by the licensee until the same have been approved of by the Board of Railway Commissioners for Canada, and in no case shall they exceed those fixed by the International Radiotelegraph Convention of London, 1912.

3. (i) The licensee shall so work the licensed apparatus as not to interfere with the working of any radiotelegraph station established in

Canada or the territorial waters abutting on the coasts of Canada (whether on shore or on any ship), by or for the purpose of the Minister or any Department of His Majesty's Government or for commercial purposes and in particular with the sending or receipt of any messages between or at radiotelegraph stations established as aforesaid on land and radiotelegraph stations established on ships at sea.

(ii) With a view to preventing such interference as aforesaid, the licensee shall comply with all directions which shall be given to the licensee by the Minister and with all rules prescribed by the Minister for observance by his licensees:—

(a) With respect to all arrangements to be adopted for the purposes of syntony or enabling the messages exchanged by means of the licensed apparatus to be distinguished from those emanating from any other radiotelegraph station;

(b) With respect to any alteration of messages which the Minister may think necessary;

(c) Generally with respect to avoiding interference between one radiotelegraph station and another.

4. The licensed apparatus shall not, without the consent of the Minister, be altered or modified in respect of any of the particulars mentioned in the schedule hereto.

5. (i) The coupling between the primary and secondary circuits of the oscillation transformer shall not be closer than that which gives a difference of 5 per cent. between the mean wavelength and either of the two waves emitted by the coupled circuits.

(ii) The logarithmic decrement per whole period, of the emitted waves, shall not exceed two-tenths, except when sending distress calls or messages relating to vessels in distress.

6. The licensee shall instal the apparatus at the station mentioned in the schedule, and the said station shall be placed in operation within months from the date of this licence, and shall be kept in operation continuously during the hours specified in the schedule, until this licence shall expire.

7. All apparatus used or intended to be used by the licensee shall be so erected, fixed, placed and used as not, either directly or by reason of the working or user thereof, to interfere with the efficient or convenient maintenance, working or user of any telegraphic line.

8. The licensee shall, if so required in writing by the Minister, cease to use the licensed apparatus for such period (not exceeding hours in any one day), as may be specified by the Minister.

9. The Minister or his authorised officers may, from time to time and at all reasonable times, enter upon the herein licensed station, for the purpose of inspection, and may inspect any apparatus fixed or in use in such station, for the purpose of sending and receiving messages by radiotelegraphy and all other telegraphic instruments and apparatus fixed or being in such stations, and the working and user of such apparatus and telegraphic instruments.

10. Subject to the provisions of this licence, the licensee shall transmit and receive messages by means of the licensed apparatus to and from any other station or to and from any ship without regard to the particular system of radiotelegraphy installed at such other station

Laws and Regulations—Canada

or on such other ship, on equal terms without favour or preference, whether as regards rates of charge, order of transmission or otherwise.

11. (i) If and whenever any Department of the Government shall require the licensee, his servants or agents to transmit, by means of the licensed apparatus, any message on His Majesty's Service (including messages to and from ships of His Majesty's Royal Navy or Canadian Government vessels), such messages shall have priority over all other messages (except messages of distress) and the licensee, his servants and agents shall, as soon as reasonably may be, transmit the same, and shall, until transmission thereof, suspend transmission of all other messages.

(ii) The licensee shall not be entitled to claim any compensation in respect of the suspension of the transmission of messages as aforesaid.

12. The licensee shall, so far as possible, receive from all ships and light stations all requests for assistance and all signals of distress and retransmit them with the least possible delay to the proper authorities by means of the licensed apparatus or any other means in his power.

13. The licensee shall not divulge to any person (other than properly authorised officials of the Government or a competent legal tribunal) or make any use whatever of any message coming to the knowledge of the licensee and not intended for receipt by means of the licensed apparatus, nor shall he divulge to any person other than the addressee or his accredited agent the contents of any message coming to his knowledge intended for receipt by means of the licensed apparatus. The licensee shall exhibit at the said station a copy of form No. W. 40 issued by the Department of the Naval Service.

14. All messages transmitted by means of the licensed apparatus shall be copied in full in registers to be kept by the licensee for that purpose and in such registers each of such messages shall be accompanied by its identifying number and date and full particulars of its place of origin and ultimate destination, and such further particulars as the Minister shall, from time to time, reasonably require to be shown, messages on His Majesty's Service being distinguished in such registers from other messages. The licensee shall preserve all used message forms written and printed, and transcripts of messages and all other papers for such period as is from time to time prescribed by the Regulations of the International Radiotelegraph Convention, and such registers and message papers shall be open to the inspection of the Minister or his officers thereto authorised at the office of the licensee, in between the hours of 10 a.m. and 5 p.m. on every day except Sunday or a public holiday.

15. The licensee shall make a monthly return to the Minister of all the messages handled by the licensed apparatus and in addition shall render to the Minister such accounts as the Minister shall direct in respect of all charges due or payable under the International Radiotelegraph Convention, in respect of ship-and-coast messages and shall pay to the Minister, at such times and in such manner as the Minister shall direct, all sums which shall be due from the licensee under such accounts.

16. All operators and other employees of the licensee at the said coast station shall be

British subjects, and must be of such age and hold such Certificates of Proficiency specified in the schedule annexed hereto.

17. The licensee shall observe at the station the provisions of the "Radiotelegraph Act" and those of the International Radiotelegraph Convention of London, 1912, and the detailed regulations from time to time made under each or either of them for carrying such provisions into effect.

18. The licensee shall at all times indemnify the Minister against all actions, claims and demands which may be brought or made against any corporation, company or person in respect of any injury arising from any act licensed or permitted by these presents.

19. Except with the consent in writing of the Minister, the licensee shall not assign or sublet this licence.

20. In case of any breach, non-observance or non-performance by or on the part of the licensee, his servants or agents of any of the terms or conditions herein contained, and the part of the licensee to be observed and performed then and in any such case, the Minister may, by writing, revoke and determine these presents and the licences, powers and authorities hereinbefore granted thereupon these presents and the said licences, powers and authorities and each and every of them shall absolutely cease, determine and become void.

21. Nothing in these presents contained shall prejudice or affect the right of the Minister, from time to time, to establish, extend, maintain and work any system of systems of radiotelegraphic communication (whether of a like nature to that hereby licensed or otherwise) in such manner as he shall, in his discretion, think fit, neither shall anything herein contained prejudice or affect the right of the Minister, from time to time, to enter into agreements for or to grant licences relative to the working and user of radiotelegraphs (whether of a like nature to those hereby licensed or otherwise), or the transmission of messages in any part of Canada by means of radiotelegraphy, with or to any person or persons whomsoever upon such terms as he shall, in his discretion, think fit.

22. Any notice, request or consent (whether expressed to be in writing or not), to be given by the Minister, under these presents, may be under the hand of any authorised officer, at the time being, of the Department of the Naval Service and may be served by registered post letter to the office of the licensee and any notice to be given by the licensee, under these presents, may be served by sending the same by registered post letter addressed to the Deputy Minister of the Naval Service, Ottawa.

SCHEDULE.

1. Name of coast station
2. Location
3. Latitude and longitude
4. Call signal.
5. Normal range :—
Day
Night

19. Stations with which the licensed station may communicate . . .

Deputy Minister of the Naval Service.

Department of the Naval Service, Ottawa.

Dated this day of 19

W. 18.

PUBLIC COMMERCIAL LICENCE.

F 19 Licence No.

DOMINION OF CANADA.

"LICENCE TO USE RADIOTELEGRAPHY."

Issued in accordance with the provisions of the Radiotelegraph Act, Chapter 43, Statutes 1913, and the Regulations of the Minister made thereunder.

The herein named resident of hereinafter called the licensee, is hereby licensed to establish and operate a Radiotelegraph land station situated at

for the term of one year commencing on the first day of April and terminating on the thirty-first day of March and to instal and operate at such station the apparatus mentioned in the schedule hereto, on payment of the sum of Fifty Dollars (\$50), being the licence fee for the privilege above-named.

This licence is subject to the said Act and Regulations and to the following terms, conditions and restrictions :—

1. In this licence, the following words and expressions shall have the several meanings hereinafter assigned to them unless there be something, either in the subject or context repugnant to such construction, that is to say :—

The expression "marine signalling" means signalling by means of any system of radiotelegraphy between two or more ships, between ships and any coast station, or between two Government coast stations; and the term "Minister" means the Minister or the Deputy Minister of the Naval Service for the time being.

2. The licensee shall not establish, instal or work any apparatus for radiotelegraphy, except the apparatus hereinafter called "the licensed apparatus," specified in the said schedule hereto, nor shall wavelengths other than those mentioned therein be employed.

3. The working of the licensed station shall be limited to the exchange of messages with such coast and land stations as are specified in the schedule.

4. No tolls, fees, or other consideration shall be received, levied, or collected by the licensee until the same have been approved of by the Board of Railway Commissioners for Canada.

5. (i) The licensee shall so work the licensed apparatus as not to interfere with the working of any radiotelegraph station established in Canada by any Department of His Majesty's Government, or with the marine signalling on the waters or territory of Canada or neighbouring waters or territory.

(ii) With a view to preventing such interference as aforesaid, the licensee shall comply with all directions which shall be given to the licensee by the Minister and with all rules prescribed by the Minister for observance by his licensees :—

(a) With respect to all arrangements to be adopted for the purpose of syntony or enabling the messages exchanged by means of the licensed apparatus to be distinguished from those emanating from any other radiotelegraph station;

(b) With respect to any alternation of messages which the Minister may think necessary; and

(c) Generally with respect to avoiding interference between one radiotelegraph station and another.

6. The licensed apparatus shall not, without the consent of the Minister, be altered or modified in respect of any of the particulars mentioned in the schedule hereto.

7. The licensee shall, if so required in writing by the Minister, cease to use the licensed apparatus for such period (not exceeding hours in any one day) as may be specified by the Minister.

8. The licensee shall at all times indemnify the Minister against all actions, claims and demands which may be brought or made by any corporation, company or person in respect of any injury arising from any act licensed or permitted by these presents.

9. (i) If the maximum power taken by the transmitter as mentioned in the schedule is less than 5 kw., then the coupling between the primary and secondary circuits of the transmitting oscillation transformer shall not be closer than that which gives a difference of 5 per cent. between the mean wavelength and either of the two waves emitted by the coupled circuits and the logarithmic decrement of the emitted waves per whole period, shall not exceed two-tenths.

(ii) In the case of stations using more than 5 kw. power the logarithmic decrement of the emitted waves per whole period shall be as specified by the Minister and as mentioned in the schedule.

10. (i) If and whenever any Department of the Government shall require the licensee, his servants or agents to transmit, by means of the licensed apparatus, any message on His Majesty's Service, such messages shall have priority over all other messages and the licensee, his servants and agents, shall, as soon as reasonably may be, transmit the same, and shall, until transmission thereof, suspend transmission of all other messages.

(ii) The licensee shall not be entitled to claim any compensation in respect of the suspension of the transmission of messages as aforesaid.

11. The licensee shall not divulge to any person (other than properly authorised officials of the Government or a competent legal tribunal) or make any use whatever of any message coming to the knowledge of the licensee and not intended for receipt by means of the licensed apparatus, nor shall he divulge to any person other than the addressee or his

accredited agent the contents of any message coming to his knowledge intended for receipt by means of the licensed apparatus. The licensee shall exhibit at the said station a copy of Form No. W.40, issued by the Department of the Naval Service.

12. (i) All messages transmitted by means of the licensed apparatus shall be copied in full in register to be kept by the licensee for that purpose and in such registers each of such messages shall be accompanied by its identifying number and date and full particulars of its place of origin and ultimate destination and such further particulars as the Minister shall, from time to time, reasonably require to be shown, messages on His Majesty's Service being in such registers distinguished from other messages. The licensee shall preserve all used message forms written and printed and transcripts of messages and all other papers for such period as is, from time to time, prescribed by the Regulations of the International Radiotelegraph Convention, and such registers and message papers shall be open to the inspection of the Minister or his officers thereto authorised at the office of the licensee, in between the hours of 10 a.m. and 5 p.m. on every day, except Sunday, or a public holiday.

(ii) The licensee shall make a detailed return of the messages handled by the licensed station during each month on the forms provided for that purpose, and shall forward the same to the Minister at the end of each month.

13. The Minister or his authorised officers may, from time to time and at all reasonable times, enter upon the herein licensed station, for the purpose of inspection, and may inspect any apparatus fixed or in use in such station, for the purpose of sending and receiving messages by radiotelegraphy and all other telegraphic instruments and apparatus fixed or being in such stations, and the working and user of such apparatus and telegraphic instruments.

14. All apparatus used or intended to be used by the licensee shall be so erected, fixed, placed and used as not, either directly or by reason of the working or user thereof, to interfere with the efficient or convenient maintenance, working or user of any telegraphic line.

15. The licensee shall observe at the said station the provisions of the Radiotelegraph Act and the detailed regulations from time to time, made thereunder for carrying such provisions into effect; also such provisions of the International Radiotelegraph Convention of London, 1912, as are applicable to the operation of the station.

16. Except with the consent in writing of the Minister, the licensee shall not assign or sublet this licence.

17. The licensee shall instal the apparatus at the station mentioned in the schedule and the said station shall be placed in operation within months from the date of this licence, and shall be kept in operation during the hours specified in the schedule until this licence shall expire.

18. All operators and other employees of the licensee at the said station shall be British subjects, and must be of such number and the holders of such certificate of proficiency as are specified in the schedule annexed hereto.

19. In case of any breach, non-observance or non-performance by or on the part of the licensee, his servants or agents, of any of the terms or conditions herein contained and on the part of the licensee to be observed and performed then and in any such case, the Minister may, by writing, revoke and determine these presents and the licences, powers and authorities hereinbefore granted and thereupon these presents and the said licences, powers and authorities and each and every of them shall absolutely cease, determine and become void.

20. Nothing in these presents contained shall prejudice or affect the right of the Minister, from time to time, to establish, extend, maintain and work any system or systems of radiotelegraphic communication (whether of a like nature to that hereby licensed or otherwise) in such manner as he shall, in his discretion, think fit, neither shall anything herein contained prejudice or affect the right of the Minister, from time to time, to enter into agreements for or to grant licences relative to the working and user of radiotelegraphs (whether of a like nature to those hereby licensed or otherwise), or the transmission of messages in any part of Canada, by means of radiotelegraphy, with or to any person or persons whomsoever upon such terms as he shall, in his discretion, think fit.

21. Any notice, request or consent (whether expressed to be in writing or not), to be given by the Minister, under these presents, may be under the hand of any authorised officer, for the time being, of the Department of the Naval Service and may be served by sending the same by registered post letter to the office of the licensee, and any notice to be given by the licensee, under these presents, may be served by sending the same by registered post letter addressed to the Deputy Minister of the Naval Service, Ottawa.

Department of the Naval Service, Ottawa.
Dated this day of 19

W. 43.
PRIVATE COMMERCIAL LICENCE.

Licence No.
19 DOMINION OF CANADA.

"LICENCE TO USE RADIOTELEGRAPHY."

Issued in accordance with the provisions of the Radiotelegraph Act, Chapter 43, Statutes 1913, and the Regulations of the Minister made thereunder.

The herein named resident of _____ hereinafter called the licensee, is hereby licensed to establish and operate a radiotelegraph land station situated at _____ for the term of one year commencing on the first day of April _____ and terminating on the thirty-first day of March _____, and to instal and operate at such station the apparatus mentioned in the schedule hereto, on payment of the sum of ten dollars (\$10), being the licence fee for the privilege above-named.

This licence is subject to the said Act and regulations, and to the following terms, conditions, and restrictions:—

1. In this licence, the following words and expressions shall have the several meanings hereinafter assigned to them unless there be something, either in the subject or context, repugnant to such construction that is to say:—

The expression "marine signalling" means signalling by means of any system of radiotelegraphy between two or more ships, between ships and any coast station, or between two Government coast stations; and the term "Minister" means the Minister or the Deputy Minister of the Naval Service for the time being.

2. The licensee shall not establish, instal or work any apparatus for radiotelegraphy, except the apparatus hereinafter called "the licensed apparatus," specified in the said schedule hereto, nor shall wavelengths other than those mentioned therein be employed.

3. The working of the licensed station shall be limited to the exchange of messages with such coast and land stations as are specified in the schedule.

4. The station shall be worked solely for the transmission and reception of messages appertaining to the service or affairs of the licensee and no tolls, fees or other consideration shall be received, levied or collected by the licensee on account of any business or messages handled by the licensed apparatus.

5. (i) The licensee shall so work the licensed apparatus as not to interfere with the working of any radiotelegraph station established in Canada by any Department of His Majesty's Government, or with marine signalling on the waters or territory of Canada or neighbouring waters or territory.

(ii) With a view to preventing such interference as aforesaid, the licensee shall comply with all directions which shall be given to the licensee by the Minister and with all rules prescribed by the Minister for observance by his licensees:—

(a) With respect to all arrangements to be adopted for the purpose of syntony or enabling the messages exchanged by means of the licensed apparatus to be distinguished from those emanating from any other radiotelegraph station;

(b) With respect to any alteration of

messages which the Minister may think necessary; and

(c) Generally with respect to avoiding interference between one radiotelegraph station and another.

6. The licensed apparatus shall not, without the consent of the Minister, be altered or modified in respect of any of the particulars mentioned in the schedule hereto.

7. The licensee shall, if so required in writing by the Minister, cease to use the licensed apparatus for such period (not exceeding _____ hours in any one day) as may be specified by the Minister.

8. The licensee shall at all times indemnify the Minister against all actions, claims and demands which may be brought or made by any corporation, company or person in respect of any injury arising from any act licensed or permitted by these presents.

9. (i) If the maximum power taken by the transmitter as mentioned in the schedule is less than 5 kw., then the coupling between the primary and secondary circuits of the transmitting oscillation transformer shall not be closer than that which gives a difference of 5 per cent. between the mean wavelength and either of the two waves emitted by the coupled circuits and the logarithmic decrement of the emitted waves per whole period shall not exceed two-tenths.

(ii) In the case of stations using more than 5 kw. power the logarithmic decrement of the emitted waves per whole period shall be as specified by the Minister and as mentioned in the schedule.

10. (i) If and whenever any department of the Government shall require the licensee, his servants, or agents to transmit, by means of the licensed apparatus, any message on His Majesty's Service, such messages shall have priority over all other messages and the licensee, his servants, and agents, shall, as soon as reasonably may be, transmit the same, and shall, until transmission thereof, suspend transmission of all other messages.

(ii) The licensee shall not be entitled to claim any compensation in respect of the suspension of the transmission of messages as aforesaid.

11. The licensee shall not divulge to any person (other than properly authorised officials of the Government or a competent legal tribunal) or make any use whatever of any message coming to the knowledge of the licensee and not intended for receipt by means of the licensed apparatus nor shall he divulge to any person other than the addressee or his accredited agent the contents of any message coming to his knowledge intended for receipt by means of the licensed apparatus. The licensee shall exhibit at the said station a copy of Form No. W. 40, issued by the Department of the Naval Service.

12. (i) All messages transmitted by means of the licensed apparatus shall be copied in full in registers to be kept by the licensee for that purpose and in such registers each of such messages shall be accompanied by its identifying number and date and full particulars of its place of origin and ultimate destination and such further particulars as the Minister shall, from time to time, reasonably require to be shown, messages on His Majesty's Service being in such registers distinguished from other messages. The licensee shall preserve all used message forms written and

printed, and transcripts of messages and all other papers for such period as is, from time to time, prescribed by the Regulations of the International Radiotelegraph Convention, and such registers and message papers shall be open to the inspection of the Minister or his officers thereto authorised at the office of the licensee, in _____ between the hours of 10 a.m. and 5 p.m. on every day, except Sunday or a public holiday.

(ii) The licensee shall make a detailed return of the messages handled by the licensed station during each month on the forms provided for that purpose, and shall forward the same to the Minister at the end of each month.

13. The Minister or his authorised officers may from time to time, and at all reasonable times, enter upon the herein licensed station, for the purpose of inspection, and may inspect any apparatus fixed or in use in such station, for the purpose of sending and receiving messages by radiotelegraphy and all other telegraphic instruments and apparatus fixed or being in such stations, and the working and user of such apparatus and telegraphic instruments.

14. All apparatus used or intended to be used by the licensee shall be so erected, fixed, placed and used as not, either directly or by reason of the working or user thereof, to interfere with the efficient or convenient maintenance, working or user of any telegraphic line.

15. The licensee shall observe at the said station the provisions of the Radiotelegraph Act and the detailed regulations from time to time made thereunder for carrying such provisions into effect; also such provisions of the International Radiotelegraph Convention of London, 1912, as are applicable to the operation of the station.

16. Except with the consent in writing of the Minister, the licensee shall not assign or sublet this licence.

17. The licensee shall instal the apparatus at the station mentioned in the schedule and the said station shall be placed in operation within _____ months from the date of this licence, and shall be kept in operation during the hours specified in the schedule until this licence shall expire.

18. All operators and other employees of the licensee at the said station shall be British subjects and must be of such number and the holders of such certificate of proficiency as are specified in the schedule annexed hereto.

19. In case of any breach, non-observance, or non-performance by or on the part of the licensee, his servants or agents, of any of the terms or conditions herein contained, and on the part of the licensee to be observed and performed, then and in any such case, the Minister may, by writing, revoke and determine these presents and the licences, powers and authorities hereinbefore granted and thereupon these presents and the said licences, powers, and authorities, and each and every of them shall absolutely cease, determine and become void.

20. Nothing in these presents contained shall prejudice or affect the right of the Minister, from time to time, to establish, extend, maintain, and work any system or systems of radiotelegraphic communication (whether of a like nature to that hereby licensed or otherwise) in such manner as he shall in his discretion

think fit, neither shall anything herein contained prejudice or affect the right of the Minister, from time to time, to enter agreements for or to grant licences relating to the working and user of radiotelegraphs (whether of a like nature to those hereby licensed or otherwise), or the transmission of messages in any part of Canada, by means of radiotelegraphy, with or to any persons whomsoever upon such terms as shall in his discretion think fit.

21. Any notice, request or consent (whether expressed in writing or not), to be given by the Minister, under these presents, may be given under the hand of any authorised officer, the time being, of the Department of Naval Service and may be served by sending the same by registered post letter to the _____ office of the licensee, and any notice to be given by the licensee under these presents, may be served by sending the same by registered post letter addressed to the Deputy Minister of the Naval Service, Ottawa.

EXPERIMENTAL LICENCE.

Licence No. _____
DOMINION OF CANADA.

"LICENCE TO USE RADIOTELEGRAPH."
Issued in accordance with the provisions of the Radiotelegraph Act, Chapter 43, Statutes 1913, and the Regulations of the Minister made thereunder.

H The herein named _____ resident of _____ after called the licensee, is hereby licensed to establish and operate an experimental radiotelegraph station situated at _____ for the term of one year commencing on the first day of April, 19____, and terminating on the thirty-first day of March, 19____, and to instal and operate at such station the apparatus mentioned in the schedule hereto, on payment of the sum of five dollars (\$5), being the licence fee for the privilege above named.

This licence is subject to the said Act and Regulations and to the following terms, conditions and restrictions:—

1. In this licence, the term "Minister" means the Minister or the Deputy Minister of the Naval Service for the time being.

2. (i) The licensee shall not establish, instal or operate any apparatus for radiotelegraphy, except the apparatus hereinafter called the "licensed apparatus," specified in the said schedule hereto, nor use wavelengths other than those specified therein.

(ii) The licensee shall work the licensed apparatus solely for the purpose of conducting experiments in radiotelegraphy and for no other purpose whatever.

3. (i) The licensee shall so work the licensed apparatus as not to interfere with the working of any radiotelegraph station established in Canada or the territorial waters abutting on the coasts of Canada (whether on shore or on any ship), by or for the purposes of the Minister or any Department of His Majesty's Government or for commercial purposes and in particular with the sending or receipt of any messages between or at radiotelegraph stations established as aforesaid on land and radiotelegraph stations established on ships at sea.

(ii) With a view to preventing such interference as aforesaid the licensee shall comply with all directions which shall be given to the licensee by the Minister and with all rules prescribed by the Minister for observance by his licensees:—

(a) With respect to all arrangements to be adopted for the purpose of securing syntonised apparatus or for enabling the messages exchanged by means of the licensed apparatus to be distinguished from those emanating from any other radiotelegraph station;

(b) Generally with respect to avoiding interference between one radiotelegraph station and another.

The licensed apparatus shall not, without the consent of the Minister, be altered or modified in respect of any of the particulars mentioned in the schedule hereto.

5. (i) The coupling between the primary and secondary circuits of the oscillation transformer shall not be closer than that which gives a difference of 5 per cent. between the mean wavelength and either of the two waves emitted by the coupled circuits.

(ii) The logarithmic decrement per whole period of the emitted waves shall not exceed two-tenths except when sending distress calls or messages relating to vessels in distress.

6. The licensee shall not divulge to any person (other than the properly authorised officials of the Government or a competent legal tribunal) or make any use whatever of any message coming to the knowledge of the licensee and not intended for receipt by means of the licensed apparatus. The licensee shall exhibit at the said station a copy of Form No. W. 40, issued by the Department of the Naval Service.

7. The Minister or his officers may, from time to time and at all reasonable times, enter upon the herein licensed station, for the purpose of inspection, and may inspect any apparatus fixed or in use in such station, for the purpose of sending and receiving messages by radiotelegraphy and all other telegraphic instruments and apparatus fixed or being in such stations, and the working and user of

such apparatus and telegraphic instruments respectively.

8. All apparatus used or intended to be used by the licensee shall be so erected, fixed, placed and used as not, either directly or by reason of the working or user thereof, to interfere with the efficient or convenient maintenance, working or user of any telegraphic line.

9. The licensee shall at all times indemnify the Minister against all actions, claims, and demands which may be brought or made by any corporation, company or person in respect of any injury arising from any act licensed or permitted by these presents.

10. The licensed apparatus shall only be worked by a person, or persons, holding certificates as are specified in the schedule annexed hereto.

11. The licensed apparatus shall be operated in accordance with the provisions of the Radiotelegraph Act and the regulations issued thereunder by the Governor in Council or the Minister, and also in accordance with such provisions of the International Radiotelegraph Convention as are applicable to such operation.

12. Except with the consent in writing of the Minister, the licensee shall not assign or sublet this licence.

13. (i) The Minister may at any time in his absolute discretion give notice in writing to determine these presents, and the licence or permission hereby given at the end of one calendar month from the date of such notice, and at the expiration of that period the licence or permission hereby granted shall cease and determine accordingly, but without prejudice to any remedy of the Minister under any provision herein contained on the part of the licensee to be observed and performed.

(ii) The licensee shall, if so required by the Minister, cease to use the licensed apparatus for such period (not exceeding eight hours in any one day) as may be specified by the Minister.

14. In case of any breach, non-observance, or non-performance by or on the part of the licensee, his servants or agents of any of the terms or conditions herein contained and on the part of the licensee to be observed and performed, then and in any such case, the Minister may, by writing, revoke and determine these presents and the licences, powers and authorities hereinbefore granted, and thereupon these presents, and the said licences, powers and authorities and each and every of them shall absolutely cease, determine and become void.

15. Nothing in these presents contained shall prejudice or affect the right of the Minister from time to time, to establish, extend, maintain and work any system or systems, of radiotelegraphic communication (whether of a like nature to that hereby licensed or other wise) in such manner as he shall in his discretion think fit, neither shall anything herein contained prejudice or affect the right of the Minister, from time to time, to enter into agreements for or to grant licences relative to the working and user of radiotelegraphs (whether of a like nature to those hereby licensed or otherwise), or the transmission of messages in any part of Canada, by means of radiotelegraphy, with or to any person or persons whomsoever upon such terms as he shall, in his discretion, think fit.

16. Any notice, request or consent (whether expressed to be in writing or not), to be given by the Minister under these presents may be under the hand of any authorised officer, for the time being, of the Department of the Naval Service, and may be served by sending the same by registered post letter to the licensee, and any notice to be given by the licensee under these presents, may be served by sending the same by registered post letter addressed to the Deputy Minister of the Naval Service, Ottawa.

AMATEUR EXPERIMENTAL
LICENCE.

19 Licence No.

DOMINION OF CANADA.

"LICENCE TO USE RADIOTELEGRAPHY."

Issued in accordance with the provisions of the Radiotelegraph Act, Chapter 43, Statutes 1913, and the Regulations of the Minister made thereunder.

The herein named

I resident of herein-after called the licensee, is hereby licensed to establish and operate an experimental radiotelegraph station situated at for the term of one year commencing on the first day of April, 19 , and terminating on the thirty-first day of March, 19 , and to instal and operate at such station the apparatus mentioned in the schedule hereto, on payment of the sum of one dollar (\$1) being the licence fee for the privilege above named.

This licence is subject to the said Act and Regulations and to the following terms, conditions and restrictions:—

1. In this licence, the term "Minister" means the Minister or the Deputy Minister of the Naval Service for the time being.

2. (i.) The licensee shall not establish, instal, or operate any apparatus for radiotelegraphy, except the apparatus hereinafter called the "licensed apparatus" specified in the said schedule hereto, nor use wavelengths other than those specified therein.

(ii.) The licensee shall work the licensed apparatus solely for the purpose of conducting experiments in radiotelegraphy and for no other purpose whatever.

3. (i.) The licensee shall so work the licensed apparatus as not to interfere with the working of any radiotelegraph station established in Canada or the territorial waters abutting on the coasts of Canada (whether on shore or on any ship), by or for the purposes of the Minister or any Department of His Majesty's Government or for commercial purposes and in particular with the sending or receipt of any messages between or at radiotelegraph stations established as aforesaid on land and radiotelegraph stations established on ships at sea.

(ii.) With a view to preventing such interference as aforesaid the licensee shall comply with all directions which shall be given to the licensee by the Minister and with all rules prescribed by the Minister for observance by his licensees:—

(a) With respect to all arrangements to be adopted for the purpose of securing synchronised apparatus or for enabling the messages exchanged by means of the licensed apparatus to be distinguished from those emanating from any other radiotelegraph station;

(b) Generally with respect to avoiding interference between one radiotelegraph station and another.

4. The licensed apparatus shall not, without the consent of the Minister, be altered or modified in respect of any of the particulars mentioned in the schedule hereto.

5. (i.) The coupling between the primary and secondary circuits of the oscillation transformer shall not be closer than that which gives a difference of 5 per cent. between the mean wavelength and either of the two waves emitted by the coupled circuits.

(ii.) The logarithmic decrement per whole period, of the emitted waves, shall not exceed two-tenths.

6. The licensee shall not divulge to any person (other than the properly authorised officials of the Government or a competent legal tribunal) or make any use whatever of any message coming to the knowledge of the licensee and not intended for receipt by means of the licensed apparatus. The licensee shall exhibit at the said station a copy of Form No. W. 40, issued by the Department of the Naval Service.

7. The Minister or his officers may, from time to time and at all reasonable times, enter upon the herein licensed station, for the purpose of inspection, and may inspect any apparatus fixed or in use in such station, for the purpose of sending and receiving messages by radiotelegraphy and all other telegraphic instruments and apparatus fixed or being in such stations and the working and user of such apparatus and telegraphic instruments respectively.

8. All apparatus used or intended to be used by the licensee shall be so erected, fixed, placed, and used as not, either directly or by reason of the working or user thereof, to interfere with the efficient or convenient maintenance, working or user of any telegraphic line.

9. The licensee shall at all times indemnify the Minister against all actions, claims and demands which may be brought or made by any corporation, company or person in respect of any injury arising from any act licensed or permitted by these presents;

10. The licensed apparatus shall only be worked by a person, or persons, holding an Amateur Experimental Certificate of Proficiency in Radiotelegraphy as provided for in Regulation No. 97 of the Minister's Regulations.

11. The licensed apparatus shall be operated in accordance with the provisions of the Radiotelegraph Act and regulations issued thereunder by the Governor in Council or the Minister and in accordance with such provisions of the International Radiotelegraph Convention as are applicable to such operation.

12. Except with the consent in writing of the Minister, the licensee shall not assign or sublet this licence.

13. (i.) The Minister may at any time in his absolute discretion give notice in writing to determine these presents and the licence or permission hereby given at the end of one calendar month from the date of such notice, and at the expiration of that period the licence or permission hereby granted shall cease and determine accordingly, but without prejudice to any remedy of the Minister under any provision herein contained on the part of the licensee to be observed and performed.

(ii.) The licensee shall, if so required by the Minister, cease to use the licensee's apparatus for such period (not exceeding eight hours in any one day) as may be specified by the Minister.

14. In case of any breach, non-observance or non-performance by or on the part of the licensee of any of the terms or conditions herein contained and on the part of the licensee to be observed and performed, then, and in any such case, the Minister may, by writing, revoke and determine these presents, and the licences, powers and authorities hereinbefore granted, and thereupon these presents, and the said licences, powers and authorities and each and every of them shall absolutely cease, determine and become void.

15. Nothing in these presents contained shall prejudice or affect the right of the Minister, from time to time, to establish, extend, maintain and work any system or systems of radiotelegraphic communication (whether of a like nature to that hereby licensed or otherwise) in such manner as he shall in his discretion think fit, neither shall anything herein contained prejudice or affect the right of the Minister, from time to time, to enter into agreements for or to grant licences relative to the working and user of radiotelegraphs (whether of a like nature to those hereby licensed or otherwise), or the transmission of messages in any part of Canada, by means of radiotelegraphy, with or to any person or persons whomsoever upon such terms as he shall, in his discretion, think fit.

16. Any notice, request or consent (whether expressed to be in writing or not), to be given by the Minister under these presents may be under the hand of any authorised officer, for the time being, of the Department of the Naval Service, and may be served by sending the same by registered post letter to the licensee, and any notice to be given by the licensee under these presents, may be served by sending the same by registered post letter addressed to the Deputy Minister of the Naval Service, Ottawa.

SHIP LICENCE.

19 Licence No.

DOMINION OF CANADA.

"LICENCE TO USE RADIOTELEGRAPHY."

Issued in accordance with the provisions of the Radiotelegraph Act, Chapter 43, Statutes 1913, and the Regulations of the Minister made thereunder.

Class Ship Station.

J The herein named resident of hereinafter called the licensee, is hereby licensed to establish and operate a radiotelegraph station on board the vessel for the term of one year commencing on the first day of April, nineteen hundred and and terminating on the thirty-first day of March nineteen hundred and and to instal and operate at such stations the apparatus mentioned in the schedule hereto on payment of the sum of one dollar (\$1), being the licence fee for the privilege above-named.

This licence is subject to the said Act and Regulations and to the following terms, conditions and restrictions:—

1. In this licence the term "Minister" shall mean the Minister or the Deputy Minister of the Naval Service for the time being.

2. (i.) The licensee shall not establish, instal or operate any apparatus for radiotelegraphy, except the apparatus hereinafter called the "licensed apparatus," specified in the said schedule hereto, nor use wavelengths other than those specified therein.

(ii.) The ship station shall be of such class mentioned in Regulations Nos. 34, 35 or 36 of the Minister's Regulations, as is specified in the said schedule annexed hereto.

3. No tolls, fees or other consideration shall be received, levied or collected by the licensee until the same have been approved of by the Board of Railway Commissioners for Canada, and in no case shall they exceed the maximum fixed by the International Radiotelegraph Convention of London, 1912.

4. The licensee shall comply with all such directions and observe all such rules as may be given or made by the Minister, from time to time, for the purpose of preventing interference with the working of any other radiotelegraph station and for enabling the messages exchanged by means of the licensed apparatus to be distinguished from those emanating from any other radiotelegraph station.

5. The licensed apparatus shall not, without the consent of the Minister, be altered or modified in respect of any of the particulars mentioned in the schedule hereto.

6. The licensee shall at all times indemnify the Minister against all actions, claims and demands which may be brought or made by any corporation, company or person in respect of any injury arising from any act licensed or permitted by these presents.

7. (i) The coupling between the primary and secondary circuits of the oscillation transformer shall not be closer than that which gives a difference of 5 per cent. between the mean wavelength and either of the two waves emitted by the coupled circuits.

(ii) The logarithmic decrement per whole period, of the emitted waves, shall not exceed two-tenths except when sending distress calls or messages relating to vessels in distress.

8. The licensee shall, so far as possible, receive from all ships and light stations all requests for assistance and all signals of distress and retransmit them with the least possible delay to the proper authorities by means of the licensed apparatus or any other means in his power.

9. Subject to the provisions of this licence, and in accordance with the regulations issued from time to time by the Minister, the licensee shall transmit and receive messages by means of the licensed apparatus to and from any coast station or to and from any other ship station without regard to the particular system of radiotelegraphy installed at such coast station or on such other ship, on equal terms without favour or preference, whether as regards rates of charge, order of transmission or otherwise, provided always that signals of distress and messages in connection therewith shall receive priority over all other messages and that the order of transmission of such other messages shall be governed by the International Telegraph Regulations.

10. (i) If and whenever any Department of the Government shall require the licensee, his servants or agents to transmit, by means of the licensed apparatus any message on His Majesty's service (including messages to and from ships of His Majesty's Royal Navy or Canadian Government vessels), such messages shall have priority over all other messages (except messages of distress), and the licensee, his servants and agents shall, as soon as reasonably may be, transmit the same, and shall until transmission thereof, suspend transmission of all other messages.

(ii) The licensee shall not be entitled to claim any compensation in respect of the suspension of the transmission of messages as aforesaid.

11. The licensee shall not divulge to any person (other than properly authorised officials of the Government or a competent legal tribunal) or make any use whatever of any messages coming to the knowledge of the licensee and not intended for receipt by means of the licensed apparatus, nor shall he divulge to any person other than the addressee or his accredited agent the contents of any message coming to his knowledge intended for receipt by means of the licensed apparatus, and the licensee shall exhibit at the said station a copy of Form No. W. 40, issued by the Department of the Naval Service.

12. All messages transmitted by means of the licensed apparatus shall be copied in full in registers to be kept by the licensee for that

purpose, and in such registers each of such messages shall be accompanied by its identifying number and date and full particulars of its places of origin and ultimate destination and such further particulars as the Minister shall from time to time reasonably require to be shown, messages on His Majesty's Service being in such registers distinguished from other messages. The licensee shall preserve all used message forms written and printed, and transcripts of messages and all other papers for such period as is from time to time prescribed by the Regulations of the International Radiotelegraph Convention, and such registers and message papers shall be open to the inspection of the Minister or his officers thereto authorised at the office of the licensee, in

between the hours of 10 a.m. and 5 p.m., on every day except Sunday or a public holiday.

13. The licensee shall prepare a detailed return of the messages handled by the licensed station during each month on the forms provided for that purpose, and shall forward the same to the Deputy Minister of the Naval Service at the end of each month.

14. The licensee shall render to the Minister such accounts as the Minister shall direct in respect of all charges due or payable under the Radiotelegraph Convention, 1912, in respect of messages exchanged between the ship station hereby licensed and coast stations or other ship stations, and shall pay to the Minister at such times and in such manner as the Minister shall direct all sums which shall be due from the licensee under such accounts.

15. The Minister or his duly authorised officers may, from time to time and at all reasonable times, enter upon the herein licensed ship station, for the purpose of inspection, and may inspect any apparatus fixed or in use in such station, for the purpose of sending and receiving messages by radiotelegraphy and all other telegraphic instruments and apparatus fixed or being in such stations, and the working and user of such apparatus and telegraphic instruments.

16. The licensee shall observe at the said station the provisions of the Radiotelegraph Act and International Radiotelegraph Convention of London, 1912, and the detailed regulations from time to time made under each or either of them for carrying such provisions into effect.

17. Except with the consent in writing of the Minister, the licensee shall not assign or sublet this licence.

18. (i) The licensed apparatus at the said ship station shall be worked only by a person or persons holding a certificate or certificates issued by the Minister, the British Postmaster-General or the corresponding authorities of any self-governing British colony or the Government of India, and the licensee shall provide for the working of the station such operators as are required by the provisions of Regulations Nos. 80, 81, 82 or 83 of the Minister's Regulations according to the classification of the station as is specified in the schedule annexed hereto.

(ii) A certificate shall not be recognised as authorising the holder to work a ship station under the terms of this licence unless it bears a statement that it is issued in accordance with the Radiotelegraph Convention, 1912.

19. The licensee shall carry on the ship on which the ship station is established under this licence a properly certified copy of such licence, and shall produce such copy for inspection if required so to do by the duly

authorised officials of the countries where the ship calls, and the following documents:—

Postmaster-General's Handbook for Wireless Telegraph Operators:

Official list of Radiotelegraph Stations:

Official list of Call Signals :

C.P.R., G.N.W. or Western Union Tariff Book:

Adequate supply of telegraph forms;
International Radiotelegraph Convention of
London, 1912:

and also such other documents as may be prescribed by the Minister, for the purpose of enabling the licensee to communicate with coast and ship stations in accordance with the rules and regulations of the International Radiotelegraph Convention, 1912.

20. In case of any breach, non-observance or non-performance by or on the part of the licensee, his servants or agents of any of the terms or conditions herein contained and on the part of the licensee to be observed and performed, then and in any such case, the Minister may, by writing, revoke and determine these presents and the licences, powers and authorities hereinbefore granted, and thereupon these presents, and the said licences, powers and authorities and each and every of them shall absolutely cease, determine and become void.

21. Nothing in these presents contained shall prejudice or affect the right of the Minister, from time to time, to establish, extend, maintain and work any system or systems of radiotelegraphic communication (whether of a like nature to that hereby licensed or otherwise) in such manner as he shall in his discretion think fit, neither shall anything herein contained prejudice or affect the right of the Minister, from time to time, to enter into agreements for or to grant licences relative to the working and user of radiotelegraphs (whether of a like nature to those hereby licensed or otherwise), or the transmission of messages in any part of Canada, by means of radiotelegraphy, with or to any person or persons whomsoever upon such terms as he shall, in his discretion, think fit.

22. Any notice, request or consent (whether expressed to be in writing or not), to be given by the Minister under these presents may be under the hand of any authorised officer, for the time being, of the Department of the Naval Service and may be served by sending the same by registered letter to the licensee, and any notice to be given by the licensee, under these presents, may be served by sending the same by registered letter addressed to the Deputy Minister of the Naval Service, Ottawa.

DOMINION OF CANADA.

"LICENCE TO USE RADIOTELEGRAPHY."

Issued in accordance with the provisions of
the Radiotelegraph Act, Chapter 43,
Statutes 1913, and the Regulations made
thereunder.

The herein named
K resident of
 hereinafter called the licensee, is
 hereby licensed to establish and operate
 a radiotelegraph Training School situated
 at _____ for the term of
 one year commencing on the first day of April,
 19____, and terminating on the thirty-first day
 of March, 19____, and to instal and operate
 at such station the apparatus mentioned in
 the schedule hereto, on payment of the sum
 of One Dollar (\$1), being the licence fee for
 the privilege above-named.

This licence is subject to the said Act and Regulations and to the following terms, conditions and restrictions :—

1. In this licence the term "Minister" means the Minister or the Deputy Minister of the Naval Service for the time being.

2. (i.) The licensee shall not establish, instal or operate any apparatus for radiotelegraphy, except the apparatus hereinafter called the "licensed apparatus" specified in the said schedule hereto, nor use wavelengths other than those specified therein.

(ii.) The licensee shall work the licensed apparatus solely for the purpose of instruction in radiotelegraphy and for no other purpose whatever.

3. (i.) The licensee shall so work the licensed apparatus as not to interfere with the working of any radiotelegraph station established in Canada or the territorial waters abutting on the coasts of Canada (whether on shore or on any ship), by or for the purposes of the Minister or any Department of His Majesty's Government or for commercial purposes and in particular with the sending or receipt of any messages between or at radiotelegraph stations established as aforesaid on land and radiotelegraph stations established on ships at sea.

(ii.) With a view to preventing such interferences as aforesaid the licensee shall comply with all directions which shall be given to the licensee by the Minister and with all rules prescribed by the Minister for observance by his licensees :—

(a) With respect to all arrangements to be adopted for the purpose of securing synchronised apparatus or for enabling the messages exchanged by means of the licensed apparatus to be distinguished

from those emanating from any other radiotelegraph station;

(b) Generally with respect to avoiding interference between one radiotelegraph station and another.

4. (i) The coupling between the primary and secondary circuits of the oscillation transformer shall not be closer than that which gives a difference of 5 per cent. between the mean wavelength and either of the two waves emitted by the coupled circuits.

(ii.) The logarithmic decrement per whole period, of the emitted waves, shall not exceed two-tenths.

5. All apparatus used or intended to be used by the licensee shall be so erected, fixed, placed and used as not, either directly or by reason of the working or user thereof, to interfere with the efficient or convenient maintenance, working or user of any telegraph or telephone line.

6. The Minister or his officers, may, from time to time and at all reasonable times, enter upon the herein licensed station, for the purpose of inspection, and may inspect any apparatus fixed or in use in such station, for the purpose of sending and receiving messages by radiotelegraphy and all other telegraphic instruments and apparatus fixed or being in such stations and the working and user of such apparatus and telegraphic instruments respectively.

7. The licensed apparatus shall not, without the consent of the Minister be altered or modified in respect of any of the particulars mentioned in the schedule hereto.

8. The licensed apparatus shall be operated in accordance with the provisions of the Radiotelegraph Act and the Regulations issued thereunder by the Governor in Council or the Minister and in accordance with such provisions of the International Radiotelegraph Convention as are applicable to such operation.

9. The licensee shall not divulge to any person (other than the properly authorised officials of the Government or a competent legal tribunal) or make any use whatever of any message coming to the knowledge of the and not intended for receipt by means of the licensed apparatus. No person shall operate or work the receiving apparatus at the licensed school who has not subscribed to, and filed with, the Minister of the Naval Department, a Declaration of Secrecy as prescribed in Section 6 of the Radiotelegraph Act and Radiotelegraph Regulation No. 72.

The licensee shall exhibit at the said station a copy of Form No. W. 40, issued by the Department of the Naval Service.

10. At least one of the instructors at the licensed school shall be the holder of a First-class Canadian Certificate of Proficiency in Radiotelegraphy. Other instructors, teaching in one or two subjects only, must have passed a successful examination in the subject or subjects, with which they propose to deal; the papers for this examination and the percentage of marks to be obtained will be as prescribed for the examination for a First-class Canadian Certificate of Proficiency in Radiotelegraphy.

11. The licensee shall at all times indemnify the Minister against all actions, claims and demands which may be brought or made by any corporation, company or person in respect of any injury arising from any act licensed or permitted by these presents.

12. Except with the consent in writing of the Minister, the licensee shall not assign or sublet this licence.

13. (i) The Minister may at any time in his absolute discretion give notice in writing to determine these presents and the licence or permission hereby given at the end of one calendar month from the date of such notice, and at the expiration of that period the licence or permission hereby granted shall cease and determine accordingly, but without prejudice to any remedy of the Minister under any provision herein contained on the part of the licensee to be observed and performed.

(ii) The licensee shall, if so required by the Minister, cease to use the licensed apparatus for such period (not exceeding eight hours in any one day) as may be specified by the Minister.

14. In case of any breach, non-observance or non-performance by or on the part of the licensee, his servants or agents, of any of the terms or conditions herein contained and on the part of the licensee to be observed and performed, then and in any such case, the Minister may, by writing, revoke and determine these presents and the licences, powers and authorities hereinbefore granted, and thereupon these presents and the said licences, powers and authorities and each and every one of them shall absolutely cease, determine and become void.

15. Nothing in these presents contained shall prejudice or affect the right of the Minister, from time to time, to establish, extend, maintain and work any system or systems of radiotelegraphic communication (whether of a like nature to that hereby licensed or otherwise) in such manner as he shall in his discretion think fit, neither shall anything herein contained prejudice or affect the right of the Minister, from time to time, to enter into agreements for or to grant licences relative to the working and user of radiotelegraphs (whether of a like nature to those hereby licensed or otherwise), or the transmission of messages in any part of Canada, by means of radiotelegraphy, with or to any person or persons whomsoever, upon such terms as he shall, in his discretion, think fit.

16. Any notice, request or consent (whether expressed to be in writing or not), to be given by the Minister under these presents may be under the hand of any authorised officer, for the time being, of the Department of the Naval Service, and may be served by sending the same by registered post letter to the licensee, and any notice to be given by the licensee, under these presents, may be served by sending the same by registered post letter addressed to the Deputy Minister of the Naval Service, Ottawa.

SCHEDULE.

1. Name of station

CIRCULAR LETTER TO MASTERS OF
MERCHANT SHIPS FITTED WITH
RADIOTELEGRAPH APPARATUS

L The attention of masters of merchant ships fitted with radiotelegraph apparatus is called to the following notice of change in wavelength at Canadian D.F. stations:—

"On and after August 1st, 1920, the Canadian Radiotelegraph Direction Finding Stations at Cheburto Head, N.S., Canso, N.S. and Cape Race, Newfoundland, will use the

wavelength of 800 metres exclusively for transmission and reception.

"It will be necessary for all ships to have their transmitters adjusted to transmit on 800 metres if they desire to obtain bearings from the above stations.

"All use of the wavelength of 600 metres by Canadian D.F. stations will be discontinued after August 1st, 1920."

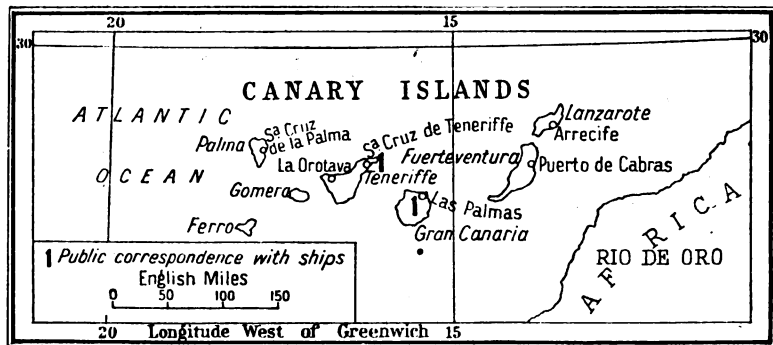

A revised reprint of Canadian Notice to Mariners No. 4 of 1919, embodying the above change, will be issued shortly.

June 10th, 1920.

CANARY ISLANDS

THE group of islands known under the above name consists of seven large and several small islands, whose combined area amounts to about 2,800 square miles and possesses a population of 360,000. It is commonly supposed that these islands constituted the Fortunate Islands of ancient history. They were forgotten, however, for several hundreds of years, but were re-discovered in 1334, when a French vessel was driven on to them by a storm.

They constitute at the present time a colony of Spain, and are administered by Spanish representatives.

CONTROL.

Wireless telegraphy in the islands is under the control of the Compañia Nacional de Telegrafia sin Hilos, which possesses two stations, one at Tenerife and the other at Las Palmas.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Mr. Enrique Gallego ..	Chief Engineer	Teneriffe and Las Palmas.
Mr. B. Walsh ..	Assistant Engineer	Teneriffe.
Mr. W. Sparkes ..	Assistant Engineer	Las Palmas.

There are five operators at each station.

ORGANISATION.

At the end of 1911 the Compañia Nacional de Telegrafia sin Hilos took over the wireless stations of Tenerife and Las Palmas (at that time of 20 kw. power) from the old French company, and held trial programmes with the Poldhu station in England. As a result of this, each station was fitted with a Marconi 3 kw. set for ships. At the present time Tenerife has two valve receivers and one crystal receiver for ships, with a low frequency amplifier. It is anticipated that the Spanish Government will shortly instal a direction-finding station, but at present the site has not yet been fixed. The Tenerife station sends out Press Bulletins in English and Spanish daily at 0330. Under the jurisdiction of the Canary Islands falls the military radio station at Cabo Juby, on the African mainland. This is a 3 kw. Telefunken set.

ADMINISTRATION.

No special Laws and Regulations exist under which wireless telegraphy and telephony are administered, their working being regulated in accordance with the International Rules.

CAPE VERDE ISLANDS

(See PORTUGAL.)

CEYLON

(See map on p. 274.)

THIS British Colony, lying S.E. of Hindustan (latitude $5^{\circ} 53' 5''$ to $9^{\circ} 50' N.$; longitude $79^{\circ} 48'$ to $81^{\circ} 52' E.$), possesses a written history dating from 543 B.C., and the Portuguese were the first of European nations to fix a permanent settlement in the Island; this occurred in A.D. 1511. The Portuguese gave place to the Dutch in 1658, and the latter surrendered Ceylon to the British in 1796, possession being confirmed by treaty in 1802. The Island is administered by a Governor aided by an Executive Council of seven and a Legislative Council of twenty-one members.

CONTROL.

The Wireless Station is under the control of the Postmaster-General and the Director of Telegraphs. The actual working is vested in the undermentioned officials:—

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Mr. A. E. McCloskey ..	Chief Telegraph Engineer	Colombo.
Mr. G. W. J. Praat ..	Superintendent of Traffic	Colombo.
Mr. M. J. Golightly ..	Officer in Charge of the Wireless Station ..	Colombo.

The rest of the operating staff are members of the Postal Department. The station belongs to the Government. There are no Experimental Amateur or Ships' Stations licensed in Ceylon, and no Wireless Clubs or Societies exist in the Island.

ORGANISATION.

The erection of the first Wireless Station for Ceylon was sanctioned by the Ceylon Government in 1910. Finally a site in Colombo was adopted as the best available from an "all-round" standpoint for a single station. The contract for the station was given to the Marconi Wireless Telegraph Co. in 1911 and the station was brought into use in 1912. A station has been erected at Matura and is under the control of the Admiralty. Arrangements for the transmission of Time and Weather Signals have not yet been completed, but it is hoped to include particulars in a subsequent edition.

ADMINISTRATION.

Wireless Telegraphy in Ceylon and its territorial waters was originally legislated for under an Ordinance of 1903. In 1908 an Ordinance (No. 35) regulating Telegraphy in general was passed, which was afterwards extended to affect Wireless Telegraphy by an Amending Ordinance (No. 15), passed in 1914. This later Ordinance, however, specifically cancelled a provision, contained in that of 1908, which provided for the continuance in force of the original 1903 enactment. The latter has, therefore, now been completely abrogated, and Wireless Telegraphy in Ceylon is regulated (a) by such clauses of the 1908 Ordinance as are applicable to Wireless Telegraphy; (b) by the Amending Ordinance (No. 15) of 1914; and (c) by the rules formulated under the provision of the latter Ordinance.

We print below the apposite sections of Ordinance 15 of 1914 and the rules based upon it.

A—Ordinance No. 15 of 1914 (August 18th);

B—Rules under this Ordinance.

ORDINANCE.

A Ordinance No. 15 of 1914 (modifying Ordinance No. 35 of 1908) and dated August 3rd, 1914, provides in its Clause 5 an amendment of Section 7 of the 1908 Ordinance. This prescribes the right of the Governor in Executive Council to "make rules, consistent with the Ordinance, for the conduct of all or any telegraphs established, maintained, or worked by the Government or by persons licensed under this Ordinance." Rules under this section may provide for all or any of the following, amongst other matters, that is to say:—

(a) The rates at which, and the other conditions and restrictions subject to which messages shall be transmitted.

(b) The precautions to be taken for preventing the improper interception or disclosure of messages.

(c) The period for which, and the conditions subject to which, telegrams and other documents belonging to, or being in the custody of, telegraph officers shall be preserved; and

(d) The fees to be charged for searching for telegrams and other documents in the custody of any telegraph officer.

(e) For prescribing the form and the manner in which applications for licences under this Ordinance are to be made.

(f) For prescribing fees payable on the grant of any licence.

(g) For regulating the manner in which an apparatus for wireless telegraphy on board a merchant ship, whether British or foreign, in the waters of Ceylon, shall be worked so as to prevent interference with naval signalling, or the working of any wireless telegraph or telephone station lawfully established, installed, or worked in Ceylon or the waters thereof, and so as not to interrupt or interfere with the transmission of any messages between wireless telegraph or telephone stations established as aforesaid on land and wireless telegraph or telephone stations established on ships at sea.

(h) For prohibiting, except with the special or general permission of the Postmaster-General of Ceylon, the working or using of any apparatus for wireless telegraphy on board a merchant ship, whether British or foreign, while such ship is in any of the harbours of Ceylon.

(i) For prohibiting or regulating, in case at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy on board merchant ships, whether British or foreign, in the waters of Ceylon, the use of wireless telegraphy on board such ships while in such waters by such further rules as the Governor may deem fit to make from time to time, either in all cases, or in such cases as may be deemed desirable.

Moreover, Clause 6 of Ordinance No. 15 of 1914 adds to Clause 7 of the 1908 Ordinance a new sub-section lettered (2) A, which runs as follows:—

Provided that no regulations made in respect of the matters described in paragraphs (g), (h), and (i) or sub-section (2) of this section shall apply to the use of wireless telegraphy

for the purpose of making or answering signals of distress.

* * *
RULES.

B The current rules, under which the wireless telegraphy is at present administered, were issued on December 3rd, 1914. They were based on Ordinance 15 of 1914 (see above) and run as follows:—

DECEMBER 3RD, 1914.

1. Any person desirous of obtaining a licence for the establishment of a wireless telegraph station, or the installation or working of any apparatus for wireless telegraphy, in any place in the Colony, or on board any British ship registered in the Colony, must apply in writing to the Colonial Secretary. Such application must contain full particulars—

(a) Of the place or ship in respect of which a licence is sought;

(b) Of the nature of the apparatus which it is desired and proposed to instal and work; and

(c) Of the purposes for which the installation is intended to be utilised.

2. The following shall be the fees payable on the grant of licences:

	Rs.
(a) For a licence for a land station	5
(b) For a licence for a ship station	5
(c) For an experimental licence	Free

3. All apparatus for wireless telegraphy on board a merchant ship, whether British or foreign, in the waters of the Colony, shall be worked in such a way as not to interfere with:

(a) Naval signalling; or

(b) The working of any wireless telegraph station lawfully established, installed, or worked in the Colony or in waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

4. In these regulations "naval signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and Naval Stations, or between a ship of His Majesty's Navy or a Naval Station and any other wireless telegraph station, whether on shore or on any ship.

5. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in any harbour, port, or bay of the Colony, except with the special or general permission of the Postmaster-General.

6. (i) If at any time in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy on board merchant ships, and notice to that effect is published by the Postmaster-General, after the publication of such notice and until further notice the use of wireless telegraphy on board merchant ships, whether British or foreign, whilst in the waters of the Colony, shall be subject to such rules as may be made by the Governor, and such rules may prohibit or regulate such use in all cases, or in such cases as may be deemed desirable.

(ii) Such notice as aforesaid shall be published in the *Ceylon Government Gazette*,

and in such other manner, if any, as to the Postmaster-General may seem fit.

7. For the purpose of any proceedings under these regulations the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship.

8. Any summons or other document in any proceedings under these regulations shall be

deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in command or charge of the ship.

9. These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

CHILE

THE narrow strip of territory constituting the Republic of Chile lies between that remarkable range of mountains known as the Andes, and the Pacific Ocean. The country is divided into 23 provinces, and the total estimated population in 1915 was about $3\frac{1}{2}$ millions.

CONTROL.

Wireless Telegraphy in Chile is a State monopoly under the management of the Naval Department.

All Chilean wireless stations, both ship and land, are controlled by the Admiralty, and the Wireless Section of the Navy forms part of the general organisation administering naval affairs.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Rear-Admiral Don Miguel Aguirro	Chief of the General Maritime Office	Direction del Territorio Marítimo
Lieut. - Com. Don Hector Alliende	Head of the Wireless Section ..	Santiago de Chile Do. Do. Do.

ORGANISATION.

The first practical demonstration of wireless telegraphic communication was given in 1904, when the Marconi Company conducted a series of successful experiments between the Chilean Navy Cruisers "Esmeralda" and "Errazuriz," the apparatus utilised being coil and coherer sets.

At the present time the number of stations in operation total 56; these include 16 land stations varying in power from $\frac{1}{2}$ kw. to 100 kw. The stations fall under the following classification:—

Ship Stations	— Naval 25
" "	— Mercantile 15
Land Stations	— Open to public service 11
" "	— Control 1
" "	— Experimental 2
" "	— For aviation services 1
" "	— Amateur 1

ADMINISTRATION.

Below will be found the Law and Regulations governing the use of wireless in Chile.

A—Law governing wireless service in Chile.

B—Regulations made thereunder.

PROJECT OF LAW GOVERNING THE WIRELESS SERVICE IN THE CHILIAN REPUBLIC.

MONOPOLY OF THE STATE.

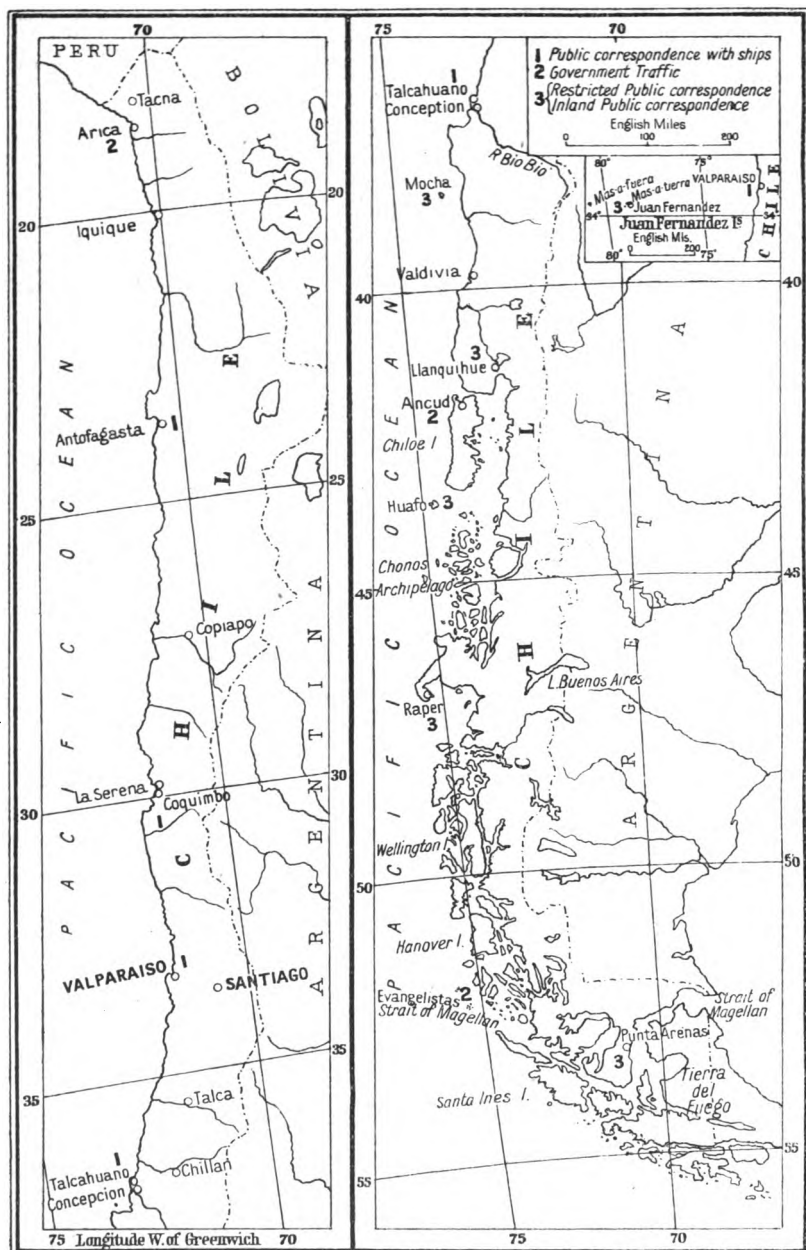

A ART. 1.—Wireless stations destined to transmit and receive wireless signals to or from other wireless stations in Chile or in any other foreign country, can only be installed and worked by the State.

Nevertheless, the State may permit the

installation and working of private wireless stations destined exclusively to experimental work or for purposes of instruction, but under the condition that the power of such stations shall not exceed $1\frac{1}{2}$ h.p. All wireless stations installed for experimental or educational purposes shall be submitted to the inspection and control established in the respective regulation.

ART. 2.—All persons that instal or attempt to instal clandestine wireless stations of any kind shall be liable to punishment according to

G

COPYRIGHT "GEOGRAPHIA" LTD 55 FLEET STREET, LONDON E.C.4

the regulations of the service and the laws of the country.

The State will confiscate all the material employed in these clandestine stations.

ERECTION OF WIRELESS STATIONS.

ART. 3.—(a) The State will dispose of the installation of all the wireless stations in the country electing the sites according to plans consulting all military, naval and commercial necessities of the country.

(b) In those isolated regions of the country where private persons solicit wireless communication and there exists manifest convenience in the establishment of such communications, wireless stations may be installed, but under the condition that the land required shall be ceded to the State by those interested also the total cost or that part of the cost decided upon by the Government, shall be borne by the persons or parties interested in the said communication.

At the termination of the construction of such stations the same shall pass over wholly to the State together with the land occupied.

UNIFORMITY OF SYSTEM.

ART. 4.—The wireless installations shall be as uniform as possible, and of a national type that shall satisfy the wireless service of the country and the different parts shall, as far as possible, be made in the country.

CONTROL.

ART. 5.—All the wireless stations destined to transmit or receive wireless communications of any kind shall be under the charge of the Ministry of Marine, and the stations shall be worked by personnel of the Navy with exception of the Army wireless stations which will be under the charge of the Ministry of War.

PUBLIC SERVICE.

ART. 6.—The Minister of Marine will designate the wireless stations that may attend public service of wireless communication.

These stations shall be directly connected to the State land telegraphs, which will serve to connect the wireless stations with the general public.

The tariffs shall be collected under the charge of the Minister for Home Affairs, and the said Ministry shall maintain all relations and communications that the wireless service may cause with other foreign administrations, wireless telegraph companies, telegraph or cable companies.

SHIP STATIONS.

ART. 7.—(a) Six months after this law is passed no ship will be allowed to enter or leave any of the ports of the Chilean Republic that carries 50 or more persons on board (including the crew), unless the ship is installed with wireless telegraph apparatus.

The wireless apparatus must be in working order and be capable of transmitting and receiving

messages at a distance not less than 200 miles during the daytime.

(b) In certain accidental cases expressly determined by the respective regulations, ships may be allowed to enter or leave Chilean ports, although they may be carrying 50 or more persons on board, and are not installed with wireless telegraph apparatus.

(c) The respective regulation will fix the number of operators, capable of working the wireless installation that all merchant ships must carry according to their class, which class will be determined by the same regulation.

(d) Any infraction or attempt at infraction of this article will be fined the sum of from one to five thousand Chilean gold dollars.

CONDITIONS THAT WIRELESS INSTALLATIONS ON CHILIAN MERCHANT SHIPS MUST FULFIL.

ART. 8.—(a) The wireless apparatus installed on board Chilean merchant ships will be subjected to the conditions that the respective regulations may fix.

(b) All wireless operators on board Chilean merchant ships must be of Chilean nationality.

(c) The Government will establish annexed to the Naval wireless school, the necessary courses of instruction to form operators destined to serve in the National Merchant Marine.

The cost of these courses will be paid for by the companies or persons concerned, in the form to be indicated by the respective regulation.

FUNDS FOR THE SERVICE.

ART. 9.—In the annual budget funds will be consulted to maintain and increase the State Wireless Telegraph Service.

REGULATIONS.

ART. 10.—The President of the Republic will dictate the necessary regulations for the fulfilment of this law. (N.B.—These are not as yet formulated, but are in course of being drawn up.)

ART. 11.—This law will come into force from the date of its publication in the Official Gazette.

REGULATIONS MADE BY CHILIAN ADMINISTRATION.

PARAGRAPH IX.

(Supreme Decree of 7th October, 1878, concerning Merchant Shipping.)

ART. 1.—Every sailing or mechanically propelled ship having 50 and more persons on board including the crew, should carry a wireless installation with a communicating power of 200 miles radius during the day.

ART. 2.—When about to effect the wireless installation the companies or shipowners should apply to the maritime authorities for the permission or right which the Government grants for radiotelegraphic stations.

[The above regulations came into force on October 1st, 1920.]

CHATHAM ISLANDS

(See NEW ZEALAND.)

CHINA

(1) FOREIGN SETTLEMENTS.

(For Laws of the Republic see under "Chinese Republic," page 204.)

(A) Hong-Kong.

THE Crown Colony of Hong-Kong consists of a number of islands situated off the south-eastern coast of China, at the mouth of the Canton River, and of a portion of the adjacent mainland. They lie between latitude $22^{\circ} 10'$ and $22^{\circ} 34' N.$; whilst the longitude extends between $113^{\circ} 52'$ and $114^{\circ} 30' E.$ The capital of the Colony is Victoria, built on the northern shore of Hong-Kong Island, facing the mainland. The magnificent harbour consists of the arm of the sea which lies between the mainland and the city. It was first occupied by Great Britain in January, 1841, and is now administered as a Crown Colony under a Governor aided by an Executive Council of eight members and a Legislative Council of thirteen.

CONTROL AND ORGANISATION.

Hong-Kong possesses two wireless stations, one of which, at Cape D'Aguilar, is for commercial service. This station is under the control of the Postmaster-General and is manned by a naval crew. Meteorological observations are exchanged with ships and time signals distributed free of charge. Arrangements have not yet been made for the installation of an aviation station.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Mr. M. J. Breen	Postmaster-General	Hong-Kong
Mr. H. Blandon	Commander Telegraphist, Royal Navy ..	Hong-Kong

ADMINISTRATION.

The regulation of wireless telegraphy is carried on under the provisions of the Wireless Telegraphy Ordinance, 1913, passed on July 24th of that year, which repealed all previous Ordinances; and by regulations issued under that Ordinance.

A—The Wireless Telegraphy Ordinance, 1913.

B—Regulations.

C—Ship Licence.

D—Permit to use wireless telegraphy on ships in the harbours of the Colony.

ORDINANCE No. 20 OF 1913.

A 1. This Ordinance may be cited as "The Wireless Telegraphy Ordinance, 1913."

2. "Telegraph" means an electric, galvanic or magnetic telegraph and includes appliances and apparatus for transmitting or making telegraphic, telephonic or other communications by means of electricity, galvanism or magnetism.

The expression "Wireless Telegraphy" means any system of communication by "telegraph" as (defined in this Ordinance) without the aid of any wire connecting the points from and at which the messages or other communications are sent and received: provided that nothing in this Ordinance shall prevent any person from making or using an electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

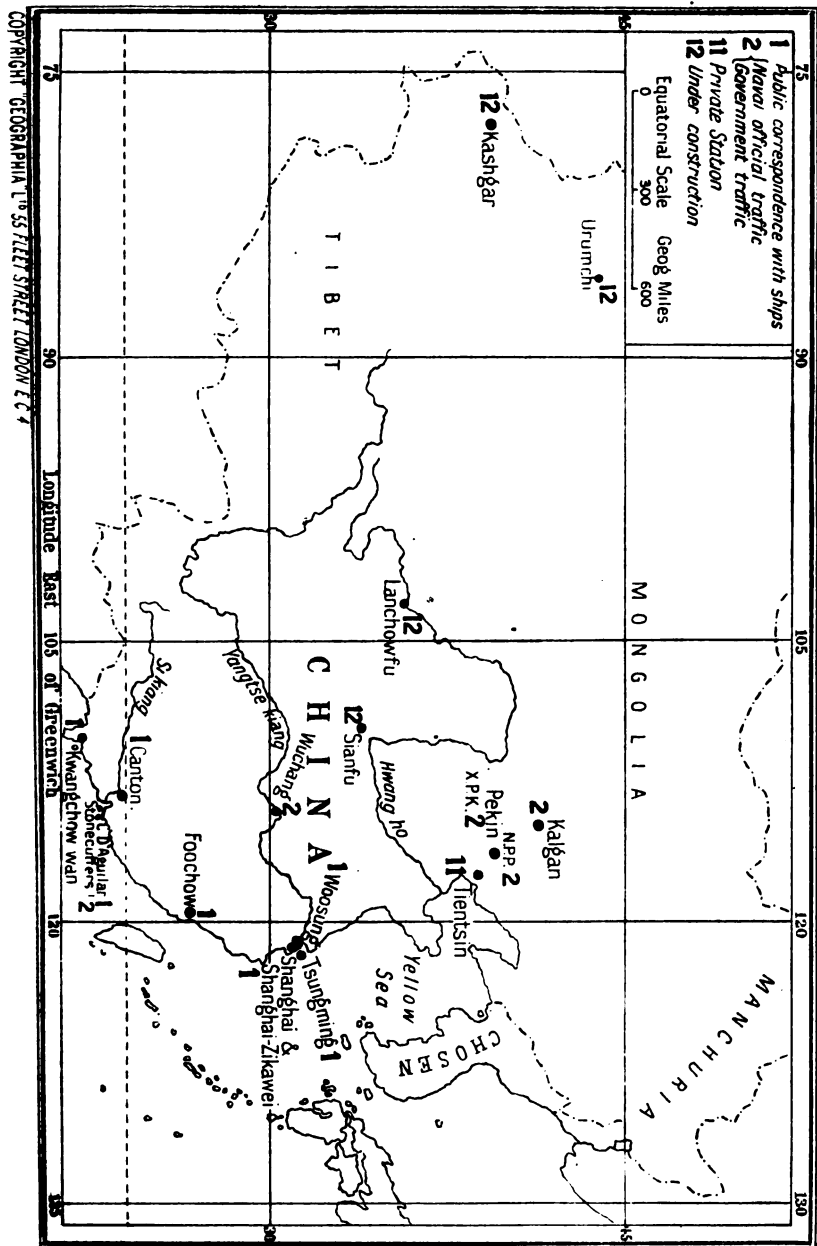

3. The Governor may whenever he shall deem it expedient to do so license the establishment of any wireless telegraph station or

the installation or working of any apparatus for wireless telegraphy in any place in the colony or on board any British ship registered in the colony.

(4). (i) No person shall establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place in the colony or on board any British ship registered in the colony except under and in accordance with a licence granted in that behalf by the Governor.

(ii) Every such licence shall be in such form and for such period as the Governor-in-Council may determine and shall contain such terms, conditions, and restrictions on and subject to which the licence is granted as the Governor shall consider desirable in the public interest.

5. (i) If any person establishes a wireless telegraph station without a licence in that behalf or installs or works any apparatus for wireless telegraphy without a licence in that behalf he shall be liable to a fine not exceeding one thousand dollars or to imprisonment for

a term not exceeding twelve months, and in either case be liable to forfeit any apparatus for wireless telegraphy installed or worked without a licence, but no proceedings shall be taken against any person under this Ordinance except with the previous sanction of the Attorney-General.

(ii) If a magistrate is satisfied by information on oath that there is reasonable ground for believing that a wireless telegraph station has been established without a licence in that behalf or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any ship within the jurisdiction without a licence in that behalf he may grant a search warrant to any police officer to enter and inspect the station, place, or ship, and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

6. (i) The Governor-in-Council may make regulations for all or any of the following matters:—

(a) For prescribing the form and manner in which applications for licences under this Ordinance are to be made;

(b) For prescribing the fees payable on the grant of any licence;

(c) For regulating the manner in which apparatus for wireless telegraphy on board a merchant ship, whether British or foreign, in the waters of the colony shall be worked so as to prevent interference with naval signalling or the working of any wireless telegraph station lawfully established, installed, or worked in the colony or the waters thereof, and so as not to interrupt or interfere with the transmission of any wireless messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea;

(d) For prohibiting, except with the special or general permission of the Colonial Secretary, the working or using of any apparatus for wireless telegraphy on board a merchant ship, whether British or foreign, whilst such ship is in any of the harbours of the colony;

(e) For prohibiting or regulating, in case at any time in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy on board merchant ships, whether British or foreign, in the waters of the colony, the use of wireless telegraphy on board such ships while in such waters by such further rules as the Governor may see fit to make from time to time and either in all cases or in such cases as may be deemed desirable.

(ii) Provided that no regulations made in respect of the matters described in paragraphs (c), (d), and (e) of this section shall apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

7. When an applicant for a licence proves to the satisfaction of the Governor that the sole object of obtaining the licence is to enable him to conduct experiments in wireless telegraphy a licence for that purpose shall be granted subject to such special terms, con-

ditions, and restrictions as the Governor may think proper, but shall not be subject to any rent or royalty.

8. (i) Every omission or neglect to comply with and every act done or attempted to be done contrary to the provisions of this Ordinance or of any regulation made thereunder or in breach of the conditions and restrictions subject to or upon which any licence has been issued shall be deemed to be an offence against this Ordinance, and for every such offence not otherwise specially provided for the offender shall, in addition to the forfeiture of any articles seized, be liable to a fine of five hundred dollars.

(ii) All convictions, forfeitures, and fines under this Ordinance or any regulations made thereunder may be had and recovered before a magistrate.

9. The Wireless Telegraphy Ordinance, 1903, the Wireless Telegraphy Ordinance, 1909, and the Wireless Telegraphy Amendment Ordinance, 1909, are hereby repealed.

B The following regulations were made by the Officer Administering the Government in Council under the provisions of Section 6 of the Wireless Telegraphy Ordinance No. 20 of 1913, on November 20th, 1913:—

1. Any person desirous of obtaining a licence for the establishment of a wireless telegraph station or the installation or working of any apparatus for wireless telegraphy in any place in the colony, or on board any British ship registered in the colony, must apply in writing to the Colonial Secretary. Such application must contain full particulars—

(a) of the place or ship in respect of which a licence is sought;

(b) of the nature of the apparatus which it is desired and proposed to instal and work; and

(c) of the purposes for which the installation is intended to be utilised.

2. The following shall be the fees payable on the grant of licences:—

(a) For a licence under Section 3 for a land station \$2.50

(b) For a licence under Section 3 for a ship station \$2.50

(c) For an experimental licence under Section 7 Nil

3. All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of the colony shall be worked in such a way as not to interfere with—

(a) Naval signalling; or

(b) The working of any wireless telegraph station lawfully established, installed, or worked in the colony or the territorial waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

4. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used whilst such ship is in any of the harbours of the colony except with the special or general permission in writing of the Colonial Secretary of the colony.

5. If at any time in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that his

Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships whilst in the territorial waters shall be subject to such further rules as may be made by the Governor from time to time, and such rules may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

6. These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

7. No proceedings shall be taken against any person under these Regulations except with the previous sanction of the Attorney-General.

SHIP LICENCE.

Dated the day of , 19 .

C THE WIRELESS TELEGRAPHY ORDINANCE, 1913. (HONG-KONG.)

His Excellency the Governor of the Colony of Hong-Kong

To.....
Licence to establish Wireless Telegraph Ship
Stations.

TO ALL TO WHOM THESE PRESENTS SHALL
COME I.....

Governor and Commander-in-Chief of the Colony of Hong-Kong and its Dependencies and Vice-Admiral of the same send greeting:

Whereas
(hereinafter called "the licensee") is desirous of establishing installing working and using on a ship or ships belonging to the licensee Wireless Telegraphy as defined in Section 2 of the Wireless Telegraphy Ordinance, 1913:

And whereas by reason of the provisions of the Wireless Telegraphy Ordinance, 1913, it is unlawful to establish any wireless telegraphy station or instal or work any apparatus for wireless telegraphy in any place in the colony or on board any British ship registered in the colony except under and in accordance with a licence granted in that behalf by the Governor:

And whereas at the request of the licensee I have agreed to grant to the licensee the licences powers and authorities hereinafter expressed and contained for the period upon the terms and subject to the stipulations and conditions hereinafter appearing:

Now I the above-named.....

Governor and Commander-in-Chief of the Colony of Hong-Kong and its Dependencies and Vice-Admiral of the same in exercise of all powers and authorities enabling me in this behalf do hereby grant to the licensee during the term or period commencing on the day of the date hereof and terminating on the day of , 19 , and thereafter so long as the Wireless Telegraphy Ordinance, 1913, shall continue in force unless and until these presents and the licence or permission hereby given shall be determined as hereinafter provided licence and permission—

(i) To establish, instal and work for the purposes hereinafter mentioned at the ship station or stations specified in the Schedule hereto apparatus for wireless telegraphy of the kind specified in the Schedule hereto (which apparatus is hereinafter referred to as "the licensed apparatus"):

Provided that—

(a) Each ship station shall be of such class mentioned in Article XIII of the Service Regulations annexed to the Radiotelegraphic Convention, 1912, as is specified in the said Schedule opposite to the name of such station;

(b) The apparatus installed at each ship station shall be of the character specified in the said schedule opposite to the name of such station;

(c) The sending apparatus used at each ship station shall be of such a character that the waves emitted are as pure and as little damped as possible and the receiving apparatus used at the said station or stations shall be of such a character as to afford the greatest possible protection from disturbance during the reception of signals;

(d) The apparatus shall include such emergency installation as may be required according to the class of the ship station under the provisions of Article XI of the Service Regulations annexed to the Radiotelegraphic Convention, 1912;

(e) The licensed apparatus shall be so constructed as to be capable of using wavelengths of 600 and 300 metres in length as measured by the standard of measurement in use by the Government of the Colony for the time being or as may be otherwise directed by the Governor and such other wavelengths not exceeding 600 metres in length as shall be authorised in writing from time to time by the Governor; Provided always that the wavelength of 600 metres shall normally be used for communication and further that the wavelength of 1,800 metres may be used in the exceptional case contemplated by Article XXXV (2) (a) of the Service Regulations annexed to the Radiotelegraphic Convention, 1912; Provided further that only the wavelength of 600 metres shall be used by the licensee during the period of any war in which the United Kingdom is engaged;

(f) The apparatus shall admit of the transmission and reception of messages at the rate of not less than 20 words a minute five letters being counted as one word.

(ii) To send and receive messages by means of the licensed apparatus between the said ship stations and also between the said ship stations and coast stations and other ship stations.

Provided that the licensee shall not except with the consent in writing of the Colonial Secretary of the Colony send or receive messages from and at the said ship stations when in any of the harbours of the colony; and

(iii) To receive money or other valuable consideration for or in respect of the use of the licensed apparatus or for or in respect of the transmission or receipt of messages by means of the said apparatus.

And I do hereby declare that the said licence and permission is granted on and subject to the following conditions and provisions:—

1. In these presents (and in the Schedule hereto) the following words and expressions shall have the several meanings hereinafter assigned to them unless there shall be something either in the subject or context repugnant to such construction (that is to say):—

The expression "wireless telegraphy" has the same meaning as in the Wireless Telegraphy Ordinance, 1913.

The term "telegraph" has the same meaning as in the Wireless Telegraphy Ordinance, 1913.

The expression "Naval signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and Naval Stations, or between a ship of His Majesty's Navy or a Naval Station and any other wireless telegraph station whether a coast station or a ship station.

The expression "the Admiralty" means the officer of His Majesty's Navy who is for the time being in Hong-Kong in charge of the China Squadron of His Majesty's Eastern Fleet.

The expressions "the International Telegraph Convention" and "the International Telegraph Regulations" mean respectively the International Convention of St. Petersburg, dated the 10th 22nd July, 1875, and the Service Regulations made thereunder and include respectively any modifications of the Convention or regulations made from time to time.

The expression "the Radiotelegraphic Convention, 1912," means the Convention signed at London on the 5th day of July, 1912, and the Service Regulations made thereunder and includes any modification of the Convention or Regulations made from time to time.

The expression "coast station" means a wireless telegraph station which has been established on land or on board a ship permanently moored, and which is open for the service of correspondence between the land and ships at sea.

The term "ship station" means a wireless telegraph station established on board a ship which is not permanently moored.

2. The licensed apparatus shall not be used by the licensee or by any other person either on behalf of or by permission of the licensee for the transmission or receipt of messages except messages authorised by this licence.

3. (1) The licensee shall not by the transmission of any message by means of the licensed apparatus or otherwise by the use of the licensed apparatus interfere with Naval signalling.

(2) If the Admiralty is of opinion that the working of the licensed apparatus at any ship station specified in the Schedule hereto is inconsistent with the free use of Naval signalling the licensee shall when required in writing by the Governor so to do close the said station.

(3) These provisions for the protection of Naval signalling shall be construed to be without prejudice to the generality of any other provisions of this licence.

4. For the purpose of this licence the licensee shall observe the International Telegraph Convention and the International Telegraph Regulations so far as the said Convention and Regulations are capable of being applied to wireless telegraphy in common with ordinary land and submarine telegraphy.

5. The licensee shall observe the provisions of any Regulations from time to time made under the provisions of the Wireless Telegraphy Ordinance, 1913, by the Governor-in-Council in relation to the conduct of wireless telegraph business so far as the same are applicable to the licensee.

6. The licensee shall observe the provisions of the Radiotelegraphic Convention, 1912.

7. The licensee shall comply with all such directions and observe all such rules as may be given or made by the Governor from time to time for the purpose of preventing interference with the working of any other wireless telegraph station and for enabling the messages exchanged

by means of the licensed apparatus to be distinguished from those emanating from any other wireless telegraph station.

8. The licensed apparatus shall not without the consent of the Governor be altered or modified in respect of any of the particulars mentioned in the Schedule hereto.

9. The licensee shall at all times indemnify the Governor against all actions claims and demands which may be brought or made by any corporation company or person in respect of any injury arising from any act licensed or permitted by these presents.

10. (1) Subject to the provisions of this licence the licensee shall transmit messages by means of the licensed apparatus on equal terms without favour or preference whether as regards rates of charge, order of transmission or otherwise. Provided always that signals of distress and messages in connection therewith shall receive priority over all other messages and that the order of transmission of such other messages shall be governed by the International Telegraph Regulations.

(2) In respect of messages transmitted on behalf of His Majesty's Government the licensee shall charge rates not in excess of half of the rates charged to the ordinary public.

11. The licensee shall so far as possible receive from ships and light stations all request for assistance and all signals of distress and shall answer such requests and signals and send them with the least possible delay to the proper authorities by means of the licensed apparatus or any other means in the power of the licensee.

12. (1) The licensed apparatus at each of the ship stations mentioned in the Schedule hereto shall be worked only by operators holding certificates issued by the Governor or the Postmaster-General of the United Kingdom or the Government of any self-governing Dominion and the licensee shall provide for the working of each station such operators as are required by the provisions of Article X of the Service Regulations annexed to the Radiotelegraphic Convention, 1912, according to the class of the ship station and shall observe the regulations as to the working of the ship station laid down according to its class by Article XIII of the said Regulations.

(2) A certificate shall not be recognised as authorising the holder to work a ship station under the terms of this licence unless it bears a statement that it is issued by the Governor or the Postmaster-General of the United Kingdom or the Government of any self-governing Dominion in accordance with the Radiotelegraphic Convention, 1912. Such certificates will be valid only during the operation of the said Convention. When issued by the Governor such certificates will be granted to persons of such technical proficiency and will be in such form and will be subject to such conditions as the Governor shall from time to time prescribe and they may be, by whomsoever issued, endorsed or withdrawn at the discretion of the Governor in case of misconduct or breach on the part of the holder of the regulations prescribed for the working of ship stations.

13. The licensee shall not divulge to any person (other than properly authorised officials of His Majesty's Government or a competent legal tribunal) or make any use whatever of any message coming to the knowledge of the licensee and not intended for receipt by means of the licensed apparatus. The licensee shall exhibit at each of the ship stations specified in the Schedule hereto a copy of Section 11 of the

Post Office (Protection) Act, 1884, and any contravention of that section by any person in the employment of the licensee shall be deemed to be a breach of the provisions of this licence entitling the Governor under clause 22 hereof to revoke and determine this licence.

14. The licensee shall keep full accounts records and registers of all messages transmitted by means of the licensed apparatus and in such registers each of such messages shall be accompanied by its identifying number and date and full particulars of its place of origin and of ultimate destination and such further particulars as the Governor shall from time to time reasonably require to be shown; messages on His Majesty's service being in such registers distinguished from other messages. The licensee shall preserve all used message forms written and printed and transcripts of messages and all other papers for a period of at least fifteen months counting from the month following that in which the radiotelegrams were handed in as prescribed by the Radiotelegraphic Convention, 1912, and such registers and message papers shall be open to the inspection of the Governor or his officers thereto authorised at the office of the licensee in Hong-Kong or at such other place as may be agreed between the hours of 10 a.m. and 5 p.m. on every day except Sunday or a general or public holiday.

15. The licensee shall render to the Governor such accounts as the Governor shall direct in respect of all charges, if any, due or payable under the Radiotelegraphic Convention, 1912, in respect of messages exchanged between the ship stations hereby licensed and coast stations and shall pay to the Colonial Treasurer at such times and in such manner as the Governor shall direct all sums which shall be due from the licensee under such accounts.

16. The Governor and any agent authorised in that behalf in writing by him may at all reasonable times enter upon all or any of the ship stations hereby licensed for the purpose of inspecting and may inspect any apparatus fixed or being in such stations respectively for the purpose of sending and receiving messages by wireless telegraphy and all other telegraphic instruments and apparatus fixed or being in such stations respectively and the working and user of such apparatus and telegraphic instrument respectively.

17. The licensee shall carry on every ship on which a ship station is established under this licence a print or copy of the licence certified under the hand of the Colonial Secretary of the colony of Hong-Kong or appropriate officer of the Postmaster General of the United Kingdom or of the Government of any self-governing Dominion to be a true copy and shall produce such print or copy for inspection if required to do so by the competent authorities of the countries where the ship calls. The licensee shall also carry on every such ship such documents as may be prescribed by the Governor for the purpose of enabling the licensee to communicate with coast stations and ship stations in accordance with the Radiotelegraphic Convention, 1912.

18. (1) The licensee shall pay to the Colonial Treasurer for and in respect of the licence hereby granted a royalty of \$2.50 per annum in respect of each ship station at which the licensed apparatus is installed.

(2) The said royalty shall be payable on the 1st of December in each year during which the licence remains valid.

19. Except with the consent in writing of the

Governor the licensee shall not assign under let or otherwise dispose of or admit any other person or body to participate in the benefit of the licences, powers or authorities hereby granted or any of such licences, powers or authorities.

20. (1) If and whenever an emergency shall have arisen in which it is expedient for the public service that His Majesty's Government shall have control over the transmission of messages by the licensed apparatus it shall be lawful for any Naval, Military, Customs or Police officer or any other person authorised by the Admiralty to take possession of the licensed apparatus or any part thereof in the name and on behalf of His Majesty and to be used for His Majesty's service and in that event any officer or person so authorised may enter upon any ship on which any such apparatus is installed and take possession of the said apparatus and use the same as aforesaid and subject to such use may use the same or allow it to be used for such ordinary services as may in his discretion seem fit to him or may prohibit and take steps to prevent the use of the same and issue directions which shall be obeyed by the licensee to prevent such use.

(2) Any such officer or person so authorised may in such event as aforesaid instead of taking possession of the licensed apparatus as aforesaid direct and authorise such persons as he may think fit to assume the control of the transmission of messages by the licensed apparatus either wholly or partly and in such manner as he may direct and such persons may enter upon any ship on which any apparatus is installed accordingly or the said officer or person so authorised may direct the licensee to submit to him or any person authorised by him all messages tendered for transmission or arriving by the licensed apparatus or any class or classes of such messages to stop or delay the transmission of any messages or deliver the same to him or his agent and generally to obey all such directions with reference to the transmission of messages as the said officer or person so authorised may prescribe and the licensee shall obey and conform to all such directions.

(3) The licensee shall be entitled to reasonable compensation for any damage to the licensed apparatus arising in consequence of the exercise of the powers conferred by this clause.

21. At any time after the _____ day of _____, 19____, the Governor may in his absolute discretion give notice in writing to determine these presents and the licence or permission hereby granted at the end of one calendar month from the date of such notice and at the expiration of that period the licence or permission hereby granted shall cease and determine accordingly but without prejudice to any remedy of the Governor under any condition or provision herein contained:

22. In any of the following cases (that is to say):—

(a) In case any sum of money which ought to be paid by the licensee to the Colonial Treasurer under or by virtue of these presents shall be in arrear and unpaid for one calendar month after the time at which the same ought to be paid under or by virtue of the provisions herein contained; or

(b) In case of any breach non-observance or non-performance by or on the part of the licensee of any of the provisions (other than a provision for the payment of money) or conditions herein contained;

then and in any such case the Governor may by notice in writing under his seal revoke and

determine these presents and the licences, powers and authorities hereinbefore granted and each and every of them as to all or any of the ship stations hereby licensed and thereupon these presents and the said licences, powers and authorities and each and every of them shall absolutely cease determine and become void as to all or any of the said ship stations (as the case may be) but without prejudice to any right of action or remedy which shall have accrued or shall thereafter accrue to the Governor under any condition or provision herein contained.

23. Nothing in these presents contained shall prejudice or affect the right of the Governor from time to time to establish extend maintain and work any system or systems of telegraphic communication (whether of a like nature to that hereby licensed or otherwise) in such manner as he shall in his discretion think fit neither shall anything herein contained prejudice or affect the right of the Governor from time to time to enter into agreements for or to grant licences relative to the working and user of telegraphs (whether of a like nature to those hereby licensed or otherwise) or the transmission of messages in any part of the colony by means of wireless telegraphy or by any other means with or to any person or persons whomsoever upon such terms as he shall in his discretion think fit.

And (save as in this licence expressly provided) nothing herein contained shall be deemed to authorise the licensee to exercise any of the powers or authorities conferred on or acquired by the Governor or any other person by or under any Imperial or local enactment or by or under any agreement relating to the transmission of messages by ordinary land and submarine telegraphy.

24. Any notice request or consent (whether expressed in writing or not) to be given by the Governor under these presents may be under the hand of the Colonial Secretary of the Colony of Hong-Kong and may be served by sending the same in a registered letter addressed to the licensee at the usual or last known place of residence or business of the licensee or if such notice request or consent relates to any particular ship station by delivery to the master of the ship upon which such station is installed and any notice to be given by the licensee under these presents may be served by sending the same in a registered letter addressed to the Colonial Secretary of the Colony of Hong-Kong.

PERMIT TO WORK AND USE APPARATUS FOR
WIRELESS TELEGRAPHY ON BOARD A
MERCHANT SHIP IN THE HARBOURS OF
THE COLONY.

The Wireless Telegraphy Ordinance, 1913.

Section 6 (1) (iv).

Permission is hereby given for the working and using of apparatus for Wireless Telegraphy on board the ships of the specified in the Schedule hereto whilst such ships are in any of the harbours of the Colony subject nevertheless to the following conditions, namely:—

CONDITIONS.

1. This Permit may be cancelled or suspended at any time by the Governor in his absolute discretion and without any reason being assigned therefor.

2. All such vessels shall obey promptly the "Naval Silence Sign" (— ● ● — ● ● ● ● ● —) and thereupon shall not work or use their wireless telegraphy apparatus until after the "Message Complete Sign" (● ● ● ● ● —) shall have been made.

3. The above company shall render every assistance possible as required by the Postmaster-General by furnishing information in respect of incoming mails carried by the ships of the said company.

4. All information received as to the weather being experienced by the vessels of the said company at sea must be forwarded to the Harbour Office for transmission to the Observa-

tory or sent to the Observatory direct whichever may be the more expeditious. The information should give the date and time of the observation, the position of the ship, the reading of the barometer, the direction and force of the wind, and the state of the sea and weather.

Dated at Hong-Kong, this
day of _____ 19__
Fee \$2 received.

Colonial Secretary.

SCHEDULE.

Colonial Secretary

(B) Weihaiwei.

WEIHAIWEI, a territory in the Shantung district of China, leased by that Republic to Great Britain in 1898, lies in latitude $37^{\circ} 30'$ and longitude $121^{\circ} 40'$ E. The total area comprises 285 square miles.

CONTROL.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Sir J. H. Stewart Lockhart, K.C.M.G.	Commissioner of Weihaiwei ..	Government House, Port Edward Weihaiwei.
Mr. A. P. Blunt	Senior District Officer ..	Government Offices, Port Edward Weihaiwei.

ADMINISTRATION.

Wireless Telegraphy in the territory is governed by :

A—Ordinance No. 5 of 1913.

A AN ORDINANCE TO PROVIDE FOR THE
REGULATION OF WIRELESS
TELEGRAPHY.

August 11th, 1913.

BE IT ENACTED by the Commissioner of Weihaiwei as follows :—

1. This Ordinance may be cited as "The Wireless Telegraphy Ordinance, 1913."
2. "Telegraph" means an electric, galvanic or magnetic telegraph, and includes appliances and apparatus for transmitting or making telegraphic, telephonic or other communications by means of electricity, galvanism, or magnetism. The expression "Wireless Telegraphy" means any system of communication by "telegraph" (as defined in this Ordinance) without the aid of any wire connecting the points from and at which the messages or other communications are sent and received : provided that nothing in this Ordinance shall prevent any person from making or using an electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

3. The Commissioner may whenever he shall deem it expedient to do so licence the establishment of any wireless telegraph station or the installation or working of any apparatus for wireless telegraphy in any place in the territory or on board any British ship registered in the territory.

4. (i) No person shall establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place in the territory or on board any British ship registered in the territory except under and in accordance with a licence granted in that behalf by the Commissioner.

(ii) Every such licence shall be in such form and for such period as the Commissioner may determine and shall contain such terms, conditions and restrictions on and subject to which the licence is granted as the Commissioner shall consider desirable in the public interest.

5. (i) If any person establishes a wireless telegraph station without a licence in that behalf or installs or works any apparatus for wireless telegraphy without a licence in that behalf he shall be liable to a fine not exceeding one thousand dollars or to imprisonment of either description for a term not exceeding twelve months and in either case be liable to forfeit any apparatus for wireless telegraphy installed or worked without a licence, but no proceedings shall be taken against any person under this Ordinance except with the previous sanction of the Commissioner.

(ii) If a magistrate is satisfied by information on oath that there is reasonable ground for believing that a wireless telegraph station has been established without a licence in that behalf or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any ship within the jurisdiction without a licence in that behalf he may grant a search warrant to any police officer to enter and inspect the station, place, or ship, and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

6. (1) The Commissioner may make regulations for all or any of the following matters :—

(i) For prescribing the form and manner in which applications for licences under this Ordinance are to be made ;

(ii) For prescribing the fees payable on the grant of any licence ;

(iii) For regulating the manner in which apparatus for wireless telegraphy on board a merchant ship whether British or foreign in the waters of the territory shall be worked so as to prevent interference with naval signalling or the working of any wireless telegraph station lawfully established, installed or worked in the territory or the waters thereof and

so as not to interrupt or interfere with the transmission of any wireless messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea;

(iv) For prohibiting except with the special or general permission of the Commissioner the working or using of any apparatus for wireless telegraphy on board a merchant ship whether British or foreign whilst such ship is in any of the harbours of the territory;

(v) For prohibiting or regulating in case at any time in the opinion of the Commissioner an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy on board merchant ships whether British or foreign in the waters of the territory the use of wireless telegraphy on board such ships while in such waters by such further rules as the Commissioner may see fit to make from time to time and either in all cases or in such cases as may be deemed desirable.

(2) Provided that no regulations made in respect of the matters described in paragraphs (iii), (iv) and (v) of this section

shall apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

7. When an applicant for a licence proves to the satisfaction of the Commissioner that the sole object of obtaining the licence is to enable him to conduct experiments in wireless telegraphy a licence for that purpose shall be granted subject to such special terms, conditions and restrictions as the Commissioner may think proper, but shall not be subject to any rent or royalty.

8. (i) Every omission or neglect to comply with and every act done or attempted to be done contrary to the provisions of this Ordinance or of any regulations made thereunder or in breach of the conditions and restrictions subject to or upon which any licence has been issued shall be deemed to be an offence against this Ordinance, and for every such offence not otherwise specially provided for the offender shall in addition to the forfeiture of any articles seized be liable to a fine of five hundred dollars.

(ii) All convictions, forfeitures and fines under this Ordinance or any regulations made thereunder may be had and recovered before a magistrate.

9. Ordinance No. 1 of 1904 to regulate the establishment of wireless electric telegraphs is hereby repealed.

(2) CHINESE REPUBLIC.

THE Republic of China comprises China Proper (eighteen provinces), Manchuria, Mongolia, Sinkiang, and Tibet. It lies between $18^{\circ} 13'$ and $56^{\circ} 40'$ N. latitude, and between $71^{\circ} 51'$ and $133^{\circ} 52'$ E. longitude. The total area of the eighteen provinces and four dependent territories is estimated at 4,277,170 square miles.

The Republic in its present form was established on October 10th, 1911. The constitution, drafted by the first Parliament, that met on April 8th, 1913, laid down the basis of government under which this great Republic is now governed. The executive power is vested in a President; whilst the legislative authority is exercised by a National Congress, comprising a Senate and a House of Commons.

CONTROL.

Radiotelegraphy in China is owned and controlled by the Government, and its administration is regulated by the Department of Telegraphs, Ministry of Communications. The Ministry of War and the Ministry of Marine control the use of Radiotelegraphy in the Army and the Navy respectively.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Yeh Kun Cho	Minister of Communications	Peking, Chiaotungpu
Tsiang Tsen Yi	Director General (and Chief of the Department) of Telegraphs, Commissioner of Codification of Telegraphy and Telephony, Ministry of Communications	Peking, Chiaotungpu
Lin Tze Sue	Electrical Engineer, Chief of the Traffic Sub-Department, Department of Telegraphs	Peking, Chiaotungpu
Mr. A. H. Eriksen	Adviser and Foreign Chief Superintendent	Peking, Chiaotungpu
Mr. A. Jørgensen	Wireless Engineer and Instructor in Radiotelegraphy at the College of Post and Telegraphy	Peking, Chiaotungpu
Mr. S. T. Dockray	Wireless Engineer	Peking, Chiaotungpu
Admiral Sah Cheng Ping ..	Minister of Navy	Peking, Naval Board
Sü Chen Peng	Vice-Minister of Navy	Peking, Naval Board
Chen En Tao	Chief of the Military Department, Naval Board	Peking, Naval Board
General Chin Yuen Peng ..	Minister of War	Peking, Board of War
Loo Kai Pun	Vice-Minister of War	Peking, Board of War

ORGANISATION.

The coast and inland stations administered by the Ministry of Communications are ten in number, including those of Woosung, Canton, Foochow, Shanghai, Tsungming, Wuchang, Kalgan, and Peking, of which the last five are coast stations open for public service, while the remaining three are official stations. Three new stations of the Marconi type (25 kw.) are being erected at Kashgar, Tihwafu (Urumtsi), and Urga. One 50 kw. station and five 5 kw. stations will be erected in Yunnan Province. These stations will be of the Poulsen type.

It has been proposed to erect several small stations of from 1½ to 5 kw. in Outer Mongolia and at some important points in Chihli Province.

The Naval Board has purchased a very large station of 500 kw. from a Japanese factory. The erection of this station was started in 1920.

A *Radio Training Station* was opened in Peking in 1913. It is controlled by the Ministry of Communications.

ADMINISTRATION.

At present radiotelegraphy in China awaits development and the laws and regulations affecting the subject consist, therefore, of those formulated to govern the working of the ordinary wired telegraph, and telephone, applied, as far as they are applicable, to radiotelegraphy. For this reason we present here a translation of the Chinese general regulations affecting all electrical means of communication, with a few comments emphasising the points which appear to affect wireless telegraphy, and also form of licence for pilot boats.

A—Instructional Order No. 20.

B—Form of Licence for Pilot Boats.

INSTRUCTIONAL ORDER No. 20.

A Dated April 18th, in the fourth year of the Republic of China—i.e., 1915.
REGULATIONS AFFECTING ELECTRICAL MEANS OF COMMUNICATION.

ART. 1.—All telegraphs and telephones, whether wired or wireless, shall be included in the term "Electrical means of Communication."

ART. 2.—All electrical means of communication shall be owned and controlled by the State.

ART. 3.—The following electrical means of communication may be set up by private individuals or corporations after the sanction of the Government has been obtained:

(a) Those established for the exclusive use of railways, mines, or other specific and commercial enterprises.

(b) Those which are set up by individuals or corporations or official departments on their premises for the purpose of establishing connection with a public telegraph office for the convenience of the transaction of the business carried on by the said individuals or corporations.

(c) Those which are used by individuals, corporations, or official departments for intercommunication between various parts of the building in which they are located.

(d) Those which are used by ships *in transitu*.

(e) Those which are set up for the purpose of experiment or research.

(f) Telephones whose calling powers are to be confined within a certain definite area. These must not, however, be erected in any area which is at present furnished with telephonic communication.

[This clause appears to be one intended to apply to future telephone installations and not to any which may be at present

erected. Of the above items it will be noted only (d) and (e) can apply to wireless telegraphy.]

ART. 4.—The Government, in case of necessity, may, in accordance with the provision of Laws and Edicts, seize all private electrical means of communication and convert them to public or military use. When, under the provision of this regulation, the Government so seize and make use of private owned electrical means of communication, it may appoint officials to take charge of and work them.

ART. 5.—When the Government consider it necessary in the interests and for the maintenance of public safety, they can restrict, suspend or cancel any use of electrical means of communication within certain prescribed areas.

ART. 6.—The Superintendent officials at telegraph offices controlled by the Government may suspend the transmission of any message or refuse altogether to accept it, when they consider its contents to be opposed to public safety.

ART. 7.—When special circumstances or *force majeure* cause telegrams to be delayed in transmission or prevent their transmission, the senders cannot claim compensation for damage arising from such delay or hindrance.

ART. 8.—Correspondents are themselves responsible for the contents of their messages.

ART. 9.—With regard to the transmission of telegrams or telephone messages no exemption with regard to liability or responsibility can be entertained on the ground of mental deficiency on the part of the sender.

ART. 10.—Telegrams received at public telegraph offices—other than those specified by Government orders—will be delivered in accordance with the addresses given by the

sender. If, owing to the fact that the address given is incorrect or insufficient, the telegram cannot be delivered, this fact will be publicly announced, and if no application for the message is received within forty-two days from the date of the public announcement, the said message will be destroyed.

ART. 11.—When messages are received in secret code, or in obscure or metaphorical language, the telegraph officials may, if they think fit, call upon the sender to translate the code or elucidate the meaning of the message. If the sender refuses to decode or explain, or, in complying with this request, fail to put the telegraph official truthfully in possession of the real meaning of the message, the official may stop the transmission of the said message.

ART. 12.—Officials, workmen, or messengers engaged in the performance of their duty in connection with telegraphs or telephones are not to be interfered with or stopped by the authorities of the customs or by those operating the canal locks.

ART. 13.—Officials, workmen, or messengers when proceeding in discharge of their official functions are to be allowed unhindered transit over building land and fields (with the exception of those enclosed by walls and gateways) whenever there may be any hindrance to their transit through the regular streets or paths. But if the passage of such officials, workmen, or messengers causes damage to be done to buildings, or to crops in cultivated property, the Government will pay adequate compensation on the application of the owner and on his proof of such damage.

ART. 14.—When officials, workmen or messengers engaged in performing their official functions ask for help or assistance in order to overcome any special hindrance in transit, or when they ask for assistance in climbing mountains or crossing rivers, the persons to whom such request is made may not refuse such help or assistance without assigning adequate reason for so doing. But in the event of such assistance being rendered, the Government will give the person rendering it fit and proper remuneration for such aid and assistance, on his application for such remuneration.

ART. 15.—Telegraph or telephone wires may be set up at convenient places, no matter through what property it is necessary for them to pass; but if their erection involves an encroachment on the rights of others, whether private individuals or corporations, the Government will on application, allot adequate compensation for such encroachment.

ART. 16.—Charges for telegrams and telephone messages shall be collected in cash according to fixed rates.

ART. 17.—Materials used for the purposes of Telegraph and Telephone Services shall be exempted from tax, but not from Customs Duties.

ART. 18.—With reference to the compensation for damage caused, and the right of application for remuneration referred to in the above clauses in connection with the carrying out of Electrical Means of Communication, the period within which such right to compensation or remuneration may be dealt with, and the manner in which it may be so dealt with and adjudicated, shall be regulated by separate "Instructional Orders."

ART. 19.—Any who may offend against Articles 2, 3, 4, 12, 13, and 14, shall be liable

to a fine of from 5 to 200 dollars. Those who offend against Articles 2 and 3 shall, in addition to fines, be liable to confiscation of poles, wires, machines or other apparatus.

ART. 20.—The conditions laid down in Articles 12-19 shall not be applicable to private electrical means of communication, but the specially authorised telephones erected under section (f) or Article 3 may adopt the regulation comprised in Article 16.

ART. 21.—All Laws, Orders or Treaties affecting telegrams between China and Foreign Countries shall have their respective provisions observed and the provisions of this Instructional Order shall not be held to modify or abrogate them.

ART. 22.—These regulations shall come into force immediately on the date of their promulgation.

FORM OF LICENCE FOR PILOT BOATS IN CHINESE WATERS.

B The (hereinafter called "the licensee") is hereby granted licence to operate within the pilot district of the wireless telegraph system installed on board the Pilot Boat , as specified in the schedule hereto for the period commencing the and terminating on the on payment of the sum of ten Mexican dollars, being the licence fee for the privilege above named.

This licence is subject to the following terms, conditions and restrictions:—

1. The licensee shall not establish, instal or operate any apparatus for wireless telegraphy, except the apparatus hereinafter called the "licensed apparatus" specified in the said schedule hereto.

2. The range of signalling shall at no time exceed one hundred nautical miles.

3. The licensee shall use the licensed apparatus solely for the purpose of exchanging with ships at sea messages relating to the safe and prompt working of the licensee's pilot service, and for making or answering calls of distress. However messages originating or terminating on board the aforesaid pilot boat may be exchanged with the Chinese wireless coast stations at on payment of the ordinary charges accruing to the Chinese Telegraph Administration for wireless messages exchanged by means of the said stations. Payment of such charges shall be made in such manner as the Ministry of Communications shall direct.

4. The licensed apparatus shall not be used by the licensee or by any other person either on behalf or by permission of the licensee for the transmission or receipt of messages, except messages authorised under paragraph three.

5. All telegrams exchanged by means of the licensed apparatus shall be copied in full in registers to be kept by the licensee for that purpose. Such registers as well as the licensed apparatus shall be open to inspection by thereto authorised officers of the Chinese Telegraph Administration.

6. The licensee shall operate the licensed apparatus in accordance with any regulations which may be issued from time to time by the Ministry of Communications.

7. The licensee shall observe the provisions of the International Radiotelegraphic Service Regulations of 1912, as regards transmission

of messages (Article XX—Article XXXIV) in so far as they are not inconsistent with the rights and privileges granted by these presents.

8. The licensee shall so operate the licensed apparatus so as not to interfere with:—

(a) Naval signalling by means of any system of wireless telegraphy between two or more ships of the Chinese Navy or between a ship of the Chinese Navy and any other wireless station, whether on shore or on any ship;

(b) the working of any wireless telegraph station lawfully established, installed, or worked in China or the territorial waters thereof, and in particular the licensed apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations on ships at sea.

9. The licensee shall not work or use the licensed apparatus whilst the boat is in the harbour of _____, except with the special permission in writing of the Ministry of Communications.

10. Regulations 8 and 9 shall, however, not apply to the use of the licensed apparatus for the purpose of making or answering signals of distress.

11. The licensed apparatus shall not, without the consent in writing of the Ministry of Communications, be altered or modified in respect of any particulars mentioned in the schedule hereto.

12. The licensee, in case the aforesaid pilot boat be sold or dispensed with and remain in Chinese waters, shall remove the wireless apparatus before transfer of ownership takes place.

13. The licensee shall operate the licensed apparatus only during the hours indicated on the schedule hereto, except for the purpose of making or answering signals of distress.

14. The licensee shall at all times indemnify the Ministry of Communications against all actions, claims and demands which may be

brought or made by any corporation, company or person in respect of any injury arising from any act licensed or permitted by these presents.

15. If, and whenever, in the opinion of the Ministry of Communications, the interests of the Government of China demand that the use of the licensed apparatus shall be prohibited or shall be under full control of the said Government, the licensee shall conform to all directions prescribed by the Ministry of Communications.

16. In case of any breach, non-observance or non-performance by or on the part of the licensee of any of the terms or conditions herein contained and on the part of the licensee to be observed and performed, the licensee shall be liable for every such breach, non-observance or non-performance to a penalty of one hundred Mexican dollars, and in every such case the Ministry of Communications may, by writing, revoke and determine these presents, and the licence herein granted shall become null and void.

17. This licence or a confirmed duplicate of it shall always be carried on board the aforesaid Pilot Boat.

The Schedule of ship Stations before referred to:—

1. Name of ship on which station established.

2. Nationality.

3. Call signal.

4. Normal range of signalling in nautical miles:—

(a) by day;

(b) by night.

5. Character apparatus:—

(a) Radiotelegraph system with the characteristics of the system of emission;

(b) Wavelengths in metres (the normal wavelength to be underlined).

6. Hours of service.

7. Power:—

(a) Source and maximum output;

(b) Maximum antenna energy.

8. Alternator:—

Number of cycles per second.

COCHIN-CHINA

(See FRANCE.)

COCOS-KEELING ISLANDS

(See STRAITS SETTLEMENTS.)

COLOMBIA

THE Republic of Colombia lies between latitude $2^{\circ} 40'$ S. and $12^{\circ} 25'$ N., its longitude extending from $68^{\circ} 0'$ to $79^{\circ} 0'$ W. Its superficial area is estimated at 461,606 square miles, its population at $5\frac{1}{2}$ millions. The country is intersected by three great ranges of the Andes Mountains known as the Western, Central, and Eastern Cordilleras, the latter of which is the more important as it affords a series of vast table-lands, cool and healthy. Railroads are in their infancy and the telegraphic wiring is estimated at a little under 9,000 miles.

CONTROL.

Control of radiotelegraphy in Colombia is vested in the Minister of the Interior, who is ultimately responsible, whilst the executive authority is wielded by the Minister of Posts and Telegraphs.

ORGANISATION.

The station of Santa Marta was the first wireless installation in the Republic, that of Cartagena being next in order, the most recent being the Government station of San Andres y Providencia. There are six new stations under construction.

ADMINISTRATION.

No special regulations have been issued through the medium of wireless legislation, but in accordance with the current Colombian laws wireless as well as wired telegraphy constitutes a public Service under State control in every way. The Government does, however, in certain special cases grant permission for contracts, under which radiotelegraphic service may be instituted by private companies. As instances of such concessions we may cite the stations of Santa Marta and Cartagena, installed by the "United Fruit Company" and the "Gesellschaft für Drahtlose Telegraphie m.b.H." respectively. The Government only owns and works in the territory of the Republic a single station, located in the Archipelago of San Andres y Providencia, and erected by the last-named company.

COMMONWEALTH OF AUSTRALIA

(See AUSTRALIA.)

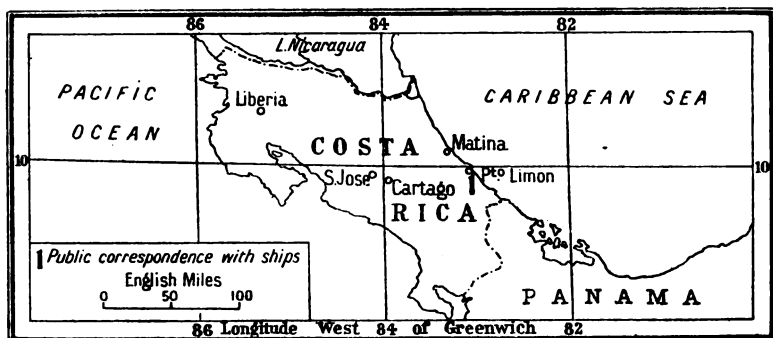

COMORO ISLANDS

(See map on p. 377.)

COOK ISLANDS

(See map on p. 356.)

COSTA RICA

COPYRIGHT: "GEOGRAPHIA" L^{td} 55 FLEET STREET LONDON E.C. 4.

THE smallest of the Central American Republics, its territory lies between the independent Republic of Panama on the east and that of Nicaragua on the north. In area it covers about 23,000 square miles, and possesses approximately 430,000 inhabitants. According to the latest statistics, there is but one wireless station, situated at Limon, the Atlantic port of the capital, San José. It conducts public correspondence with ships.

CRETE

(See map on p. 251.)

CRETE, or Candia, by which name this interesting and mountainous land is sometimes known, forms the largest of the islands of the Greek archipelago and constitutes part of the island barrier separating the Ægean Sea from the main body of the Mediterranean. Its length is about 140 miles and its breadth averages less than 30.

During the war a wireless apparatus existed in this island for the use of the British Naval and Royal Air Force base at Suda Bay, but this has since been dismantled.

Before the war a site was selected near Mournees in the vicinity of Canea, and the construction of a wireless station was begun under the superintendence of Greek officials sent for the purpose from Athens, but the work was suspended on the outbreak of hostilities. Some time ago eight or nine engineers connected with the Marconi Company, and employed on work at Athens and Smyrna went over and inspected the partial construction. They returned to make their report and it is expected that the station will be completed in the near future.

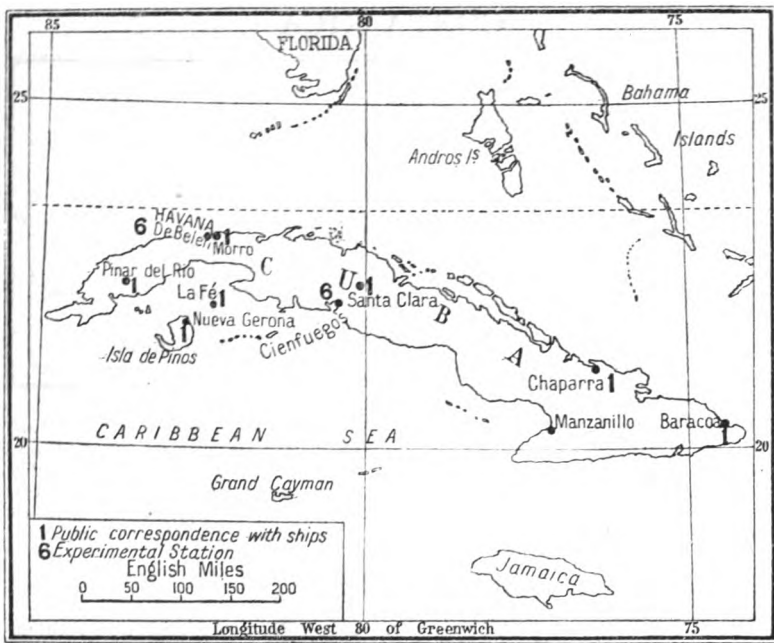

CUBA

THE largest of the islands in the Caribbean Sea, the territory of Cuba occupies an area of about 44,000 square miles—*i.e.*, roughly one-third the size of the United Kingdom. The capital city is Havana, with a population of about 360,000. The country was in Spanish occupation from its discovery until the signature of the Paris Treaty in December, 1898, when it assumed independence. The language of the country, however, remains Spanish.

There are some ten wireless stations in the Republic, open to public correspondence with ships, and their position is shown on the map on page 210.

CONTROL.

The radiotelegraph service in Cuba is controlled by the Government and is carried on under the direction of the Department of Communications.

COPYRIGHT, "GEOGRAPHIA" L^{td} 55 FLEET STREET LONDON E.C. 4

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Sr. Mignel Paniagua	Director-General of the Department of Communications	Havana
Sr. Carlos Barnet	Sub-Director of the Department of Communications	Havana
Sr. Pedro Pablo Torres	Chief of the Division of Technical Inspection	Havana

ORGANISATION.

The radiotelegraph service of Cuba was inaugurated in the year 1906 by the establishment of two small stations installed at the landing places of Mariel and Nueva Gerona, on the Island of Pinos, the said stations being assigned to the handling of internal correspondence.

In 1909 the station of Mariel was abolished and the service extended by the installation of four new stations distributed amongst the ports of Havana, Santiago de Cuba, and the towns of Santa Clara and Camaguey. The four stations were instituted for the rendering of a public service, in general, and they filled a great want in view of the large number of vessels navigating the territorial waters of the Island.

Following the dictates of experience, the stations of Santiago de Cuba, and Camaguey were removed to the coast towns of Chaparra and Baracoa, and a new station was established in the town of Pinar del Rio.

At present seven coast stations exist, all of which are open for public correspondence with ships.

As experimental stations worthy of mention may be cited that of the Colegio Francés (French College) of Cienfuegos, and that of de Belén, of Havana, the latter being assigned to the reception of meteorological signals.

In addition to the coast stations shown in the foregoing statement, the Cuban Government has under its jurisdiction over twenty ship stations installed on vessels of the Navy and merchant vessels belonging to private companies.

ADMINISTRATION.

The Cuban Administration adhered to the Radiotelegraph Convention of London in January, 1918; but owing to reasons that are irrelevant here, this adherence was not formalised until February, 1920. For this reason the administrative side of the radiotelegraph service is actually in process of organisation and the laws and regulations by which it will be governed are being studied. It is hoped to include their text in our next edition.

CURAÇAO

(See NETHERLANDS.)

CYPRUS

THE declaration of war upon Turkey by the British Government on November 5th, 1914, released this island from allegiance to the Ottoman Empire, and it was thereupon annexed by Great Britain. Occupying a strong strategical position in the Levant, it proved of immense value to the Allies during the late world conflict. At its shortest distance (to Asia Minor) it lies 35 miles from the mainland, whilst about 50 miles separate it from the nearest point on the Syrian coast. The island constituted the base for several of the Egyptian campaigns, as its climate forms a pleasant and refreshing contrast to the tropical heat of the North African deserts. In area it covers 3,584 square miles. The government of the island is administered by a High Commissioner (appointed by Great Britain) with the advice and consent of the Legislative Council. At present there is one wireless station in the island, situated at Famagusta.

ADMINISTRATION.

The following Act provides for the regulation of wireless telegraphy in Cyprus:—

A—Wireless Telegraphy Law, 1913.

A Law enacted by His Excellency the Officer Administering the Government of the Island of Cyprus, with the advice and consent of the Legislative Council thereof, to provide for the Regulation of Wireless Telegraphy.

A Be it enacted by His Excellency the Officer Administering the Government of the Island of Cyprus, with the

advice and consent of the Legislative Council thereof, as follows:—

1. This Law may be cited as the Wireless Telegraphy Law, 1913.

2. In this Law:—

"Wireless telegraphy" means any system of transmitting messages or other communica-

tions by means of electric galvanic or magnetic signals without the aid of any wire connecting the points from and at which the messages or other communications are sent and received, and includes any apparatus for transmitting or receiving such messages or other communications.

Provided that nothing in this Law shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

3. The High Commissioner in Council may whenever he shall deem it expedient to do so license the establishment of any wireless telegraph station or the installation or working of any apparatus for wireless telegraphy in any place in Cyprus or on board any ship registered in Cyprus.

4. (1) No person shall establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place in Cyprus or on board any ship registered in Cyprus except under and in accordance with a licence granted in that behalf by the High Commissioner.

(2) Every such licence shall be in such form and for such period as the High Commissioner in Council may determine and shall contain such terms conditions and restrictions on and subject to which the licence is granted as the High Commissioner in Council shall consider desirable in the public interest.

5. (1) If any person establishes a wireless telegraph station without a licence in that behalf or installs or works any apparatus for wireless telegraphy without a licence in that behalf he shall be liable to a fine not exceeding one hundred pounds or to imprisonment with or without hard labour for a term not exceeding twelve months and in either case be liable to forfeit any apparatus for wireless telegraphy installed or worked without a licence but no proceedings shall be taken against any person under this Law except with the previous sanction of the King's Advocate.

(2) If a judge of a District Court or of the Supreme Court is satisfied by information on oath that there is reasonable ground for believing that a wireless telegraph station has been established without a licence in that behalf or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any ship within the jurisdiction without a licence in that behalf he may grant a search warrant authorising the person to whom it is addressed to enter and inspect the station place or ship and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

6. (1) The High Commissioner in Council may make regulations for all or any of the following matters:—

(a) for prescribing the form and manner in which applications for licences under this Law are to be made;

(b) for prescribing the fees payable on the grant of any licence;

(c) for regulating the manner in which apparatus for wireless telegraphy on board a merchant ship of any nationality in the waters of Cyprus shall be worked so as to prevent interference with naval signalling or the working of any wireless telegraph station lawfully established installed or worked in Cyprus or the waters thereof and so as not to interrupt or interfere with the transmission of any wireless messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea;

(d) for prohibiting except with the special or general permission of the Island Postmaster the working or using of any apparatus for wireless telegraphy on board a merchant ship of any nationality whilst such ship is in any of the harbours of Cyprus;

(e) for prohibiting or regulating in case at any time in the opinion of the High Commissioner an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy on board merchant ships of any nationality in the waters of Cyprus the use of wireless telegraphy on board such ships while in such waters by such further rules as the High Commissioner may see fit to make from time to time and either in all cases or in such cases as may be deemed desirable.

(2) Provided that no regulations made in respect of the matters described in paragraphs (c), (d) and (e) of this section shall apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

7. When an applicant for a licence proves to the satisfaction of the High Commissioner in Council that the sole object of obtaining the licence is to enable him to conduct experiments in wireless telegraphy a licence for that purpose shall be granted subject to such special terms conditions and restrictions as the High Commissioner in Council may think proper but shall not be subject to any rent or royalty.

8. (1) Every omission or neglect to comply with and every act done or attempted to be done contrary to the provisions of this Law or of any Regulations made thereunder or in breach of the conditions and restrictions subject to or upon which any licence has been issued shall be deemed to be an offence against this Law and for every such offence not otherwise specially provided for the offender shall in addition to the forfeiture of any articles seized be liable to a fine not exceeding fifty pounds.

(2) All convictions forfeitures and fines under this Law or any Regulations made thereunder may be had and recovered before a District Court.

9. This Law shall come into operation on the 1st day of July, 1913.

Passed in Council the twenty-third day of May, in the year of Our Lord one thousand nine hundred and thirteen.

CZECHO-SLOVAKIA

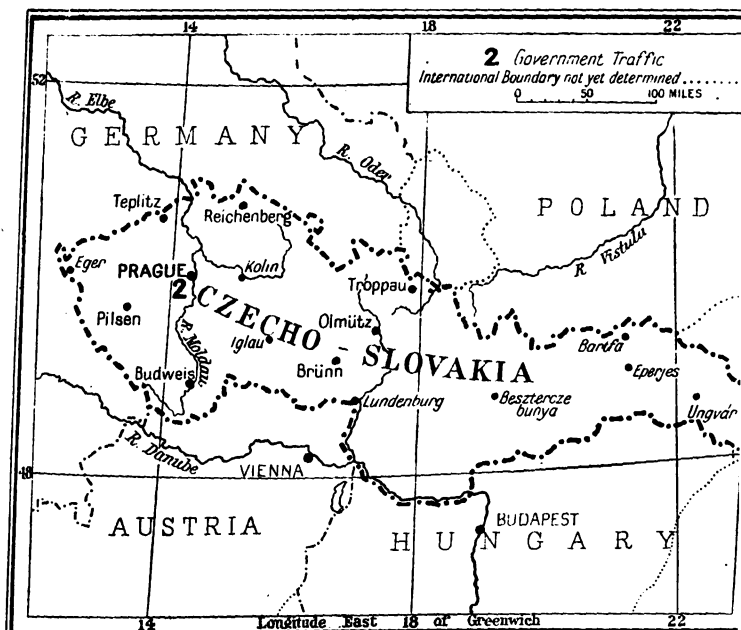

THE Czechs and the Slovaks were fortunate in securing their independence from Austria-Hungary under the terms of the European Peace Treaty. They have in the past been a much oppressed people, and their release from subservience to their former masters must form a source of intense gratification to them and their friends.

Laws and Regulations—Denmark

Conditions have not yet been sufficiently re-established in this territory to permit of our obtaining any particulars in regard to the organisation and administration of radiotelegraphy in that country, but it is hoped to include them in our next year's edition. The annexed map will show the definition of the country's boundaries, and the location of such wireless stations as are known to exist.

DEMERARA

(See BRITISH GUIANA.)

DENMARK

(See map on p. 350.)

THE area of the Kingdom of Denmark, including the territory added as a result of the recent plebiscite, totals 17,082 square miles. The country is ruled under a Constitutional Monarchy, the Crown of Denmark having been elective from the earliest times.

The territory ruled by King Christian X includes the peninsula of Jutland and several islands in the Baltic Sea, the most important of which are Sealand and Funen; furthermore the Farøe Islands (north of the Shetlands) and

Greenland. The Government is what is called Parliamentary Government, the executive power being vested in the Sovereign (acting through his Ministers), assisted by the Cabinet consisting of ten Secretaries of State and one Minister without portfolio, whose power rests upon the possession of a majority in the Lower House (Folketinget). The Constitution rests on the fundamental law of June 5th, 1849. This fundamental law has, however, been revised by Parliament, was ratified by the King on June 5th, 1915, and became effective on May 6th, 1918.

CONTROL.

Wireless Telegraphy is naturally of considerable importance to a maritime nation like that of the Danes, whose fatherland is at no point any great distance from the sea. It is a Government monopoly, and the administration is supervised by the Minister of Public Works.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
Mr. M. Siebsager	Minister of Ways and Communications.	Copenhagen V., Vesterbro-gade 198.
Mr. N. Meyer	Director of Telegraphs	Copenhagen B., Vesterbro-gade 40.42.
Mr. W. Thomsen	Engineer in Chief of the Telegraph Department.	Copenhagen B., Vesterbro-gade 40.
Mr. W. Bjarnov	Chief Engineer, Inspector of Wireless Installations and Instruction.	Copenhagen B., Vesterbro-gade 42.
Mr. H. Schledermann ..	Electrical Engineer in Chief, Royal Danish Navy, Inspector of Wireless Installations and Instruction.	Taffelbays Alle 11, Hellerup.

ORGANISATION.

Originally radiotelegraphy was adopted in Denmark by the Lighting Department (1901) and by the Royal Navy (1902), but later on the commercial use of radiotelegraphy was organised under the supervision of the Telegraph Department and the State Railway Department (both acting under the jurisdiction of the Department of Public Works); the Naval Department and the Lighting Department (both under the Admiralty), and the War Office. These various departments exercise jurisdiction independently over their own radiotelegraphic section.

The first stations erected were those at Blaavandshuk (lighthouse) and on board the Horns Rev (lightship), both of them dating from 1901. The latest available statistics enumerate:—

LAND STATIONS.

- (a) Eight directly controlled by Government (two of them situated in the Faroe Islands).
- (b) One experimental station (Lyngby Radio), belonging to the Telegraph Department (not included under (a)).
- (c) Two instructional stations (Svendborg Radio), with corresponding station Jylland (frigate).

SHIP STATIONS.

- (a) One hundred and twenty-eight with lower power.
- (b) Seventy-three Government vessels.
- (c) Fifty-five private vessels.

No forms of licence for radiotelegraphic working have been issued. The regulations for the erection and operation of private wireless stations are under revision, but it is not yet possible to give details. Laws regarding wireless in its application to aviation are also projected, but so far have not eventuated. The Danish Government contemplates the purchase of a radiotelegraph station for the reception of time and meteorological signals, and of a high power station for transatlantic service.

ADMINISTRATION.

The first Act to regulate radiotelegraphy in Denmark was passed in 1907 (Act No. 99 of April 19th). New regulations became effective on July 1st, 1913. Both are reprinted below.

Special regulations for experimental stations, instructional stations, etc., became effective in August, 1914, and are given *in extenso* below.

A—Act 99 of 1907.

B—Rules dated July, 1913.

C—Regulations for Special Stations.

A The regulations affecting Wireless Telegraphy in Denmark are based upon:

ACT No. 99 OF APRIL 19TH, 1907.

1. The Government shall have the sole right to erect and operate wireless telegraphs (radiotelegraphs) within the Danish boundaries and maritime territory.

2. Telegraph stations on board ships under foreign flag must only be utilised on Danish maritime territory when following the regulations to be drawn up in this respect by the Minister for Public Works. The Minister may prohibit every kind of telegraphic communication from such stations and take the necessary measures to carry through such prohibition, when in his opinion circumstances require it.

3. On board ships under Danish flag, not owned by the Government, telegraphic stations must only be fitted and operated both on and outside Danish maritime territory according to licence previously obtained from the Minister of Public Works. In case the conditions concerning the fitting and working of the station stipulated in the licence are not maintained, the Minister may cancel the licence.

In case it is desired that the working of stations being in operation at the time when the Act comes into force, should be continued, an application to that effect must be filed with the Minister for Public Works not later than four weeks after the Act has come into force, the Minister having then to decide whether and on what conditions the operation of the station may be continued.

4. Scientific and technical trials with wireless telegraphy must be made by no others than the State Authorities unless permission to that effect has been previously obtained from the Minister for Public Works.

5. The regulations stipulated in Act No. 84 of May 11th, 1897, Art. 17, concerning the duty as to secrecy incumbent on the officers and functionaries of the Telegraph Department and concerning the punishment they may be subjected to in the case of a breach of the aforesaid duty, should also be applicable to wireless operators. The regulations stipulate in Art. 18 of the same Act concerning corresponding regulations for employers of private companies may also be made applicable towards operators on board ships.

6. Any contravention of the regulations given in Articles 1—4 shall be punished, provided that the circumstances concerned according to their nature do not inflict a more serious punishment, with forfeiture of the apparatus unlawfully placed and utilised. Furthermore, the contravening person may be liable to a fine of up to 400 kroner, which fine shall devolve to the Treasury. Such contraventions shall be dealt with in the same

way as public police cases. The Minister for Public Works shall be the only person entitled to institute proceedings against contraveners of this Act.

REGULATIONS.

B MADE EFFECTIVE ON JULY 1ST, 1913. In accordance with Act No. 99 of April 19th, 1907, concerning wireless telegraphs (radiotelegraphs) and the International Convention concerning radiotelegraphs drawn up in London on July 5th, 1912, supplemented by appendix decisions, finishing protocol and service regulations, the following decisions shall be observed in founding and working of radiotelegraph stations and in the handling of radiotelegrams:

I.—ESTABLISHING OF RADIOTELEGRAPH STATIONS.

1. On Danish soil and on board ships permanently anchored such as lightships, etc., radiotelegraph stations (coast stations) can only be established by the Government.

2. On board ships under Danish flag, not owned by the Government, radiotelegraph stations (ship stations) may only be established and operated after permission has been previously obtained from the Department of Public Works.

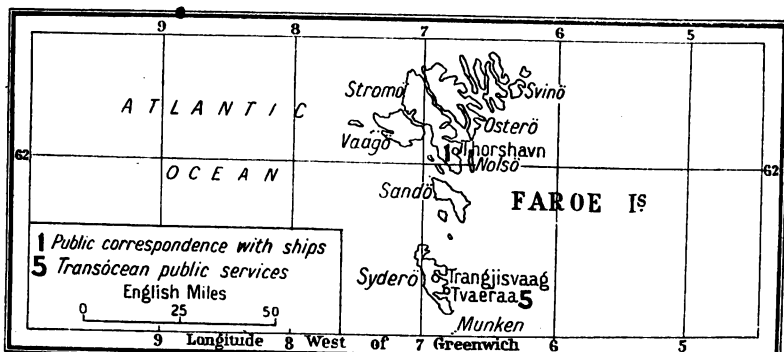

The licence or a certified duplicate of it must always be kept on board the ship.

The licence may be withdrawn if the conditions for the fitting and operation of the station set out therein are not complied with; in such cases the entire apparatus belonging to the station must be removed.

3. Applications for licences to establish and operate radiotelegraph stations on board ships sailing under the Danish flag must be drawn up on forms approved of by the Department of Public Works, delivered and sent in duplicate to the Telegraph Department, and must be supplied with an endorsement to the effect that the station will fulfil the following conditions:

(a) The waves transmitted must be as pure and as little damped as possible; the utilisation of transmitting apparatus, by which the transmitted waves are generated by a direct sparking discharge in the antenna, especially, is only permissible in case of need. This latter arrangement of the transmitter may, however, be permitted in the case of certain special stations (as, for instance, on board small vessels), the primary energy of which does not exceed 50 watt.

(b) The speed of transmission and reception must be no less than twenty words a minute, the word to consist of five letters. New installations utilising an energy of more than 50 watt must be fitted in such a way as to make it easy to obtain more telegraph distances, smaller than the normal ones, the smallest of which should

COPYRIGHT: GEOGRAPHIA L^{td} 55 FLEET STREET LONDON E C 4

be about 15 nautical miles (equal about 28 km.). Old installations utilising an energy of more than 50 watt must be altered, if possible, so as to comply with the regulations mentioned above.

(c) The receiving apparatus, protected in the best possible way against disturbances, must be able to receive signals with the wavelengths of up to 600 m., which are stipulated for the ship station.

(d) The primary energy of the station measured across the generator must under no circumstances exceed 1 kw.

(e) Larger energy than 1 kw. may, however, be utilised, if the ship is to interchange telegrams over a distance of more than 200 nautical miles (equal 370 km.) with the nearest station, or if communication, due to interference is not obtained unless by an increase of the transmitting energy.

(f) The station must be operated by one or more operators who have obtained certificates as specified below in Section 7.

The station must not be opened for communication until the telegraph department has issued a certificate, which will not be granted until the department, by inspection, is satisfied that the conditions set out in the licence granted by the Department of Public Works have been fulfilled.

II—INSTALLATION, SERVICE AND OPERATION OF PRIVATE SHIP STATIONS.

4. The apparatus of ship stations must at any time be in strict accordance with the conditions set out in the licence for their establishment.

5. The hours of service of each coast station are decided by the Government Department.

As far as the hours of service of ship stations are concerned, these stations are divided into the following three classes:

(1) Stations with continuous hours of service;

(2) Stations with limited hours of service; and

(3) Stations with no fixed hours of service. During navigation stations with continuous hours of service must be attended to constantly at the aural apparatus. In the case of stations with limited hours of service the aural apparatus must be attended to during all of the hours of service as well as during the first ten minutes of each hour not comprised in the normal hours of service. Stations with

no fixed hours of service are not obliged to keep any regular watch over the aural apparatus.

The classification of a ship as regards the hours of service of same shall be stated in the licence.

6. Any ship station must be fitted to utilise wavelengths of 600 m. and 300 m. respectively. The normal wavelength is 600 m. Small ships may, however, be allowed to utilise wavelengths of 300 m.; but they must always be able to receive telegrams with a wavelength of 600 m. During the hours of service each ship station must be capable of being called with its normal wavelengths.

Ship stations maintaining continuous watch and ship stations with limited hours of service shall be bound to have a radiotelegraphic spare installation, the single parts of which must be placed as safely as possible. This installation must have a source of energy of its own and must be capable of being put into use quickly, must be able to work satisfactorily for at least six hours and must have a minimal range of:

80 nautical miles (equal to about 150 km.) for ship stations belong to the first class (maintaining continuous watch).

50 nautical miles (equal to about 100 km.) for ship stations belonging to the second class (with limited hours of service).

This special installation is not required in the case of ships, the normal installations of which comply with the requirements of spare installations mentioned above.

7. The service of the ship station must be maintained by operators who are in possession of certificates granted by the Department of Public Works.

In cases of urgent necessity and during one voyage only the service of a ship station may be undertaken by one or more operators holding a certificate from a foreign Government which Government has joined the International Convention concerning radio-telegraphs.

The certificate shall certify

Partly the ability of the operator:

(a) In the maintenance of the apparatus and knowledge of their working.

(b) In the sending and receiving (by sounding) of telegrams with a speed:

(1) No less than twenty words a minute for obtaining a certificate of first class, and

(2) No less than twelve words a minute

for obtaining a certificate of second class.

(c) In the knowledge of the regulations utilised, governing radiotelegraphic service. Partly that the operator shall be bound to secrecy and subject to penalty, etc., for a breach of this condition as in the case of State telegraph operators.

Operators holding a certificate of second class may do service :

(a) On board ships utilising radiotelegraph in their own service or for the correspondence of the crew only.

(b) As assistant operators on board all ships having at least one operator holding a certificate of first class.

Ship stations with continuous service must be operated by at least two operators holding a certificate of first class.

The radiotelegraphic service of the ship stations is placed direct under the master of the ship concerned.

In the event of a contravention of the regulations governing the operation of the radiotelegraphic service, the certificate may be cancelled by the Department of Public Works.

No unauthorised person must be allowed to enter the wireless cabin.

8. If technically possible, ship stations must interchange telegrams with other stations (coast or ship stations), without regard to the system of radiotelegraphy employed at the station concerned. The interchange of telegrams with other ship stations must, however, be so arranged that the working of coast stations is not interfered with, these as a rule having the priority in public telegraph service.

The operation of a station must as far as possible be arranged so that it does not interfere with other stations.

Exchange of superfluous signals and words is prohibited. Experiments and practice shall only be permitted in so far as the service of other stations is not interfered with ; therefore, they must be executed with no other wavelengths than those utilised in the case of public telegram exchange, and utilising as little energy as possible.

When a ship is in a Danish harbour her station must only be utilised for communication with ships in distress.

9. According to the London Convention, the Telegraph Department must notify the Berne Bureau of the ship installation, and the Telegraph Department can demand to be furnished with any information regarding the installation, service, and working of a ship station, both for this and for other purposes.

10. The Telegraph Department will see that all conditions for the fitting and operation of ship stations are complied with. The inspectors for this purpose, who are selected by the Director of Telegraphs, must at any time on showing their authority be admitted to inspect and test the station, provided that the ship is within Danish waters. All information required by the said inspectors must be immediately given, and their directions must be complied with, pending the decision of the Director of Telegraphs, or that of the Department of Public Works.

For the proper carrying out of the inspection the inspectors shall be paid a daily remuneration in addition to travelling expenses ; such amount shall be paid by the Telegraph Department, but will have to be refunded (on demand) by the owners of the ship in question.

III—HANDLING OF RADIOTELEGRAMS.

11. Radiotelegraph stations open for public service for the transmission and reception of telegrams may be used by any person, unless the public telegram exchange at the station in question is limited to a certain special kind of telegrams (see section 14).

The telegrams are divided into three classes :

- (1) State telegrams.
- (2) Service telegrams.
- (3) Private telegrams.

The right to transmit State telegrams and service telegrams, and the right to priority for such messages, is at any time governed by the provisions embodied in the International Telegraph Regulation and the Inland Telegraph Regulation governing the transmission of such telegrams over ordinary telegraph systems.

12. Regarding the radiotelegraph traffic, the handling of telegrams is governed by the International Radiotelegraph Service Regulation, Articles XIV-XV, XIX-XL, XLV-XLIX. The handling of telegrams to and from coast stations and over the ordinary telegraph and telephone system is at any time governed by the Inland and International regulations for such traffic.

13. State and service telegrams may under all conditions be written in code or cypher. Private telegrams in code or cypher may be interchanged only with coast stations of such countries where this method of communication is allowed.

14. The ship station may be licensed for :

Ordinary public telegraph communication.

Limited public telegraph communication (with specified ships, with specified shipping lines, etc.).

Private telegraph communication.

Special telegraph communication (exclusively for State use, etc.).

In the public telegraph communication the following special radiotelegrams are to be received and handled :

- (1) Radiotelegrams with prepaid reply.
- (2) Radiotelegrams (collated telegrams).
- (3) Radiotelegrams to be delivered by express messenger.
- (4) Radiotelegrams to be delivered by post.
- (5) Radiotelegrams with more addresses than one.
- (6) Radiotelegrams with certificate of arrival. Certificates of arrival are handled on lines of telegraphs only.
- (7) Paid service messages, except such as require a repetition or an information.
- (8) Express telegrams, which are, however, only transmitted as such on the ordinary lines of telegraphs and under the proviso that the prescriptions of the International Telegraph Regulations are followed.

All stations are bound to receive, answer, and, if possible, further to communicate messages from ships in distress and give these absolute priority.

Ship stations, however, have no responsibility whatever regarding the radiotelegraph communication.

Ship stations intended for public telegraph service shall get such printed forms, service journals, tariff lists, etc., as are necessary for this service, from the Telegraph Department against payment of fixed amounts. It is the duty of the station to take care that a sufficient supply of these things is always available.

Such stations must furthermore be governed by all the instructions regarding the installation and operation of the station and the handling of the traffic issued by the Telegraph Department.

15. The abbreviations mentioned below covering the terms also mentioned below may be utilised; they are written between two double hyphens before the address, and are charged as one word:

To be delivered to addressee	
only	MP
Delivered open	Ouvert
Private express telegram	Urgent or D
x Addresses	TMx
Reply paid x	RPx
Urgent reply paid x	RPDx
Collation	TC
To be delivered per post	Poste
Télégraphe restant	TR
Poste restante	GP
Post registered	PR
Poste restante registered	GPR
Telegraphic certificate of arrival	PC
Telegraphic urgent certificate of arrival	PCD
Certificate of arrival by post	PCP
Express messenger	Express
All addressed to be stated	CTA

16. The entire charge for radiotelegrams shall include:

(1) Charge for the radiotelegraphic handling, namely:

(a) "Coast fee," which shall devolve on the coast station.

(b) "Ship fee," which shall devolve on the ship station.

(c) "Transit fee," for the coast or ship stations being intermediary stations at the handling of the telegrams.

(2) Charge for handling over the ordinary telegraph and telephone system paid according to the general regulations.

The coast fee for Danish coast stations shall be 15 ctm per word.

The ship fee shall be fixed by the owner of the ship station, subject to the approval of the Department of Public Works. It must not exceed 40 ctm. per word; a minimum charge per telegram may, however, be adopted, not exceeding the charge for ten words. Service telegrams concerning telegrams handled exclusively per radiotelegraph are handled without any charge between the radiotelegraph stations, but are liable to charge when passing lines of telegraphs. Press telegrams at a reduced charge will not be received.

17. The entire charge for the handling of a radiotelegram from the sender to the addressee is to be collected from the sender by the station where it originates. The stations must not collect larger amounts than allowed in the tariffs.

18. All pecuniary liability in consequence of the operation of the ship stations is payable entirely by the owners of the ship in question, without regard to whether the liability in any case may have been due to fault or neglect on the part of the operators.

19. The original radiotelegrams with the vouchers pertaining thereto must, if possible, be sent once a month by the ship stations to the Telegraph Department.

20. Reimbursements of charges paid, and accounts with the Telegraph Department, are governed by the International Radiotelegraph Service Regulation, Articles XLI and XLII.

IV.—OTHER REGULATIONS.

21. Stations on board ship under foreign flags must not be operated during the time such ships are in a Danish harbour, except to receive, answer and forward messages from ships in distress.

22. When the interests of the State require it, the Government may reserve to itself the right to prohibit all radiotelegraphic communication from ships, Danish or foreign, in Danish waters, and to make the necessary regulations to carry through such prohibition.

23. The maximum penalty payable to the State by the owners or radiotelegraphic company concerned for contravening the foregoing regulations is 400 kroner (£22), and all unlawfully fitted or utilised apparatus may be forfeited. Such contraventions are dealt with in the public police court, and proceedings may only be taken according to demand by the Minister for Public Works.

24. These regulations shall come into force on July 1st, 1913.

REGULATIONS

C FOR THE ERECTION AND WORKING OF PRIVATE RADIOTELEGRAPHS

(Experimental Stations; Instructional Stations; Stations to Receive Time Signals, Meteorological Reports, etc., etc.).

1. Licence to establish and operate private radiotelegraphs can only be granted to persons above eighteen years of age, who are Danish subjects and have their residence in Denmark. It is not to be expected that the licence, which cannot be transferred to or utilised by others except in accordance with the consent of the Telegraph Department, be granted, unless it is considered to be of actual value to the person concerned or the scientific or technical development of Wireless Telegraphy or Telephony.

Application for the licence drawn up in duplicate and provided with signature is to be sent to the Telegraph Department; same must contain exact information with regard to the full name, age, residence, previous training, present position, and occupation of the applicant, as well as whether he is a Danish subject or not. The applicant must state exactly the scientific, technical, practical or other purpose for which the erection of the station is intended; furthermore he must send in a diagram of connections for and a description of the projected station as well as particulars about the energy by which the station is intended to work; furthermore the name of the wireless land or ship station or stations with which the station of the applicant wants to communicate.

2. It is under no circumstances allowed to transmit telegrams or messages, unless such telegrams and messages have absolute reference to the radiotelegraphic service of the station concerned.

Signals of distress or messages and enquiries concerning assistance or the like, occasioned by disasters at sea form, however, an exception from the above, the station being bound to receive and immediately retransmit such messages to the proper persons by means of its apparatus or in some other way.

3. Communication, experiments and the like, with other wireless stations outside Danish waters is not allowed unless the consent of the Telegraph Department has been previously obtained.

An application to that effect must contain the name, location and licensee of the foreign land or ship station or stations, with which communication is wanted. A licence, if such one be obtained, does not entitle to communication with other foreign stations than those mentioned in the licence.

4. Stations equipped with transmitters must by no means interfere with the radio-telegraphic communication of other land or ship stations or the public telegraph or telephone traffic. These stations will receive from the Telegraph Department a call signal of their own, and shall answer as soon as this call signal has been observed. Every transmission of signals shall be stopped the moment this is demanded radiotelegraphically or in another way by a Danish wireless land or ship station open to public communication.

5. No transmission of signals must take place until the station has convinced itself that no communication is taking place which might be interfered with by such transmission.

6. The station is liable to be a client of the local telephone net of the place, so that telephonic connection with it can be obtained quickly.

7. The licensee and those persons who are allowed to use the stations out of actual instructional purposes must sign a declaration to the effect that they bind themselves to keep secret the contents of such wireless telegrams as might be brought to their knowledge through the wireless station.

These declarations shall be written on special forms, which latter are to be sent to the Telegraph Department duly filled in and signed.

8. In the case of stations equipped with transmitting apparatus, the licensee must be familiar with and strictly maintain the Regulations of the International Radiotelegraph Convention and the Service Regulations annexed thereto, in so far as these regulations have reference to the station concerned.

9. Stations equipped with both transmitting and receiving apparatus, which have not been expressly mentioned in the licence as experimental stations, must use in general no other wavelengths than 200 metres and below. Should it turn out to be necessary—in order to obtain the purposes intended for the erection of the station—to use larger wavelengths than the above mentioned, the station shall be exclusively worked by such wireless operators as are holders of a certificate of first or second class as prescribed according to the notification of the Department of Public Works of June 27th, 1913. The transmission of signals over wavelengths from 600 to 1,800 metres inclusive will entail an immediate withdrawal of the licence.

10. The stations mentioned in Article 9 shall generally not use a larger primary energy than $\frac{1}{4}$ kw. Should the utilisation of a larger energy than the above turn out to be necessary in order to obtain the purpose intended for the erection of the station, the working of same be undertaken by a trained wireless operator as mentioned in Article 9.

It is necessary that the primary energy of the station can be read from permanently installed meters.

The utilisation of transmitting apparatus by which the generation of the transmitted waves takes place by direct discharge of sparks in the antenna is not allowed.

11. Receiving stations, which shall receive nothing but signals (time signals, meteorological reports, and the like) shall be arranged in such a way as to be able to receive at most only two wavelengths; they shall be arranged in such a way that the licensee can only vary the tuning very little from the wavelength or wavelengths fixed, and the deviation from one wavelength must not exceed five per cent. up or down.

The receiving apparatus shall be enclosed in a case in such a way that it can be worked from the outside only by the handle of the tuning contrivance. The shifting of detector and telephone shall, however, take place without it being necessary to open the case, which is to be plumbed by an inspector from the Telegraph Department.

With the exception of the coupling of the detector and telephone, the remaining connections of the receiver—also the connections from the aerial net and water or earth—shall be carried out inside the plumbed case and made so immovable (by soldering together) that a change of the tuning beyond the permissible limits cannot take place.

Later couplings of connections or tuning arrangements are not allowed.

12. When the station is not used and cannot be called, the aerial net (the antenna) must be put direct to a good water or earth connection.

13. The station must not be used until it has been examined by an inspector from the Telegraph Department. If the examination has turned out to be favourable the licensee will receive from the Telegraph Department an information in writing to the effect that the station may be used. An amount of Kr. 10.00 is to be paid for the examination, together with the travelling expenses of the inspector. The amount is to be paid to the Telegraph Department as per bill.

14. Produced under the authority of the Telegraph Department it will be examined as often as is deemed necessary, whether or not the provisions prescribed for the utilisation of the station are maintained; in general this examination will take place once a year. The expenses in connection with this examination to be paid by the licensee in accordance with the same rules as are mentioned in Article 13.

15. The installations of the stations shall satisfy the provisions being at any time in force for the establishment of similar electric plants, and the necessary notices of warning shall be placarded on all places accessible to strangers. When the plant of a station undergoes a change of some importance, this shall immediately be brought to the knowledge of the Telegraph Department.

16. It is exclusively incumbent on the licensee to pay any damage caused by the plant of the station (apparatus and aerial net) to a person or his property.

17. The conditions prescribed for obtaining a licence to establish and work a station can at any time be supplemented and changed should circumstances make it necessary.

18. The licence to work a station can be withdrawn at any time and without notice. This will always happen, in case the above conditions for obtaining a licence be not strictly maintained, and the licensee has no right to claim any compensation for the withdrawal of the licence. If the licence be withdrawn the licensee shall—under penalty

pursuant to Act No. 99 of April 19th, 1907, section 6—immediately remove all of the apparatus and antennæ of the station.

Every abuse of the station, every transmission of false signals, or the fact that strangers gain admittance to use the trans-

mitting apparatus of the station, will entail a withdrawal of the licence granted. In such case the offender might even be liable to penalty.

THE TELEGRAPH DEPARTMENT.

DOMINICA (B.W.I.)

(See LEEWARD ISLANDS.)

DOMINICAN REPUBLIC

(See SANTO DOMINGO.)

DUTCH EAST INDIES

(See NETHERLANDS.)

EAST AFRICAN PROTECTORATE

(See KENYALAND COLONY.)

ECUADOR

THE Republic of Ecuador comprises the provinces which formed the ancient Presidency of Quito, the Colon Archipelago (Galapagos Islands) and the so-called Orient Territory. The fifteen provinces have a total area of 55,000 square miles, that of the Archipelago being 2,900 square miles. The Orient Territory is largely unexplored, and its boundaries are in dispute. Its inclusion makes the total area of Ecuador anywhere between 160,000 and 270,000 square miles. No complete census has ever been taken, but it is estimated that the present population is about 2,000,000.

The Government of Ecuador, according to the Political Constitution of 1830, is republican, representative and democratic. It is composed of the Legislature, the Executive and the Judicature. The Legislature, or National Congress, comprises the Senate and the Chamber of Deputies. The Executive is wielded by the President of the Republic, who is elected by popular vote every four years, and who is responsible for the appointment of the Ministers of State, Governors of Provinces, etc. The Judicature is exercised by the Supreme Court, High Courts, and other tribunals established according to the Constitution.

CONTROL AND ORGANISATION.

Up to the present there has been no legislation affecting wireless telegraphy. There is consequently no Government control over the installation of wireless stations, provided that no commercial service is carried on. The latter is the prerogative of the State.

Officers and men in the Guayaquil artillery school are put through a comprehensive course in radiotelegraphy with the aid of laboratory apparatus.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
Dr. Don Carlos Tobar y Borgoño ..	Minister for Foreign Affairs.	Quito
Señor Don Guillermo Destruge ..	Director-General of Telegraphs	Do.

The first wireless telegraph station was installed in 1913 at Guayaquil by Señor Don Geo. Chambers Vivero, Captain of the Port, for the purpose of communicating with vessels navigating in the Guayaquil River. It has a range of about 80 miles. The Marconi Company has recently completed a station at Santa Elena Point having a range of over 500 miles.

Two 10 kilowatt stations have been placed at Quito and Guayaquil, and a 5 kilowatt station is installed at Esmeraldas. The antennæ are of the umbrella type of a hundred metres. The transmission waves are of 1,800

metres, in order to facilitate communication across the mountains, but stations will eventually work with a 600-metre wave for communication with ships.

The Marconi Company has a 5 kilowatt station which is not yet in public service, but which will shortly be utilised, by virtue of an agreement which it is hoped will be concluded shortly.

At present these stations are merely strategical, and for the Navy. In view, however, of the progress made by wireless telegraphy, as regards reliability and speed, work is proceeding in the direction of creating a permanent interior system, which, having regard to the mountainous nature and small population of the country, shall ensure a continuous service which will advantageously and economically supplement the present wire telegraph system, which is always so liable to accidents, with consequent paralysis of traffic.

Furthermore, aviation, which sooner or later will become more general, demands that an efficient wireless system shall be created for the rapid

COPYRIGHT 'GEOGRAPHIA' LTD 55 FLEET STREET LONDON E.C.4.

transmission of meteorological information in all parts of the country. The progress of aviation is bound up with that of wireless telegraphy.

Communication is projected between the Galapagos Islands and the continent. A station will be placed at a point on the coast which shall permit of exterior communication. All these matters are receiving consideration and the hope is felt that they will be realised.

The stations of Quito and Guayaquil have been adapted for a system which is capable of effecting an efficient and permanent service, as apparatus exists which has recently been tested and found adequate to ensure this class of permanent service, notwithstanding the difficulties of territory and atmosphere; these questions are of great importance in view of the geographical position of the country. As the traffic develops, small stations will be established in towns of lesser importance.

The question of wireless telegraphy in Ecuador is receiving consideration from the technical and economical points of view; that is to say, due account will be taken of the country's requirements and resources. With regard to all these questions, the wave system will have to be considered. At certain points the service will be performed by the use of the damped wave and some stations will be transformed to work with both classes of wave. For example, a coast station will have to work not only with ships but also with

all the stations in the interior of the country. Further, the simultaneous working of all stations demands a variety of system between them all, and this will call for the most rigid organisation. The present state of wireless telegraphy will enable all this to be realised, and in the future communication will be effected by this means with the most distant points.

EGYPT

KNOWN by the Arabic-speaking peoples of the world as "Masr," Egypt was proclaimed a British Protectorate on December 18th, 1914, shortly after the declaration of war on Turkey. The inhabited portion of the country is practically wholly comprised within the valley of the Nile and its delta, a few nomadic tribes living in the large desert wastes lying to the west and east of that remarkable river. The cultivable area of Egypt is computed at about 8,006,000 feddans (a feddan is a little more than an acre).

CONTROL.

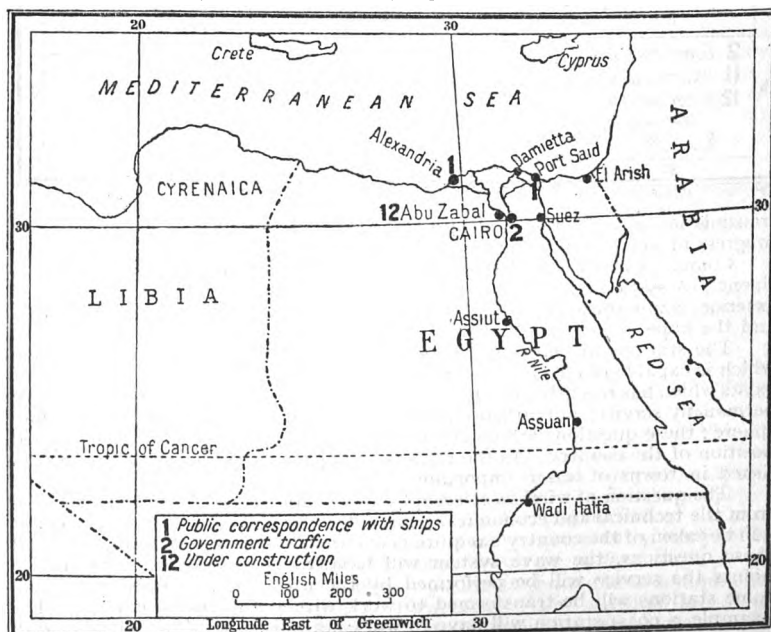

Wireless Telegraphy forms a branch of the Ministry of Communications and is controlled by the State Telegraph Department of that Ministry. The following is the position in regard to land stations :—

Public service to ships	2
Government traffic only	1
Under construction	1

ADMINISTRATION.

Wireless Telegraphy is a State monopoly in accordance with the following Khedivial Decree dated May 12th, 1906 :—

1. Wireless Telegraphy shall be a State monopoly and no installation shall be established or used except by the Government or
- with the sanction of the Government.
2. The Minister of Public Works shall be responsible for the administration of this law.

COPYRIGHT, "GEOGRAPHIA" L^o 35 FLEET STREET LONDON E.C. 4

ERYTREA

(See ITALY.)

FALKLAND ISLANDS

THIS is a Crown Colony situated in the South Atlantic, 300 miles east of the Magellan Straits. The area covers 6,500 square miles, besides South Georgia, 1,000 square miles (estimated), and there are several dependencies:—e.g., the South Shetlands, South Orkneys, Sandwich Group, and Graham's Land.

The Administration is conducted by the Governor, assisted by an Executive Council and a Legislative Council. There are two stations conducting public correspondence with ships.

ADMINISTRATION.

Radiotelegraphy is administered under the following Act:—

WIRELESS ORDINANCE.

DATED MARCH 15TH, 1912.

The following Ordinance relating to wireless telegraphy came into force on March 15th, 1912:

1. No person shall establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place or on board any British ship registered in the Colony except under and in accordance with a licence granted in that behalf by the Governor in Council.

2. No person shall work any apparatus for wireless telegraphy installed on any merchant ship (whether British or foreign) whilst that ship is in the territorial waters of the Colony, otherwise than in accordance with regulations made in that behalf by the Governor in Council, and the Governor in Council may, by any such regulations, impose penalties, recoverable before a Stipendiary Magistrate or any two Justices of the Peace in a summary manner, for the breach of any such regulations, not exceeding twenty pounds each for offence, and may provide for the forfeiture of any such breach of any apparatus for wireless telegraphy installed or worked on such ship.

3. If any person establishes a wireless telegraph station without a licence in that behalf or installs or works any apparatus for wireless telegraphy without a licence in that behalf he shall be guilty of a misdemeanour and be liable on summary conviction thereof to a penalty not exceeding twenty pounds or to imprisonment not exceeding three months and, on conviction in the Supreme Court,

to a fine not exceeding one hundred pounds, or to imprisonment for a term not exceeding twelve months, and in either case be liable to forfeit any apparatus for wireless telegraphy installed or worked without a licence.

4. If a Justice of the Peace is satisfied by information on oath that there is reasonable ground for supposing that a wireless telegraph station has been established without a licence in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any merchant ship within his jurisdiction without a licence in that behalf or contrary to the provisions of the regulations made under this Ordinance, he may grant a search warrant to any constable or to any officer appointed in that behalf by the Governor and named in the warrant, and a warrant so granted shall authorise the officer named therein to enter and inspect the station, place, or ship and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy.

5. The expression "wireless telegraphy" means any communication by telegraphy without the aid of any wire connecting the points from and at which the messages or other communications are sent and received: Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

6. The Wireless Telegraph Ordinance, 1903, is hereby repealed.

7. This Ordinance may be cited as the Wireless Telegraph Ordinance 1912.

FARÖE ISLANDS

(See DENMARK.)

FIJI ISLANDS

(See map on p. 356.)

ABOUT 1,100 miles north of New Zealand lie some 200 to 250 islands (a few merely bare and uninhabited rocks), which cover a square of the South Pacific Ocean about 300 miles each way and constitute the British Colony of Fiji. Their latitude lies from $15^{\circ} 45'$ to $21^{\circ} 10'$ S.; whilst their longitude stretches from $176^{\circ} 0'$ E. to $178^{\circ} 0'$ W. The gross area of the group amounts to about 7,435 square miles.

The administration is that of a British Crown Colony, the Governor being assisted by an Executive Council of six and a Legislative Council of twenty members.

CONTROL.

The four wireless telegraph stations in Fiji are owned and worked by the Colonial Government through the department of Telegraphs and Telephones.

Stations.—Suvaradio, Labasaradio, Taviuniradio, and Savusavuradio.

There are no aviation or ship stations licensed in Fiji. Licences have recently been granted for privately owned experimental stations to two members of the Fiji Defence Force, one situated at Lautoka, the other at Sigatoka. The colony possesses no wireless clubs or societies.

ORGANISATION.

The first Wireless Telegraph Ordinance was passed in 1903. This was revoked by Ordinance No. XXV of 1912 (printed in the YEAR BOOK for 1917), which was in turn revoked by Ordinance V of 1913. New regulations were made in 1917, which have since been revoked, and the original regulations made in 1913 are now in force.

No licences for wireless telegraph working have been issued since 1914. There are no stations existing or projected for aviation or meteorological purposes.

ADMINISTRATION.

The following pages contain the text of:—

A—Ordinance No. V of 1913.

B—Schedule based thereon.

C—Form of Experiment Licence.

AN ORDINANCE TO PROVIDE FOR THE REGULATION OF WIRELESS TELEGRAPHY.

Dated June 19th, 1913.

A Be it enacted by the Governor with the advice and consent of the Legislative Council as follows:—

1. This Ordinance may be cited as the Wireless Telegraphy Ordinance, 1913.

2. In this Ordinance "wireless telegraphy" means any system of communication by tele-

graph without the aid of any wire connecting the points from and at which the messages or other communications are sent or received: Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

3. (1) A person shall not establish any wireless telegraph station or instal or work any

apparatus for wireless telegraphy in any place or on board any ship registered in the Colony except under or in accordance with a licence granted in that behalf by the Governor.

(2) Every such licence shall be in such form and for such purpose as the Governor may determine and shall contain the terms conditions and restrictions on and subject to which it is granted.

4. A person shall not work any apparatus for wireless telegraphy installed on any merchant ship whether British or foreign while that ship is in the territorial waters of the Colony otherwise than in accordance with regulations under this Ordinance.

5. (1) The Governor may from time to time make regulations for carrying into effect the purposes of this ordinance and such regulations shall on publication in the *Gazette* have the same effect as if enacted in this Ordinance.

(2) The regulations in the Schedule to this Ordinance shall have effect except in so far as they may be amended or rescinded by regulations made under the authority of this section.

(3) If at any time in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy the use of wireless telegraphy on board merchant ships while in the territorial waters of the Colony shall be subject to such further regulations as may be made by the Governor from time to time and such regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

6. If a stipendiary magistrate is satisfied by information on oath that there is reasonable ground for suspecting that a wireless telegraph station has been established without a licence in that behalf or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any merchant ship without a licence in that behalf or contrary to the provisions of any regulations made under this Ordinance or of any licence granted under this Ordinance he may grant a search warrant to any officer of constabulary or any person appointed in that behalf by the Inspector-General of Constabulary and named in the warrant and a warrant so granted shall authorise the officer of constabulary or person named therein to enter and inspect the station place or ship and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

7. (1) Any person who shall offend against any provision of this Ordinance or any of the regulations made thereunder shall be liable on summary conviction for every such offence to a fine not exceeding fifty pounds and upon such conviction the court may order that any apparatus for wireless telegraphy in connection with which the offence was committed shall be seized and forfeited.

(2) Proceedings shall be taken before a stipendiary magistrate on the complaint of the Inspector-General of Constabulary or of any person thereto authorised by him in writing and the procedure shall be the same as the procedure for the time being in force in respect of offences punishable on summary conviction.

8. The Wireless Telegraphy Ordinance 1912 is hereby repealed.

Passed in Council this twenty-sixth day of

May in the year of our Lord one thousand nine hundred and thirteen.

SCHEDULE.

REGULATIONS.

B (i) All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of the Colony shall be worked in such a way as not to interfere with:—

(a) Naval signalling; or

(b) the working of any wireless telegraph station lawfully established installed or worked in the Colony or the territorial waters thereof and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

(ii) In these regulations "naval signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and naval stations, or between a ship of His Majesty's Navy or a naval station and any other wireless telegraph station whether on shore or on any ship.

(iii) No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in any harbour or bay of the Colony except with the special or general permission of the Governor.

(iv) For the purpose of any proceedings under these regulations the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship.

(v) Any summons or other document in any proceedings under these regulations shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in command or charge of the ship.

(vi) These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

LICENCE TO USE WIRELESS TELEGRAPHY FOR EXPERIMENTAL PURPOSES, GRANTED BY THE GOVERNOR IN PURSUANCE OF SECTION 3 OF ORDINANCE No. V OF 1913.

C Licence is hereby granted to ^{of} (hereinafter called the licensee), subject to the conditions hereinafter contained during the term or period commencing on the and terminating on the day of

(i) to establish, instal and work at the station specified in the Schedule hereto apparatus for wireless telegraphy (hereinafter called "the licensed apparatus") provided that the apparatus installed at such station shall be of the character specified in the said Schedule opposite to the name of such station; and

(ii) to transmit and receive messages by means of wireless telegraphy at the said stations.

Provided that the licensed apparatus shall be worked and the messages shall be transmitted and received solely for the purpose of conducting

experiments in wireless telegraphy and for no other purpose whatever.

2. The licensed apparatus shall not be used by the licensee or by any other person either on his behalf or by his permission for any purpose except for the purpose of conducting experiments in wireless telegraphy.

3. (1) The licensed apparatus shall be so worked as not to interfere with the working of any wireless telegraph station established in the Colony of Fiji or the territorial waters abutting on the coasts of the Fiji Islands by or for the purpose of the Government of Fiji or any department of His Majesty's Government or for commercial purposes and in particular with the transmission or receipt of any messages between or at wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

(2) With a view to preventing such interference as aforesaid the licensee and any person acting on his behalf or by his permission shall comply with all directions which shall be given to the licensee by the Colonial Secretary or prescribed by the Colonial Secretary with respect to avoiding interference between one wireless telegraph station and another.

(3) The licensed apparatus shall not without the consent in writing of the Colonial Secretary be altered in respect of any of the particulars mentioned in the Schedule hereto.

(4) The licensee shall at all times indemnify the Government against all actions, claims and demands which may be brought or made by any corporation, company, or person in respect of any injury arising from any act, licensed or permitted, by these presents.

4. (1) The licensee shall not (either by himself or by any person acting on his behalf or by his permission) by the transmission of any message by means of the licensed apparatus or otherwise by the use of the licensed apparatus, interfere with naval signalling.

(2) Whenever the operators at any of the said stations of the licensee perceive through the medium of the instruments used by them that naval signalling is proceeding, they shall refrain from using the licensed apparatus until all indication that naval signalling is proceeding shall have ceased.

(3) The licensee and any person acting on his behalf or by his permission shall, if so required, in writing by the Colonial Secretary cease to use the licensed apparatus for such period (not exceeding . . . hours in any one day) as may be specified by the Admiralty.

(4) If the Governor is of opinion that the working of the licensed apparatus at any station specified in the Schedule hereto is inconsistent with the free use of naval signalling the licensee shall when required in writing by the Colonial Secretary close the said station.

(5) These provisions for the protection of naval signalling shall be construed to be without prejudice to the generality of any other provisions of this Indenture.

5. Neither the licensee nor any person on his behalf or by his permission shall divulge to any person (other than properly authorised officials of the Government or a competent legal tribunal) or make any use whatever of any message coming to the knowledge of the licensee or any such person as aforesaid and transmitted by naval signalling or by any system of wireless telegraphy provided or maintained by or for the purpose of the Government

of Fiji, or by any licensee of the Colonial Secretary (other than the licensee).

6. The Superintendent of Telegraphs and Telephones and his engineers, agents and assistants may, from time to time, and at all reasonable times, enter upon or any of the stations or other premises in the possession or occupation of the licensee either solely or jointly with any other person or persons for the purpose of inspecting and may inspect any apparatus fixed or being in such places respectively for the purpose of sending and receiving messages by wireless telegraphy and all other telegraphic instruments and apparatus fixed or being in such stations respectively, and the working and user of such apparatus and telegraphic instruments respectively, and the licensee shall afford all requisite and proper facilities for such inspection and shall secure to the said Superintendent the right for the purpose aforesaid of entry from time to time and on such of the said stations and premises as may be in the possession or occupation of any person or persons other than the licensee.

7. (1) All apparatus used or intended to be used under this licence shall be so erected, fixed, placed and used as not either directly or by reason of the working or user thereof to interfere with the efficient or convenient maintenance, working or user of any telegraphic line of the Government which may from time to time exist or which it is probable that the Government may have occasion to erect, place, fix or use or to expose any such line to risk of damage or to risk of interference with the efficient or convenient working or user thereof.

(2) In case any telegraphic line of the Government shall be damaged or the efficient working or user thereof shall be wholly or partially interrupted or otherwise interfered with and the Superintendent of Telegraphs and Telephones for the time being shall certify in writing under his hand that such damage, interruption or interference has been caused directly or indirectly by any apparatus used or intended to be used under this licence or by anything done by on behalf or with the permission of the licensee in relation thereto the licensee shall on demand pay to the Colonial Secretary all costs that shall be reasonably incurred by him in repairing such damage and in removing or altering such telegraphic line so as to restore the same to efficient working order, and in adding thereto or substituting therefor either temporarily or permanently any other telegraphic line if the said engineer shall certify that such addition or substitution is reasonably required.

8. Except with the consent in writing of the Colonial Secretary the licensee shall not assign, underlet or otherwise dispose of or admit any other person or body to participate in the benefit of the licences, powers or authorities hereby granted or any of such licences, powers or authorities.

9. If and whenever in the opinion of the Governor an emergency shall have arisen in which it is expedient for the public service that His Majesty's Government shall have control over the transmission of messages by the licensed apparatus it shall be lawful for the Governor by warrant under his hand to direct and cause so much of the licensed apparatus as is within the Colony of Fiji or the territorial waters thereof or any part of the licensed apparatus to be taken possession of in the

name and on behalf of His Majesty and to be used for His Majesty's service and in that event any person authorised by the Governor may enter upon stations specified in the Schedule hereto or any of them and take possession thereof and use the same as aforesaid.

10. The Colonial Secretary may at any time in his absolute discretion give notice in writing to determine these presents and the licence or permission hereby given at the end of one calendar month from the date of such notice and at the expiration of that period the licence or permission hereby granted shall cease and determine accordingly but without prejudice to any remedy of the Colonial Secretary under any covenant or provision herein contained on the part of the licensee to be observed and performed.

11. In case of any breach, non-observance or non-performance by or on the part of the licensee of any of the covenants or conditions herein contained and on the part of the licensee to be observed and performed the Colonial Secretary may in writing revoke and determine those presents and the licensed powers and authorities hereinbefore granted and each and every of them, and thereupon these presents and the said licences, powers and authorities and each and every of them shall absolutely cease, determine and become void.

Provided always that no such revocation or determination as aforesaid shall prejudice or affect any right of action or remedy which shall have accrued or shall thereafter accrue to either of the parties hereto under the covenants herein contained.

12. Nothing in these presents shall prejudice or affect the right of the Governor from time to time to establish, extend, maintain and work any system or systems of telegraphic communication (whether of a like nature to that hereby licensed or otherwise) in such manner as he shall in his discretion think fit, neither shall anything herein contained prejudice or affect

the right of the Governor from time to time to enter into agreement for or to grant licences relative to the working and user of telegraphs (whether of a like nature to those hereby licensed or otherwise) or the transmission of messages in any part of the Colony of Fiji by means of wireless telegraphy or by any other means with or to any person or persons whomsoever upon such terms as he shall in his discretion think fit.

13. Any notice, request or consent (whether expressed to be in writing or not) to be given to the licensee under these presents may be served by sending the same by registered letter addressed to the licensee and any notice to be given by the licensee under these presents may be served by sending the same by registered letter addressed to the Colonial Secretary.

By Command,

Colonial Secretary.

Given under my hand this day of

THE SCHEDULE BEFORE REFERRED TO :

Name of Station.	Character of Apparatus.		
	Maximum range of signalling with the Licensee's	Power (Current and Voltage).	Source of Power.

FINLAND

(See map on page 389.)

THIS country is still in far too unsettled a state for us to be able to obtain the text of any laws and regulations which may exist in regard to wireless telegraphy, but we hope by the time our next edition is in course of preparation that normal conditions will be sufficiently re-established to enable our doing so.

As far as can be ascertained now, there are two wireless stations under construction near Helsingfors.

FORMOSA

(See JAPAN.)

FRANCE

(Including Algeria and Tunis.)

(For other Colonies of France, see page 237.)

FRANCE is the most westerly of Central European countries. In latitude it lies between 40° 29' and 51° 5' N.; in longitude between 7° 45' E. and 4° 45' W. The area of its 87 departments (including the Isle of Corsica) is estimated at 207,076 square miles.

Its colonial possessions (including Algeria and Tunis) cover a total area of 4,084,410 square miles. Of these Algeria (French since 1830) is reckoned as an integral part of France, the rest being governed as protec-

H2

torates. Tunis has been a French Protectorate since 1881. The area of French Africa alone is reckoned at 3,812,000 square miles.

CONTROL.

Radiotelegraphy in France is a State monopoly.

The commercial use of wireless telegraphy in France, Algeria and Tunis has been placed under the control of the Minister of Commerce, Industry, Agriculture, Labour, Posts and Telegraphs. The Department of Telegraphs deals with all matters relating to the administration of commercial wireless telegraphy, and this Department also controls inland and foreign telegraphs. The Ministry of War and the Ministry of Marine control the use of wireless telegraphy in the Army and Navy respectively.

As far as the large high-power radiotelegraph stations of France are concerned they are under the jurisdiction of different Government Departments, as follows:—

Eiffel Tower	Ministry of War.
Basse-Lande (Nantes)	Ministry of Marine.
La Doua (Lyons)	These two stations, erected by the War Department, will be worked by the Administration of Posts and Telegraphs, for Public Service, and in principle for communication with the stations of the French Inter-Colonial districts.
Croix d'Hins (Bordeaux)	..	

With regard to the other French Colonies, the service in each is organised under a decree of the respective Governors of those Colonies. We append a general note affecting radiotelegraphy in these Colonies, which will be found at the end of this section.

The statistics (December 31st, 1919) as to the number of stations in France and Colonies are:—

	<i>Coast.</i>	<i>Ship.</i>	<i>Internal Communication.</i>	<i>Total.</i>
France and Algeria	20	349	—	369
French Equatorial Africa	1	—	—	1
French West Africa	5	—	—	5
Indo-China	4	—	—	4
Madagascar	4	—	—	4
Tunis	2	—	—	2
Other French Colonies	4	—	—	4
Grand Total			389

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
M. le Capt. de Vaisseau Lagorio ..	Directeur du Service de la Télégraphie sans Fil	Sous-Secrétariat d'État des Postes et Télégraphes, Paris.
M. Gabriel Lippmann	Président of the Inter-Ministerial Commission on Wireless Telegraphy	Do.

ORGANISATION.

Since June 5th last commercial traffic has been opened with Budapest and Belgrade through the Eiffel Tower; with the United States of America a provisional service has been established between the stations of Lyons and Annapolis. The Lyons Station also communicates with Rufisque (French West Africa) and Brazzaville (French Equatorial Africa).

ADMINISTRATION.

Licences for the erection and maintenance of ship stations are issued to steamship companies. The form of such licences and the contract indicating the conditions under which is accorded authorisation to instal wireless telegraphy on board ships will be found below.

The administration of radiotelegraphy is governed by the following enactments, supplemented by a Form of Ship's Licence :—

A—Decree, dated March 5th, 1907 (modified by subsequent enactments).

B—Decree, dated February 24th, 1917.

C—Decree, dated December 15th, 1917 (modified by Decrees of May 15th, 1919, and March 21st, 1920).

D—Form of Ship's Licence.

E—Law of July 31st, 1919.

F—Administrative Order, dated February 27th, 1920, regulating Wireless Time and Meteorological Signals.

G—Law of August 9th, 1920.

H—Decree of August 26th, 1920.

A The following is the Decree dated March 5th, 1907 (modified and completed by the following decrees) : April 26th, 1910; February 5th, 1911; May 27th, 1911; November 20th, 1911; July 31st, 1919, which superseded the decrees of February, 1903, and February 27th, 1904 :—

ART. 1.—All wireless telegraph stations in France, in Algeria and in the Colonies are in times of peace worked by the Administration of Posts and Telegraphs with the exception of :—

(a) Coast stations communicating with warships and naval establishments ashore.

(b) Stations on military territory, or engaged solely on military work.

(c) Stations which are purely military in character and which in times of peace are only occupied in periodically exchanging practice telegrams.

(d) Special stations on lighthouses and buoys.

(e) Stations erected for internal communication, either within the boundaries of any one territory, or to communicate between two neighbouring territories, two groups of neighbouring territories, and a colony, or a group of colonies, with a neighbouring foreign country always providing, of course, that for other than local communication (which would be exceptionally allowed).

Questions of contract and tariff would be regulated between the departments concerned (Ministry of the Colonies), Administration of Posts and Telegraphs and, if existing, Ministry of Foreign Affairs.

Any deviation from this rule will form the subject of discussion between the Ministries concerned.

ART. 2.—In the event of mobilisation all radiotelegraphic stations, without exception automatically fall under the authority of the Ministries of War and of the Navy.

In case of mobilisation the Ministries of Marine and War shall automatically assume control of all stations, without exception.

3. The choice of sites for the proposed range of a station and all technical conditions applicable to each projected station shall be submitted for the consideration of an Inter-ministerial Commission formed in accordance with Article 4 of this Decree. The function of this Commission is to study the various aspects

of the services to be carried on and to indicate to the Administrative Departments affected the conditions that are necessary to reconcile their respective interests.

4. The Inter-ministerial Commission shall be appointed by the Minister of Public Works, Posts and Telegraphs, and shall comprise the following members :—

One President and one Vice-President appointed by Presidential decree from the Departments interested.

Three representatives from the Ministry of Marine.

Three representatives from the Ministry of War.

Two representatives from the Colonial Office.

One representative from the Foreign Office.

One representative from the Ministry of Commerce and Industry.

Four representatives from the Ministry of Public Works.

Three representatives from the Administration of Posts and Telegraphs.

A secretary who shall belong to the Post and Telegraph Administration. He shall have no voting powers.

5. The Commission shall examine the title to sites and technical conditions appertaining to all stations which shall constitute the French radiotelegraphic network; examine complaints regarding French stations; consider such administrative problems concerning the radiotelegraphic service as the Ministry of Public Works, Posts and Telegraphs deems fit to submit to it; institute experiments of general interest. The Commission shall be informed through the departments represented thereon of results obtained by various types of apparatus employed at stations in operation.

6. Exclusive of the periods of mobilisation stations established, kept up, and worked by Administrations other than that of Posts and Telegraphs may be open to public service in agreement with this Administration.

7. The Post and Telegraph Administration shall be responsible for all matters concerning the collection and taxes, foreign stations, and the International Bureau at Berne. It shall supervise the administration of international regulations in so far as they concern commercial traffic passing through coast stations in France, Algeria and Tunis, as well as

through stations on vessels of the mercantile marine.

8. Licences to establish private stations shall be granted by the Post and Telegraph administration upon the recommendation of the Commission referred to in Article 4. Such licences shall only be of a temporary character and the stations are strictly forbidden to interfere with the working of other stations.

9. Cost of experiments carried out on the demand of the Commission are regulated by special credit, negotiated through the budget of the Administration of Posts and Telegraphs.

10. The Ministers of Public Works, of Posts and Telegraphs, of War, of Marine, of Colonies and Foreign Affairs are charged in so far as concerns their respective departments, with the carrying out of this decree.

11. The provisions of the decree of February 7th, 1903, and of the decree of February 27th, 1904, are abrogated.

12. The provisions of Articles 2, 3, 5, 6, 7, and 8 are not applicable to the Colonies as far as local stations, as defined in Paragraph (c) of the 1st Article, are concerned.

The organisation of these stations, in the event of mobilisation, is regulated by Governors General and Governors in agreement with the Departments of War, of the Navy and of Colonies.

The personnel of the Administration of Posts and Telegraphs attached in any Colony to an Inter-Colonial Wireless Telegraph Station, not falling under one of the headings specified in Paragraph 5 of the 1st Article receives its working instructions from the Metropolitan Administration of Posts and Telegraphs.

These instructions are transmitted to it through the intermediary of the Administrative Authority of the Colony, except in case of urgency, and on condition that this authority is advised of them with as little delay as possible.

This personnel is placed, in regard to general discipline, under the surveillance and the authority of the high functionary who administers the territory in which is located the station. This high functionary gives to the supervised personnel annual notes, a record of which is kept in connection with their advancement.

Modifications other than those connected with the material of the stations, questions concerning the working and general organisation of the service are regulated in agreement with the Metropolitan Administration of Posts and Telegraphs and the Colony.

Colonial Military Stations are under the supreme authority of the respective Governors.

B Decree of February 24th, 1917, relating to the reception and transmission of radiotelegraphic signals.

ART. 1.—Private individuals and corporations are forbidden to establish or make use of telegraphic machinery, or apparatus, or any fittings whatsoever capable of transmitting or receiving signals, without the express authorisation of the Minister of Commerce, Industry, Agriculture, Labour, Posts and Telegraphs either on French territory or above that territory, or on board French vessels.

The employment on board foreign vessels in French territorial waters of wireless apparatus or installations, is forbidden, except in conformity with the rules laid down by the French Government for the employment of such apparatus and installations in the aforesaid territorial waters.

ART. 2.—Authorisation for the establishment of a transmitting radiotelegraphic station is only granted to private individuals, or corporations, under the proviso that no let or hindrance shall be able to arise therefrom to the detriment of the working of public stations. The Minister, whenever he shall think fit to authorise (after consultation with the Ministers of War and Marine) the establishment of any proposed station, shall lay down the conditions under which that station shall be erected and worked.

ART. 3.—Receiving wireless stations require the same authorisation, under the same conditions as transmitting stations.

It is understood, however, that stations destined for the reception of time and weather signals, whose erection is sought by French citizens, may receive due authorisation by the head of the local Postal and Telegraphic Service (when the latter is asked to do so by the parties interested) under the conditions laid down by a Decree of the Minister for Commerce, Industry, Agriculture, Labour, Posts and Telegraphs (after consultation with the Ministers of War and Marine). Special measures may be carried out under the authority of the Ministers of War and Marine in view of the concession in favour of stations of the kind above mentioned in certain stated districts.

ART. 4.—The royalties due from those who have been granted leave to erect stations are fixed by the Minister of Commerce, Industry, Agriculture, Labour, Posts and Telegraphs and worked in consultation with the Minister of Finance.

Stations for the reception of time and weather signals shall be only liable to payment of a fixed royalty of five francs per year per station.

ART. 5.—In times of war—

(a) All private wireless stations, with the exception of those used by, or on behalf of, military authorities must be dismantled. The owners of such stations must remove the antennæ, and deposit the essential parts of their sending and receiving apparatus in places designated for that purpose by the Postal and Telegraphic authorities.

(b) The antennæ of wireless stations of mercantile vessels must be dismantled during the whole of the stay of such vessels in French ports and/or territorial waters, unless they have received special authorisation not to do so from the Naval Authority. Moreover, the Marconi Cabin must be locked up and the key placed in the hands of the master of the vessel. No work (either in the way of overhaul, repair, etc.) may be executed unless the aforementioned officer has assured himself that the work is being carried out by persons authorised to do so.

(c) It is within the option of the Minister of Commerce, Industry, Agriculture, Labour, Posts and Telegraphs (acting after consultation with the Minister of War and Marine), to prohibit for the time being all manufacture, vending or sale of radio-telegraphic apparatus, except under special licence.

ART. 6.—The rules laid down under Chapter V of the Decree-Law dated December 27th, 1851, are applicable to the conditions laid down by the present Decree.

In times of war any representative of the Minister of War, or the Minister of Marine shall be qualified equally with the Minister himself to institute the proceedings provided for in Art. 10 of the aforesaid Decree-Law.

Moreover, in times of war the War Office and Admiralty shall also have power to take the provisional measures laid down in Art. 12 of the Decree-Law of December 27th, 1851, if in their opinion such measures are matters of urgency.

Statements drawn up by officers of the French Forces, either on land or sea shall not require to be taken on oath. They are to be viewed as absolutely reliable unless the contrary shall have been proven.

C Decree of December 15th, 1917 (as modified by Decrees of May 15th, 1919, and March 21st, 1920).

ART. 1.—The Ministers of Commerce, of Industry, of Posts and Telegraphs have appointed an Extra Parliamentary Committee charged :—

(1) With the centralisation and examination of all general questions concerning the establishment of radiotelegraphic services and the exploitation of Inland, Inter-Colonial and International Wireless Telegraphy with the exception of the following :—

(a) The Military and Naval Organisation of the Inter-Allied Services established purely for Military or Naval purposes.

(b) Colonial services organised to ensure internal communications in any particular colony, or between two neighbouring colonies, two neighbouring groups of colonies, and a colony, or a group of colonies with neighbouring foreign countries.

(2) As a result of this examination to prepare on broad lines legislative, or administrative, regulations to be brought into force as soon as possible after the cessation of hostilities, the National Organisation of the Radiotelegraph Service which forms a part of the General Telegraph Service without infringing Art. 2 of the Decree of March 5th, 1907.

ART. 2.—This Commission will be composed as follows :—

Four members of the Senate.

Eight members of the Chamber of Deputies.

Seven representatives of the Ministry of Public Works, *i.e.* :

(a) Four representatives of the Administration of Posts, Telegraphs and Telephones.

(b) One representative of the Services of Harbours, of the Mercantile Marine and of Fisheries.

(c) One representative of the Service of Lighthouses and Buoys.

(d) One representative of the Services of Civil Aeronautics and Aerial Transport.

Three representatives of the Ministry of War.

Three representatives of the Ministry of Marine.

Three representatives of the Ministry of Colonies.

One representative of the President of the Council.

One representative of the Ministry of Foreign Affairs.

One representative of the Ministry of the Interior (service of public safety).

One representative of the Ministry of Public Instruction.

One representative of the Ministry of Finance.

Two representatives of the Radioelectrical Industry.

One representative of the Staff of the Wireless Service of the Mercantile Marine.

ART. 3.—The Commission formed under the present Decree will be presided over by the Under-Secretary of State for Posts and Tele-

graphs, assisted by two Vice-Presidents chosen from amongst the Members of Parliament.

ART. 4.—The Members of the Commission will be nominated by a Decree based on the report of the Minister of Posts and Telegraphs, of the Minister of War, of the Minister of Marine, and of the Colonial Minister, after the Head of each of the other Administrations mentioned in Art. 2 above shall have named their representatives to the Minister of Posts and Telegraphs.

ART. 5.—The active Members of the Commission who are bound to be present at a meeting may absent themselves on condition that their place is taken by a member of their same service who will represent them with votive powers.

ART. 6.—All previous regulations on this subject are hereby abrogated.

ART. 7.—The President of the Council, the Minister of War, and the other Ministers interested are charged, in so far as concerns their respective departments, with the carrying out of this decree, which will be published in the *Journal Officiel* and inserted in the *Bulletin des Lois*.

FORM OF SHIP'S LICENCE.

FRENCH REPUBLIC.

D MINISTRY OF COMMERCE AND INDUSTRY, POSTS AND TELEGRAPHS.

Office of Control, Telegraphic Administration.
Licence delivered in accordance with Article IX of the International Radiotelegraphic Convention Service Regulations.

In consideration of the undertaking given by the applicant and the particulars furnished by.....

And in consideration of the arrangements under the Convention and the Radiotelegraphic Regulations as codified in London on July 5th, 1913; and especially of Articles III, VII, VIII, X, XI, XIII, and XVI of the aforesaid Regulations.

And in consideration of the report supplied by the Engineer-in-Charge of the Radiotelegraphic Service following on his visit to the station on board.....

Authorisation is hereto given for the installation and maintenance of the radiotelegraphic station on board the..... which is scheduled under Class.....

The present licence is available for as long as the Radiotelegraphic Convention and Regulations of London remain in force.

Given in Paris on the..... day of.....

(Signed) on behalf of the Minister of Commerce, Industry, Posts and Telegraphs by.....

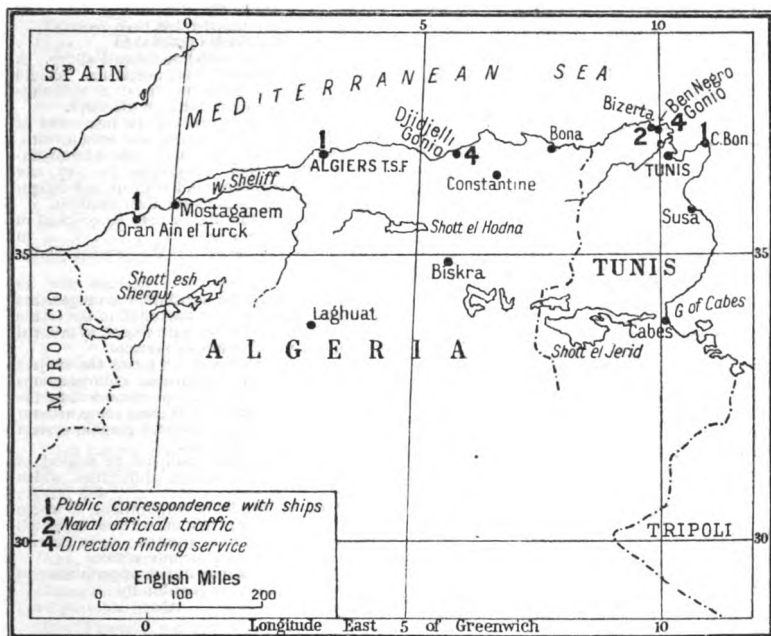

Chief of the Telegraphic Administration.

UNDERTAKING

GIVEN BY.....

Who in consideration of an authorisation to instal and maintain a wireless telegraph station on board the s.s. declares himself willing to submit, without reserve, to the clauses and conditions of the agreement whereof the text is herewith subjoined, with the object of obtaining such authorisation for utilising a wireless station on board the s.s.

ART. 1.—The installation of the proposed wireless station shall be submitted to the preliminary approval of the Administration of Posts and Telegraphs. Only apparatus manufactured in France, from materials sup-

COPYRIGHT "GEOGRAPHIA L^{te} 55 FLEET STREET LONDON E.C. 4"

plied by builders or manufacturers having their workshops in France, can be employed in the construction of this radiotelegraphic station.

The average range of the station shall be

In the event of its being recognised—in consequence of improvements carried out in radiotelegraphy (affecting range, syntony, wave direction, etc.)—that important modifications can be adopted in the ship's station, the Administration of Posts and Telegraphs reserves to itself the right of providing for the adoption of such improvements.

Every subsequent alteration made to the station must be notified to the Administration of Posts and Telegraphs and receive official approval before its inception.

ART. 2.—..... shall take every care necessary to ensure that the installation, maintenance, and usage of the station, as well as any modifications introduced in accordance with the preceding article, shall be carried out without involving any expense to the Administration of Posts and Telegraphs.

ART. 3.—All contracts, agreements, etc., which have been entered into, or which shall in the future be entered into, between and the manufacturers of wireless apparatus, or which have been or shall be made with wireless companies, for the construction and maintenance of the station, shall—before being put into effect—be submitted for the approval of the Administration of Posts and Telegraphs.

ART. 4.—A charge in favour of the ship's station may be levied on the aforementioned vessel; its amount being fixed by the Administration of Posts and Telegraphs in agreement

with This charge shall not be made on official communications of the French Republic.

..... shall be liable to be called upon to place in an office of the Posts and Telegraphs a deposit, by way of guarantee for the charges received on board, and for which he is accountable to the Administration of Posts and Telegraphs.

In the event of the administration of the authorised station being granted to a company, shall remain responsible for the charges received on board.

ART. 5.—All telegraphists entrusted with the manipulation of apparatus must be of French nationality, and subject to the approval of the Administration of Posts and Telegraphs.

ART. 6.—The contents of telegrams transmitted by wireless, which reach the ship's station without being intended for shall not be divulged to any one whatsoever outside the officials appointed by the Administration of Posts and Telegraphs, or the competent officers of judicial police. No use whatsoever may be made thereof.

ART. 7.—The Administration of Posts and Telegraphs may, if it seems good to them, demand at any moment, and on immediate requisition, that the station on board shall be temporarily, or permanently, taken over by State officials. These officials shall be accommodated on board in the class corresponding to their grade. Their messing may be charged for, but not their transport. In such cases the Administration of Posts and Telegraphs shall render account to for the board ship charges due to him after making deduction of cost of upkeep of the station.

In the event of the Administration of Posts and Telegraphs deciding to apply the foregoing provision they may employ wireless telegraphic apparatus of a different type to that utilised by They reserve, moreover, the right, in case of need, of placing such apparatus on board in advance.

ART. 8.—The Administration of Posts and Telegraphs shall exercise in the manner which seems best to them their right of control over the authorised ship's station (installation, transmission, and reception of radiograms, rendering of accounts, etc.).

ART. 9.—The date of the initiation of the service of the ship's station shall be fixed by agreement with the Administration of Posts and Telegraphs.

After the establishment of the installation the apparatus cannot be removed without the express consent in writing of the Administration of Posts and Telegraphs. The apparatus must be continuously maintained ready for use, and must give fifteen days' notice in advance to the Administration of Posts and Telegraphs in the event of his desiring for any reason to cease to use the station.

In the event of the ship's sale, must advise the Administration of Posts and Telegraphs, informing them at the same time of the name and address of the new owner, as well of the arrangements which may have been made (should there be any such) for the closing of the station.

In any event, the aforesaid station cannot be closed down without the express consent in writing of the Administration of Posts and Telegraphs, and the holder of this licence shall

remain responsible for the charges due until authorisation for transfer has been received.

ART. 10.—The licence granted to applies only to the vessel mentioned above. A new licence would be necessary, should decide to instal a radiotelegraphic station on any other of his ships.

This licence can, moreover, be suspended or revoked at any time, and for any reason, without any liability on the part of the Administration of Posts and Telegraphs to pay any indemnity whatsoever, and without any obligation to state the reasons for their decision.

In particular, the licence may be revoked in the event of failure by to observe the provisions of the present agreement.

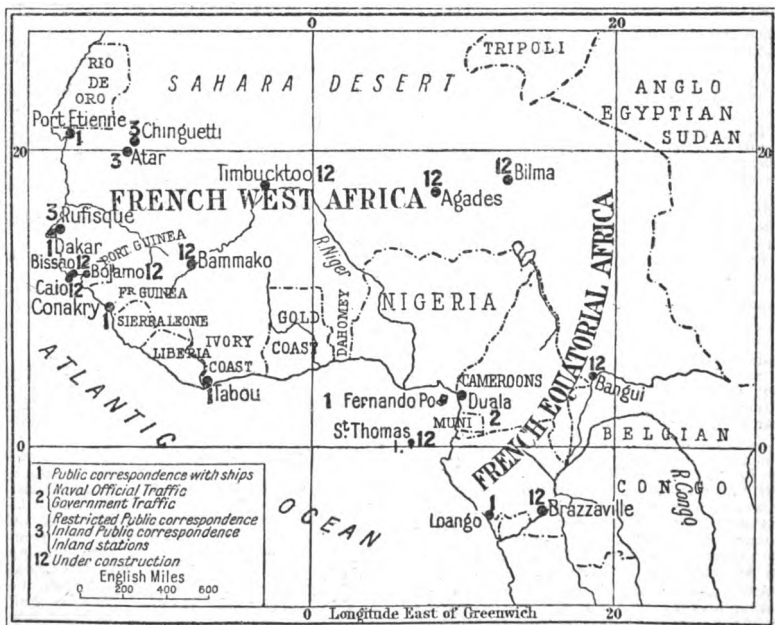

ART. 11.—..... declares that he subscribes to all the legislative arrangements and rules established, or that shall in the future be established, in France with regard to internal and international wireless service.

The wireless station which forms the subject of this licence shall exchange radiotelegrams with all the coast or ship stations within the sphere of action of which it shall come without any distinction of the radiotelegraphic system adopted by these stations.

ART. 12.—The State shall not be subject to any responsibility through difficulties which may arise between and private individuals, companies or corporations, to whom authorisation for carrying on wireless telegraph stations may have been granted; or in general with anyone soever or for any reason.

ART. 13.—The stamp duties appertaining to the present licence are payable by

Given on the day of

COPYRIGHT "GEOGRAPHIA" L^{re} 55 FLEET STREET LONDON E.C. 4.

LAW OF JULY 31ST, 1919.

E The President of the Council; the Minister of War; the Minister of Marine; the Minister of Public Works, of Transports and of the Mercantile Marine; the Minister of Commerce, of Industries, of Posts and Telegraphs; the Minister of Colonies, having seen the Decree of March 5th, 1907, Hereby decree:—

ART. 1.—Radiotelegraph Stations joining departments other than the departments of War and of Marine are in times of peace, in view of their utilisation in war time, under the control of a special commission instituted by the Minister of War (General Staff of the Army).

ART. 2.—The Commission is presided over by one of the sub-heads of the General Staff of the Army and comprises a representative of each of the following Ministries: Marine, War, Public Works, and Colonies, as well as of the Administration of Posts and Telegraphs.

These representatives, who are nominally elected by the Administrations which they serve, are in principle the Directors of the Wireless Service in their respective administrations.

Each has an assistant, also nominally elected, and with authority to take the place of the former in case of absence.

An officer of the General Staff of the Army carries out the functions of Secretary, with voting powers.

ART. 3.—The Commission will give its advice on all questions relative to the best means of utilising Radiotelegraph Stations, both fixed and portable in time of war.

It will especially occupy itself with the control of mobilisation of Non-Military Wireless Telegraph Stations, and to investigate experiments of every kind made to improve the utility of wireless in time of war of Non-Military Stations as suggested by the different Ministerial Departments.

ART. 4.—At least once a year, and more often if necessary, the Commission will overhaul Non-Military Stations and their technical equipment, and will also test the professional knowledge of the personnel. Each overhaul will be made by a representative of the Administration working the station and by a representative of the Ministry of War or of the Ministry of Marine according as to whether the station falls under the authority of the one or the other.

The Commission chooses those of its members who will undertake the overhaul, or will ask the departments interested to make the necessary selection from their personnel.

A *procès-verbal* will be prepared after each overhaul and forwarded to the Commission.

ART. 5.—The Commission will transmit its reports and the *procès-verbaux* of its sittings to the Ministers concerned through their representatives. The Ministers will take what steps are necessary in view of these communications.

ART. 6.—In the Colonies the overhaul on Non-Military Stations and of their technical equipment as also that of the professional knowledge of the personnel is carried out according to rules formulated under Articles 3 and 4, by representatives of the departments concerned who are chosen by the Governors-General or Governors.

Reports are transmitted by these High Functionaries to the Department of the Colonies. The latter formulates, if necessary, its observations or propositions.

UNDER SECRETARIATE OF STATE FOR POSTS, TELEGRAPHS AND TELEPHONES

F ADMINISTRATIVE ORDER OF FEBRUARY 27TH, 1920, REGULATING THE CONCESSION OF WIRELESS TELEGRAPH TIME AND METEOROLOGICAL STATIONS.

The Under-Secretary of State for Posts and Telegraphs, having seen the decree of February 24th, 1917, and in accordance with the advice of the Minister of War and of the Minister of Marine, on the proposal of the Director of the exploitation of Telegraphs,

Enacts:—

The conditions regulating the establishment and use, by private persons, of radiotelegraph stations intended solely for the reception of time signals and meteorological telegrams are fixed as follows:—

ART. 1.—Applications for authorisation must be addressed to the Director of Posts and Telegraphs of the department in which the station is to be installed.

Applicants must indicate the precise place where the station will operate and must furnish a description of the apparatus utilised. They must, if necessary, furnish evidence as to their French nationality.

ART. 2.—Authorisation is granted:—

(a) By the Director of Posts and Telegraphs concerned, when the applicant is of French nationality.

(b) By the Under-Secretary of Posts and Telegraphs to whom the application shall have been forwarded by the Director who will express his opinion, if the applicant be a foreign subject.

Authorisation is moreover subordinated to the opinion of the military authorities (General Commanding the Army Corps) to whose jurisdiction the place in question is subject when the station for which the concession is sought is situated at a point 50 kilometres or less distant from the land frontiers, and to the opinion of the Maritime Authorities (Maritime Prefect) to which the place is subject when the station is situated at a point 50 kilometres or less distant from the maritime frontiers.

ART. 3.—The receiving stations referred to in Article 1 cannot be used for purposes other than the reception of time signals and meteorological telegrams. Any transmission of signals is formally forbidden.

ART. 4.—The contents of radiotelegrams other than meteorological telegrams which might be received by the receiving stations authorised must not be published or divulged to any person whatever excepting to the officials designated by the Administration of Posts and Telegraphs or to the competent officers of the judiciary police. No use shall be made of such telegrams.

ART. 5.—The Administration of Posts and Telegraphs reserves the right to exercise over receiving stations authorised any control that it may deem fit.

ART. 6.—The State shall not be under any responsibility by reason of the utilisation of the wireless telegraph receiving stations for which a concession may have been granted.

ART. 7.—The concessionaries are bound to notify the Directors of Posts and Telegraphs of any change that they propose to make in the installation of their stations.

The Administration of Posts and Telegraphs may, moreover, at any time and for any cause whatever, suspend or revoke the authorisations

granted without being called upon to pay any indemnity or to reveal the reasons for its decision.

These authorisations do not carry any privilege and cannot impose any obstacle to the subsequent granting of authorisations of the same character to any other applicant. They cannot be transferred to third parties without the express and written authorisation of the Administration of Posts and Telegraphs.

At the first request of the Administration of Posts and Telegraphs every concessionary shall immediately put his station out of working order.

ART. 8.—The concessionary shall submit to all the regulatory of fiscal provisions resulting from the laws, decrees or regulations which might subsequently intervene as regards the establishment or use of wireless telegraph stations.

ART. 9.—The concessionary shall pay a statistical tax fixed at five francs per year and for each station authorised. This royalty is due for the whole year.

ART. 10.—The stamp dues applicable to documents relative to the authorisation of time stations shall be borne by the applicant.

Paris, February 27th, 1920.

(Signed) Gaston Deschamps.

LAW OF AUGUST 9TH, 1920.

CHAPTER I.

G STATIONS FOR THE SERVICE OF AERIAL NAVIGATION.

ART. 1.—The Service of Aerial Navigation installs and exploits all Radio-lectric Stations which are necessary to assure the carrying out of the Service and the security of aviators.

ART. 2.—The technical particulars of these stations (location, power, nature of transmission, wavelength, call letters) are arranged between the Under-Secretary of State for Posts and Telegraphs and the Under-Secretary of State for Aviation and Aerial Transport.

ART. 3.—If interference is caused by Stations of the Service of Aerial Navigation, or if these are interfered with by foreign stations the Under-Secretary of State for Posts and Telegraphs and the Under-Secretary of State for Aviation and Aerial Transport will agree on the technical means to be employed to avoid such interference.

ART. 4.—Certain stations of the Service of Aerial Navigation may be open to private correspondence by arrangement between the Under-Secretary of State for Posts and Telegraphs and the Under-Secretary of State for Aviation and Aerial Transport. In this case the tax payable for each telegram will be established in accordance with the rules in force for radiotelegraphic correspondence with ships at sea.

CHAPTER II.

LAND STATIONS INSTALLED BY PRIVATE COMPANIES.

ART. 5.—Land Radio-lectric Stations may be installed by Companies for Aerial Navigation, or by private persons with the object of communicating with aviators or to ensure their safety.

These stations and their personnel will be subject to the rules already issued, or to be issued in the future by the Administration of Posts and Telegraphs, for all private Radio-telegraph Stations.

ART. 6.—Requests for permission to instal stations and for licences for personnel must be sent to the Service of Aerial Navigation. If the

latter decides that they are justified by the necessities of aerial traffic, and that they will not compete with its own installations, such requests are forwarded to the Administration of Posts and Telegraphs together with their remarks. If the Administration grants such authorisation this will be made through the Service of Aerial Navigation, who, in turn, will advise the applicant.

ART. 7.—The Under-Secretary of State for Posts and Telegraphs delegates to the Under-Secretary of State for Aviation and Aerial Transport the control and working of stations defined in Article 5. It retains, however, its direct right of control in so far as complaints concerning the stations or the services committed by the latter are concerned. In this case a warning is given to the Under-Secretary of State for Aviation and Aerial Transport in order that a representative of this department may attend the enquiry and give his views. He makes a direct report to his department.

CHAPTER III.

AIRCRAFT STATIONS.

ART. 8.—Aircraft Radio-lectric Stations are of two categories those of the first category being utilised both for safety in navigation and for private communication; those of the second category being utilised solely for safety in navigation.

ART. 9.—The installation of all the stations defined in Article 8 and their control are under the same rules which regulate Wireless Stations of the Mercantile Marine.

ART. 10.—The personnel of stations of the first category are subject to the same rules as the Radiotelegraphic personnel of the Mercantile Marine.

ART. 11.—The personnel of stations of the second category must be in possession of a Special Licence granted by the Under-Secretary of State for Posts and Telegraphs.

ART. 12.—The Under-Secretary of State for Posts and Telegraphs delegates to the Under-Secretary of State for Aviation and Aerial Transport the right to authorise the installation of stations as defined in Article 8, also their control and working with the following exceptions:—

(a) Only apparatus of the type agreed upon by the Under-Secretary of State for Posts and Telegraphs may be authorised, and

(b) The Under-Secretary of State for Posts and Telegraphs exercises his direct right of control when he receives complaints concerning these stations, or of mistakes committed by them. In this case he warns the Under-Secretary of State for Aviation and Aerial Transport in order that a representative of the latter department may take part in the enquiry and give his views. He makes direct report to his department.

ART. 13.—In order to permit of the control during a flight of Radio-lectric Installations, the authority in charge of all aircraft must freely allow representatives of the Administration of Posts and Telegraphs and of the Service of Aerial Navigation to make inspection on board from time to time.

ART. 14.—Requests for authority to instal stations on board aircraft must be sent to the Service of Aerial Navigation. It should be stated whether stations of the first or second category are required.

CHAPTER IV.

ART. 15.—The stations mentioned in Articles 5 and 8 are subject to "Subscription" tax for management expenses which the Controlling Company is obliged to pay over to the Treasury. This Subscription Tax is fixed at 200 francs annually per kilowatt and per station, any fraction of a kilowatt being counted as one kilowatt and the minimum amount payable per station being fixed at 200 francs. It is payable to the State on January 1st for a complete year, and is due from the day when the station is put in commission; for the first year the amount is calculated proportionately to the time yet to run before December 31st.

ART. 16.—Any company which benefits under the arrangements of this regulation for a given time will only be taxed for a portion of the aircraft affected. The Under-Secretary of State for Aviation and Aerial Transport will determine the number of the latter; failing the total of aircraft affected the number of them which should come within the scope of this regulation.

ART. 17.—Every time that an aircraft is replaced by another the licence granted for the wireless station will be valid for the second machine and a fresh tax will not be payable.

ART. 18.—In all localities where no Radio-electric Station controlled by the Administration of Posts and Telegraphs exists for communication with aviators, the Service of Aerial Navigation and the Controllers of Stations named in Article 5 must receive and transmit gratuitously all Official Government Telegrams, on condition that they emanate from or are destined for aircraft.

ART. 19.—In case of interruption of their radio communication the Service of Aerial Navigation and the Controllers of the Station named in Article 5 are authorised to route their urgent service radio communications through the Administration of Posts and Telegraphs, which will give them priority in transmission.

Reciprocally the Service of Aerial Navigation and the Controllers of Stations named in Article 5 must, in the case of interruption of radio communications of the Administration of Posts and Telegraphs, transmit gratuitously through their stations during the hours at which they are open, official or private telegrams destined for aircraft which may be sent to them by the Telegraphic Offices of this Administration.

ART. 20.—Radio communications relative to the flight and safety of aircraft have priority over those set out in Articles 4, 18, and 19.

ART. 21.—The present law will be deposited with the Under-Secretary of State for Posts and Telegraphs (Central Service) and with the Under-Secretary of State for Aviation and Aerial Transport for notification to those whom it concerns.

DECREE OF AUGUST 26TH, 1920, FIXING THE TAX FOR RADIOGONIOMETRIC MESSAGES.

H ART. 1.—Each Radiogoniometric Message sent by a Land Station at the request of a Mobile Station (Aircraft) will be liable to a fixed Coast Tax of 6 francs.

ART. 2.—Mobile Wireless Stations belonging to the Departments of the Navy and of War (warships and war aircraft) are exempted from the Radiogoniometric tax.

ART. 3.—In accordance with Article 6 of the Law of November 29th, 1850, the State accepts no responsibility in connection with Radiogoniometric Messages.

ART. 4.—The date of the announcement of the application of the tax mentioned in Article 1 will be fixed by a Law of the Under-Secretary of State for Posts and Telegraphs.

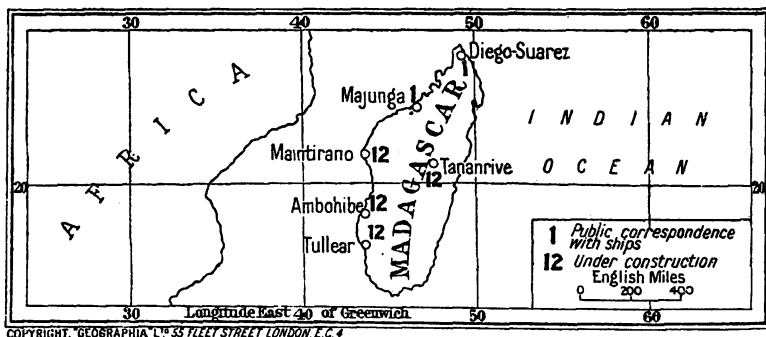

ART. 5.—The Minister of Public Works and the Minister of Finance are charged, in so far as they are respectively concerned, with the carrying out of the present Decree, which will be published in the *Journal Officiel* and inserted in the *Bulletin des Lois*.

Colonies of France

THE first trials of Wireless Telegraphy in French Colonial Possessions date from the closing years of the last century. From 1901 to 1907 the local services of the principal Colonies followed experiments in the new method of communication. The apparatus, of a type to-day obsolete, included direct excitation with induction coil and the registration of signals by means of the coherer.

These pieces of apparatus proved very satisfactory, despite the difficulties of establishing communication by wireless in tropical zones, caused through the intensity of electrical atmospheric disturbances in those regions. Trial stations were erected in 1902 and 1903 by Captain (now General) Ferrié, at Martinique and Guadeloupe, to replace the cable joining these two islands, which was broken by the eruption of Mont Pelé. Thus was the first commercial wireless service established in the French Colonies. Experiments made after 1907 demonstrated the necessity of replacing the old apparatus by the "Musical Spark."

From 1907 to 1912 the Governor administering West Africa developed the first coast system, embodying the stations of Dakar, Rufisque and Port-Etienne. Later this was completed by the construction of stations at Konakry (in Guinea) and Tabou (on the Ivory Coast). A station was also erected by the French Government at Monrovia, in the Republic of Liberia. At the same time it was decided to organise a large central station at Timbuctoo,

whose effective range should include the Mediterranean Coast. At Madagascar there were first constructed stations at Mayotte (Comoro Island) and Majunga, and later on at Diégo-Suarez, whilst in Indo-China were erected the stations at Cap-Saint-Jacques, at Kien-An, at Quang-Tcheou-Wan and at Hanoi. Such was the Colonial system about the end of 1912. The period of the world-war then intervened, effectually sealing all sources of information regarding wireless.

In 1917 the Government decided to commence the erection of a big Inter-Colonial system of wireless stations, viz., those at Saida (South Algeria), Bamako (French West Africa), Brazzaville (French Equatorial Africa), Tananarive (Madagascar), and Saigon (Indo-China). The original project made provision for the installation of two stations, which would ensure local communication and act eventually as a relay between France, the Far East, and Madagascar. These stations were intended for erection at Djibouti, on the Somali coast, and at Pondichery, in India. In view of the extent of their communication—9,000 kilometres from Paris to Tananarive, and 10,000 kilometres from Paris to Saigon—they were projected for regions where atmospheric conditions were least troublesome. Two other stations have been projected for Noumea and Papeete. They will act as relays to the French Oceanic Possessions, which are at present completely isolated and far from the nearest cable station.

The last station of the system, that at Martinique, will maintain communication with Tahiti (9,000 kilometres), West Africa (4,500 kilometres), France (7,000 kilometres), and will act as relay station between America and the Panama Canal.

Such constitutes, on broad lines, an outline of the development of the French Colonial wireless telegraph system.

The local systems of these Colonies are organised and regulated by their Governor-Generals and the other Administrators affected. Co-ordination in working is secured through the intermediary of the French Colonial Office (Secretarial and Counter-Signatory Departments), to which is attached a Special Committee, entitled the Colonial Committee of Radiotelegraphy, whose business it is to advise on all matters of general concern.

(For Positions of the Wireless Stations in French Indo-China, see map on page 402.)

FRIENDLY ISLANDS

(See PACIFIC ISLANDS—TONGA ISLANDS.)

GAMBIA

THE Colony of the Gambia was created in 1843, after a long history of trading competition in this locality with the Portuguese and French, dating from the time of Queen Elizabeth. Its separate constitution was inaugurated in 1888. The total area of the various islands and mainland adjacent thereto which go to make up the Colony is estimated at 4,000 square miles. The chief town is Bathurst, situated on the island of St. Mary, at the mouth of the River Gambia, in $13^{\circ} 24'$ N. latitude, and the only wireless station in the Colony is located there. Ruled as a Crown Colony, the administration is vested in a Governor assisted by two councils, one executive and one legislative, consisting of nominated and elected members.

ORGANISATION.

A proposal to establish wireless telegraph and telephone stations at Bathurst and MacCarthy Island is under consideration.

There are no privately owned wireless stations in the Colony, nor are there any wireless clubs or societies.

ADMINISTRATION.

The rules governing the working of wireless telegraphy in this Colony were originally instituted under the Ordinance (Maintenance of Control) of 12th February, 1903. This has now been repealed and the ruling Ordinance is that of the 22nd of September, 1913, entitled "An Ordinance to provide for the Regulations of Telegraphs." The text will be found below.

A—Ordinance, September 22nd, 1913.

B—Schedule.

C—Rules under 1913 Ordinance.

A I. This Ordinance may be cited as "The Telegraphs Ordinance, 1913."

II. The words "telegraphy" and "telegraph" mean any system used for conveying transmitting or distributing electricity or any like agent for the purpose of communication from one point to another.

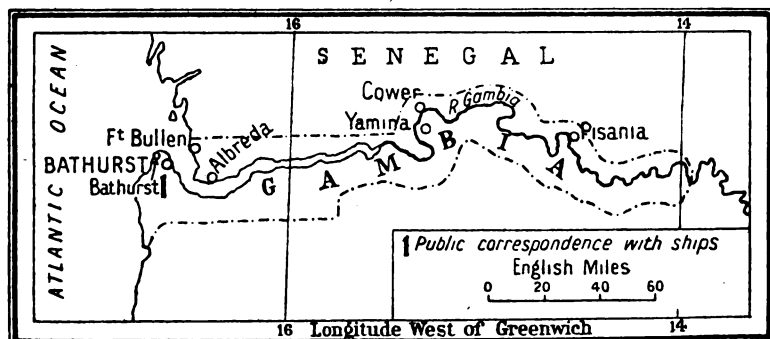

The expression "wireless telegraphy," means any system of communication by telegraph without the aid of any wire connecting the points from and at which the messages or other communications are sent and received.

III. The Governor may, whenever he shall deem it expedient to do so, licence the establishment of any telegraph station, or the installation or working of any apparatus for wireless telegraphy, in any place in the Colony or Protectorate, or on board any British ship registered in the Colony.

IV. (1) No person shall establish any telegraph station, or instal or work any apparatus for wireless telegraphy, in any place in the Colony or Protectorate or on board any British ship registered in the Colony except under, and in accordance with, a licence granted in that behalf by the Governor.

(2) Every such licence shall be in such form and for such period, as the Governor in Council may determine and shall contain such terms, conditions and restrictions on and subject to which the licence is granted as the Governor shall consider desirable in the public interest.

V. (1) If any person establishes a telegraph station without a licence in that behalf or installs or works any apparatus for wireless telegraphy without a licence in that behalf he shall be liable to a fine not exceeding one hundred pounds or to imprisonment with or without hard labour for a term not exceeding

twelve months and in either case be liable to forfeit any apparatus for telegraphy installed or worked without a licence; but no proceedings shall be taken against any person under this section except with the sanction of the Legal Adviser to the Governor.

(2) If the Chief Magistrate, the Police Magistrate, or a Justice of the Peace is satisfied by information on oath that there is reasonable ground for believing that a telegraph station has been established without a licence in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any ship within the jurisdiction without a licence in that behalf, he may grant a search warrant to any Police Officer to enter and inspect the station, place or ship and to seize any apparatus which appears to him to be used, or intended to be used, for telegraphy therein.

VI. (1) The Governor in Council may amend, vary or revoke any of the regulations contained in the Schedule to this Ordinance, and may make regulations for all or any of the following matters:—

(i) prescribing the form and manner in which applications for licences under this Ordinance are to be made;

(ii) prescribing the fees payable on the grant of any licence;

(iii) prohibiting or regulating the use of telegraphy in such telegraph stations, or of wireless telegraphy on board such ships while in such waters, by such further rules as the Governor-in-Council may see fit to make from time to time, and either in all cases or in such cases as may be deemed desirable, if at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over telegraph stations or over the transmission of messages by wireless telegraphy on board merchant ships, whether British or foreign, in the waters of the Colony.

(2) Provided that no regulations made in respect of the provisions in this section contained shall apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

VII. When an applicant for a licence proves to the satisfaction of the Governor that the sole object of obtaining the licence is to enable him to conduct experiments in wireless telegraphy, a licence for that purpose shall be granted subject to such special terms, conditions and restrictions as the Governor may think proper, but shall not be subject to any rent or royalty.

VIII. (1) Every omission or neglect to comply with, and every act done or attempted to be done contrary to the provisions of this Ordinance or of any regulation made thereunder, or in breach of the conditions and restrictions subject to, or upon, which any licence has been issued shall be deemed to be an offence against this Ordinance, and for every such offence not otherwise specially provided for the offender shall, in addition to the forfeiture of any articles seized, be liable to a fine not exceeding fifty pounds or to imprisonment with or without hard labour for a term not exceeding six months.

(2) All convictions, forfeitures and fines under this Ordinance or any regulations made thereunder may be had and recovered before a Court of Petty Sessions.

IX. Nothing in this Ordinance contained shall invalidate or impair any agreement now in force entered into between the Governor of this Colony, or the Imperial Government on behalf of the Government of this Colony, and any telegraph company, relative to the laying down or landing of any telegraphic cable, the removal, renewal, maintenance and use thereof, or to the payment of any subsidy to such company by the Government of this Colony or any other the like matter.

X. Nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

XI. The Telegraphic Establishments (Maintenance of Control) Ordinance 1903 is hereby repealed.

To this Ordinance is attached a Schedule which runs:—

THE SCHEDULE.

B 1. All apparatus for wireless telegraphy on board a merchant ship, whether British or foreign, in the territorial waters of the Colony shall be worked in such a way as not to interfere with (a) naval signalling, or (b) the working of any wireless telegraph station lawfully established, installed or worked in the Colony or the territorial waters thereof, or in the Protectorate, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. No apparatus for wireless telegraphy on board a merchant ship, whether British or foreign, shall be worked or used whilst such ship is in any of the harbours of the Colony or Protectorate except with the special or general permission of the Governor.

3. These Regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

It will be noted that under Section VI of this Ordinance the Governor-in-Council has power to make regulations. Of those which His Excellency has accordingly promulgated under date of the 28th January, 1914, the text runs as follows:—

RULES MADE BY THE GOVERNOR-IN-COUNCIL UNDER SECTION VI OF THE TELEGRAPHS ORDINANCE, 1913.

C 1. These rules may be cited for all purposes as "The Telegraph Rules, 1914."

2. The expression "the Company" shall mean any company, corporation or person for the time being engaged in the Colony or Protectorate of the Gambia in transmitting or receiving telegrams.

3. If and whenever in the opinion of the Governor an emergency shall have arisen in which it is expedient for the public service that the Government of the Colony and Protectorate of the Gambia shall have control over the transmission of telegrams by the Company, it shall be lawful for the Governor by warrant under his hand to direct and authorise such persons as he may think fit to assume the

control of the transmission of telegrams by the Company either wholly or partly and in such manner as he may direct, and such persons may enter upon the Company's premises accordingly or the Governor may direct the Company to submit to him or any person authorised by him all telegrams tendered for transmission or received by the Company or any class or classes of such telegrams, and to stop or delay the transmission of any telegrams or deliver the same to him or his agent and generally to obey all such directions with reference to the transmission of telegrams as the Governor may prescribe, and the Company shall obey and conform to all such directions.

Provided always that if default shall be made by the Company in the observance or performance of any provision hereinbefore contained it shall be lawful for the Governor by warrant under his hand to direct and cause so much of the Company's works as are in the Colony or Protectorate of the Gambia or any part of such works to be taken possession of for such services as to the Governor may seem fit, and in that event any person authorised by the Governor may enter upon the offices and works of the Company or any of them and take possession thereof and use the same as aforesaid. Nothing herein contained shall be deemed in any way to prejudice or abridge the power of the Government of the Colony and Protectorate of the Gambia to take possession under or by virtue of any agreement for the time being in force.

4. In any such case as aforesaid if the Company show that during the exercise of any of the powers aforesaid their receipts from the telegraphs with respect to which the said powers have been exercised have been less

than their receipts from the same source during a corresponding period on the average of the last three years preceding the Government of the Colony and Protectorate of the Gambia shall pay to the Company as compensation for any loss of profit sustained by the Company by reason of the exercise by the Governor of any of the powers hereby reserved such sum as may be settled between the Governor and the Company by agreement or as in case of difference may be determined by arbitration. Provided always that no such compensation as aforesaid shall be paid if and so far as the powers hereby reserved to the Governor are exercised for the purpose of preventing direct communication with any of His Majesty's enemies, and save with the consent of the Governor no such compensation shall be paid if and so far as the powers aforesaid are exercised for the purposes of preventing indirect suspected communication with any of His Majesty's enemies or of protecting the interests of His Majesty under the apprehension of impending war.

5. In estimating such compensation as in the preceding section provided the Arbitrator shall take into account all the circumstances of the case, including not only any such loss as aforesaid but also any additional profit accruing to the Company from the emergency which gave rise to the exercise of the powers aforesaid, and as regards the telegraphs with respect to which the said powers have been exercised the receipts of the Company on the average of the last preceding three years during a period corresponding to that of the exercise of the said powers shall be deemed to be the receipts which the Company would have taken during the period of the exercise of the said powers had the powers not been exercised.

GEORGIA

(See map on page 389.)

THIS small Republic has only recently gained its independence, and lies in the mountainous region of the Caucasus. Its chief town is Tiflis, whilst it possesses in Batum its outlet to the world through the Black Sea.

CONTROL.

Wireless Telegraphy constitutes a State monopoly, and is under the control of the War Office.

ORGANISATION.

The first wireless station on Georgian territory was erected during the war in 1914 for the use of the Caucasian Army which was fighting on the Turkish front. The following stations are those now existing: Tiflis, Batum and Poti.

Great improvement was made in the wireless services in 1918, when Germany recognised the independence of Georgia and a small Expeditionary German Corps was sent to the Republic. The Germans maintained a wireless service between Tiflis and Berlin by means of several ships on the Black Sea through Batum and Constanza (Roumania).

At the present time there is a very powerful station at Tiflis which was improved by the Italians. The Director of this station is Prince A. Andronikashvili and there are six other officials.

No other classes of wireless stations exist but these Government stations are used for commercial purposes and also for communicating with aircraft.

The employees of the wireless station have to pass a special examination, and a certificate is issued to them to that effect. No amateurs are admitted to it.

The Tiflis Wireless Station receives and despatches messages to and from Moscow, Basra and Constantinople, thereby acting as a relay station between these points. There is also one British Light Cruiser, one Italian Destroyer, and one American Destroyer at Batum, which have wireless installation and work in conjunction with the Georgian Central Station in Tiflis.

ADMINISTRATION.

No special laws exist yet, although they are now being worked up.

GERMANY

THE German "Empire" dates only from April 16th, 1871, when the kingdoms of Prussia, Bavaria, Saxony and Wurtemberg, together with six Grand Duchies, five Duchies, seven Principalities, and the "Free Towns" of Lubeck, Bremen, and Hamburg, elected the King of Prussia as *Deutscher Kaiser*.

CONTROL.

The Imperial Ministry of Posts is the central authority for the whole of the wireless system of the German Republic. To deal with all matters having reference to wireless telegraphy, a special section—Section V—was formed in the Imperial Ministry of Posts, which regulates all basic questions regarding installation, administration of traffic and working.

Under the authority of Section V is placed the Wireless Working Department (*Funk-Betriebsamt*), whose sphere of activity lies principally with work relating to the technical side of wireless telegraphy as well as the building and working of wireless installations.

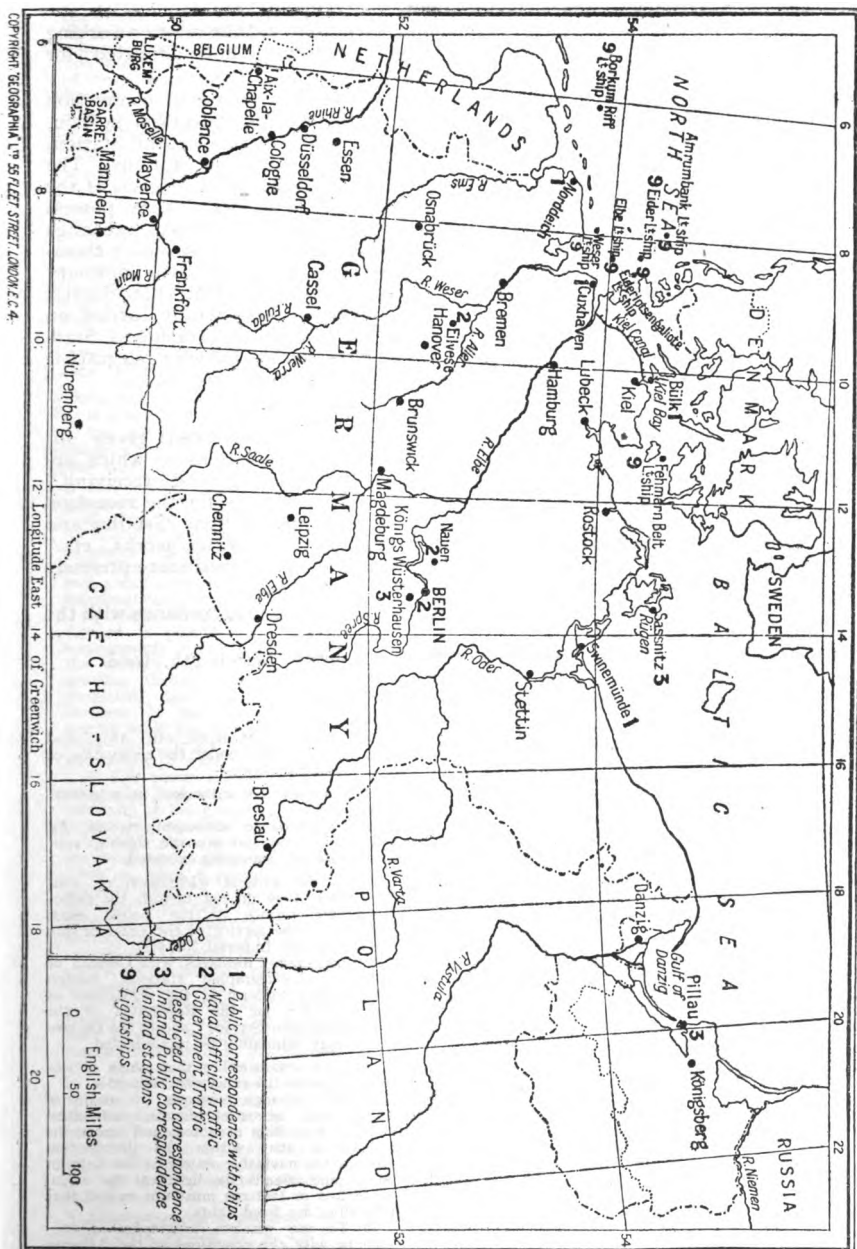

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
Mr. Giesberts	Minister of Posts	Berlin.
Dr. Engineer h.c. Hans Bredow ..	Controller of Wireless Telegraphy	Berlin.

ORGANISATION.

Wireless telegraphy, after having demonstrated its serviceability as the result of trials, was brought into the service of general public communication as early as the year 1900, by the utilisation of the coast wireless station on the Island of Borkum. Since then the practical use of wireless telegraphy, which has kept pace with technical development, has been advanced to such a degree that on the outbreak of the world war there were in Germany and in countries under German protection 26 coast stations and over 600 ship stations, in addition to numerous testing stations. There further existed the high-power wireless stations of Nauen and Eilvese for traffic with America and with the high-power stations of Kamina (Togoland) and Windhuk (South-West Africa), as well as the wireless stations at Tsingtau, Yap, Nauru, Rabaul, and Apia.

In Germany there are at present 13 coast stations, of which four are intended for general, and nine for restricted public service with ships at sea. Further, there are three direction-finding stations, which, however, have not yet been opened generally for public service. The three high-power stations of Nauen, Eilvese, and Königs Wusterhausen are only used for traffic with fixed land stations; but this traffic has not yet been regulated internationally. Nauen and Eilvese are used for overseas traffic and Königs Wusterhausen for European traffic. At the present time Eilvese is working with Spain.

The inter-continental service is developing generally in accordance with the provisions of the International Telegraph Convention and the relative working agreement. Telegraph money orders are, however, not admitted for transmission by wireless telegraphy.

The *State Wireless System (Network)* which is in course of completion is intended for the completion and relief of the wireless telegraph system. It will consist of a wireless collecting station in Berlin as a central station, as well as of chief district wireless stations and ordinary stations. The chief district stations will constitute the central traffic point of each of the wireless districts into which the State territory is divided. They possess sending and receiving installations of such a strength that a direct exchange of wireless correspondence is possible between all chief district offices themselves and with the wireless collecting station in Berlin. The ordinary wireless stations erected within each district work with their chief district station as well as between themselves. The traffic is generally carried on in accordance with the wireless telegraph regulations. Nevertheless, State telegrams are not usually forwarded by wireless routes, likewise telegraphic money orders are excluded from transmission by wireless routes.

ADMINISTRATION.

For some time past authorisations have also been given for the erection and working of private wireless installations in which are distinguished "Experimental installations for sending and receiving," "Experimental installations for receiving," "Installations for the reception of the Nauen time signal" and Wireless Working installations (Sending and Receiving installations) for overland power stations, water works, etc." The conditions in which they are approved will be determined more precisely in accordance with the special circumstances of each case.

The present Wireless Laws and Regulations appear in accordance with the following list:—

A—Telegraph Law of the German Empire, March 7th, 1908.

B—Regulations (Foreign Ships).

C—Conditions of Concession (Ship Stations).

A *Sole Article.*—The Act of April 6th, 1892, relating to telegraphs in the German Empire is modified as follows:—

1. Article 3 is completed by the following paragraph (2):—

Installations of electric telegraphs for transmission of messages without the aid of metallic wires of junction shall not be established and worked, except with the authorisation of the State.

2. The following provisions are inserted after Article 3:—

(3a) Telegraphic installations which are not exclusively designed for the internal service of a ship cannot be established and worked on German vessels unless authorised by the State.

(3b) The Imperial Chancellor shall decree the regulations concerning the working of telegraph stations on board foreign vessels in German territorial waters.

3. Article 7 is completed by the following paragraph (2):—

The provision of Paragraph 1, Phrase 1, does not apply till July 1st, 1913, to installations of the nature defined in Article 3, Paragraph 2.

B The following regulations are decreed for the working of telegraphic installations on board foreign ships in German territorial waters, and are founded on Article 3 (b) of the "Telegraph Law of the

German Empire," of April 6th 1892, and March 7th, 1908, and under the reservation of Article 15 of this law:—

1. Ships of war are authorised, in a general manner—

(a) To exchange messages, signals, by means of optic and acoustic signals, submarine acoustic signalling excepted.

(b) To use wireless telegraphy, on condition that they do not disturb the radiotelegraphic service of the public coast stations, or the service of the coast or ship stations of the Imperial Navy.

In exchanging messages with German or foreign radiotelegraphic stations, foreign vessels must conform to the regulations of the "Decree for the Regulation of the Radiotelegraphic Service" and to the Decrees which may ultimately be promulgated.

2. Foreign vessels other than ships of war are authorised—till otherwise decreed—

(a) To exchange messages by means of optic and acoustic signals, submarine acoustic signalling excepted, and under the reservation that within the illumination zone of the navigable waters of the German coasts and islands the lights of the signal protectors or lanterns must not exceed that prescribed for fixed lights.

(b) To use wireless telegraphy in conformity with the provisions of the "Decree Regulating the Radiotelegraphic Service" and the decrees which may ultimately be

promulgated; nevertheless, in the ports, roadsteads, and estuaries, and in the navigable waterways of the interior, wireless telegraphy can only be used on an authorisation being granted in writing by the Ministry of Posts and Telegraphs of the German Empire.

3. In the public interest the Articles 1 and 2 may be temporarily restricted or suspended.

4. Whosoever works telegraphic installations in a way not authorised by the preceding provisions is liable to fines determined in Article 9 of the "Law of Telegraphs," and in virtue of Article 40 of the Penal Code of the German Empire all the apparatus designed for the transmission of wireless messages can be confiscated. Moreover, installations which have been worked without a licence can be, in conformity with Article 11 of the "Telegraph Law," removed or rendered unserviceable.

C The following are some of the principal conditions on which the concession for the installation and working of a radiotelegraph station on board ship is granted—

1. The concession for the installation and working of the ship station may be withdrawn at any time.

2. The station must fulfil the following requirements:—

(a) The construction of the station must be in accordance with modern developments of science and technology.

(b) The ship station must be equipped in such a way as to be able to use the two wavelengths of 600 and 300 metres.

(c) The waves must be as pure and little damped as possible. The use of sending arrangements with which the production of the emitted waves takes place by direct sparking discharges of the antenna is not permitted, except in cases of distress. However, it may be allowed for certain special stations—e.g., for such on small ships—the primary energy of which does not exceed 30 watts.

(d) The power transmitted by the radiotelegraphic apparatus, measured at the terminals of the generator, must not under normal conditions exceed one kilowatt.

(e) With the reservation of the special provisions concerning the application of the 1,800 m. wave, a power of more than one kilowatt may be used if the ship must maintain communication over a distance exceeding 200 nautical miles from the nearest coast station, or if, in consequence of exceptional circumstances, communication cannot be maintained except by means of an increase of power.

(f) The apparatus must be suitable for transmitting and receiving at a speed of at least 20 words per minute, five letters being counted as one word. Installations working with more than 30 watts must be equipped so as to be able to cover several distances within the normal range of transmission, the shortest of which shall be about 15 nautical miles.

(g) The receiving apparatus must be capable of reception up to 600 miles with the greatest possible protection against disturbances.

3. Ships belonging to the first two categories stated under Article 8, in addition to the ordinary apparatus, must be equipped with emergency gear having an independent source

of power and capable of working for at least six hours, with a minimum range of 80 nautical miles in the case of ships in the first category, and of 50 nautical miles of those of the second category. The emergency gear is not necessary in the case of ships whose ordinary plant fulfils the conditions for emergency sets.

The emergency gear, as well as the ship stations themselves, must be placed as high as possible above the deck—viz., according to the structure of the ship and the available space, either equal to the height of the bridge or of the large boat deck, so that in case of accident they shall be able to remain longest above the water. When using batteries for the emergency plants accumulators may be arranged in the station room itself, whilst acid accumulators, on account of the vapours which they develop, must be placed outside the station room, but in its immediate vicinity and so that they are protected against outside influences.

4. The contractor must submit to the Imperial Telegraph Administration a description of the ship station, together with a plan of the circuits. Subsequent alterations of the technical equipment affecting transmission or reception must not be made without the consent of the Imperial Telegraph Administration.

5. In order to examine the prescribed arrangement of the ship's station, and the carrying out of the service, the officers of the Imperial Telegraph Administration are permitted at any time to enter the rooms where the apparatus is installed, and to inspect the working equipments.

6. The radiotelegraph service on the ship must be operated only by German subjects.

7. The service of the ship station must be carried out by an operator holding a certificate issued by the Imperial Telegraph Administration, or in an emergency, and for one journey only, by another Government which is a party to the International Radiotelegraphic Convention.

There are two classes of certificates.

The first-class certificate for the capability of the operator, with regard to:—

(a) The adjustment of the apparatus and knowledge of the methods of working.

(b) Transmitting of telegrams and receiving by sound at a speed of at least 20 words per minute.

(c) Knowledge of the regulations applying to the exchange of radiotelegraphic communication.

The second-class certificate may be issued to an operator who attains in transmitting and receiving a speed of 12 to 19 words per minute, but who fulfils the other conditions mentioned above. Operators holding a second-class certificate may be admitted:—

(a) On ships which use radiotelegraphy for their own service only and for the exchange of messages of the crew, in particular on fishing vessels.

(b) On all ships as junior operators, provided that such ships have on board at least one operator holding the first-class certificate. Nevertheless on ships placed in the first category mentioned in Article 8 the service must be carried on by at least two operators holding the first-class certificate.

Transmission may be made only by an operator holding either the first or second class certificate, except in cases of emergency.

8. Ship stations are placed in three categories:

- (1) Stations always open.
- (2) Stations having limited working hours.
- (3) Stations having no fixed working hours.

During navigation the following must remain permanently on the watch:—

- (1) The stations of the first category.
- (2) Those of the second category during the hours that they are open for service; out of these hours these stations must remain on the watch for the first ten minutes of each hour.

The stations of the third category are not bound to perform any regular "listening" service.

9. The ship station operator is under the supreme authority of the captain or of the captain's representative, who, in his capacity as superintendent of the ship station, is entitled to note the contents of all telegrams provided he has been placed by the Imperial Telegraph Administration, or, in the case of ships that are permanently abroad, by a German Consulate (General or Vice-consulate), under the obligation of preserving the secrecy of correspondence.

10. The certificate may be withdrawn if, in the case of any offences against the "Regulations for the Radiotelegraph Service," the operator has been found guilty after an inquiry.

11. If it is shown that the offence is due to the condition of the apparatus or to instructions given to the operator, the same pro-

cedure will be followed in respect of the licence issued to the ship.

12. The certificate may also be withdrawn if it is stated by an officer of the Imperial Telegraph Administration that the operator is no more in possession of the prescribed knowledge and skill. In the latter case a certificate will be granted to the operator after he has successfully passed a further examination.

13. Every change in the staff of the ship station must be reported immediately to the local post office of the home port.

14. The ship station is bound to interchange radiotelegrams with every coast station and with every other ship station, without regard to the particular system of radiotelegraphy employed.

15. The Radiotelegraph Service is regulated in accordance with the rules in the "Instructions for the Radiotelegraph Service." In addition, special instructions which may be issued by the Imperial Telegraph Administration must be observed also.

22. The ship station must be in possession of the certificate from the Imperial Telegraph Administration, stating that the installation and the working of the station have been licensed by the authority named and the category in which the station is placed. This certificate must be kept in the station and presented upon the request of the authorities of the countries at the ports at which the ship calls.

GIBRALTAR

(See map on page 414.)

PERHAPS nowhere in the world has more romance been crowded into a tiny piece of territory than is the case with the rocky promontory, $2\frac{1}{2}$ miles long by $\frac{1}{4}$ mile broad, which we know as Gibraltar. Its name (*Gebel-Tarik*, the Rock of Tarik, a famous Mohammedan Conqueror) is simply crystallised history. British since 1713, its famous $3\frac{1}{2}$ years' siege ended in 1783.

CONTROL.

In this essentially naval and military station, the Commander-in-Chief acts as Governor, exercising autocratically both administrative and legislative functions.

ORGANISATION.

There are no commercial wireless telegraph stations in Gibraltar, and the right to use wireless telegraphy is reserved to the Government. Private wireless of any description, whether amateur, commercial, or experimental, is strictly forbidden; not only the control, but the possession and working of radiotelegraphy, being exclusively vested in military or naval hands. At the present time there are three stations in existence, one for public service to ships and two used for Government traffic only.

ADMINISTRATION.

The Ordinance to prohibit importation, keeping, use or establishment of any apparatus or installation for transmission of messages by wireless telegraphy by unauthorised persons in Gibraltar came into force on October 20th, 1903. This Ordinance has been amended by the Wireless

Telegraph Apparatus Amendment Ordinance, 1909 (February 3rd), and in the text below the amending words are shown in brackets :—

We print below the ruling Ordinances and regulations :—

A—Wireless Telegraph Apparatus Ordinance, 1903.

B—Wireless Telegraph Apparatus Further Amendment Ordinance, 1909.

C—Rules as to use on Merchant Ships.

D—Ship Licence.

A 1. This Ordinance may be cited as "The Wireless Telegraph Apparatus Ordinance, Gibraltar, 1903."

2. No person shall import, keep, use or establish in Gibraltar [or on board any British ship registered in Gibraltar] any apparatus or installation for the receipt or transmission of messages by wireless telegraphy without the licence in writing of the Governor, and under such terms and conditions as may be prescribed in such licence, which licence the Governor may in his discretion at any time cancel and revoke.

3. It shall be lawful for the Governor by order in writing to authorise the Chief of Police or any other person named by him in such order to enter at any time by day or night and by force, if necessary, any premises or place [or any ship] in Gibraltar, and to search for any such apparatus or installation as described in this Ordinance, and to seize and remove the same to be dealt with in such manner as the Governor may direct.

4. Any person offending against this Ordinance, or resisting or in any way interfering with any person charged with the execution of an order issued by the Governor under the preceding section, may be arrested without warrant and shall be liable on conviction by a Court of Summary Jurisdiction to a penalty not exceeding £50, or to imprisonment with or without hard labour for any term not exceeding three months.

5. All penalties under this Ordinance shall be recoverable summarily in manner directed by "The Justices Ordinance, Gibraltar, 1890."

B The "Wireless Telegraph Apparatus Further Amendment Ordinance, Gibraltar, 1909" (April 30th), contains the following clause :—

2. A person shall not work any apparatus for wireless telegraphy installed on merchant ships, whether British or foreign, while in Gibraltar otherwise than in accordance with rules made in that behalf by the Governor, and the Governor may, by any such rules, impose penalties recoverable summarily for the breach of any such rules, not exceeding £10 for each offence, and may provide for the forfeiture on any such breach of any apparatus for wireless telegraphy installed or worked on such ships. All such rules shall be published in the Official Gazette and after such publication shall have the same force and effect as if enacted in this Ordinance.

C The following rules as to the use of wireless telegraph apparatus on merchant ships, whether British or foreign, while in Gibraltar, were made on May 3rd, 1909, under "The Wireless Telegraph Apparatus Further Amendment Ordinance, Gibraltar, 1909" :—

1. All apparatus for wireless telegraphy on board a merchant ship in the territorial waters

of Gibraltar shall be worked in such a way as not to interfere with (a) Naval signalling, or (b) the working of any wireless telegraph station lawfully established, installed or worked in Gibraltar or the territorial waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used whilst such ship is in any of the harbours of Gibraltar, except with the special or general permission in writing of the Governor.

3. If at any time in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy the use of wireless telegraphy on board merchant ships whilst in the territorial waters shall be subject to such further rules as may be made by the Governor from time to time, and such rules may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

4. These rules shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

5. Any person offending against any of these rules shall be liable to a penalty not exceeding ten pounds for each offence recoverable summarily under "The Justices Ordinance, Gibraltar, 1890," and any apparatus for wireless telegraphy installed or worked on such ship may be forfeited to His Majesty.

LICENCE TO ESTABLISH WIRELESS TELEGRAPH SHIP STATIONS.

D To all to whom these Presents shall come.

I,, Governor of the City and Garrison of Gibraltar send greeting :

Whereas Messrs..... of (hereinafter called the licensee) is desirous of establishing, installing, working and using, in a ship belonging to the licensee to wit the wireless telegraphy :

And Whereas by reason of the provisions of the Summary Conviction Ordinance, 1885, it is unlawful to establish, keep or use in Gibraltar or on board any British ship registered in Gibraltar any apparatus or installation for the receipt or transmission of messages by wireless telegraphy without the licence in writing of the Governor and under such terms and conditions as may be prescribed in such licence.

And Whereas at the request of the licensee I have agreed to grant to the licensee the licences, powers and authorities hereinafter expressed and contained for the period and upon

the terms and subject to the stipulations and conditions hereinafter appearing :-

Now, I, the above-named..... Governor of the City and Garrison of Gibraltar, in exercise of all powers and authorities enabling me in this behalf, do hereby grant to the licensee, during the term or period commencing on the day of the date hereof and until these presents and the licence or permission hereby given shall be determined or revoked, licence and permission,

(i) to establish, instal and work for the purposes hereinafter mentioned on board the steamship apparatus for wireless telegraphy (which apparatus is hereinafter referred to as "the licensed apparatus");

(ii) to send and receive messages by means of the licensed apparatus between the said steamship and coast stations and other ship stations.

And I do hereby declare that the said licence and permission is granted on and subject to the following conditions and provisions :-

1. The provisions of the Imperial Telegraph Acts, 1863 to 1916, and the Regulations made

thereunder shall be deemed to apply to this licence and on any breach thereof this licence shall be null and void.

2. The licensee shall observe the provisions of the Radiotelegraph Convention, 1912, the Service Regulations made thereunder and any modification of the Convention or Regulations made from time to time.

3. The licensee shall, except as set out hereinafter, use the licensed apparatus solely on behalf and in the course of the business of the licensee and the licensee shall not receive money or other valuable consideration for or in respect of the use of the licensed apparatus or for or in respect of the transmission or receipt of messages by means of the said apparatus.

4. The licensee shall so far as possible receive from ships and lights stations all requests for assistance and all signals of distress and shall answer such requests and signals and send them with the least possible delay to the proper authorities by means of the licensed apparatus or any other means in the power of the licensee.

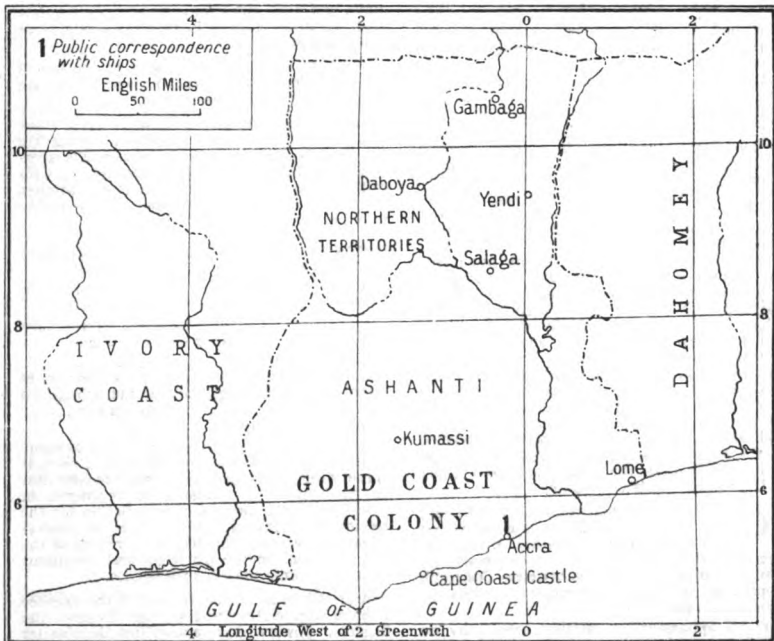

Given under my hand and seal at Gibraltar this.....day of.....19..

GILBERT AND ELLIS ISLANDS

(See PACIFIC ISLANDS.)

GOLD COAST COLONY

THE Gold Coast Colony comprises the coast of the Gulf of Guinea from about longitude $3^{\circ} 7'$ W. to $1^{\circ} 14'$ E. of Greenwich; with a protectorate extending inland to an average distance of 440 miles or to the 11° of N. latitude. It is bounded on the west and north by the French Colonies of the Ivory Coast and French Sudan, and on the east by the ex-German colony of

COPYRIGHT "GEOGRAPHIA" L^{td} 35 FLEET STREET LONDON E.C.4

Togoland. The natives are almost Pagans, but Mohammedanism and Christianity are steadily gaining ground. English merchants started trading at Kormantyne on this coast in 1618, and Chartered Companies subsequently took up the task of organising British trade. Their settlements were in 1821 transferred to the Crown, and a separate establishment under the title of Gold Coast Colony was created in 1874. The seat of Government is at Accra, and the administration is conducted by a Governor, aided by a nominated Executive Council and by a Legislative Council of six official and four unofficial members.

CONTROL.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Mr. S. B. Gosling	Postmaster-General	Accra.
Major J. F. O'Shaughnessy	Engineer-in-Chief of Posts and Telegraphs Dept.	Do.
Mr. L. C. C. Miles	Operator	Do.
Mr. P. McC. Connolly	Do.	Do.

ORGANISATION.

Radiotelegraphy was introduced in 1912, and in 1913 the Accra station was completed.

There are no privately owned experimental or amateur stations; neither are there any wireless clubs or societies. In fact no licences have been issued to any classes of individual or corporations, radiotelegraphy in this Colony being still in its infancy.

ADMINISTRATION.

The first Act to regulate radiotelegraphy in this Colony was "The Wireless Telegraphy Ordinance, 1903." This was followed by "The Wireless Telegraphy (Amendment) Ordinance, 1913" (see the WIRELESS YEAR-BOOK for 1915). These Ordinances, however, were both of them repealed by "The Wireless Telegraphy Ordinance No. 15 of 1913," which is the extant Government Ordinance as at present administered, and the text thereof will be found below.

Annexed to this Ordinance are regulations applying to Merchant Ships, whereof the text appears below. In 1917 the Government promulgated Rules for the Regulation of Wireless Telegraphy within its territorial waters. These rules also figure in the following pages:—

The Laws and Regulations here printed are:—

A—Wireless Telegraphy Ordinance No. 15
of 1913 (dated October 4th, 1913).

B—Regulations (Merchant Ships).

C—Rule No. 17 of 1917.

A An Ordinance (No. 15) to provide for the regulation of Wireless Telegraphy, 4th October, 1913.

Be it enacted by the Governor of the Gold Coast Colony, with the advice and consent of the Legislative Council thereof, as follows:—

1. This Ordinance may be cited as "The Wireless Telegraphy Ordinance, 1913."

2. In this Ordinance "Wireless Telegraphy" means any system of communication by telegraphy without the aid of any wire connecting the points from and at which the messages or other communications are sent or received: Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

3. (1) A person shall not establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place

or on board any ship registered in the Colony except under and in accordance with a licence granted in that behalf by the Governor.

(2) Every such licence shall be in such form and for such period as the Governor may determine, and shall contain the terms, conditions, and restrictions on and subject to which it is granted.

4. A person shall not work any apparatus for wireless telegraphy installed on any merchant ship, whether British or foreign, while that ship is in the Colonial waters otherwise than in accordance with regulations under this Ordinance.

5. (1) The Governor may from time to time make regulations for carrying into effect the purposes of this Ordinance, and such regulations shall on publication in the *Gazette* have the same effect as if enacted in this Ordinance.

(2) The regulations in the Schedule to this Ordinance shall have effect except in so far as

they may be amended or rescinded by regulations made under the authority of this section.

(3) If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in the Colonial waters shall be subject to such further regulations as may be made by the Governor from time to time, and such regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

6. If a Magistrate or District Commissioner is satisfied by information on oath that there is reasonable ground for suspecting that a wireless telegraph station has been established without a licence in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any merchant ship without a licence in that behalf or contrary to the provisions of any regulations made under this Ordinance or of any licence granted under this Ordinance, he may grant a search warrant to any Commissioner or Assistant Commissioner of Police or any person appointed in that behalf by the Commissioner of Police and named in the warrant, and a warrant so granted shall authorise the Commissioner or Assistant Commissioner of Police or person named therein to enter and inspect the station, place or ship and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

7. (1) Any person who shall offend against any provision of this Ordinance or any of the regulations made thereunder shall be liable on summary conviction for every such offence to a fine not exceeding fifty pounds, and upon such conviction the Court may order that any apparatus for wireless telegraphy in connection with which the offence was committed shall be seized and forfeited.

(2) Proceedings shall be taken before a District Commissioner's Court on the complaint of a Commissioner or Assistant Commissioner of Police or of any person thereto authorised by the Commissioner of Police in writing, and the procedure shall be the same as the procedure for the time being in force in respect of offences punishable on summary conviction.

8. The Wireless Telegraphy Ordinance, 1903, and the Wireless Telegraphy (Amendment) Ordinance, 1913, are hereby repealed.

REGULATIONS.

B (i) All apparatus for wireless telegraphy on board a merchant ship in the Colonial waters shall be worked in such a way as not to interfere with—

(a) Naval signalling, or

(b) The working of any wireless telegraph station lawfully established, installed, or worked in the Colony or the Colonial waters and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

(ii) In these regulations "Naval signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy between ships of His Majesty's Navy and Naval Stations, or between a ship of His Majesty's Navy or a Naval Station and any other wireless telegraph station whether on shore or on any ship.

(iii) No apparatus for wireless telegraphy on

board a merchant ship shall be worked or used while such ship is in any harbour, port or bay of the Colony except with the special or general permission of the Governor.

(iv) For the purpose of any proceedings under these regulations the master or person being, or appearing to be, in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship.

(v) Any summons or other document in any proceedings under these regulations shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be, in command or charge of the ship.

(vi) These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

RULE No. 17 of 1917.

C Under and by virtue of section 8 of the Defence of the Colony Ordinance, 1914, I, Sir Hugh Charles Clifford, Knight Commander of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Gold Coast Colony, with the advice of the Executive Council of the said Colony, do hereby make the following rules which I, with the advice aforesaid, consider necessary for the public safety and the Defence of the Colony.

1. The radiotelegraphic stations on board ships (other than His Majesty's ships of war) shall not be worked, except for the reception of messages whilst such ships are within any harbour, port or within any roadstead within the Colonial waters of the Colony.

2. For the proper enforcement of the last preceding rule.

(a) The master of every ship of British or Allied register whilst in any such harbour, port or roadstead shall cause the sending and transmitting portion of the radio apparatus on such to be disconnected and to be kept disconnected from the dynamo, accumulators, or other source of electrical power available, so that radio messages cannot be sent from the ship.

(b) If an officer appointed in writing by the Postmaster-General to examine the wireless apparatus on any ship shall so order, the master of such ship within such harbour, port or roadstead shall cause all portions of the radio apparatus on such ship to be disconnected or sealed in such manner as such officer shall order, and shall cause the same to be kept so disconnected or sealed while such ship is within such harbour, port or roadstead.

(c) The master of a ship of neutral register shall immediately on arrival in any such harbour, port or roadstead cause the aerial wires to be taken down completely and disconnected from the radiotelegraph apparatus on such ship and shall cause such wires to remain so down and disconnected while such ship is in such harbour, port or roadstead, and shall cause the operating room to be sealed and kept sealed and such other steps to be taken as any officer appointed by the Postmaster-General for the purpose may order.

Made at a meeting of the Executive Council held at Government House, Accra, this 1st day of September, 1917.

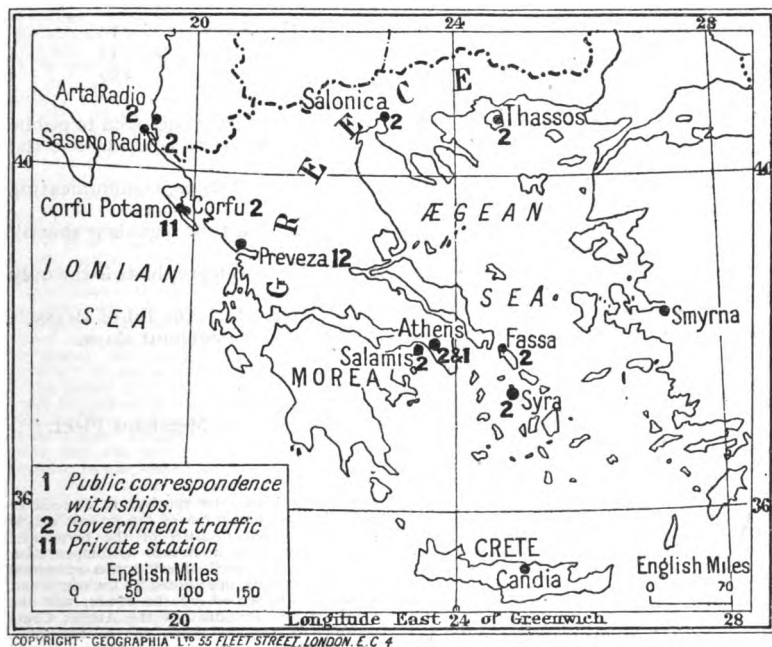

(Signed) HUGH CLIFFORD,
Governor.

GREAT BRITAIN

(See UNITED KINGDOM.)

GREECE

ONE of the oldest maritime countries in the world, the kingdom of Greece lies in latitude $34^{\circ} 45' 43''$ N., its longitude stretching between $19^{\circ} 20' 28''$ 30 E.

The State consists (a) of the southern part of the Balkan Peninsula, including all Thrace (except a small area round Constantinople), (b) of western Asia Minor, and (c) of islands in the Aegean, Mediterranean and Ionian Seas.

CONTROL.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
A. Miaoulis	Minister of the Navy	Asklipiou Str. 45, Athens.
Capt. C. Athanasiadis ..	Head of the Radiotelegraphic Service	Nikis Str. 45, Athens.
Com. L. Teocharis	First Assistant to Head of Radio Service.	Panepistimiou Str. 53, Athens.

ORGANISATION.

The Greek Ministry of the Navy, following the lead of other countries, took up the question of wireless seriously in 1909, when Capt. Athanasiadis, the present head of the Radio Service (an officer of the Navy), was sent to England at the head of a Mission for the construction of different stations.

The first wireless land station was erected at Athens, and completed in February, 1911, and several other stations were installed on ships of the Navy. It was only during the Balkan War (1912-1913) that other land stations were erected, the Athens station being the only land station in Greece up to that moment.

A new scheme of coast wireless stations has been laid down since the recent increase of territory, and is to be completed within four years. This scheme includes more than twenty stations.

The following is a summary of the wireless stations under the control of the Greek Authorities :—

Land stations under the Ministry of the Navy ..	10
Proposed stations	11
Ship stations for Public Service	150
Stations on warships	30

For the present the Athens station, No. 2, is the only one open to public service. During the present year other coast stations are to be opened to the public service.

A powerful station has just been completed near Athens, communicating direct with all other European countries.

The transmission of meteorological, aviation and time signals is shortly to be placed on new bases.

Wireless Societies or Clubs.—The Union of Greek Telegraphists is the only organisation of persons interested in wireless.

The Société Anonyme Internationale de Télégraphie sans Fil of Brussels is the only company erecting and working stations on merchant ships.

ADMINISTRATION.

A—Law, 1831, passed January 14th, 1920.

B—Regulation on the Wireless Service of the Merchant Fleet.

C—Form of Ship-Licence.

D—Form of Radio-operator's Licence.

LAW 1831.

A Concerning the organisation of the Radiotelegraphic and Radiotelephonic Service of the State and the formation of a Directorate of Radiotelegraphic Service of the Navy.

Passed, January 14th, 1920.

CHAPTER A.

General Clauses concerning the Radiotelegraphic and Radiotelephonic Service of the State.

ART. 1.—The installation and operation of Radiotelegraphic and Radiotelephonic stations on Hellenic territory and on board Hellenic ships constitutes a State monopoly.

ART. 2.—The State may grant permission to private individuals to instal and operate radio-stations on land and on board ships under conditions specified in the licence. Any such licence may be revoked or the conditions under which same has been granted be altered when the station interferes with the working of Government Stations or does not fulfil the conditions under which the licence has been issued.

In time of mobilisation of the naval or military forces the licence for the operation of private stations may be revoked without notice.

The State may take possession of private stations for its own use in mobilisation time after paying compensation as mentioned in the licence.

The State reserves to itself the right to purchase any private station in time of peace

and if the licence be revoked in accordance with the first paragraph of the present article after a certified decision of the permanent advisory board as in Article 8, compensation is fixed by a council of arbitrators composed of three members, one chosen by the competent Ministry, the second by the owner, and the third by the President of the Athens Court of Appeal.

If more than one owner is interested and these do not agree as to the choice of an arbitrator, each of them shall propose one, and the arbitrator shall be chosen from them by ballot in the presence of the arbitrator chosen by the President of the Court of Appeal.

Such a Council settles definitely any dispute regarding compensation due for the temporary seizure of the station.

ART. 3.—Radiotelegraphists operating private wireless stations must be in possession of a licence issued by the State after successful examination, and undertake the obligation to preserve the secrecy of correspondence.

Licences are valid for a term of three years and a stamp of 10 Drs. is affixed to them. When Greek subjects are concerned, the application for the issue of the licence must be accompanied by certificates proving that the applicant is not a deserter from Government Forces and has not been convicted in accordance with Article 22 of the Penal Code.

Licences for Radiotelegraphists issued before the promulgation of this law are not valid after the lapse of one year.

ART. 4.—Shall be liable to a penalty not

exceeding 20,000 Drs. and to imprisonment for a term not exceeding one year.

1. Every person who establishes a radio-station or sets any radio-apparatus on land or on board ship without a licence.

2. Any person employing an operator not holding a State licence.

3. Any person violating the terms under which the licence of installation of wireless station has been granted.

4. Any person who sends or transmits any fraudulent distress signal or who without lawful excuse interferes with or obstructs any radio communication of other stations as well as persons exhorting operators to transmit such signals.

5. Any person causing damage or destruction to the radio-apparatus.

6. Any person violating the regulations in force.

7. Any person violating the due secrecy of the radio communication.

The above penalties are imposed by the Athens Court of First Instance on the action of the competent Minister without excluding any penalty provided by the Penal Code or by the Military Penal Code in the event of a Military case.

The same Court can order the confiscation of the station whenever it might be deemed desirable according to circumstances.

In addition to the above penalties the Minister can order when he takes cognisance of such infringement of the above regulations, a temporary cessation of the service of the station confiscated, also the set and any apparatus necessary to the wireless service.

The licence of an operator punished by the Court for one of the above cases is suspended temporarily or permanently on the judgment of the Court. Should the competent Minister think that the infringement effected by the operator is not serious as to demand action, or in the event of the operator being guilty of negligence, the Minister may punish him by suspending his licence for a period not exceeding three months.

ART. 5.—The land stations of the State are divided into two classes :—

(a) Inland Radio-Stations for the transmission of official or private correspondence with ship stations or other Inland or Coast Stations of the State or Stations abroad providing that there are no private Wireless Stations.

(b) Shore or Coast Radio-stations for the transmission of official or private correspondence to ships or other coast and land stations in the State or abroad, providing that there are no private stations for wireless correspondence.

The Government stations on board ships are divided into two classes :

(a) Stations on board warships.

(b) Stations having been specially installed by the State on board merchant ships, exempted by the present law for the ships, particular use.

ART. 6.—All wireless telegraphic subjects come under the special jurisdiction of the Ministries of Marine, of Communications, and of National Economy, who are kept *au courant* with wireless telegraphic questions in connection with merchant shipping by their representative and member to the Advisory Board (provided for by Article 8). The Director of the Merchant Shipping Department, or by direct communication of the Marine Minister providing special arrangements are made.

The following come under the special jurisdiction of the Minister of Communications :—

(a) The installation and operation of the land stations.

(b) The issue of licences for the installation and operation of private land stations, the inspection and supervision of their operation, the observance of the regulations in force and the conditions stipulated in the licence, of these stations upon decision of the board provided for in Article 8.

(c) The control and payment of accounts for private radiograms transmitted by stations under his jurisdiction, or that of the Minister of Marine who in turn transmits full information concerning the subject.

For this purpose the staff of the office of the Ministry of Communications shall be fixed by special Royal Decree.

The following come under the jurisdiction of the Ministry of the Navy :—

(a) The installation and operation of the coast stations, of warship stations, and stations of the State on merchant vessels.

(b) The issue of licences for the installation and operation of private stations on merchant vessels and private coast stations after consultation with the Advisory Board, the inspection and supervision of their operation, the observance of the regulations and conventions in force and conditions stipulated in the licence of the station.

(c) The issue of licences to the operator of all stations.

(d) The control of ships or land stations and the observance of rules and conventions shall be fixed by Royal Decree and special regulations.

(e) As coast or shore stations are considered all stations installed a small distance from the coast if they keep up Naval radio-communication.

ART. 7.—Temporarily and until the formation of a Technical Service has been effected at the Ministry of Communications all matters under its jurisdiction except those stipulated in Chapter C will pertain to the Ministry of Marine.

A permanent Advisory Board is established at the Ministry of the Navy, composed of the Head of the General Staff of the Navy, as Chairman, the Director of Posts and Telegraphs, the Director of the Radio-Service of the Navy, the Head of the Radio Department of the Ministry of Communications, and one officer of the Army General Staff appointed by the Chief of the Staff, and of the Director of the Merchant Shipping Department in the Ministry of National Economy.

This Board considers :—

(a) The necessity for the erection of land stations.

(b) The issue of licences for the installations of private stations in the interior or on the coast and the cancellation of such licences.

(c) Matters pertaining to International Conventions.

(d) Questions arising between different services.

(e) Any relative matter brought forward by the Ministers of the Navy and Communications or of the Ministry of National Economy.

ART. 9.—The coast station charges and ship charges are fixed by Royal Decree according to circumstances after the consultation with the Advisory Board.

CHAPTER B.

CONCERNING THE RADIO-SERVICE ON BOARD MERCHANT SHIPS.

ART. 10.—All Greek merchant ships of 1,600 gross tonnage and over, and ships of less tonnage if they carry fifty or more persons including crew, must be fitted with a radiotelegraph set. The following are exempted from the above obligation :—

(a) Cargo-boats and sailing vessels whose voyages are not extended to an ocean.

(b) Passenger ships whose voyages are included in the parallelogram limited by 34° 0' to 42° 20' north latitude and the meridians 17° 0' to 30° 0' east of Greenwich. Passenger boats below 500 gross tonnage, undertaking fixed voyages further than the meridian 30° east of Greenwich, but in the area included by the above parallelogram, may also be exempted by decision of the Ministers of the Navy and National Economy.

In reckoning the number of persons stated in the first paragraph of this article, there are not included persons embarked exceptionally and temporarily as the result of *force majeure*, or because the master is under the necessity of increasing the number of his crew to fill the places of those who are ill, or is obliged to carry ship-wrecked or other persons.

ART. 11.—The power of the wireless sets provided for in the foregoing article will be defined in the licence and shall be able to transmit signals clearly under normal circumstances at a distance of at least 100 nautical miles in addition they shall be equipped with an emergency gear which elements shall be under the greatest safety conditions.

ART. 12.—The clearance of ships, subject according to Article 10 to carry a wireless set, and not being fitted therewith, is prohibited by the harbour authorities. The acceptance of Greek passengers on ships of foreign nationality which are not equipped with wireless is also prohibited for voyages where Greek ships are required to be equipped.

ART. 13.—Merchant ships exempted from the obligation to be fitted with a wireless set, may be fitted with State apparatus for purposes of the War-Navy. All expenses of installation and maintenance of the necessary staff for the operation being reserved to the competent Ministry.

ART. 14.—All ship radio-charges are deducted from the general radio-charges and belong to the shipowner or to any person having the exploitation of the radio-station under special arrangement with the shipowner.

In cases where the ship helps in salvage or affords assistance to another ship in consequence of a radiogram the shipowner is required to pay to the State 10% of the net sum which he obtains for salvage, but only if the apparatus belongs to the State. This sum being devoted to the Naval *Caisse des Invalides*.

CHAPTER C.

CONCERNING THE RADIO-SERVICE OF THE NAVY.

ART. 15.—A Direction of Radio-Service of the Navy is formed in the Ministry of the Navy under the immediate orders of the Minister of Marine and to which, in addition to matters specified in Article 6 of this law, are subject : The enlistment, training, appointment and alterations of the staff serving on stations

subject to the jurisdiction of the Ministry of the Navy or any other relative matter to be fixed by Royal Decree.

(Further articles concern the special service of the Naval Radio-Corps.)

REGULATION OF WIRELESS SERVICE ON MERCHANT SHIPS.

CHAPTER I.

SHIPS BOUND TO BE FITTED WITH RADIO-TELEGRAPH INSTALLATION.

B 1. All Greek merchant ships of 1,600 gross tonnage and over, and ships of less tonnage, if they carry fifty or more persons including crew, must be fitted with a radiotelegraph set. The following are exempted from the above obligation :—

(a) Cargo-boats and sailing vessels whose voyages are not extended to an ocean.

(b) Passenger ships whose voyages are included in the parallelogram limited by 34° 0' to 42° 20' north latitude, and the meridians 17° 0' to 30° 0' east of Greenwich. Passenger boats below 500 gross tonnage, undertaking fixed voyages further than the meridian 30° east of Greenwich, but in the area included by the above parallelogram may also be exempted by decision of the Ministers of the Navy and National Economy.

In reckoning the number of persons stated in the first paragraph of this article there are not included persons embarked exceptionally and temporarily as the result of *force majeure*, or because the master is under the necessity of increasing the number of his crew to fill the places of those who are ill, or is obliged to carry ship-wrecked or other persons.

2. The power of the wireless station on merchant ships is fixed by the Direction of the Radiotelegraphic Service of the Navy (D.R.S.N.), and is prescribed in the licence according to the voyages undertaken by the various ships. As a minimum limit should be taken the clear transmission of signals to a distance of at least 100 naval miles under normal conditions. In addition merchant ships must be fitted with an emergency set, the whole system of which must be kept in the safest condition. The accumulators must be placed out of the wireless cabin and if possible in the open air in dry cases. The wireless cabin must be connected with the bridge by some safe means assuring verbal communication.

3. Each shipowner, obliged by this law to instal a radiotelegraph station on his ship, must submit an application to the D.R.S.N. (Inspection Department) for the necessary licence.

In the application the following items of the ship must be prescribed :—

- (1) Dynamo—how moved and where placed.
- (2) Masts—distance between and height.
- (3) Capacity (deadweight).
- (4) Passenger or cargo.
- (5) Number of crew.
- (6) Voyages undertaken.
- (7) System of the radiotelegraphic station to be installed.
- (8) Length of aerial.
- (9) Wave system.
- (10) Wavelengths used.
- (11) Emergency set.

After the installation the shipowner submits to the D.R.S.N. :—

- (1) Small drawing of the aerial.
- (2) Small drawing of the connections.
- (3) Disposition of the set in the cabin.

The responsibility for the accuracy of these certificates is borne wholly by the shipowner.

The D.R.S.N. on granting the necessary licence can accept the above items or change them, the shipowner being obliged to comply with the suggestion of the D.R.S.N.

4. Shipowners not bound by law and wishing to instal a radio set on their ships must apply by a similar application as above.

5. The D.R.S.N. on granting a licence assigns the call letters to the station.

6. Merchant ships are divided into three classes, A, B, C, as regards the wireless installation :—

Class A.—To this class belong all the passenger ships travelling at a distance of more than 200 miles from the coasts. The ships of this class must be in permanent watch.

Class B.—To this class belong all other ships which are bound by law to be fitted with a radiotelegraphic installation; the ships of this class are bound to keep limited watch during the voyage which is regulated in accordance with the needs of the voyage. In any case the station of these ships must be in watch the first ten minutes of each hour.

Class C.—To this class belong all ships fitted with wireless installation without being bound by law. The station of these ships have no fixed watches.

CHAPTER II.

SERVICE OF WIRELESS STATION ON MERCHANT SHIPS.

9. The wireless stations service of Greek merchant ships must be carried out by telegraphists holding a Greek licence granted in accordance with Law 1831 by the D.R.S.N.

10. The stations of ships of class A are served by two operators at least, holding a first-class licence.

11. The stations of ships of class B are served by at least one operator holding a first-class licence.

In cases where no second operator is carried a member of the crew must be able to understand the distress signal or the call of another station, so that he may at once inform the telegraphist.

Such skill of the said man of the crew shall be tested and mentioned in the respective report of the Wireless Inspector.

12. The station of a ship of the C class must be served by at least one operator holding a second-class licence.

13. The operator of the ship in charge of the station is responsible for the regular carrying out of the service, the keeping up of books, the cleaning and maintenance in good order of the apparatus. The other operator must obey him.

14. Each merchant ship station must be supplied with the following papers :—

- (1) The licence for the installation.
- (2) A copy of the present Wireless Regulation and of any other subsequent or of any circular concerning the radiotelegraphic service.
- (3) A copy of the International Wireless Convention and of annexed regulation.
- (4) The official list of wireless stations and alphabetical list of call letters.

(5) Radiogram prints.

(6) A copy of the standing wireless and cable rates and the protocol of the wireless station.

(7) A log-book for the wireless station.

The operator will state from time to time on a slate placed out of the wireless cabin the coast station with which he is in touch.

15. The operator on service shall keep in a log-book of the station a record of all orders received and all other observations connected with the wireless service and any infringement of the regulations.

The log-book of the station will be considered as an official document and it is forbidden to detach leaves therefrom or to use erasers on its pages. It may thus serve as means of proof before the courts and the competent authorities.

16. The wireless station on a merchant ship and the operators serving it are under the direct orders of the captain who regulates their watch on his own responsibility. But the operator is responsible for any signal or call of the station or any message which he receives and has not passed in the protocol of the station.

17. The captains of the merchant ships must take the necessary steps to secure during the voyage the necessary electric power for the transmitting set for the regular service of the station.

18. When the captain, on his own responsibility, forbids communication or orders silence to a station's call, or in general gives orders to the operator contrary to the regulations or hinders the operator in the fulfilment of his duties in any way, the latter must call the captain's attention to the fact, and if the captain insists, the operator must obey stating the fact in his log-book, and as soon as the ship arrives at a Greek port he must report the case to the wireless inspector or in the latter's absence to the harbour master.

19. The correspondence and the service in general of merchant ships is carried out in accordance with the regulations annexed to the International Radiotelegraphic Convention of London and with the present regulation, as well as with any other order of the D.R.S.N.

Operators are also bound to carry out all orders and to comply with the instructions given by the wireless inspector.

20. On no account may a ship station use other call letters than those prescribed in the licence.

21. The transmission of radiotelegrams in harbours or bays in the proximity of coast stations is prohibited.

22. Merchant ship stations are bound to suspend transmission as soon as a coast station requires it. As a general rule the ship stations must comply with the orders given by the coast stations.

23. In time of mobilisation or Naval manoeuvres the ship stations must conform to the instructions given by the Greek Navy.

24. Before leaving port the operator in charge of the station must try the working condition of the main and emergency set. This test, however, is carried out by disconnecting the aerial. Whenever the operator thinks it necessary to verify the radiation of the station and its emergency set or the sensitivity of the receiver he applies for it, using the international abbreviation.

25. The operators in charge of merchant ships are bound when they proceed to a Greek harbour, to report at once to the wireless

inspector or to the harbour officer all deficiencies of the station and in his personnel.

26. The captain is bound at specified intervals not exceeding four hours to give the operators the position of the ship which is to be constantly suspended under their view in the receiving cabin.

27. The operator receiving (by any means) knowledge of a message dangerous to the interests of the country must report it at once to the captain and to the nearest Government coast station or warship or harbour authorities, and simultaneously must draw up a report embodying the message, the station in communication, and full information on it, which he forwards to the D.R.S.N.

28. If the wireless operator receives a suspicious message for transmission from a passenger, before transmitting it he must ask the permission of the captain.

29. It is forbidden for operators to undertake service at a station not fitted with a regular licence.

30. All operators must carry their licence in the ship to which they belong.

31. It is forbidden for operators to maintain communication by wireless on subjects not referring to the wireless service.

32. Whenever the operator hears any infringement of the rules, effected by other stations he must report at once the fact with all necessary particulars to the D.R.S.N. and he will record in his log-book exactly what he has heard.

33. It is absolutely forbidden for a third station to interrupt two stations already communicating.

34. As a general rule wireless operators must constantly recognise that it is of their duty to enable the wireless communication to be carried out regularly and not to be absorbed exclusively by the finishing up of their service in the station they belong to.

35. It is forbidden to every person not concerned in the service of the station to enter the wireless cabin.

36. Captains are bound to supply the necessary personnel for the cleaning of the station and the repair of the aerial and of the set and generally to grant all assistance for the maintenance and regular service of the station.

37. Merchant ships operators hold officer's rank of the merchant fleet.

38. Operators on finally landing from a merchant ship must present their licence to the captain before landing who endorses on it the capacity and character of the operator as shown during his service period.

CHAPTER III.

PENALTIES FOR THE VIOLATION OF THE LAW AND THE REGULATION.

39. Shall be liable to a penalty not exceeding 20,000 Drs. and to imprisonment for a term not exceeding one year.

(1) Everyone who establishes a wireless station or sets any radiotelegraphic apparatus on land or ship without a licence.

(2) Any person employing an operator not holding a State licence.

(3) Any person violating the terms under which the licence of installation for wireless has been granted.

(4) Any person violating the regulations in force.

(5) Any person who sends or transmits any false or fraudulent distress signals or who

without lawful excuse interferences with or obstructs any radio communication of the station.

(6) Any person causing damage or destruction to the radiotelegraph apparatus.

(7) Any person violating the due secrecy of the radio communication.

(8) Any person violating generally any regulation of the rules in force.

40. The above penalties are imposed by the Athens Court of First Instance on the action of the competent Minister without excepting any penalty provided by the penal code or by the military penal code in the event of military case.

41. The same court can order the confiscation of the station whenever it might be deemed desirable according to circumstances.

42. In addition to the above penalties the Minister can order when he takes cognisance of such infringement of the above regulations, a temporary cessation of the service of the station confiscated, also the set and any apparatus necessary to the wireless service.

43. The licence of an operator punished by the court for one of the above cases is suspended temporarily or permanently on the judgment of the court. Should the competent Minister think that the infringement effected by an operator is not so serious as to demand such action, or in the event of the operator being guilty of negligence, the Minister may punish him by suspending his licence for a period not exceeding three months.

CHAPTER IV.

INSPECTION OF THE WIRELESS STATIONS OF MERCHANT SHIPS.

44. In harbours specified by order of the Minister of Marines there are centres for Inspection of wireless in active service.

45. In these centres there are Inspectors of the corps of the wireless operators of the War-Navy to superintend the application of Law 1831, of the International Convention and the Regulations for Wireless Telegraphy which are in force.

46. The Inspectors communicate directly with the harbour officers and co-operate with them in order to enforce the law.

47. The Wireless Inspectors, or failing them, the harbour officers, inspect the ships affected by the law before their departure and verify whether they are fitted with wireless as well as with the necessary personnel and the class of operators in accordance with the law and the present regulations.

48. The Wireless Inspector who discovers an infringement of the law or the regulations reports it simultaneously to the harbour master who either prevents the leaving of the ship in accordance with law or reports the infringement effected to the D.R.S.N. asking for the suspension of the responsible operator or the imposition of a penalty according to the nature of the infringement effected.

The Harbour Master accompanies such report with a detailed report concerning the transgression committed, signed by him and the Wireless Inspector, and if need be accompanied by a sworn statement to this effect, which he may obtain from any person acquainted with the fact. He also submits any other item which might be useful to the court.

49. If the inspection of the ship station is impossible the Inspector or the Harbour

Officer can ask for a written statement from the captain testifying that the station is maintained in good condition.

50. The Wireless Inspector can accept as a proof of the efficiency of the set and the capacity of the operators of the ship under examination, radiograms transmitted or received during the lapse of the last voyage to the harbour where they are from a distance of at least 100 miles.

51. For any obstruction or difficulty caused by the captain or other person of the ship with regard to the service and the duties of the Inspectors or the Harbour Officers the captain of the ship will be held responsible and against whom the Harbour Master may at once order legal proceedings to be taken.

52. The captain is responsible if he sail from any harbour where there is an Inspector without having his wireless installation in order or the requisite number of operators.

53. All consequences of the law concerning the infringement of the regulations will be enforced against the captain or the shipowner or against both according to the circumstances.

GRENADA

(See map on p. 311.)

GRENADA, and the chain of small islands called the Grenadines, lie between 12° 30' and 11° 58' N. latitude, whilst their longitude is included between 61° 20' and 61° 35' W. The total area of the colony is estimated at about 85,120 acres. Originally settled by the French, it was definitely ceded to Great Britain in 1783. The control is vested in the Governor, an Executive Council, and a Legislative Council, both consisting partly of nominated and partly of official members. There are no wireless clubs or societies in the colony.

Emergency set

The Director of the Naval Radiotelegraph Service.

ADMINISTRATION.

Wireless telegraphy is regulated by the following Ordinances and Regulations :—

A—Wireless Telegraph Ordinance, 1903.

B—Wireless Telegraph Amendment Ordinance, 1913.

C—Regulations of February 1st, 1913.

D—Regulations of August 3rd, 1914.

WIRELESS TELEGRAPH ORDINANCE
1903.

A In this Ordinance the term "Wireless Telegraphy" means any system or installation designed or constructed for the transmission or receipt of any messages or communications to or from a distant place by means of electric currents and signals generated by any apparatus or instrument which system, installation or instrument is unconnected by wire or other tangible attachment with such distant place. The term "Wireless Telegram" means any message or communication transmitted, or intended for transmission, by wireless telegraphy.

2. The Governor-in-Council and the servant, of the Government of the Colony shall have the exclusive privilege of installing, erecting, maintaining, and using in this Colony apparatus intended for wireless telegraphy, and also the incidental services of transmitting, receiving, collecting or delivering wireless telegrams.

3. It shall not be lawful for any person to instal, erect, maintain, or use in this Colony any apparatus or instrument for the purpose of wireless telegraphy without having previously obtained from the Governor a licence in that behalf to be granted on such terms and conditions as the Governor may prescribe.

4. Any person contravening the provisions of this Ordinance shall be liable on conviction to a fine not exceeding Fifty Pounds, and the apparatus and installation in respect of which a conviction is obtained may by order of the Magistrate before whom such conviction is obtained be forfeited to the use of His Majesty the King.

5. All proceedings under this Ordinance may be taken before the Magistrate of the Southern District or any other person appointed by the Governor for the purpose of hearing and deciding the case; and the mode of procedure shall be according to the law in force for the time being in respect of other offences punishable on summary conviction.

6. This Ordinance may be cited as "The Wireless Telegraph Ordinance."

THE WIRELESS TELEGRAPH AMENDMENT
ORDINANCE, JANUARY 15TH, 1913.

B Be it enacted by the Governor with the advice and consent of the Legislative Council of Grenada as follows:
1. The Governor-in-Council may make regulations.

(a) Prescribing the form and manner in which applications for licences under the Principal Ordinance are to be made and the fees payable on the grant of any such licence;

(b) Governing the use of wireless telegraph apparatus on merchant ships, whether British or foreign, while in the territorial waters of the Colony; and

(c) Generally for the purpose of carrying the principal Ordinance into effect.

2. Any person committing a breach of any regulation made under this Ordinance shall be liable on summary conviction to a fine not exceeding Twenty Pounds.

3. (1) This Ordinance shall be cited as the Wireless Telegraph Amendment Ordinance, 1913, and shall be read as one of the Wireless Telegraph Ordinance, and may be cited therewith as the Wireless Telegraph Ordinances, 1911 and 1913.

(2) The Wireless Telegraph Ordinance is herein referred to as the Principal Ordinance.

Passed the Legislative Council this tenth day of January, in the year of our Lord one thousand nine hundred and thirteen.

C. LIVINGSTON WILSON,
Clerk of Councils.

REGULATIONS WITH RESPECT TO THE USE OF
WIRELESS TELEGRAPH APPARATUS ON
MERCHANT SHIPS.

(Gazetted February 1st, 1913.)

C Under the authority of section one of the Wireless Telegraph Ordinance, 1913, the following regulations are hereby made by the Governor-in-Council:—

1. In these regulations the expression "merchant ship means any merchant ship" whether British or foreign.

2. All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of the Colony shall be worked in such a way as not to interfere with (a) Naval signalling, or (b) the working of any wireless telegraph station lawfully established, installed, or worked in the Colony or territorial waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph established on ships at sea.

3. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used whilst such a ship is in any of the harbours of the Colony except with the special or general permission of the Colonial Postmaster.

4. If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government shall have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in the territorial waters shall be subject to such further rules as may be made by the Governor from time to time, and such rules may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

5. These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

Made by the Governor-in-Council this 31st day of January, 1913.

C. LIVINGSTON WILSON,
Clerk of Councils.

REGULATIONS MADE BY THE GOVERNOR.
(Gazetted August 3rd, 1914.)

D Whereas it is provided by section 4 (3) of the Wireless Telegraphy Ordinance, 1913, that if at any time in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in the territorial waters of the Colony shall be subject to such further regulations as may be made by the Governor from time to time; and such regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

And whereas in my opinion such emergency as aforesaid has arisen:

Now I do hereby make the following further regulations—namely:—

1. The Governor may appoint any person to take possession and control of the apparatus for wireless telegraphy on board of any merchant ship while in the territorial waters of the Colony.

2. Any person so appointed may enter upon any such ship and take possession of the aforesaid apparatus thereon on behalf of His Majesty, and use the same for His Majesty's service and subject thereto for such ordinary services as to the said person may seem fit.

3. Any such person may instead of taking possession of such apparatus as aforesaid direct the master of the ship to submit or cause to be submitted to him all messages intended for transmission or arriving by the said apparatus or any class or classes of such messages, to stop or delay the transmission of any message or deliver the same to him, and generally to obey all such directions with reference to the transmission of messages as such persons may prescribe, and the master of the ship shall obey and conform to all such directions. Any master failing to obey and conform to any such direction shall be liable on summary conviction to the penalties under the Ordinance provided.

Made by me under the provisions of the Wireless Telegraphy, 1913, this third day of August, 1914.

DOUGLAS YOUNG,
Acting Governor.

GUAM

(See map on p. 139.)

GUATEMALA

THE Republic of Guatemala lies south-eastward of Mexico, and is almost shut off from the Atlantic Ocean by British Honduras on the north and by the Republic of Honduras on the south-east. Puerto Barrios and Livingston constitute the chief ports of the Republic on the Atlantic seaboard; San José (the chief port), Champerico and Ocos on the Pacific. The Republic in its present form was established on March 21st, 1847, after having formed part, for 26 years, of the Confederation of Central America. The Constitution dates from December, 1879, modified in 1885, 1887, 1889, and 1903.

CONTROL AND ORGANISATION.

At the present moment radiotelegraphy is represented by a private Government station at Guatemala City. This installation is nominally under the supervision of the Minister of Public Works, but is entirely under the personal direction of the President. An American operator named Mr. J. H. Watts, of the U.S. Navy, has been lent to the Government for the purpose of superintending the working.

COPYRIGHT: "GEOGRAPHIA" LTD 55 FLEET STREET, LONDON, E.C.4.

ADMINISTRATION.

No laws and regulations have up to the present been issued in Guatemala to regulate the use of wireless.

HAITI

(See map on p. 398.)

THE Republic of Haiti occupies the western (French-speaking) portion of the Island of San Domingo,* which ranks only second in size to Cuba amongst the West Indian Islands. Its area is estimated at 10,200 square miles.

CONTROL.

The Republic does not itself possess any wireless stations, and has passed no regulations affecting telegraphy. The various stations which do exist in the island all constitute items in the American occupation, and remain under the supervision of U.S.A. officials.

HAWAII

(See UNITED STATES OF AMERICA.)

HOLLAND

(See NETHERLANDS.)

HONDURAS (BRITISH)

(See BRITISH HONDURAS.)

HONDURAS (REPUBLIC OF)

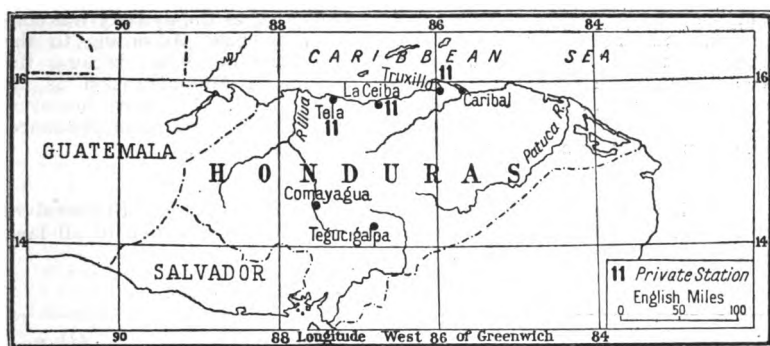

HONDURAS is a Republic, proclaimed September 15th, 1821, and is governed under a charter proclaimed October, 1894. The Legislative Power is in the hands of a Congress of Deputies of 42 members, chosen for four years directly by popular vote, in the ratio of one per 10,000 inhabitants. The executive authority rests with the President, nominated and elected by popular vote for four years. The number of electors is about 110,000. The Republic is administered by a Council of six ministers, with the portfolios of Foreign Relations, Government of Justice, War and Marine, Treasury and Public Credit, Public Works and Agriculture, and Education.

The area of the Republic is about 44,275 square miles, which lie between the Atlantic on the north and the Pacific on the south. The Atlantic coast line is the more important, as it forms the seat of the banana industry, and contains the only railroads in the country. The chief towns on the north coast are Puerto Cortes (the head of the railroad leading inland to San Pedro Sula, one of the most important towns in the country), Tela, La Ceiba, Trujillo, and Omoa. On the south coast Honduras has only a small coast line on the Gulf of Fonseca, with a port on Tiger Island called Amapala. This constitutes the chief port for the capital, Tegucigalpa, goods and passengers being carried across the gulf to the small port of San Lorenzo, and thence by automobile and oxcarts over the fine national highway to the capital, a distance of 80 miles.

CONTROL AND ORGANISATION.

The first wireless station was installed during 1912 at the port of La Ceiba by the Vaccaro Brothers Railroad and S.S. Company.

* For Wireless Organisation and Laws current in the Dominican Republic see under Santo Domingo.

COPYRIGHT "GEOGRAPHIA" L^{td} 55 FLEET STREET LONDON, E.C.4

There are other stations at Cuyamel, Tela, and Trujillo.

All these stations belong to private companies, and are without any co-ordination, being used only by the various companies to maintain communication with their own steamers. Under favourable atmospheric conditions they can work with New Orleans, but ordinarily they communicate with the Isla del Cisne (Swan Island), in the Caribbean Sea. They are more or less of the type of that at Tela, which has a transmitter of 5 kw., and aërials sustained by towers 250 feet high.

The Government has recently ordered a course of wireless to be included in the studies of the Military School at Tegucigalpa, and has installed a teaching set. There are no manufacturing plants in the Republic.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address
Excmo. Señor don Jesus M. Alvarado	Secretario de Estado en el Despacho de Fomento, Obras Públicas y Agricultura	Tegucigalpa
Licenciado don Antonio Castillo Vega	Sub-Secretario de Estado en el Despacho de Fomento, Obras Públicas y Agricultura	Tegucigalpa

ADMINISTRATION.

According to the Law of Telegraphs of the Republic, this branch of Telegraphy is the exclusive right of the State, but this right has been made over to private companies on the north coast, in the form of concessions, under the following conditions:—

"The concessionaire has the right to construct, maintain, and use, in order to direct the service of his steamships, and those contracted by him, wireless stations; these cannot be placed in public service without previous arrangement with the Government. Said Government shall have the right, in times of peace or of war, to use such installations, without remuneration for the concessionaire, and even to direct and control, exclusively, the service of same, by its own employees."

These concessions granted by the Government were approved by Congress.

HONG-KONG

(See CHINA, FOREIGN SETTLEMENTS.)

HUNGARY

HUNGARY was founded in the ninth century by the Magyars. Constitutionally speaking the method of government has always been monarchical. By the Convention of 1723 (*Pragmatica Sanctio*) Hungary

and Austria together formed a single territory as far as the dynasty was concerned, and in consequence for purposes of defence. According to the Convention of 1867 the Commonalty was further developed because the Austro-Hungarian Monarchy possessed a common Administration as far as the Army and Foreign Affairs were concerned. The war, however, changed all this, and as a result Hungary acquired her entire independence. The form of government remains in principle monarchical.

CONTROL.

Radiotelegraphy is at present controlled by the Director-General of Posts and Telegraphs who is responsible for the promulgation of all laws and regulations relative thereto.

OFFICIAL CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Mons. Charles Demény	Secretary of State and Director-General of Posts and Telegraphs	Budapest

ORGANISATION.

A large station, with a range of 3,000 km., situated at Csepel, near Budapest, was established on November 18th, 1914, whilst a trial station has been erected at Budapest itself. Wireless apparatus has been installed in many of the schools throughout the country. No stations exist for aviation or meteorological purposes.

ADMINISTRATION.

A law concerning aviation in connection with radiotelegraphy is in course

of preparation, but detailed particulars are not yet available. No arrangements are contemplated regarding Time and Weather Signals.

Radiotelegraphy is governed by the following law, the text of which is printed below:—

A—Decree No. 62574/13, dated October 16th, 1913.

B—Form of Ship Licence thereunder.

C—Form of Certificate for Ship Stations.

D—Form of Certificate for Operators.

DECREE OF THE HUNGARIAN MINISTER OF COMMERCE WITH REFERENCE TO THE FITTING UP OF WIRELESS STATIONS ON HUNGARIAN SEA-GOING PASSENGER SHIPS.

A In accordance with paragraphs 24 and 27 of the Supplement to my Order No. 60,805, issued on August 21st of the current year, in the matter of authorising the placing of service of commercial sea-going ships, the safety appliances provided on them and the provision of the navigation service in connection with working them, passenger liners already in service, which make regular voyages from Hungarian ports to points beyond Gibraltar or Aden and are carrying passengers, are to be fitted with wireless apparatus of the description specified below not later than by February 1st, 1915: new ships, on the other hand, must be fitted with such apparatus before they are put into service. Such apparatus must be sufficiently powerful to be able to send or receive messages under ordinary conditions over a minimum distance of 100 sea miles.

In order to carry out this decree I order the following:—

1. The owner (or charterer) is obliged to apply to the Hungarian Minister of Commerce for permission to establish a wireless station on board.

Such application must be accompanied in quadruplicate by a technical description of the apparatus to be used, with a diagram of the connections. Any subsequent alteration in the system, or remodelling of any description of the apparatus, which may affect its capacity for sending or receiving messages, must receive the preliminary authorisation of the Hungarian Minister of Commerce.

2. The arrangement of the wireless station on the ship must be up to date and comply with Rule 3 of the London International Wireless Agreement, so that the station may be able to work in harmony with the working of wireless stations using other systems and be able to exchange messages with such other stations. The system to be adopted and to be used will depend on the preliminary authorisation of the Hungarian Minister of Commerce.

The apparatus must be of such a type that it can be adjusted for waves 300 and 600 metres long and with these be able to send or receive 20 words at least per minute, counting five letters to the word.

In the case of applying subsections 2a to 2d of paragraph xxxv of the London International Wireless Service Regulations, the apparatus on the ship will be allowed to make use also of wavelengths of 1,800 metres.

3. All the machinery and materials for fitting up the wireless station on the ship must be acquired in the home country as far as possible.

Machinery and materials to be used for such purpose may only be acquired from abroad with the special permission of the Hungarian Minister of Commerce. Service books and similar other stores and office requisites for the working of the wireless service will be supplied at cost price by the Chief Post and Telegraph Administration.

4. All ships fitted either for continuous or restricted wireless service, must in addition to the usual apparatus be fitted also with apparatus for sending out wireless distress signals in conformity with Rule xl of the London Wireless Service Regulations as ordered by and in a manner fixed by the Hungarian Minister of Commerce.

Such apparatus for sending out wireless distress signals must be provided with its own separate power supply independently of any other power supply not used for the wireless service on board and must be of a design that it can be put in action expeditiously and be kept at work continuously for at least six hours and at the same time be powerful enough to send signals over a distance of at least 80 sea miles, on ships having a continuous wireless service and over at least 50 miles on ships with restricted wireless service.

This special installation for sending out distress signals may be omitted on all ships on which the regular wireless installation is able to fulfil these requirements.

5. The speed at which signals can be sent and received will be set out by the Hungarian Minister of Commerce in the document granting permission to establish a wireless service on a ship.

As regards new inventions for materially improving the efficient working of the apparatus and the speed of sending and receiving messages, the Hungarian Minister of Commerce may compel the owner (or charterer) of the ship to adopt such invention or inventions within a fixed period for the wireless station on his ship with due regard to existing practical requirements and a fair consideration of the expenditure incurred in connection therewith.

6. Under ordinary conditions the electrical power for working the wireless apparatus may not exceed one kilowatt. A greater power than this may only be used if the nearest station on the coast with which it is desired to exchange messages is situated at a greater distance than 200 sea miles or if on account of obstacles extant it is necessary to use the larger power (London Wireless Service Regulations, Rule viii).

7. The Chief Post and Telegraph Administration is empowered to have the wireless installation examined by its own inspectors at any period and to control the service.

The owner (or charterer) of the ship is obliged to afford to the inspectors of the Chief Post and Telegraph Administration, and with the intervention of this Administration to officers appointed by the Navy every facility

to make themselves thoroughly familiar with the working in every detail of the wireless apparatus and gear and to acquire the necessary practice in working the apparatus.

Any stipulation on the part of the supplier of the apparatus that certain parts or details of the apparatus are to be kept secret and not to be shown to the inspectors of the Chief Post and Telegraph Administration or to officers of the Navy must not be accepted by the owner (or charterer) of the ship.

All inspectors and naval officers deputed to control or learn the working of the apparatus must be carried on the ship cost free by the owner (or charterer) of the ship in a class corresponding to their rank (with cabin accommodation in accordance therewith also free) and to charge them for their board at cost price.

Not more than two such persons, however, may travel on these conditions on the same voyage.

8. The nature of the service of the wireless station on the ship (whether public or special service, etc.), and its duration (whether continuous, restricted or service without special fixed hours), also the number and qualification (1st class or 2nd class) of the wireless operators, will be set out by the Hungarian Minister of Commerce in the document granting permission for the installation.

9. The Hungarian Minister of Commerce reserves himself the right to suspend at any time the wireless service on the ship for an indefinite period or permanently or in respect of certain special classes of messages without divulging his reason for so doing or without rendering himself liable to the payment of an indemnity.

In the case of an order for mobilisation in the Hungarian Monarchy being issued or in the case of war the wireless service on the ship is to be suspended altogether unless the captain of the ship receives special instructions to the contrary from the Chief Post and Telegraph Administration.

The captain of the ship will be held personally responsible for the carrying out of this regulation.

In other respects in time of mobilisation or war the owner (or charterer) of the ship is bound to carry out the special orders to be issued for the occasion.

10. Wireless operators to be employed may only be Hungarian citizens with a blameless record who can speak and write the Magyar language thoroughly and have obtained a certificate of qualification as regards wireless operating from the examining committee appointed by the Hungarian Minister of Commerce for the purpose.

The individuals thus qualified are to take the oath of loyalty in the presence of the examining committee, such oath to include promises to attend to their duty and to keep all messages secret, the fact of their having taken the oath being recorded on their certificate of qualification.

The wireless operators on board are subject to the discipline on the ship, must each possess their service books, and are to be placed on the list of the crew.

The owner (or charterer) of the ship is only allowed to have such individuals trained for the wireless service who have been chosen by the Hungarian Chief Post and Telegraph Administration for such purpose from a preliminary list of candidates submitted to the Administration.

Every wireless operator whose certificate is cancelled by the Hungarian Post and Telegraph Administration is to be dismissed immediately.

The owner (or charterer) of the ship is bound to give immediate notice of any change in the personnel of wireless operators to the Chief Post and Telegraph Administration and to the Hungarian Naval Authorities.

11. Every wireless station established for public service may be used by the public for sending wireless messages against payment of the proper fees.

The tariff of fees for wireless messages is fixed by the Hungarian Minister of Commerce on the recommendation of the Company. These fees are retained by the owner of the wireless station on board.

12. Out of these fees received by the owner (or charterer) of the ship for wireless messages he is responsible for the portions due to the inland and foreign telegraph authorities for forwarding messages.

In administrative matters the owner (or charterer) of the ship, or the wireless station on board, may only communicate with foreign telegraph administrations or with the International Bureau at Berne of the Telegraph Association through the Hungarian Chief Post and Telegraph Administration.

13. In conformity with Rule 3 of the London Wireless Agreement the wireless station on board is bound to enter into communication with every wireless station ashore or established on any ships regardless of the system used by such stations for the purpose of exchanging messages, and in accordance with Rule 9 the wireless station on board is compelled to accept distress signals from any source whatever, to reply to these and to take the necessary steps.

Wireless stations established on ships are to pay particular attention to the working of stations on the coast. The wireless station on board is to be kept in perpetual and efficient working order in order to be able to keep up faultless communication with the coastal stations.

At the request of the coastal station the wireless station on board is bound to stop its message immediately.

14. The working of the wireless station on board and the accounting for the fees received by such station are to be governed by the London Wireless Agreement and the service regulations attached thereto, by the St. Petersburg Telegraph Agreement and the service regulations attached thereto, and also by any orders already issued or to be issued by the Hungarian Chief Post and Telegraph Administration.

The wireless station, or the shipowner (or charterer) respectively, is bound to conform with the legal enactments and orders issued with reference to matters relating to the telegraph, telephone and electric signals.

During a stay in foreign ports the wireless station on board is bound to conform with any special rules which may be in force in the country of its sojourn besides those prescribed by the International Wireless Agreement and the regulations attached thereto.

It is the duty of the shipowner (or charterer) to make himself acquainted with these.

15. As an acknowledgment of the sovereignty of the State and in order to defray expenses incurred in the ordinary control of the wireless station on board, the owner (or charterer) of

the ship is bound to pay on the dates named, and at the receiving offices named in the document granting permission for the establishment of the wireless station, twenty (20) crowns per station per annum.

Should it become necessary to institute an inquiry owing to any neglect or fault on the part of the owner (or charterer) of the ship or one of his employees and should the enquiry establish any neglect or fault on the part of the owner (or charterer) or one of his employees, the owner (or charterer) will be bound to indemnify the Treasury for all expenses incurred in connection with such enquiry.

16. In every case of neglect or fault in or about the wireless service the Hungarian Chief Post and Telegraph Administration may mulct the owner (or charterer) of the ship in a penalty not exceeding 100 crowns providing such acts of neglect or fault do not constitute a misdemeanour or crime.

17. If after repeated warnings the wireless station on board should not do its duty, or if the working of the station should militate against public interests, the Hungarian Minister of Commerce is empowered to inflict a heavier penalty of 100 to 1,000 crowns or to issue orders to have the working of the wireless station entrusted to an individual appointed by the Minister at the expense and responsibility of the shipping undertaking, and at the same time the Minister is to have power to have all faults made good in the apparatus and have all the necessary alterations made in the apparatus at the expense of the owner (or charterer) of the ship, or as an alternative to suspend or cancel the permit for the wireless station on board.

18. The permit for the establishment and working of a wireless station on board cannot be granted for a period exceeding 20 years.

At the expiration of the period mentioned in the document granting permission the whole installation with all its accessories (including furniture and fittings) and eventually also the installation for sending out distress signals are to be handed over to the Hungarian Post Office in full efficient and faultless working condition free of charge and without liability.

Should the Hungarian Post Office not wish to take charge of the working of such wireless station thus come into their possession, but to leave it further in the hands of the owner (or charterer) of the ship, the owner (or charterer) is bound to pay twenty (20) crowns per annum over and above the fee mentioned in Clause 15 in acknowledgment of the right of ownership of the installation thus acquired by the State.

A permit given for the establishment of a wireless station on a ship is automatically cancelled by the putting out of commission of the ship and the owner (or charterer) of the ship is obliged to give notice of this to the Hungarian Chief Post and Telegraph Administration. Should it be desired to transfer the wireless installation to another ship a fresh permit for so doing will be required.

19. Moreover, the Hungarian Minister of Commerce has full power to cancel temporarily or permanently the permit for the working of a wireless station at any time even before the expiry of the period for which such permit has been granted and to cancel it without assigning any reason for his decision and to take over the working of the installation or to have it dismantled.

In the case of the working of the installation

being taken over temporarily by the Ministry, the owner (or charterer) of the ship is bound to hand over for use free of charge and without any indemnity the whole of the installation with all the apparatus, fittings and stores for working same, also the cabin and locality in which the installation is housed, together with the sleeping cabins of the wireless operators; also to supply free of cost the power required for working the installation and supply the food, render all medical service and provide attendance and other necessities required by the operators. As against this, however, all fees paid for wireless messages will be handed over to the owner (or charterer) of the ship.

The terms of the final taking over of the installation are or will be specified in the permit or in the special order issued for the purpose.

Before the installation is taken over finally under the ordinary conditions six months' previous notice will be given, but the Hungarian Minister of Commerce reserves himself the right to shorten this period if public interests should necessitate this step or even to take over the installation at any time without any previous notice whatever.

20. Should, in the unchallengeable opinion of the Hungarian Minister of Commerce, public interests require it, the Hungarian Chief Post and Telegraph Administration may—through the courts of law and without incurring any liability in respect of claims for indemnity—issue orders for any vessel being fitted with wireless installation at the expense of the Treasury to have the service maintained and to have the installation dismantled when its use is no longer required by public interests and to arrange for certain compensation being arranged in connection therewith to the owner (or charterer) of the vessel.

21. The Hungarian Minister of Commerce reserves himself the right to grant exemptions from the above regulations from case to case in conformity with practical requirements.

Hungarian Minister of Commerce.

V. 191.

LICENCE.

B SEC. 1.—The Minister grants a licence to install a public wireless service station on his ship named carrying passengers and to work such station during the period while the licence remains in force under the conditions specified below.

SEC. 2.—The person to whom the licence is granted is obliged to comply with the following:—

(a) With the provisions contained in Section XXXI of the Law of 1888 and with Decree No. 23445 issued in July 1890 for carrying out this law, as well as with Decree No. 62574 issued on October 16th, 1913, for establishing wireless stations on Hungarian passenger ships.

(b) With the provisions of any law to be enacted in future as well as of any ministerial decree or order already issued or to be issued in future by the Hungarian Post Office with the same object in view.

(c) With the orders contained in the International Wireless Agreement and its service regulations.

(d) With the conditions laid down in the present licence.

SEC. 3.—The grantee is obliged to establish

the installation on board in accordance with the "Telefunken" system in a manner complying in every respect with the requirements laid down in the Wireless Service Regulations, Rule III, sub-sections 1 and 2, Rule VII, sub-section 2 and Rule VIII.

The normal distance over which the installation is to be able to exchange messages is to be at least 200 sea miles by day and at least 300 miles by night.

The normal wavelength of the installation is fixed by the Minister at 600 metres with the reservation laid down in Rules III and XXXV of the International Wireless Service Regulations.

SEC. 4.—The holder of this licence is obliged to instal besides the ordinary service installation on board an auxiliary installation in conformity with Rule XI of the International Wireless Service Regulations.

SEC. 5.—The holder of this licence undertakes to maintain permanently the two installations mentioned in sections 3 and 4 in good serviceable working condition and to introduce all improvements in accordance with the progress made by the science of wireless telegraphy.

The Minister reserves himself the right to compel the holder of this licence to adopt all new inventions of wireless practice materially enhancing the reliability and speed of exchanging messages.

All machinery, apparatus and materials to be used in fitting up the installation on board are to be obtained inland as far as possible.

Machinery, materials and apparatus of this kind may only be obtained from abroad with the special sanction of the Hungarian Minister of Commerce.

SEC. 6.—The holder of this licence has no right to alter the system of the wireless installation on board mentioned in Section 3. Generally speaking the Minister's preliminary consent must be obtained for any alteration whatever in the installation as described in the technical description or in the diagram of connections both forming a complementary part of the present licence.

SEC. 7.—The holder of this licence and his employee in handling the wireless apparatus and maintaining the wireless service must act in conformity with the International Wireless Agreement and the Service Regulations attached thereto with the rate of telegraph fees and also with parts I and II of the telegraph service rules and orders issued by the Chief Post and Telegraph Administration.

SEC. 8.—The Minister fixes the call signal of the station in the H A B group of letters, its character is to be a "P G station for public correspondence" in conformity with sub-section 4 of Rule V of the Wireless Service Regulations. As regards hours of service the wireless station is to be classed in the second category—i.e., stations with restricted hours of service in accordance with the provisions of Rule XIII, sub-section 3 of the Wireless Service Regulations.

The official hours are to be from 8 a.m. to 8 p.m.

In accordance with Rule XIII sub-section 3 of the International Wireless Service Regulations—during the periods of sailing over and above the official hours named—operators must be at their posts ready to receive messages and stay there permanently during the first ten minutes of every hour.

SEC. 9.—In conformity with the office hours

fixed in section 8 the holder of this licence undertakes to employ at least one first-class operator for attending to the service of the wireless station on board in accordance with Rule X sub-section 2 and the Wireless Service Regulations.

SEC. 10.—This operator, like all other wireless employees, must be a Hungarian citizen of blameless character who is able to write and speak the Magyar language perfectly and is the holder of a certificate of qualification for wireless operating from an examining body appointed for the purpose by the Hungarian Minister of Commerce.

The qualified individuals must take the oath of loyalty in the presence of the examining body, such oath to include promises of due attendances to their duties and to keep all messages secret, the fact of having taken this oath is to be testified in their certificate of qualification.

The employees in the service of the wireless station on board are subject to the discipline of the ship, they must be provided with service books of the ship and enrolled on the register of the crew.

As regards the wireless service these employees are subject also to the Chief Post and Telegraph Administration and must comply with the directions issued for the proper performance of the service.

The owner (charterer) of the ship may only train such individuals for the wireless service whose training is permitted by the Hungarian Chief Post and Telegraph Administration after preliminary notice of such intended training has been given to the Administration.

Every wireless employee whose certificate is withdrawn by the Hungarian Chief Post and Telegraph Administration must be dismissed immediately.

The owner (or charterer) of the ship must give immediate notice of any change in the personnel of the wireless staff to the Chief Post and Telegraph Administration and also to the Hungarian Naval Authorities.

In accordance with Rule X sub-section 4 of the Wireless Service Regulations "the service of the wireless station on board is under the chief supervision of the captain of the ship." Hence the holder of this licence must order the captain of the ship to take the oath of loyalty and for the preservation of the secret of messages, before a representative of the Hungarian Post Office.

SEC. 11.—The wireless station is intended for public correspondence and may therefore be used by anybody for sending messages against payment of the prescribed fees and observance of the rules laid down for the telegraph service.

On the other hand, in accordance with Rule 3 of the International Wireless Agreement the wireless station on board must exchange wireless messages with any and every other such station on shore or afloat—irrespective of the system used by such stations for receiving or sending wireless messages.

The operators of the wireless station on board must refuse to accept any message which, if transmitted to any part of the territory of Hungary, may endanger the safety of the Hungarian State, or the contents of which may form a breach of the country's laws or offend against public order or morality.

Should the person handing in the message still insist on its transmission the captain of the ship is to be appealed to, whose decision in this matter is to be considered final.

SEC. 12.—The fee for transmitting a wireless message from the ship is fixed at 40 fillérs per rateable word with a minimum fee of 4 crowns per message.

The Minister, however, reserves himself the right to modify this rate of fees at any time even during the duration of this licence or to fix a new tariff for messages sent.

SEC. 13.—The fees referred to in the previous section may be retained by the holder of this licence.

Messages which at telegraph stations of the State are accepted for free transmission or are transmitted on the credit system must be accepted and transmitted by the holder of this licence on the same terms.

SEC. 14.—In dealing with telegrams and preparing accounts the wireless station on board must only use dating stamps, printed forms and books that are prescribed for use and are issued for this purpose by the Hungarian Post who will supply them to the holder of this licence at cost price on his written application to the Chief Post and Telegraph Administration.

The holder of this licence is obliged under all circumstances to keep within easy reach a copy of each of the following service books for the use of the wireless station staff on board—the International Telegraph Agreement with the Service Regulations pertaining thereto, the International Wireless Agreement with the Service Regulations pertaining thereto, the Nomenclature Officielle des Bureaux Télégraphiques, the Nomenclature Officielle des Stations Radiotélégraphiques, the Liste Alphabétique des Indicatifs d'Appel, the book of telegraph rates and Parts I and II of the Telegraph Service Regulations, the book of telegraph fees issued for Hungarian wireless stations on ships, and also a copy of the Post and Telegraph Instructions. The holder of this licence must also take care that all these books are corrected and kept up to date by the wireless staff in conformity with the additions and corrections periodically issued by the International Telegraph Bureau and in the collection of Postal and Telegraph Regulations.

SEC. 15.—The holder of this licence is fully responsible financially for all claims of every kind raised on any legitimate grounds against the Hungarian Post Office by anybody for the return of fees paid or indemnification in cases arising from the service of the wireless station on board his ship.

The holder of this licence is fully responsible financially for all telegraph fees of every kind payable under International agreements in accordance with telegraph tariffs arising from the telegraph service of the wireless station on his ship.

These fees—at the financial responsibility of the holder of this licence—are collected in cash by the staff of the wireless station on his ship who are bound to keep and render correct accounts and also supply a list of all the wireless messages received, sent or relayed by the station. The Chief Post and Telegraph Administration issues proper forms for making out such accounts and lists with the necessary instructions for dealing with these forms.

The holder of this licence or the manager of the wireless station in his place—in accordance with Rule XL of the International Wireless Service Regulations—must once a month or in any case within eight days of the ship's return to port from every voyage send at the expense of the holder of this licence to the Section III of the Adult Department of the

Ministry of Commerce the following papers and documents carefully arranged and packed: the originals of all wireless messages, all records of messages transmitted all receipts for delivery of wireless messages received and all documents and accounts in connection therewith.

Prior to this, however, the holder of this licence or the manager of the wireless station in his place must prepare an account of all fees received in connection with the working of the wireless station on board and after deducting the fees due to the holder of this licence or to the wireless station on board he must pay in the remaining balance at the Hungarian Post and Telegraph Office No. 1 duly receipting on the account the sum retained by the station on the ship of the holder of this licence.

The holder of this licence or the manager of the wireless station on board respectively may only communicate with foreign telegraph authorities or with the International Bureau of the Telegraph Association at Bern through the medium of the Hungarian Chief Post and Telegraph Administration.

SEC. 16.—In home ports the wireless station may not transmit telegrams unless specially authorised to do so by the Chief Post and Telegraph Administration.

When visiting foreign parts, any special regulations in force in the country of sojourn must also be respected in addition to the regulations of the International Wireless Agreement and the Service Rules prescribed therein.

It is the duty of the owner (or charterer) to make himself acquainted with these.

SEC. 17.—The Hungarian Chief Post and Telegraph Administration may at any time have the wireless station examined by their inspectors and its service checked.

The owner (or charterer) of the ship undertakes to afford means to the inspectors of the Hungarian Chief Post and Telegraph Administration, as well as to officers of the Navy, through the mediation of the Hungarian Chief Post and Telegraph Administration to make themselves thoroughly acquainted in every detail with the handling of the wireless apparatus and to acquire the necessary practice therein.

The owner (or charterer) of the ship must not consent to any stipulation on the part of the supplier of the wireless apparatus that the arrangement of the apparatus or any part thereof should be kept secret and not be shown to the inspectors of the Hungarian Post and Telegraph Administration or to the officers of the Navy.

The owner (or charterer) of the ship undertakes to carry the inspectors and naval officers thus appointed for the study of the apparatus and training in its manipulation free of charge in a class of the ship corresponding to their rank, also to find them, free of charge, cabin accommodation and to make it possible for them to pay for their board at cost price.

Two such persons, however, may only travel on the ship on the same voyage.

SEC. 18.—As an acknowledgment of the right reserved to the State and to defray the costs incurred in the regular control of the wireless station on board, the holder of this licence undertakes to pay the sum of twenty (20) crowns to the Post and Telegraph Office No. 1 within the first half of January every year.

Should an enquiry become necessary owing to any alleged neglect or fault on the part of the owner (or charterer) of the ship or one of his

employees, and should such enquiry prove that the holder of this licence or his employee is at fault, the holder of this licence would be obliged to refund to the Treasury the whole of the costs arising from such enquiry.

SEC. 19.—The Hungarian Chief Post and Telegraph Administration has the power to mulct the holder of this licence in a penalty not exceeding 100 crowns for any neglect or fault in the wireless service provided such omission or commission does not form an act of misdemeanour or a crime. If the wireless station on board should not attend to its duties after repeated warnings, or should the service of the station clash with the public interests, the Hungarian Minister of Commerce shall have the power to inflict eventually a higher penalty of from 100 to 1,000 crowns or to make arrangements to have the wireless service of the station performed by a delegate of the Minister specially appointed for the purpose at the expense and responsibility of the shipping undertaking, and to have any apparent shortcomings in the arrangement of the wireless apparatus put right and any required alterations made at the expense of the holder of this licence, or as an alternative the Minister may suspend or cancel the licence for the working of the wireless apparatus.

SEC. 20.—The period during which the present licence will remain in force is ten (10) consecutive years counting from the date of the licence.

Should the holder of this licence not instal the wireless apparatus within a year counted from the date of the present permit, this permit will be cancelled and the holder of the licence will have to return it for cancellation to the Minister.

SEC. 21.—In accordance with the provisions of Section XXI subsection 3 of the Law of 1888 and in conformity with the decree issued by the Minister of Commerce under No. 62574 1913 in the matter of establishing wireless stations on sea-going passenger ships, the whole of the wireless installation with all its accessories (including furniture, fittings), as well as the installation for sending out distress signals, is to be handed over to the Hungarian Post Office in perfect working order free of cost and without any claims at the expiry of the period specified in the present licence.

Should the Hungarian Post not wish to undertake themselves the service of the station thus handed over to them but to leave its further working in the hands of the holder of this licence, the owner (or charterer) of the ship undertakes to make an annual payment of twenty (20) crowns in acknowledgment of the proprietary right over the installation thus acquired by the State over and above the payment specified in section 15 payment of both sums to be made simultaneously.

Should a ship be put out of commission the licence for the maintenance and working of the wireless station thereon becomes null and void and the holder of this licence shall give the Hungarian Chief Post and Telegraph Administration due notice of the fact. Should it be desired to transfer the wireless installation and re-erect it on another ship, this can only be effected under a new licence.

SEC. 22.—The Minister reserves himself the right to take possession temporarily or permanently, on behalf of the State, of the wireless station at any time even before the expiry of the present licence without giving any explanation whatever for taking such a step.

Should the installation be taken over temporarily the holder of this licence undertakes to hand over for use free of charge the whole of the apparatus with all accessories, fittings and stores for working it as well as the office wherein it is housed and the cabins for the accommodation of the operators without any claim for indemnity, also to supply free of charge the power required for working the installation, also to provide free of charge all necessaries (board, medical assistance and servants, etc.) required by the operators. As against all these services all fees collected for wireless messages are to be handed over in this instance also to the holder of this licence.

Under normal conditions six months' previous notice will be given if the installation is to be taken over permanently, but the Hungarian Minister of Commerce reserves himself the right to shorten the period of this notice or to take possession of the station at any time without any notice at all, should public interest call for such a step.

Should the working of the installation be taken over by the State permanently before the expiry of this licence, the Hungarian Post Office will indemnify the holder of this licence for the technical parts of the wireless apparatus by paying him the cost as per invoices or other evidence to be produced by him less ten (10) per cent. for every year during which the installation has been in use. The balance thus remaining will be paid to him by the Post and Telegraph Administration at Budapest.

Beyond this indemnity to be paid to him the holder of the licence shall not be able to sue in any court for any claim for loss of profit or for the payment of any other indemnity under any other pretext whatever.

SEC. 23.—The Minister reserves himself the right to suspend at any time the service of the wireless station for an indefinite period, or permanently, or for messages of a certain kind without having to assign any reason for such an order and without incurring any liability for damages caused by the suspension.

In case of an order being issued for mobilisation in Hungary, and in time of war, the wireless station on board is to be closed down altogether unless the captain receives instructions to the contrary from the Hungarian Chief Post and Telegraph Administration.

The captain will be held personally responsible for the compliance with this direction.

In other respects the holder of this licence will have to carry out all special orders to be issued in times of an eventual mobilisation or war.

SEC. 24.—This licence may only be transferred to another person with the Minister's special consent to be applied for in advance.

SEC. 25.—Should any difference of opinion arise between the State and the holder of this licence as to the correct interpretation of any of the stipulations of the present licence the matter or matters at issue shall not be referred to any Court of Justice but shall be settled by the Minister of Commerce in the usual official way, adopted by the Public Administration.

SEC. 26.—Every copy of the present licence issued officially is subject to a fixed stamp duty amounting to two crowns.

Budapest, 19 .

By the Order of the Minister,
Chief Director of Posts and Telegraphs.

CERTIFICATE.

C For the ship station on board the Hungarian vessel
 The general administration of Posts and Telegraphs of Hungary attests that the ship station on board the Hungarian vessel was installed on the basis of the licence of the Hungarian Government and that the installation of the ship station complies with the conditions prescribed by the service regulations annexed to the International Radiotelegraph Convention.

The ship station is classed in the category from the point of view of its obligations as to hours of service.

Normal range in nautical miles :

Day
 Night

ICELAND

ICELAND, known to the geographers of the ancient world as "Ultima Thule," lies in the North Atlantic Ocean between $63^{\circ} 23'$ and $66^{\circ} 33'$ north latitude, whilst its longitude extends from $13^{\circ} 22'$ to $24^{\circ} 35'$ W. Its area is estimated as 40,500 square miles, which means that it exceeds Ireland in point of size.

Colonised in the ninth century by Vikings from Norway, the inhabitants were converted to Christianity by Irish monks, and in 1000 A.D. that religion was formally acknowledged by the State.

Originally an aristocratic republic, as described in the pages of its illustrious historian, Snorre Sturlason, Iceland acknowledged the sovereignty of the King of Norway in the thirteenth century, and shared the union of the latter country with Denmark in 1388. On the partition of Europe in 1814, Denmark resigned Norway but retained Iceland.

On December 1st, 1918, an Act creating a Federal Constitution for Denmark and Iceland came into force, the two states remaining free and independent under the same sovereign. Its capital city is Reykjavik, with a population of about 13,000.

Iceland employs the metric system of weights and measures, whilst its coinage is the same as that of Denmark.

COPYRIGHT "GEOGRAPHIA" LTD 55 FLEET STREET LONDON E.C.4.

CONTROL.

The first wireless station erected in Iceland was designed and fitted for reception only, and was put up by the Marconi Company in 1905. It was shut down in 1908. The present installation at Reykjavik was erected by the same company for the Icelandic Government in the course of 1917-18, and was opened for public service on June 17th 1918. The station at Flatey & Breidafirdi was put up by Icelandic technicians in 1919.

The State has a monopoly in the erection and working of wireless stations, but private persons or companies may be permitted to do both under a licence from the Telegraph Department.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
The Rt. Hon. Sigurdur Jonsson..	Minister of Public Works	Reykjavik
Mr. O. Forberg	Director-General of Telegraphs	Reykjavik
Mr. Paul Smith	Engineer of Telegraphs	Reykjavik
Mr. Frb. Adalsteinsson	Superintendent of Wireless Station and School	Reykjavik

Amateur Stations.—Three, only one of which is able to transmit.

Wireless Societies.—There are none devoted solely to radiotelegraphy, but the *Technical Society of Iceland* (Secretary, Otto B. Arnar) gives considerable prominence to the subject.

ADMINISTRATION.

The following legislative enactments govern wireless in Iceland :—

A—Act of November 14, 1917.

B—Regulations under the above Act.

ACT OF NOVEMBER 14TH, 1917, CONCERNING THE WORKING OF WIRELESS TELEGRAPH STATIONS IN ICELAND.

I.

A The State has a monopoly in the erection and working of wireless stations on Icelandic soil and within the territorial waters of Iceland.

II.

Within the territorial waters of Iceland, the wireless stations of foreign ships may only be in use in conformity with regulations drawn up by the Ministry of Iceland. The Ministry can prohibit all wireless communication within the territorial waters of Iceland, and take such precautions as may be necessary to ensure the observance of this prohibition.

III.

On board of Icelandic ships which do not belong to the Government, whether they are within or without the territorial waters of Iceland, wireless stations may only be erected and worked with the permission of the Ministry. If the stipulations accompanying this permission as regards the equipment and working of the station are not complied with, the Ministry can withdraw it. Applications for permission to work wireless stations that are in operation when this Act comes into force must be sent to the Ministry not later than eight weeks from the date of this Act. The Ministry will then decide how their future working is to be carried on.

IV.

On Icelandic soil, and within the territorial waters of Iceland, wireless stations, or other means of wireless communication, can only

be installed and worked with the consent of the Ministry, and in conformity with the stipulations made by it.

V.

The Regulations contained in the fifteenth paragraph of the Telegraph Act of October 20th, 1905, imposing secrecy upon those engaged in the telegraph service, are equally applicable to wireless operators. Paragraph 16 of the same Act, regarding the same obligation of those engaged in private telegraph service, is also valid as regards wireless telegraph operators on board of ships.

VI.

The violation of this law, or of the Regulations which the Ministry are hereby empowered to make, shall be punished with fines, or with imprisonment for a term not exceeding six months, provided the violation does not involve a more serious punishment. Further, all apparatus illegally installed or worked shall be confiscated. Lawsuits arising from violations of this law, or the corresponding Regulations of the Ministry, shall be tried in public police courts.

WIRELESS TELEGRAPHY AND TELEPHONY REGULATIONS.

B

I.

In the present Regulations :

(a) *Wireless station* means apparatus or other means of conveying signals to a distant point without any intermediate conductor.

(b) *Wireless operator* means a person employed in the operating of all sorts of apparatus for wireless telecommunication.

(c) *Ministry* means the Ministry of Iceland.

(d) *Wireless apparatus* means apparatus used for transmission and reception of intelligence between distant points, without any intervening conductor.

I.—ERECTION OF WIRELESS STATIONS.

II.

On Icelandic soil, or within the territorial waters of Iceland, or on ships registered in Iceland, a wireless station must not be erected or worked without a special permit of the Ministry, who will issue a licence for such station. This licence, or a certified copy of it, must always be kept at the station named therein. If the stipulations contained in this licence are not complied with, it may be withdrawn and the station dismantled.

III.

Application for a licence to erect and work a wireless station must be sent to the Director-General of Telegraphs.

The installation of wireless stations on board ships must comply with the stipulations of Paragraph VII of the International Regulations on Wireless Telegraphy.

A wireless station must not be opened for correspondence before the Director-General of Telegraphs has declared the equipment complies with the stipulations contained in the licence.

2.—INSTALLATION AND OPERATION OF PRIVATE SHIP STATIONS.

IV.

The wireless apparatus of a ship station must always be maintained in strict accordance with the stipulations of the licence.

V.

The Director-General of Telegraphs fixes the hours of service for each coast station.

Ship stations are, as regards hours of service, divided into three classes:

1. Stations permanently open.
2. Stations with limited hours of service.
3. Stations with no fixed hours of service.

During navigation a constant aural watch must be kept at stations of the first class. On stations of the second class watch must be kept during the hours of service, and also during the first ten minutes of each hour. At stations belonging to the third class no regular watch need be kept.

VI.

All ship stations must be so equipped as to permit both transmission and reception with 300 and 600 metre wavelengths; 600 metres is the normal wavelength of all ship stations.

An exception to this rule may be made in the case of small vessels, where it is difficult to produce a wavelength of 600 metres, when permission may be given to use 300 metre wavelengths for transmission, but every station must be able to receive wavelengths of 600 metres.

First and second-class ship stations must be fitted with an auxiliary transmitting set provided with an independent power supply, able to work for at least six hours continuously. This set must be fixed in as safe a position as possible, and must have a minimum range of eighty miles for first-class stations and fifty miles for second-class stations.

On ships where the main installation is such as to fulfil the conditions laid down for the auxiliary set, the latter is not required.

VII.

Ship stations should be operated by either one or two wireless operators licensed by the Director-General of Telegraphs.

Wireless operators holding certificates issued by foreign administrations may be permitted to operate ship stations, but a separate permit must be obtained for each voyage.

The certificate states:—

(a) That the holder understands the wireless apparatus and how to operate it.

(b) That the holder is able both to transmit and to receive Morse signals at a speed of not less than

(1) Twenty words a minute in the case of first-grade operators, and

(2) Twelve words a minute in the case of second-grade operators.

(c) That the holder possesses an adequate knowledge of the Regulations affecting wireless telegraphy.

Furthermore, the certificate contains the holder's pledge of secrecy, whereby he is subject to the same law as telegraph operators of the telegraph administration, and the same penalties for violation.

Second-grade wireless operators are permitted to operate ship stations which are only for the ship's own use or that of the crew. Furthermore, they are entitled to operate other stations having at least one first-grade operator.

First-class ship stations are bound to be operated by at least two first-grade wireless operators.

Wireless operator's certificates must always be kept in the wireless cabin, where they can be seen by the radio inspectors of the telegraph department.

VIII.

So far as it is possible all ship stations are bound to exchange traffic with other stations, without regard to the wireless telegraph system of the station concerned. The exchange of traffic between ships must be so arranged as to interfere as little as possible with that of the coast stations, which are generally given priority in public correspondence.

As a general rule, the working of every station must be so arranged as to cause the least possible disturbance in the traffic of other stations. All unnecessary transmission of signs or words is strictly forbidden. Experiments and tests are only permitted in so far as they do not interfere with other stations. In such cases as little transmitting energy as possible and none of the ordinary wavelengths should be used.

In an Icelandic port the wireless apparatus of a ship must not be made use of except in case of:—

(a) The ship being in distress.

(b) The ship being in communication with a ship in distress.

(c) The ship being in a port where there is no telegraph or telephone station.

(d) The ship being, from some reason or other, unable to communicate with the shore otherwise than by wireless.

As regards (c) and (d) the permission of the nearest shore station within the ship's range must be obtained.

IX.

Whenever it is considered necessary, the telegraph department arranges an inspection of each ship's station by persons appointed therefore by the Director-General of Telegraphs. All their orders and arrangements relating to

the maintenance and operation of the wireless apparatus must be closely followed. Inspectors are required to supply the Director-General with a report of the inspection of each station.

3.—HANDLING OF RADIOTELEGRAMS.

X.

All wireless stations, except those intended for a special limited correspondence (see Paragraph XI), are required to accept public correspondence.

Messages are divided into three classes:—

1. Government messages.
2. Service messages.
3. Public correspondence.

The handling of these messages on the land lines will be in accordance with the domestic and international regulations governing the telegraph service. The handling of radiotelegrams between wireless stations will be carried out in accordance with Paragraphs XIV-XV, XIX-XL, XLV-XLIX of the International Wireless Telegraph Regulations.

XI.

Ship stations may be utilised for:—

- (a) General public correspondence.
- (b) Limited public correspondence—e.g., light ships, cable ships, etc.
- (c) Private correspondence (with special ships and fishing companies).

In general public correspondence the following special radiotelegrams may be accepted:—

1. Telegrams with reply prepaid.
2. Telegrams to be collected.
3. Telegrams to be delivered by mail.
4. Telegrams to be delivered by express.
5. Telegrams with certificate of delivery.

This certificate is only issued as regards delivery from the wire to the nearest wireless station.

6. Paid service messages.
7. Express telegrams. These are, however, only transmitted as such along the ordinary land lines.

All stations are bound to give precedence to inquiries from ships in distress.

Ship stations have no responsibility as regards the exchange of radiotelegrams.

Ship stations that are open for general public correspondence will, against payment, be supplied with all printed forms, journals, etc., by the telegraph department; these stations are bound to be governed by all instructions of the Director-General of Telegraphs, as regards operation of the apparatus and handling of the traffic.

XII.

The complete charge for a radiotelegram includes:—

1. The wireless charges:—
 - (a) The shore fees (belonging to the shore station).
 - (b) The ship fees (belonging to the ship station).
 - (c) The transit fees (belonging to an intermediate land or ship station that may be required to handle the message).
2. The wire charges.

The shore charges in this country shall be 40 cents a word, and not less than 4 frs. for each message.

The ship fees are fixed by the shipowner with the approval of the Director-General. They must not exceed 40 cents, and the minimum charges must not be more than that for a ten-words message. Service

messages *re* wireless traffic, that has only passed between wireless stations, are not free of charge on the land lines. Press telegrams at half rate are not accepted.

XIII.

The entire charge for handling a radiotelegram from sender to addressee is to be charged to the sender. It is not permitted to charge more than stated in the tariff books.

XIV.

Every shipowner is liable for all charges collected on board his ships.

XV.

Each ship station is bound to send, once monthly, all original radiotelegrams, with relative vouchers, to the Director-General of Telegraphs.

XVI.

Reimbursement of charges, and accounts with the Telegraph Department, are to be governed by the Paragraphs XLI and XLIII of the International Radiotelegraph Service Regulations.

4.—EXPERIMENTAL AND AMATEUR STATIONS.

XVII.

Those wishing to erect an experimental or amateur wireless station must send an application for permission therefor to the Director-General of Telegraphs.

The applicant must prove his ability to transmit and receive at not less than ten words a minute in the Continental Morse code, and that he possesses an elementary knowledge of the science of wireless telegraphy. The application must be accompanied by drawings, and an accurate specification of the station to be erected. Such stations will not be permitted to radiate waves of greater length than 200 metres.

In the event of a licence being granted to such stations the licensee must sign a declaration of secrecy.

5.—OTHER STIPULATIONS.

XVIII.

The stipulations of Paragraph VIII, *re* use of wireless apparatus in ports, are also valid as regards foreign vessels.

XIX.

The Ministry may prohibit all radiotelegraphic communication within the territorial waters of Iceland, by both Icelandic and foreign vessels, and may make the necessary arrangements to enforce this prohibition.

The Ministry can, furthermore, exercise a censorship over all such radiotelegraphic traffic, and stop any radiotelegram that is considered to be harmful to the safety of the State.

XX.

Violations of these Regulations are liable to a fine not exceeding 10,000 krónur, or imprisonment for a term not exceeding six months, if the transgression does not involve a more severe punishment. Illegally erected or operated wireless apparatus will be confiscated.

Lawsuits arising from the violation of these Regulations will be tried in public police courts.

XXI.

These Regulations shall come into force immediately.

Date of Issue: May 17th, 1918.

INDIA

GREAT BRITAIN'S connection with India followed on that of the Portuguese, Dutch, and French in the fifteenth, sixteenth, and seventeenth centuries respectively. The London East India Company, formed to concentrate in a single corporation the isolated British trading efforts in the Far East, was incorporated under Royal Charter by Queen Elizabeth on December 31st, 1600.

The famous Indian mutiny of 1857 brought a realisation of the fact that a commercial company is not suited for administering an Empire, and in 1858 Queen Victoria assumed "the Government of the territories in India." In 1877 the British Queen adopted the title of "Empress of India," and at present the name "British India" covers all territories governed by the King-Emperor through the Viceroy of India, or through any officer subordinate to him; whilst "India" means "British India," together with any territories of any native prince or chief under the suzerainty of His Majesty, exercised through the Governor-General of India or any officer subordinate to him (Act 52 & 53 Vict., C. 63, S. 18).

Continental India (including Baluchistan) stretches between 8° 0' and 37° 0' N. latitude, and lies in 61° 0' to 101° 0' E. longitude. Delhi, the new capital, is in 77° 0' E. longitude. The total area covers 1,803,000 square miles, with a population of over 315,000,000; in other words, it includes a territory larger than the continent of Europe, exclusive of Russia.

CONTROL.

The control of radiotelegraphy in India is vested in the Director-General of Posts and Telegraphs, advised by the Indian Wireless Telegraph Board, constituted in 1920 for the purpose of co-ordinating military and civil wireless telegraphic and telephonic requirements. With the exception of portable stations employed for purely military purposes, all radio stations in India and Burma are worked and controlled by the Indian Department of Posts and Telegraphs.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
The Hon. Mr. H. N. Hutchinson	Director-General of Posts and Telegraphs ..	Simla
Lieut.-Col. Adrian Simpson, C.M.G., late R.E.	Director of Wireless Telegraphs	Simla
Captain P. J. Edmunds	Officer-in-Charge, Karachi Wireless Division	Karachi
Mr. N. H. Swinstead	Controller of Wireless Traffic	Simla
Captain R. N. Hawes	Superintendent of Wireless Instruction ..	Karachi

ORGANISATION.

The first stations opened for traffic in India were three 2 kw. Lodge-Muirhead stations at Diamond Island, Table Island, and Port Blair, erected for the maintenance of communication with the Andaman Islands. These date from March, 1905. All existing Wireless Telegraph stations in India form part of the Indian Telegraph network of the country.

A scheme is under consideration by the Government of India for the establishment of a High-speed Commercial Wireless Circuit between Madras and Rangoon.

There are no *privately owned* stations, nor are there any Wireless Clubs or Societies.

ADMINISTRATION.

The administration of radiotelegraphy in India is at present governed by the Indian Telegraph Act, XIII, of 1885, as modified up to June 1st, 1910.

This is further extended by (1) the Indian Telegraph (Amendment) Act, VII, of 1914, by (2) the Indian Post Office and Telegraph (Amendment) Act, XIV, of 1914, and by (3) the Indian Wireless Telegraph (Ships) Rules, 1915.

We append rules relating to the granting of experimental licences to military officers.

At present no licences to work wireless telegraphy are issued, and no experiments by private individuals are permitted.

The following Laws and Regulations affecting radiotelegraphy in India are printed in our pages, but the present Act and Rules are under revision by the Government of India.

A—Abstract of the Indian Telegraph Act, No. XIII, of 1885, as modified up to June 1st, 1910.

B—The Indian Telegraph (Amendment) Act. No. VII, of 1914.

C—The Indian Post Office and Telegraph (Amendment) Act, No. XIV, of 1914.

D—The Indian Wireless Telegraph (Ships) Rules, 1915.

E—First Schedule.

F—Second Schedule.

G—Regulations Governing Experimental Licences.

TELEGRAPH ACT XII, OF 1885.

(Modified up to June 1st, 1910.)

A Part I. deals with former Acts which are hereby repealed, and with definitions of terms used in the present Act.

Part II. reads as follows:—

PART II.

PRIVILEGES AND POWERS OF THE GOVERNMENT.

4. Within British India, the Governor-General in Council shall have the exclusive privilege of establishing, maintaining and working telegraphs:

Provided that the Governor-General in Council may grant a licence, on such conditions* and in consideration of such payments as he thinks fit, to any person to establish, maintain or work a telegraph within any part of British India.

5. (1) On the occurrence of any public emergency, or in the interest of the public safety, the Governor-General in Council or a Local Government, or any officer specially authorised in this behalf by the Governor-General in Council, may—

(a) take temporary possession of any telegraph established, maintained or worked by any person licensed under this Act; or

(b) order that any message or class of messages to or from any person or class of persons or relating to any particular subject, brought for transmission by, or transmitted or received by, any telegraph, shall not be transmitted, or shall be intercepted or detained, or shall be disclosed to the Government or an officer thereof mentioned in the order.

(2) If any doubt arises as to the existence of a public emergency, or whether any act done under sub-section (1) was in the interest of the public safety, a certificate signed by a Secretary to the Government of India or to

the Local Government shall be conclusive proof on the point.

6. Any railway company, on being required so to do by the Governor-General in Council, shall permit the Government to establish and maintain a telegraph upon any part of the land of the company, and shall give every reasonable facility for working the same.

7. (1) The Governor-General in Council may, from time to time, by notification in the *Gazette* of India, make rules consistent with this Act for the conduct of all or any telegraphs established, maintained or worked by the Government or by persons licensed under this Act.

(2) Rules under this section may provide for all or any of the following, among other matters, that is to say:—

(a) the rates at which, and the other conditions and restrictions subject to which, messages shall be transmitted;

(b) the precautions to be taken for preventing the improper interception or disclosure of messages;

(c) the period for which, and the conditions subject to which, telegrams and other documents belonging to, or being in the custody of, telegraph officers shall be preserved; and

(d) the fees to be charged for searching for telegrams or other documents in the custody of any telegraph officer.

(3) When making rules for the conduct of any telegraph established, maintained or worked by any person licensed under this Act, the Governor-General in Council may, by the rules, prescribe fines for any breach of the same:

Provided that the fines so prescribed shall not exceed the following limits, namely:—

(i) when the person licensed under this Act is punishable for the breach, one thousand rupees, and in the case of a continuing breach a further fine of two hundred rupees for every day after the first during the whole or any part of which the breach continues;

(ii) when a servant of the person so licensed, or any other person, is punishable

* For rules as to grant of telephone exchanges and telegram subscription rules in connection with such exchanges, see *Genl. Stat. R. & O.*, Vol. II., pp. 972 and 983.

for the breach, one-fourth of the amounts specified in clause (i).

8. The Governor-General in Council may, at any time, revoke any licence granted under section 4, on the breach of any of the conditions therein contained, or in default of payment of any consideration payable thereunder.

9. The Secretary of State for India in Council shall not be responsible for any loss or damage which may occur in consequence of any telegraph officer failing in his duty with respect to the receipt, transmission or delivery of any message; and no such officer shall be responsible for any such loss or damage unless he causes the same negligently, maliciously or fraudulently.

Part III. deals with power to place telegraph lines and posts, and covers sections 10-18, finishing with *Paragraph 19*.

19. Every telegraph line or post placed before the passing of this Act under, over, along, across, in or upon any property, for the purposes of a telegraph established or maintained by the Government, shall be deemed to have been placed in exercise of the powers conferred by, and after observance of all the requirements of, this Act.

Part IV. deals with penalties under the Act, and contains Paragraphs 20, 21, 22, 23, and 24; passing on to *Paragraph 25*.

25. If any person, intending—

- (a) to prevent or obstruct the transmission or delivery of any message, or
- (b) to intercept or to acquaint himself with the contents of any message, or
- (c) to commit mischief,

damages, removes, tampers with or touches any battery, machinery, telegraph line, post, or other thing whatever, being part of or used in or about any telegraph or in the working thereof, he shall be punished with imprisonment for a term which may extend to three years, or with fine, or with both.

Paragraphs 26, 27, 28 and 29 deal with offences connected with controversion of official secrecy and misconduct on the part of officials. This Part IV. concludes with *Paragraphs 30-32*.

30. If any person fraudulently retains or wilfully secretes, makes away with or detains a message which ought to have been delivered to some other person, or, being required by a telegraph officer to deliver up any such message, neglects or refuses to do so, he shall be punished with imprisonment for a term which may extend to two years or with fine, or with both.

31. A telegraph officer shall be deemed a public servant within the meaning of sections 161, 162, 163, 164 and 165 of the Indian Penal Code; and in the definition of "legal remuneration" contained in the said section 161, the word "Government" shall, for the purposes of this Act, be deemed to include a person licensed under this Act.

32. Whoever attempts to commit any offence punishable under this Act shall be punished with the punishment herein provided for the offence.

Part V. contains supplemental provisions covering charges for damage made against Local Governments and contains Paragraphs 33 and 34 of the Act.

* Genl. Acts, Vol. I.

ACT No. VII. OF 1914.

PASSED BY THE GOVERNOR-GENERAL OF INDIA IN COUNCIL.

(Received the assent of the Governor-General on the 28th February, 1914.)

An Act further to amend the Indian Telegraph Act, 1885.

B Whereas it is expedient further to amend the Indian Telegraph Act 1885; It is hereby enacted as follows:—

1. This Act may be called the Indian Telegraph (Amendment) Act, 1914.

2. For sub-section (2) of section 1 of the Indian Telegraph Act, 1885 (hereinafter called the said Act), the following shall be substituted, namely:—

"(2) It extends to the whole of British India, including the Sonthal Parganas and the Pargana of Spiti, and it applies also to—

- (a) all native Indian subjects of His Majesty in any place without and beyond British India;
- (b) all other British subjects within the territories of any Native State in India; and
- (c) all servants of the King, whether British subjects or not, within the territories of any Native State of India."

3. In clause (1) of section 3 of the said Act for the words "transmitting or making," the words "making, transmitting or receiving" shall be substituted.

4. Section 4 of the said Act shall be re-numbered 4 (1) and after the said sub-section the following proviso and sub-section shall be added, namely:—

"Provided further that the Governor-General in Council may, by rules made under this Act and published in the *Gazette* of India, permit, subject to such restrictions and conditions as he thinks fit, the establishment, maintenance and working—

(a) of wireless telegraphs on ships within Indian territorial waters, and

(b) of telegraphs other than wireless telegraphs within any part of British India.

"(2) The Governor-General in Council may, by notification in the *Gazette* of India, delegate to the telegraph authority all or any of his powers under the first proviso to sub-section (1).

"The exercise by the telegraph authority of any power so delegated shall be subject to such restrictions and conditions as the Governor-General in Council may, by the notification, think fit to impose."

5. After section 19 of the said Act the following sections shall be inserted, namely:—

"19A. (1) Any person desiring to deal in the legal exercise of a right with any property in such a manner as is likely to cause damage to a telegraph line or post which has been duly placed in accordance with the provisions of this Act, or to interrupt or interfere with telegraphic communication, shall give not less than one month's notice in writing of the intended exercise of such right to the telegraph authority, or to any telegraph officer whom the telegraph authority may empower in this behalf.

"(2) If any such person without having complied with the provisions of sub-section (1) deals with any property in such a manner as is likely to cause damage to any telegraph line or post, or to interrupt or interfere with telegraphic communication, a Magistrate of the first or second class may, on the application of the telegraph authority, order such person

to abstain from dealing with such property in such manner for a period not exceeding one month from the date of his order and forthwith to take such action with regard to such property as may be in the opinion of the Magistrate necessary to remedy or prevent such damage, interruption or interference during such period.

"(3) A person dealing with any property in the manner referred to in sub-section (1) with the *bona fide* intention of averting imminent danger of personal injury to himself or any other human being shall be deemed to have complied with the provisions of the said sub-section if he gives such notice of the intended exercise of the right as is in the circumstances possible, or where no such previous notice can be given without incurring the imminent danger referred to above, if he forthwith gives notice of the actual exercise of such right to the authority or officer specified in the said sub-section.

"198. The Governor-General in Council may, by notification in the *Gazette* of India, confer upon any licensee under section 4, in respect of the extent of his licence and subject to any conditions and restrictions which the Governor-General in Council may think fit to impose and to the provisions of this Part, all or any of the powers which the telegraph authority possesses under this Part with regard to a telegraph established or maintained by the Government or to be so established or maintained:

"Provided that the notice prescribed in section 19A shall always be given to the telegraph authority or officer empowered to receive notice under section 19A (1)."

6. For section 20 of the said Act the following section shall be substituted, namely:—

"20. (1) If any person establishes, maintains or works a telegraph within British India in contravention of the provisions of section 4 or otherwise than as permitted by rules made under that section, he shall be punished, if the telegraph is a wireless telegraph, with imprisonment which may extend to three years, or with fine, or with both, and, in any other case, with a fine which may extend to one thousand rupees.

"(2) Notwithstanding anything contained in the Code of Criminal Procedure, 1898, offences under this section in respect of a wireless telegraph shall, for the purposes of the said Code, be bailable and noncognisable.

"(3) When any person is convicted of an offence punishable under this section, the Court before which he is convicted may direct that the telegraph in respect of which the offence has been committed, or any part of such telegraph, be forfeited to His Majesty."

7. After section 20 of the said Act the following section shall be inserted—namely:

"20A. If the holder of a licence granted under section 4 contravenes any condition contained in his licence, he shall be punished with fine which may extend to one thousand rupees, and with a further fine which may extend to five hundred rupees for every week during which the breach of the condition continues."

8. After section 25 of the said Act the following section shall be inserted—namely:

"25A. If, in any case not provided for by section 25, any person deals with any property and thereby wilfully or negligently damages any telegraph line or post duly placed on such property in accordance with the provisions of this Act, he shall be liable to pay the telegraph authority such expenses (if any) as may

be incurred in making good such damage, and shall also, if the telegraphic communication is by reason of the damage so caused interrupted, be punishable with a fine which may extend to one thousand rupees:

"Provided that the provisions of this section shall not apply where such damage or interruption is caused by a person dealing with any property in the legal exercise of a right if he has complied with the provisions of section 19A (1)."

9. After section 29 of the said Act the following section shall be inserted—namely:

"29A. If any person, without due authority, (a) makes or issues any document of a nature reasonably calculated to cause it to be believed that the document has been issued by, or under the authority of, the Director-General of Telegraphs, or

(b) makes on any document any mark in imitation of, or similar to, or purporting to be, any stamp or mark of any Telegraph Office under the Director-General of Telegraphs, or a mark of a nature reasonably calculated to cause it to be believed that the document so marked has been issued by, or under the authority of, the Director-General of Telegraphs

he shall be punished with fine which may extend to fifty rupees."

10. In section 34 (1) of the said Act after the figures and word "18 sub-section (1)," the words, figures and letter "and section 19A sub-section (2)," shall be inserted.

ACT No. XIV. OF 1914.

PASSED BY THE GOVERNOR - GENERAL OF INDIA IN COUNCIL.

(Received the assent of the Governor-General on 16th September, 1914.)

C An Act further to amend the Indian Telegraph Act, 1885, and the Indian Post Office Act, 1898.

Whereas in view of the amalgamation of the offices of Director-General of Telegraphs and of Director-General of the Post Office of India, it is expedient further to amend the Indian Telegraph Act, 1885, and the Indian Post Office Act, 1898:

It is hereby enacted as follows:

1. This Act may be called the Indian Post Office and Telegraph (Amendment) Act, 1914.

2. In clause (6) of section 3 and in section 29A of the Indian Telegraph Act, 1885, for the word "Telegraphs," wherever it occurs the words "Posts and Telegraphs" shall be substituted.

3. In section 2 of the Indian Post Office Act, 1898—

(i.) in clause (a) for the words "the Post Office of India," the words "Posts and Telegraphs" shall be substituted; and

(ii.) in clause (b), after the word "department," the words "established for the purpose of carrying the provisions of the Act into effect and" shall be inserted.

INDIAN WIRELESS TELEGRAPH (SHIPS) RULES, 1915.

DATED DELHI, FEBRUARY 24TH, 1917.

D In exercise of the powers conferred by section 4 of the Indian Telegraph Act, 1885 (XIII of 1885), as amended by the Indian Telegraph (Amendment) Act, 1914, (VII of 1914), the Governor-General in Council is pleased to make the following rules

regulating the establishment, maintenance and working of wireless telegraphs on ships within Indian territorial waters:

1. These rules may be called the Indian Wireless Telegraph (Ships) Rules, 1915.

2. In these rules, unless there is anything repugnant in the subject or context—

“Convention” means the International Radiotelegraph Convention concluded at London on July 5th, 1912.

“Director-General” means the Director-General of Posts and Telegraphs, India.

“Harbour” includes harbours whether natural or artificial, estuaries, navigable rivers, piers, jetties, and other works in or at which ships can obtain shelter, or ship and unship goods or passengers.

“Licence” means a licence granted under these rules.

“Service Regulations” means the service regulations annexed to the Convention.

3. Except by general or special permission in writing from the Director-General or an officer authorised by him in this behalf, no person shall work or use a wireless telegraph on board any ship (other than a ship of war) whilst the ship is in any harbour in India.

4. No person shall send any message by means of the wireless telegraph on board any ship (other than a ship of war), whilst the ship is within Indian territorial waters, when and where such message can be forwarded by a Government telegraph either with or without wires.

5. When communications are made by means of wireless telegraph between any ship within Indian territorial waters and a wireless telegraph station on land, the rules in force for the working of wireless telegraph at that station as given in the Handbook, General Rules, and Departmental Instructions for Radiotelegraph stations, shall be observed.

6. No person shall work the wireless telegraph on board any ship within Indian territorial waters in such a way as to interrupt or interfere with—

(a) Naval or military signalling; or

(b) the transmission of messages between other wireless telegraph stations.

Explanation.—In this rule Naval or Military signalling includes signalling or communicating by means of any system of wireless telegraphy, by His Majesty's Imperial, Colonial, or Indian Naval or Military Forces.

7. The Director-General or any officer authorised by him in this behalf may demand to be shown the licence or copy of such licence issued to any ship authorising the use of any wireless telegraph on board the ship or the certificate issued to the operator on the ship, and every person having the licence or certificate in his possession or under his control shall comply with such demand.

8. No wireless telegraph shall be established or worked on any ship registered in British India except under licence granted by the Director-General on behalf of the Governor-General in Council in the form in the First Schedule to these rules and subject to the terms and conditions set forth in that form.

9. The Director-General shall not grant a licence unless he is satisfied that—

(a) the wireless telegraph can be worked in accordance with the provisions of the Convention and the Service Regulations, and

(b) operators qualified in accordance with Rule 12 will be employed to work the same.

10. A licence may include any number of ships belonging to the same person.

11. (1) The Director-General may grant to the holder of a licence a supplementary licence in respect of any ship belonging to him and not included in the original licence.

(2) A supplementary licence shall be in such form as the Director-General thinks fit, and shall be deemed to be incorporated with the original licence, and the original licence shall apply to each ship included in the supplementary licence to the same extent as if the ship had been included in the original licence.

12. No person shall work a wireless telegraph on board any ship registered in British India unless he is of British nationality and holds either a first or a second-class certificate of competency granted by, or under the authority of, the Director-General or a certificate (issued by the authority empowered to grant such certificates) entitling the holder to be employed as a wireless telegraph operator on board ships registered in the United Kingdom or in a British Possession or Protectorate.

13. (1) The Director-General may grant certificates of competency in accordance with the conditions contained in the Second Schedule to these rules.

(2) Should the holder of a certificate of competency granted under these rules be proved to the satisfaction of the Director-General wilfully or negligently to have failed to comply with the provisions of the Convention or the Service Regulations, or any other regulations which may be issued from time to time for his guidance, the Director-General may endorse, suspend or cancel the certificate.

(3) The Director-General or any officer authorised by him in this behalf may require the holder of a certificate of competency to produce the same for endorsement under sub-rule (2), and the holder shall comply with such requisition.

14. Nothing in these rules shall apply to the use of a wireless telegraph for the purpose of making or answering signals of distress.

THE FIRST SCHEDULE.

(See Rule 8.)

LICENCE TO ESTABLISH WIRELESS TELEGRAPH SHIP STATIONS.

En in these presents (and in the Table annexed hereto) the following words and expressions shall have the several meanings hereinafter assigned to them unless there be something either in the subject or context repugnant to such construction (that is to say):

The expression “The Director-General of Posts and Telegraphs” means the Director-General of Posts and Telegraphs, India, for the time being.

The expression “the Telegraph Act” means the Indian Telegraph Act, 1885 (XIII of 1885).

The word “telegraph” has the same meaning as in the Telegraph Act.

The expression “the Rules” means the Rules made from time to time under the Telegraph Act.

The expression “Naval signalling” means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy between ships of His Majesty's Navy and Naval Stations or between a ship of His Majesty's Navy or a Naval station and

any other wireless telegraph station whether a coast station or a ship station.

The expressions "the International Telegraph Convention" and "the International Telegraph Regulations" mean respectively the International Convention of St. Petersburg dated 10th-22nd July, 1875, and the Service Regulations made thereunder and include respectively any modification of the said Convention or Regulations made from time to time.

The expression "the Radiotelegraph Convention, 1912" means the International Radiotelegraph Convention signed at London on the 5th day of July, 1912, and the Service Regulations made thereunder and includes any modification of the Convention or Regulations made from time to time.

The expression "coast station" means a wireless telegraph station which is established on land or on board a ship permanently moored, and which is open for the service of correspondence between the land and ships at sea.

The expression "ship station" means a wireless telegraph station established on board a ship which is not permanently moored.

Apparatus shall be deemed to be "syntonsed" when the transmitting apparatus is so adjusted as to communicate with a receiver which has a corresponding adjustment, and to produce as little effect as possible on a receiver not having a corresponding adjustment.

Whereas hereinafter called "the licensee" is desirous of establishing, maintaining and working on the ships belonging to the licensee, specified in the Table annexed hereto, wireless telegraphy under section 4 of the Indian Telegraph Act, 1885 (XIII of 1885):

And whereas by reason of the provisions of the said Telegraph Act it is unlawful to establish, maintain or work any apparatus for wireless telegraphy on board any ship registered in British India except under and in accordance with rules made in that behalf by the Governor-General of India in Council:

And whereas the licensee has requested the Governor-General in Council to grant to the licensee the licences, powers, and authorities hereinafter expressed and contained for the period, upon the terms and subject to the stipulations and conditions hereinafter appearing;

Now the Governor-General in Council in exercise of all powers and authorities enabling him in this behalf hereby grants to the licensee during the term or period commencing on the day of the date hereof, and terminating on the 31st day of December, 19 , licence and permission—

(1.) To establish, maintain and work for the purposes hereinafter mentioned at the ship stations specified in the Table annexed hereto and at such other ship stations as may be specified in any Supplemental licence given from time to time under the hand of the Director-General of Posts and Telegraphs, but subject in all respects to the Rules, apparatus for wireless telegraphy of the kind used in the system known as the system of wireless telegraphy.

Provided that—

(a) the apparatus installed at each ship station shall be of the character specified in the said Table opposite to the name of such station or in any such supplemental licence as aforesaid;

(b) the apparatus used at all of the said ship stations shall be syntonsed;

(c) the licensed apparatus shall be so constructed as to be capable of using wavelengths of 300 and 600 metres in length as measured by the standard of measurement in use for the time being by the Government of India and such other wavelengths not exceeding 600 metres in length as shall be authorised in writing from time to time by the Director - General of Posts and Telegraphs;

Provided that only wavelengths of 600 metres shall be used by the licensee during the period of any war in which the United Kingdom is engaged;

(d) the apparatus shall admit of the transmission and reception of messages at the rate of not less than twenty words a minute, five letters being counted as one word;

(ii.) to transmit and receive messages by means of the licensed apparatus between the said ship stations and between the said ship stations and coast stations and other ship stations. Provided that the transmission and receipt of messages from and at the said ship stations when in any harbour in India shall be subject to such conditions and restrictions as the Governor-General in Council may prescribe from time to time; and

(iii.) to receive money or other valuable consideration for or in respect of the use of the licensed apparatus or for or in respect of the transmission or receipt of messages by means of the said apparatus;

And it is hereby declared that the said licence and permission is granted on and subject to the following further conditions and provisions:—

1. The licensed apparatus shall not be used by the licensee or by any other person either on behalf or by permission of the licensee for the transmission or receipt of messages except messages authorised by this licence.

2. (1) The licensee shall not by the transmission of any message by means of the licensed apparatus or otherwise by the use of the licensed apparatus interfere with Naval signalling.

(2) If the Governor-General in Council is of opinion that the working of the licensed apparatus at any ship station specified in the Table annexed hereto or in any such Supplemental Licence as aforesaid is inconsistent with the free use of Naval signalling the licensee shall, when required in writing by the Director - General of Posts and Telegraphs so to do, close the said station; the making of such a requisition shall be conclusive evidence of the opinion of the Governor-General in Council to the effect aforesaid.

(3) These provisions for the protection of Naval signalling shall be construed to be without prejudice to the generality of any other provisions of this licence.

3. For the purpose of this licence the licensee shall observe the International Telegraph Convention and the International Telegraph Regulations so far as the said Convention and Regulations are capable of being applied to wireless telegraphy in common with ordinary land and submarine telegraphy.

4. The licensee shall observe the provisions of the Radiotelegraph Convention, 1912.

5. The licensee shall comply with all such directions and observe all such rules and regulations as may be given or made by the Director - General of Posts and Telegraphs

from time to time for the purpose of preventing interference with the working of any other wireless telegraph station and for enabling the messages exchanged by means of the licensed apparatus to be distinguished from those emanating from any other wireless telegraph station.

6. The licensee apparatus shall not, without the consent of the Director-General of Posts and Telegraphs, be altered or modified in respect of any of the particulars mentioned in the Table annexed hereto or in any such Supplemental Licence as aforesaid.

7. The licensee shall at all times indemnify the Governor-General in Council against all actions, claims and demands which may be brought or made by any corporation, company or person in respect of any injury arising from any act licensed or permitted by these presents.

8. (1) Subject to the provisions of this licence and of the Rules the licensee shall transmit messages by means of the licensed apparatus on equal terms without favour or precedence whether as regards rates of charge order of transmission or otherwise.

(2) In respect of the messages transmitted on behalf of His Majesty's Government the licensee shall charge rates not in excess of half of the rates charged to the ordinary public.

9. The licensee shall so far as possible receive from ships and light stations all requests for assistance and all signals of distress and shall answer such requests and signals and retransmit them with the least possible delay to the proper authorities by means of the licensed apparatus or any other means in the power of the licensee.

10. The licensed apparatus at the said ship stations shall be worked only by a person or persons holding a certificate or certificates of competency issued by the Director-General of Posts and Telegraphs or by the proper authority in the United Kingdom, or in any British Possession or Protectorate.

11. The licensee shall not divulge to any person (other than properly authorised officials of the Government of India or a competent legal tribunal) or make any use whatever of any message coming to the knowledge of the licensee and transmitted by Naval signalling or by any system of wireless telegraphy provided or maintained by or for the purposes of the different Departments of the Government of India, or by any other licensee of the Government of India.

12. (1) The licensee shall keep full accounts, records and registers of all messages transmitted by means of the licensed apparatus, and in such registers each of such messages shall be accompanied by its identifying number and date and full particulars of its place of origin and of ultimate destination and such further particulars as the Director-General of Posts and Telegraphs shall from time to time reasonably require to be shown, messages on the service of the Government of India being in such registers distinguished from other messages.

(2) The licensee shall preserve all used message forms written and printed and transcripts of messages and all other papers for a period of at least fifteen months counting from the month following that in which the radiotelegrams were handed in as prescribed by the Radiotelegraph Convention, 1912, and in default of any provisions on the

subject in the said Convention for such period as is from time to time prescribed by the International Telegraph Regulations and such registers and message papers shall be open to the inspection of the Director-General of Posts and Telegraphs or his officers thereto authorised at the office of the licensee in between the hours of 10 a.m. and 5 p.m., on every day except Sunday or a statute or general holiday.

13. The licensee shall render to the Director-General of Posts and Telegraphs such accounts as the Director-General shall from time to time direct in respect of all charges due or payable under the Radiotelegraph Convention, 1912, in respect of messages exchanged between the ship stations hereby licensed and coast stations and shall pay to the Director-General at such times and in such manner as he shall direct all sums which shall be due from the licensee in accordance with such accounts.

14. The Director-General of Posts and Telegraphs and any agent authorised in that behalf in writing by him may at all reasonable times enter upon all or any of the ship stations mentioned in the said Table for the purpose of inspecting and may inspect any apparatus fixed or being in such stations respectively for the purpose of sending and receiving messages by wireless telegraphy and all other telegraphic instruments and apparatus fixed or being in such stations respectively and the method of working and user of such apparatus and telegraphic instruments, respectively.

15. The licensee shall carry on every ship mentioned in the said Table on which a ship station is established a print or copy of the licence and supplemental licence if any certified under the hand of an officer authorised for that purpose by the Director-General of Posts and Telegraphs to be a true copy and also such documents as may be prescribed by the Director-General of Posts and Telegraphs for the purpose of enabling the licensee to communicate with coast stations in accordance with the Radiotelegraph Convention, 1912.

16. Except with the consent in writing of the Governor-General in Council the licensee shall not assign, underlet or otherwise dispose of, or admit any other person or body to participate in the benefit of the licences, powers and authorities hereby granted or any of such licences, powers or authorities.

17. (1) If and whenever an emergency shall have arisen in which it is expedient for the public service that the Governor-General in Council shall have control over the transmission of messages by the licensed apparatus it shall be lawful for the Director-General or any other officer specially authorised by him to cause the licensed apparatus or any part thereof to be taken possession of in the name and on behalf of the Governor-General in Council and to be used for the service of the Government and subject thereto for such ordinary services as to the said officer may seem fit and in that event any person authorised by the said officer may enter upon any ship on which any such apparatus is installed and take possession of the said apparatus and use the same as aforesaid.

(2) Any such officer may in such event as aforesaid instead of taking possession of the licensed apparatus as aforesaid direct and authorise such persons as he may think fit to assume the control of the transmission of messages by the licensed apparatus either

wholly or partly and in such manner as he may direct and such persons may accordingly enter upon any ship on which any such apparatus is installed and assume such control or the said officer may direct the licensee to submit to him or any person authorised by him all messages tendered for transmission or arriving by the licensed apparatus or any class or classes of such messages, to stop or delay the transmission of any messages, or deliver the same to him or his agent and generally to obey all such directions with reference to the transmission of messages as the said officer may prescribe and the licensee shall obey and conform to all such directions.

(3) The licensee shall be entitled to reasonable compensation for any damage to the licensed apparatus arising in consequence of the exercise of the powers conferred by this clause.

18. The Governor-General in Council may at any time by notice in writing but without assigning any reason revoke and determine these presents and the licences, powers and authorities hereinbefore granted and each and every of them as to all or any of the ship stations hereby licensed and thereupon these presents and the said licences, powers and authorities and each and every of them shall absolutely cease, determine and become void as to all or any of the said ship stations (as the case may be) but without prejudice to any right of action or remedy which shall have accrued or shall thereafter accrue to the Government of India under any condition or provision herein contained.

19. Nothing in these presents contained shall prejudice or affect the right of the Governor-General in Council, from time to time, to establish, extend, maintain and work any system or systems of telegraphic communication (whether of a like nature to that hereby licensed or otherwise) in such manner as he shall in his discretion think fit; neither shall anything herein contained prejudice or affect the right of the Governor-General in Council from time to time and at any time to enter into agreements for or to grant licences relative to the working and user of telegraphs (whether of a like nature to those hereby licensed or otherwise) or the transmission of messages in any part of British India or Indian Waters by means of wireless telegraphy or by any other means with or to any person or persons whomsoever upon such terms as he shall in his discretion think fit. And (save as in this licence expressly provided) nothing herein contained shall be deemed to authorise the licensee to exercise any of the powers or authorities conferred on or acquired by the Governor-General in Council by or under the Telegraph Act.

20. Any notice, request or consent (whether required to be in writing or not) to be given by or on behalf of the Governor-General in Council under these presents may be under the hand of the Director-General of Posts and Telegraphs and may be served by sending the same in a registered letter addressed to the licensee at the office for the time being of the licensee, or if such notice, request or consent relates to any particular ship station, by delivery to the master of the ship upon which such station is installed; and any notice to be given by the licensee under these presents may be served by sending the same in a registered letter addressed to the Director-General of Posts and Telegraphs.

Signed, sealed and delivered by Director-General of Posts and Telegraphs for and in the name and as the act and deed of the Governor-General in Council in the presence of

Other particulars :—

THE SECOND SCHEDULE.

(See Rule 13.)

F CONDITIONS FOR THE GRANTING OF CERTIFICATES OF COMPETENCY AS WIRELESS TELEGRAPH OPERATOR ON BOARD SHIPS, REGISTERED IN BRITISH INDIA.

1. Certificates of competency as wireless telegraph operator on board ships registered in British India shall be granted by the Director-General subject to an examination, shall be issued in Form B annexed hereto, shall indicate the system or systems of radiotelegraphy in which the holder's examination was conducted, and shall certify that the holder—

(a) in the case of first-class certificates, is able to send and receive, by sound, messages in plain language in the International Morse Code at a rate of not less than 20 words per minute (five letters being counted as one word); or

(b) in the case of second-class certificates is able to send and receive, by sound, messages in plain language in the International Morse Code at a rate of from 12 to 19 words per minute (five letters being counted as one word); and

(c) is able to adjust the apparatus ordinarily used in some well-known system of wireless telegraphy so as to suit the varying conditions of working, without using excessive transmitting power; and

(d) has an efficient working knowledge of the regulations applicable to the exchange of radiotelegraphic traffic.

2. (1) Candidates at an examination will be expected—

(a) to send on an ordinary Morse Key for five consecutive minutes at not less than the prescribed speed. The accuracy of signalling, the correct formation of the letters, and the correctness of spacing shall be taken into account;

(b) to receive and write legibly at the prescribed speed from a double headgear telephone receiver as ordinarily used for radiotelegraphic reception;

(c) to understand simple diagrams of the electrical connections of the apparatus used in the system in which he is being examined;

(d) to be able to connect up the apparatus with the help of such diagrams so far as this is required in the system in which he is being examined;

(e) to name the principal parts of the apparatus and indicate their use;

(f) to mention the most common faults, and the means usually taken to remedy them in the system in which he is being examined;

(g) to explain the steps taken to change from one wavelength to another, in sending and receiving, in the system in which he is being examined.

TABLE OF LICENSED SHIP STATIONS.

[illegible]

(2) The practical examination shall embrace the following :—

- (a) Connecting up the apparatus.
- (b) Operating (sending and receiving).
- (c) Regulating and adjusting.
- (d) Altering the wavelength.
- (e) Reducing or increasing the transmitting power.

(f) Tracing and clearing faults.

(3) The examination in regard to the actual transmission of messages shall be based upon the rules contained in the handbook published by the Director-General.

3. Candidates for examination shall fill up an application in Form A annexed hereto and submit the same to the Director-General at Calcutta. The date and place of examination shall be notified to the candidate as soon as possible after receipt of the application.

If the candidate be successful in his examination he will sign the photograph in the presence of the Examining Officer. The Examining Officer will at the same time take the age, place and date of birth and the description of the candidate from the latter's application in Form A.

The photograph will be affixed to the back of the certificate in the office of the Director-General of Posts and Telegraphs and stamped with a special date stamp overlapping photograph and certificate.

The particulars of the description of the candidate as also his age, and date and place of birth will be entered on the back of the certificate.

The certificate will then be sent to the operator by post.

The photograph and description will be checked by the Port Authorities when the operator is signing on a ship. If the operator has not already signed his name in the space provided for that purpose on the front of the certificate he will do so in the presence of the Port authorities.

4. Candidates for examination shall pay an examination fee of Rs. 5 by means of postage stamps affixed to the form of application.

5. Examinations of persons desirous of obtaining certificates of competency referred to in Condition 1 shall ordinarily be conducted at Calcutta. Special arrangements may be made, where circumstances permit, for holding

an examination at any wireless station at which suitable apparatus is provided for the purpose.

6. If the candidate satisfactorily passes the examination, he shall make a declaration that he will observe the secrecy of radiotelegrams which come to his knowledge in the course of duty.

7. In case of failure at an examination a candidate shall not ordinarily be re-examined until after the lapse of three months. An additional fee of Rs. 5 shall be payable in respect of the further examination.

REGULATIONS GOVERNING EXPERIMENTAL LICENCES.

G The Government of India have decided that the granting of licences to military officers in respect of wireless telegraph apparatus used for experimental purposes shall be regulated by the following general principles :—

(1) When an officer conducts experiments in wireless telegraphy in his official capacity at the expense of the Government no licence is required, but only executive permission, which may be given, so far as the Telegraph Department is concerned by the Director-General, Posts and Telegraphs.

(2) When an officer carries on experiments as a private individual at his own expense he must obtain a licence. If the approval of the military authorities is required to what he proposes to do, he should obtain such approval before the Director-General, Posts and Telegraphs, is approached. The licence will then be submitted by the Director-General, Posts and Telegraphs, for the sanction of the Government of India.

(3) With reference to the above, attention is drawn to the necessity for applying for licences to own and use wireless telegraph apparatus or installations, experimental or otherwise. Applications for such licences will be submitted through the Chief of the General Staff and will contain particulars regarding the apparatus, showing (a) system it is proposed to employ, (b) maximum range of signalling with applicants' own receiving apparatus, (c) power (current and voltage), (d) source of power.

ITALIAN SOMALILAND

(See ITALY)

ITALY

THE historic kingdom of Italy occupies the central position amongst the three great peninsulas of Southern Europe, and extends from 46° 40' 12" to 34° 54' 54" North latitude; its longitude stretching from 18° 30' 37" to 6° 33' 7" East. Before the war the area totalled 110,632 square miles and the seaboard of the peninsula covered 2,272 miles.

The present constitution of Italy is an expansion of the "Statuto Fondamentale del Regno," granted March 4th, 1848, by King Charles Albert to his Sardinian subjects. The executive power of the State belongs exclusively to the Sovereign, working through responsible Ministers; whilst the legislative authority rests conjointly with the King and Parliament, the latter consisting of two Chambers. King Vittorio Emanuele III, born November 11th, 1869, is a direct descendant of the Vittorio Emanuele who was declared King of Italy on March 17th, 1861, by the first Italian Parliament.

The association of Italy with wireless telegraphy has from the start been very close, and the land of his birth has in many different ways recognised what she owes to her distinguished son, Senatore Marconi.

CONTROL.

Wireless telegraph land stations in the Kingdom belong to the Government and are operated by the Ministry of the Navy (Department of Artillery and Armaments), the Ministry of Posts and Telegraphs and the Ministry of War. Each Ministry includes a special department for dealing with wireless telegraphy.

ADMINISTRATION.

The current Rules and Regulations which we print below (and which cover the Italian Colonies) may be summarised in the following List:—

- A**—Law of June 30th, 1910, No. 395.
- B**—Regulations (No. 227) of April, 1912.
- C**—Law of June 30th, 1912.
- D**—Decree No. 1587, dated November 12th, 1916.
- E**—Decree No. 2223, dated November 4th, 1919.

A The following is known as the Law of June 30th, 1910, No. 395:—

ART. 1.—The establishment and exploitation of the radiotelegraphic and radiotelephonic installations are reserved to the Government, and in general of all those for which, in the State and in the Colonies, on land and on board ship, energy is employed in order to obtain distance effects without the use of conducting wires.

The Government has the right to grant to any person, public or private scientific or training institution, the authority to establish and to exploit installations of such a nature on land and on the passenger and mercantile vessels, for which previous concession must be obtained.

The licence may be revoked upon the recommendation of the consulting Commission when the installations cause interruptions of State stations which were in operation prior to the concession, or when they do not comply with the technical conditions established in the licence.

The exploitation of the installations granted can be revoked, suspended, or taken over by

the Government in time of war or during peace whenever the Government may deem it necessary and opportune.

The Government has also the right to inspect, through its officials, those stations which are not the property of the State, in order to ascertain whether the stations are operated in accordance with the regulations.

ART. 2.—The Government administrations concerned in these services are the Ministry of Posts and Telegraphs, of War and the Admiralty; and special regulations determine the share of the respective departments in the execution of the present law.

A permanent consultative commission is constituted to give opinions upon international agreements, questions of a scientific nature, and upon doubtful points relating to the said services.

The Commission shall also decide every doubtful case which may arise of a technical character regarding the installation and exploitation of the concessions according to Art. 1.

The Commission shall be qualified to determine the power of the radiotelegraphic and

radiotelephonic apparatus and technical and economic details for their use on vessels engaged in emigration traffic when the said apparatus has been installed by the Government according to Art. 11 of the Royal Decree, March 14th, 1909, No. 130.

Questions concerning indemnity on account of the cancellation of a licence, suspension of exploitation, or redemption as per Art. 1, shall be referred to an arbitration tribunal, which shall decide, without right of appeal. This tribunal shall be composed of three members, one nominated by the Government, one by the licensee, the third by the President of the Tribunal in Rome. The Government can leave to the said Commission the selection of its own arbitrator.

Where several licensees are interested parties to a dispute, and they are unable by mutual agreement to nominate an arbitrator, each shall submit the name of an arbitrator, and the choice will be made by drawing lots in the presence of a judge of the Tribunal of Rome.

The composition of the Commission in the present article and the rules of its working have been determined in the regulations.

Art. 3.—Every infringement of Art. 1 of the present law is punishable by a fine up to £12,000 and with imprisonment up to one year, which penalties may be imposed separately and together according to the circumstances. It is in the power of the judge to add to the said penalties the confiscation of the apparatus.

During criminal proceedings the Administration can, in virtue of decree by the prefect, and at all times that in the opinion of the prefect would be in the public interest, obtain immediate possession of the installation and provide if necessary for its removal.

Any person will incur the same penalties if he should avail himself of the installation on board commercial or passenger vessel when they are at anchor in the State waters, except in case of danger or other special cases, which will be dealt with in the regulations.

Art. 4.—If any person shall cause damage or deterioration to installations, or in any other manner interrupt, or cause interruption of the service, even temporarily, he will be liable to the penalties laid down in Art. 315 of the Penal Code, except in the case of military interference with military stations for which offence the penalties stated in the military Penal Code will be imposed.

If any person should abuse the use of the distress signal of the vessels in danger, he will be subject to the same penalties.

Art. 5.—The penalties established by the present law are understood to be applicable, without prejudice to greater offences which may take down in Art. 315 of the Penal Code, except in the case of military Penal Code.

B The following regulations (No. 227) were published in April, 1912, for carrying out the Act of June 30th, 1910 (No. 395):—

SECTION I.

1. The Ministry of Posts and Telegraphs shall have under its control:—

(a) The installation and exploitation of the stations for public service and constituting the interior network of the State and of all those opened for international communication.

(b) The verifications, inspection and control of the material and working of the service

of all the land installations exploited in virtue of Government licence.

(c) The tariff regulation for communication between all land stations and ship and shore stations, also accounting.

The Minister of War shall have under his control:—

The installation and working of stations destined exclusively to the military service, including movable field stations for use in the R. Army. In time of war the management of the service (either a part or all the stations destined to the public service) can be taken over by the military administration. The Admiralty shall have under its control:—

The installation and exploitation of the ship stations of the Royal Navy, private and mercantile; the verifications, inspections and control of the materials and of the working of the service of the installations made for passenger and mercantile traffic.

SECTION 2.

2. *Permanent Consulting Radiotelegraphic Commission.*—The Permanent Consulting Commission is composed of a President not belonging to the Government Administration, two members selected amongst persons of well known ability in electric and radiotelegraphic science, a superior officer of the Royal Navy attached to the General Staff, and a superior officer attached to the office of the Chief of the General Staff of the Royal Navy.

The following are members of the Commission by right:—

(1) The Director of Posts and Telegraphs Higher Institution.

(2) The Director in Chief of the Radiotelegraphic Department of the Posts and Telegraphs.

(3) The Officer-Director of the Radiotelegraphic Department in the Army Office of Rome.

(4) The Superior Officer of the General Staff of the Royal Navy, Chief of the Department of the Submarines, Electric Material and Radiotelegraphic Service at the Admiralty.

Three members, selected amongst the three mentioned Administrations, will act as Secretaries.

3. The President, members and secretaries will be nominated by Royal Decree, proposed by common accord, by the Ministers of the Posts and Telegraphs, Admiralty, and War.

By Ministerial Decree extraordinary members, without vote, can be added temporarily, these to be selected from persons of well-known skill, proposed by the President of the Commission.

4. The Commission shall have its office at the Admiralty in Rome. The meetings of the Commission are to be convened by the President at the request of the interested Administrations.

5. The opinion of the Consulting Commission can be asked on the following subjects:—

(a) On the compilations of arrangements and special rules for the technical organisation of the radiotelegraphic and radiotelephonic service of the State, as well as for practical rules for the constitution and exploitation of the installations.

(b) On all questions of a scientific nature, and doubtful cases referring to the radiotelegraphic and radiotelephonic services.

(c) On International Conventions.

(d) On technical conditions with reference to licences of radiotelegraphic and radiotelephonic stations.

(c) The establishment, before granting the licence, of indemnity due in case the installation should be repealed, suspended, or taken over by the State according to paragraph III. Art. 1 of the law.

(f) Repeal of the licences.

(g) On the adoption of new radiotelegraphic and radiotelephonic systems, and on the application of same by the Government service, unless they should deal with interesting systems concerning the defence of the State.

The qualified Administrations may whenever they think it warranted ask the opinion of the Commission on any subject.

The Commission is entitled to avail itself for its own study of the working rooms and of the Government experimental stations, but a previous application must be lodged with the Administrations.

6. The expenses for the working of the Commission are to be divided amongst the three Administrations interested.

SECTION 3.

7. Licences for the Exploitation of Radiotelegraphy and Radiotelephony.—Licences to persons, to institutions, and to public and private Administrations for the installation of any radiotelegraphic or radiotelephonic station will be granted in virtue of an agreement containing the conditions to be observed, by a decree issued by the Ministry of the Posts and Telegraphs, acting in harmony with the Ministry of War and the Admiralty.

Such licences cannot last longer than February 16th, 1917. After this period the licence can be renewed.

8. Licences for radiotelegraphic stations for private use are limited to private correspondence between properties of the same licensee or between properties of two licensees, all correspondence with third persons being absolutely excluded. Such licences are exempted from tax when the stations are constructed on private property and work over all the territory dividing the stations, without interruption by public land.

Licensees are also exempted from taxes which are granted for installation of radiotelegraphic and radiotelephonic stations having for object a scientific or educational purpose.

9. All applications for licences for radiotelegraphic and radiotelephonic installations must contain:—

(a) The exact indication of the person or institution making the application and their legal residence.

(b) The nature and purpose for the licence, the place or places where it is proposed to instal the station or stations, and their presumed zone of service.

(c) The detailed plans for the construction and technical quality of the installation, indicating in a detailed manner the nature and power thereof.

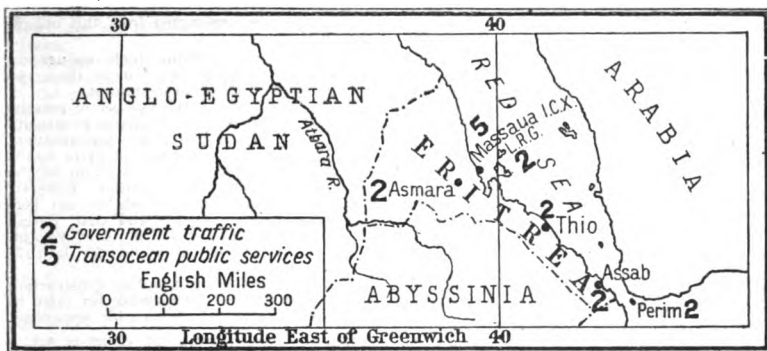

(d) The period for which the licence is asked.

(e) The period required before starting the station.

(f) The receipt of the amount to constitute the deposit-guarantee, as per Art. 13 and 14. Such a deposit must be paid to the cashier of the local Provincial Director of Posts and Telegraphs by the applicant for the licence.

COPYRIGHT: "GEOGRAPHIA" L^{td} 55 FLEET STREET, LONDON, E.C. 4.

COPYRIGHT "GEOGRAPHIA" LTD 55 FLEET STREET LONDON E.C. 4

10. Every contract by the licensee, having for object the hire, amalgamation, partial or complete transference of the licence or licences, cannot take place before obtaining in advance the approval of the Government.

11. The licence is considered as expired should the licensee fail to complete and have ready for service for radiotelegraphic or radiotelephonic installation within the time stipulated as per paragraph (e) Art. 9.

The licence is considered as expired on the death of the licensee.

12. The officials of the State Telegraphic Administration shall be responsible for the maintenance of the installation and proper upkeep of the radiotelegraphic and radiotelephonic land stations for which a licence is granted; they shall satisfy themselves that the licensee observes the law and the present regulations and that the licensee fulfils all the obligations imposed upon him by his contract with the Government.

13. Every licensee for a radiotelegraphic or radiotelephonic installation for private use, excepting the cases considered in Art. 8, will pay in advance to the State an annual fixed tax of £1t.50.

To guarantee the said tax the licensee must make a deposit as guarantee equal to the amount of fixed tax for one year.

14. Every licensee for radiotelegraphic or radiotelephonic installations for public use will pay every year to the State in quarterly instalments a tax corresponding to 10 per cent. of the revenue from radiotelegraphic or radiotelephonic charges on the basis of the common tariff.

To guarantee the said tax the licensee will make a deposit as guarantee of not less than £1t.200. If after one year the guarantee shows to be less than the amount due to the State for one year, then the deposit must be brought to the level of such proportion.

15. The period of the licence and the obligation of the tax established by Arts. 13 and 14, begin from the month following the decree granting the licence.

16. The deposits as per Arts. 13 and 14 will be forfeited to the public exchequer in case of withdrawal or termination of a licence.

Should the licensee fail to provide for the payment of the taxes due as per Arts. 13 and 14, the Government will apply the deposit, which should be increased in its integral amount within ten days of the said confiscation.

SECTION 4.

17. *Qualifications for the Radiotelegraphic and Radiotelephonic Service.*—The staff necessary for the management and working of the radiotelegraphic and radiotelephonic service is appointed as follows:—

(a) For the stations under the control of the Ministry of Posts and Telegraphs, from amongst the officials of specialists of first, second, third and fourth class.

(b) For the stations under the control of the Ministry of War, amongst the officers and privates of the engineers of the R. Army.

(c) For the stations under the control of the Admiralty, from amongst the officers of the staff and the marines.

Should it at any time be found convenient to the management and working of the above-mentioned stations, a mixed staff selected from the three Administrations can be employed.

The Ministry of the Posts and Telegraphs can for an educational purpose always send its own staff to the radiotelegraphic and radiotelephonic commercial stations by making previous arrangements with the interested Administration.

18. The staff to be employed in the radiotelegraphic stations licensed to private persons must possess a certificate proving their professional ability.

Such a document is granted either by the Ministry of Posts and Telegraphs, or by the Admiralty, according to the service for which it is intended.

SECTION 5.

19. *Limitations to the use of Radiotelegraphic and Radiotelephonic Apparatus.*—Cargo and passenger vessels are prohibited from using their own radiotelegraphic or radiotelephonic stations when they are at anchor in the State waters, except in the case of giving warning of danger or appeals for help, or when they are about to sail, or for urgent reasons within half an hour after their arrival and when the communication with the land is cut off for special reasons or for sanitary measures.

A breach of this rule will render the transgressor liable to the penalties imposed by Art. 3 of the law.

SECTION 6.

20. *Taxes.*—The tax for one radiotelegram is composed:—

(a) Of the radiotelegraphic tax due to the coast station;

(b) Of the radiotelegraphic tax due to the station on board;

(c) Of the telegraphic tax.

For taxation purposes only those radiotelegrams exchanged with Ship stations are considered.

21. All the radiotelegraphic and radiotelephonic stations installed before the promulgation of the law must apply for a licence within one calendar month of the present regulation.

C The following paragraph relating to Wireless Telegraphy is taken from the "Law of June 30th, 1912," which contains regulations concerning marine, commercial and postal services:—

"The undertakers (of said services) are obliged to adopt (on board their ships)..... wireless telegraph and telephone apparatus, whose system and power will be indicated, and, if necessary, modified by the Ministry of the Navy."

D *The OFFICIAL STATUTE BOOK of the Kingdom of Italy contains the following decree, numbered 1587 and dated at Rome November 12th, 1916.*

In pursuance of the law of May 22nd, 1915, No. 671, which confers extraordinary powers on His Majesty's Government and in pursuance of the law of June 5th, 1910, No. 395, and the relative regulations appertaining thereto, approval by Royal Decree of February 1st, 1912, No. 227, and in pursuance of the Royal Decree of July 11th, 1913, No. 1006, which gives effect to the International Radiotelegraphic Convention of London; and the Ministers in Council having given due consideration to the proposals placed before them by the Ministers of Maritime and Railway Transports and of Marine, in concert with the Minister of Posts and Telegraphs;

We have decreed and we hereby decree:—

ART. 1.—All vessels of commerce, whether propelled mechanically or by sails, whether they transport passengers or not, if they have on board a total of fifty persons or more, must, whilst at sea, carry an equipment of radiotelegraphic apparatus.

ART. 2.—From this obligation are exempted vessels on which the number of persons on board is exceptionally and accidentally increased to fifty or more, on account of *force majeure* or because the captain has been obliged to increase the number of his crew to make up for those who are ill, or on account of his having been obliged to transport persons picked up at sea or other persons.

There are also exempted from this obligation:—

(1) Vessels which during their voyage do not travel at a distance of more than 150 nautical miles from the nearest coast.

(2) Vessels on which the number of persons present on board is exceptionally or eventually increased to fifty or more, after embarkation, during a part of the voyage, of extra hands which it is found necessary to bring in for the handling of goods; on condition, however, that the aforementioned vessels do not perform trans-oceanic voyages and that, during the above-mentioned part of their voyage, they remain within thirty degrees latitude north and south.

(3) Sailing vessels of primitive construction whose build renders it impossible for them to be equipped with radiotelegraphic apparatus.

ART. 3.—Vessels, which by virtue of Art. 1 above-mentioned are required to be equipped with radiotelegraphic plant, are, as regards the Radiotelegraphic Service, divided in three classes, according to the classification of ship stations (prescribed by Article XIIIb) of the regulations annexed to the Radiotelegraphic Convention, signed in London on July 5th, 1912, viz:—

First Class.—Vessels possessing continuous wireless service. In this first class are included vessels able to carry on board twenty-five passengers or more:—

(i) If they have an average speed of fifteen knots or more.

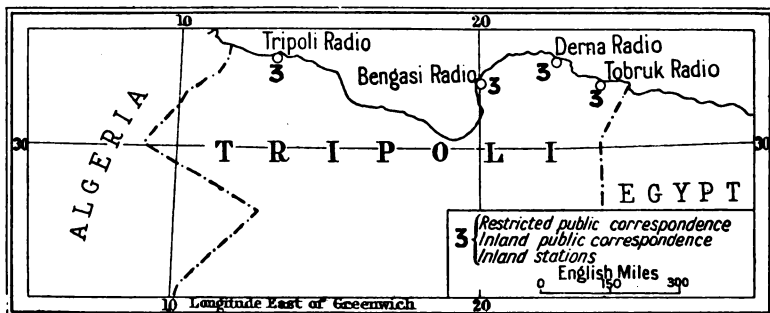

(ii) If they have an average speed of over thirteen knots, but only on the double condition (a) that they have on board 200 persons or more (passengers and crew), and (b) that they perform, during their voyage, a journey of over 500 nautical miles between two consecutive ports of call. It is, however, allowable for these vessels to be included in the second class on condition that the listening-in service be continuous.

Second Class.—Vessels possessing a wireless service limited to certain hours.

In the second class are included vessels able to carry on board twenty-five passengers or more, if they are not, for other reasons, included in the first class.

Vessels of the second class must, whilst at sea, keep a permanent listening-in service of at least seven hours per day, and must, in addition, listen-in for ten minutes at the beginning of each of the remaining hours.

Third Class.—Vessels possessing a wireless service with no fixed hours of working.

COPYRIGHT, 'GEOGRAPHIA L^{td} 55 FLEET STREET LONDON E.C.4.

In the third class are included all vessels which are not included in the first or second classes.

The owner of a vessel included in the second or third class has the right to demand that, in the certificate which is issued to him, the vessel in question be allocated to a superior class, if the said vessel satisfies all the requirements of that class.

ART. 4.—Vessels, which by the terms of Article 1 (above) must be equipped with radiotelegraphic plant shall be required to maintain whilst at sea a continuous listening-in service, if the Government shall judge that it is useful for the safety of life at sea.

In any case a continuous watch is required by :—

1. Vessels which possess an average speed of over thirteen knots; which have on board 200 persons or more; and which perform during their voyage journeys of over 500 nautical miles between two consecutive ports of call, even when those vessels are classified in the second class.

2. Vessels of the second class, during the whole time when they are voyaging over 500 nautical miles distant from the nearest coast.

3. Other vessels indicated in Article 1 when they are in the trans-Atlantic service; or, whilst in other services, when their itinerary requires them to go over 1,000 nautical miles from the nearest coast.

Vessels used for all kinds of fishing purposes, including whalers which are required to be equipped with radiotelegraphic plant, are not obliged to maintain continuous listening service.

The continuous listening service can be performed by one or more telegraphists holding one of the certificates prescribed in Article X of the regulations annexed to the International Radiotelegraphic Convention of 1912, and also, if necessary, by one or more qualified listeners (*ascoltatori patentati*).

Nevertheless, should a reliable automatic alarm apparatus be invented, the continuous listening service may be maintained by means of that apparatus, after its use has been duly authorised by the Ministry of Maritime and Railway Transports.

By the term duly qualified listener (*ascoltatore brevettato*) shall be understood a person holding a certificate of competency issued by an administrative authority established for the purpose. To obtain such a certificate, the applicant shall be required to prove that he is competent to receive and to understand the radiotelegraphic distress signal and safety signal.

The registered owner shall take the necessary steps to provide that secrecy with regard to communications shall be respected by the qualified listeners in his employ.

ART. 5.—The Radiotelegraphic apparatus obligatory fitted in accordance with Article 1 must be able to transmit, by day, from vessel to vessel, signals clearly perceptible under normal circumstances and conditions, at a minimum distance of 100 nautical miles.

Every vessel obliged, under the terms of Article 1 above mentioned, to be equipped with radiotelegraphic apparatus (in whatever category it may be classed), be fitted in conformity with Article XI of the regulations annexed to the International Radiotelegraphic Convention of 1912, with an auxiliary radiotelegraphic apparatus, every part of which shall be kept in a location as absolutely secure as possible.

In any case, the auxiliary apparatus must be entirely situated in the upper parts of the vessel, as high up as may be found practicable.

The auxiliary apparatus shall, as provided in Article XI of the regulations annexed to the International Radiotelegraphic Convention of 1912, possess a source of power devoted to that purpose alone. The apparatus must be capable of being speedily adjusted and employed besides being able to be worked for at least six hours, with a minimum range of eighty nautical miles for vessels of the first class, and of fifty nautical miles for vessels of the other two classes.

If the normal apparatus, the range of which under the terms of this Article covers at least 100 nautical miles, satisfies all the conditions indicated above, there is no obligation to carry also an auxiliary apparatus.

ART. 6.—Every installation must, after the owner has sent in his request, and before it starts working, be inspected and approved by the competent authorities; the Certificate of Inspection, which constitutes a working licence in accordance with Article IX of the regulations annexed to the Radiotelegraphic Convention of 1912, shall contain details of the apparatus as far as they relate to the terms of the concession; it shall be drawn up in duplicate, and one copy thereof shall be handed to the commander of the vessel; but the copy shall not be thus issued if the appraa us does not comply with the conditions laid down in the Radiotelegraphic Convention of 1912 and in the present decree.

ART. 7.—Every captain of a vessel who receives a distress call from a vessel in danger is obliged to go to the help of those in danger.

The captain of every vessel in danger has the right to select from those vessels which have answered his call that vessel or vessels which he considers to be the most capable of affording him help. He should only avail himself of such right after having consulted, as far as possible, the captains of the vessels themselves. The latter are obliged to comply immediately with such request, going with all speed to the help of those in danger.

The captains of the vessels upon whom devolve the duty of rendering assistance are released from their obligations as soon as the captain or captains requisitioned have made known that they are ready to obey the requisition; or as soon as the captain of one of the vessels which has reached the scene of the catastrophe shall have made known to them that their help is no longer necessary.

If the captain of a vessel finds it impossible, or does not consider it reasonable or necessary under the special circumstances of the case, to go to the help of the vessel in danger, he immediately informs the captain of the latter. He must also enter in his log the full reasons prompting his decision.

ART. 8.—With regard to the terms of Article 1, shipowners or their representatives shall, within fifteen days of the publication of the present decree, make application to the Ministry of Posts and Telegraphs for any concession required for existing vessels (in accordance with Article 1) not already equipped with radiotelegraphy and not excused from the installation of such apparatus under the provisions of Article 2.

When it is desired to nationalise any vessels after the date of the present decree, and such vessels come within the scope of the conditions laid down in Article 1, neither the necessary

nationalisation papers nor any provisional certificate will be issued unless the shipowner shows that he has made the proper application for a licence to instal radiotelegraphic apparatus on board.

Existing licences, notwithstanding the provisions of Article 7 of the regulations regarding radiotelegraphy at present in force, shall remain valid throughout the duration of the war. On their expiry the shipowner shall make application for a renewal in accordance with the Article above-mentioned; moreover it is further incumbent upon the shipowner to continue to work the ship station until the new licence has been obtained.

On the official licence there shall be entered a date on which each ship installation must be ready to work, this date will be estimated on the importance of the services for which the vessel is destined, and in accordance with the opinion of the competent authorities.

For vessels which had a radiotelegraphic station, but which did not have the auxiliary apparatus required under the above-mentioned regulations, there is granted a period of one year from the date of the present decree to put the matter in order.

ART. 9.—Vessels whose owners shall not have made application for a radiotelegraphic licence within the period fixed by Article 8; or those whose owners, having obtained their licence, have nevertheless neglected to put the station in working order, either in accord with the above-mentioned provision, or in accord with the term-limit inserted in the licence itself, may be refused the right of working cargoes.

Whenever vessels which have not complied with their obligation to instal radiotelegraphic apparatus are obliged to put to sea either because they have public services to fulfil, or for any reason of national importance, the Minister of Transports shall have the power to issue official instruction that the station shall be installed and put in working order at the expense of the owner of the vessel.

The same power is granted to the Minister of Transports in cases where the vessels referred to in Article 1 navigate waters outside the limits set forth in Article 2.

The expenses incurred for such official installation of apparatus and for the putting in working order of the same shall be recoverable in the manner indicated in Art. 205 of the laws governing the Mercantile Marine.

TEMPORARY PROVISIONS.

ART. 10.—It is therefore hereby rendered obligatory for the period of the war (and in any case, for not less than three years from the date of the licence) that all mechanically propelled mercantile vessels (of a gross tonnage of 2,000 tons or more in the case of cargo ships and of 1,500 tons or more in the case of passenger vessels) shall instal and maintain radiotelegraph stations in accordance with the existing laws and regulations, even though they are not compelled to apply for a radiotelegraph licence in accordance with Article 1.

ART. 11.—At the discretion of the Minister of Transports and following upon a request of the owners of the vessel, those vessels which perform voyages between ports of the Kingdom, excluding the Colonies, and which do not go beyond twenty miles from the coast, may be relieved of the obligation set forth in the preceding Article.

ART. 12.—The regulations contained in Articles 3 and 9 are intended to apply also to

those Articles alluded to in these temporary provisions, except as regards the duration of the concession and the obligation to apply for its renewal. However, in the case of these vessels a special auxiliary plant is not indispensable and it will be sufficient if the range of the station does not fall below eighty nautical miles, and that it is possible for regular transmission to be carried out at any moment.

* ART. 13.—The Commission for Insurance against war risks at sea, sitting at the "National Insurance Institute," in determining the premiums in respect of vessels, shall take into account the existence on board of radiotelegraph apparatus, whether temporary or permanent, in accordance with these temporary provisions.

ART. 14.—In order to insure the working of the radiotelegraphic service on mercantile vessels, operators not indispensable for the Royal Army and for the Royal Navy, will be exempted from military service at the request of the Ministry of Maritime and Railway Transports.

ART. 15.—The present decree takes effect from the day of its publication in the *Official Gazette* of the Kingdom of Italy.

We order that the present decree, stamped with the seal of State, be inserted in the official collection of laws and decrees of the Kingdom of Italy, ordering that everyone whom it concerns may observe it or cause it to be observed.

Dated Rome, November 12th, 1916.

Royal Decree No. 2223.

VITTORIO EMANUELE III.
By the grace of God and the will of the Nation, King of Italy.

Having seen the law of 30th June, 1910, No. 395, and the relative regulations approved by Royal Decree 1st February, 1912, No. 227;

Having seen the Royal Decree No. 1002 of 11th July, 1913, ratifying the International Radiotelegraphic Convention of London, 1912, and the acts thereto annexed;

Having seen the Royal Decree of 28th December, 1913, No. 1480, which extends to the radiotelegraph service in the Italian Kingdom the provisions of the above-mentioned Convention of London;

Having recognised the necessity of establishing—in harmony with the provisions of Article X of the Service Regulations annexed to the aforementioned Convention of London—opportune regulations for the issue of Government certificates to radiotelegraphists desirous of performing radiotelegraph service on board mercantile vessels;

On the proposal of the Minister Secretary of State for the Navy, in agreement with the Minister of Posts and Telegraphs;

We have decreed and we decree:

ART. 1.—Certificates of competency to perform radiotelegraphic service on board commercial vessels, as contemplated in Article X of the Service Regulations annexed to the International Radiotelegraph Convention of London, will be issued by the School of Semaphorists and Radiotelegraphists of the Royal Navy at Spezia (Comando difesa militare) marittima.

2. At the aforementioned school shall be instituted and maintained up to date a general register of all the candidates examined, with particulars of the examination undergone by each candidate, and the result. The school

shall also preserve in its archives a copy of the photograph of each candidate, furnished with all the particulars entered in the general register and also a personal description of the candidate.

The Ministry of Marine shall be empowered to authorise, when circumstances require and merely as an exceptional case, that candidates shall be examined at other branches of the Royal Navy, but the examination must always be conducted under the supervision of the officials of the Royal School of Semaphorists and Radiotelegraphists.

ART. 2.—Candidates shall be examined by a suitable commission composed of:

The Director of the aforementioned School or a superior officer of the Staff of the Royal Navy.

Two officers or officials of the Royal Navy who are specialists in radiotelegraphy.

The commission will assemble in the early days of each month.

ART. 3.—Candidates, in order to be admitted to the examinations, shall forward, in due time, an application on stamped paper to the value of two lire addressed to the "Direzione della regia scuola semaforisti e radiotelegrafisti Spezia," and such application must be accompanied by the following documents:

Certificate of study (not less than the "licenza elementare").

Authentic copy of birth certificate proving that the applicant has completed his eighteenth year but is not more than thirty years of age;

"Certificato di penali" (police certificate of good conduct), the date of which must not be more than two months prior to the date of presentation of such document;

Certificate of good conduct and personal character issued by the Mayor of the Commune in which the applicant is resident, bearing the visé of the Prefect or Sub-Prefect;

Any certificates testifying to the applicant's knowledge of radiotelegraphy and foreign languages;

Certificate of Italian citizenship;

Certificate of entry in the lists of the military or naval levies and the certificate of service performed;

Two photographs;

Postal order for L.2.05, the fee for the certificate of radiotelegraphy. (This amount will be refunded to candidates failing to pass the examination.)

The candidate shall declare in the application whether he has undergone previous examination, and if so the date and place of such examination.

N.B.—A man presenting the certificate of "esito di leva" or the extract of the "matricola della gente di mare" will not be required to present a certificate of Italian citizenship.

All documents shall be presented on paper stamped to the prescribed amount, unless the applicant is able to show, by authentic document, that he is in a state of poverty. The application, however, must always be written on stamped paper.

ART. 4.—Applicants who are admitted to the examinations after having presented the prescribed application duly documented will be notified by the School authorities as to the day on which they are to present themselves to undergo the test.

ART. 5.—The Examining Commission shall rigorously satisfy itself that the candidate fulfils the conditions prescribed in the aforementioned Article X of the Regulations—

namely, that he possesses a perfect knowledge of the radiotelegraph apparatus as shall enable him to render efficient radiotelegraph service on board ship.

Candidates must possess the knowledge of radiotelegraphy stipulated in Appendix A (programme of examination for the granting of Government radiotelegraph certificates), signed, on Our order, by the Minister of Marine.

ART. 6.—In addition to the above-mentioned tests candidates must undergo practical tests in transmission and oral reception, the duration of such tests to be not less than ten minutes.

In connection with the provisions of Article X of the Regulations of Service annexed to the International Radiotelegraph Convention of London, shall be issued:

A first-class certificate in radiotelegraphy to those who attain a speed of transmission and oral reception not less than twenty words per minute in a foreign language;

A second-class certificate in radiotelegraphy to those who attain a speed of transmission and oral reception not less than twelve and not exceeding nineteen words per minute in a foreign language. An average of five characters per word shall be taken as a basis for calculation.

ART. 7.—The aforementioned certificate shall be designated "Brevetto internazionale di radiotelegrafista" and shall bear the photograph of the holder, duly legalised by the stamp of the authority of the Royal Navy, and the personal description of the holder and the qualifications attained.

ART. 8.—Applicants who have been declared by the Examining Commission to be unqualified to receive the International Radiotelegraph Certificate cannot present themselves for further examination if at least six months have not elapsed from the date of the first examination.

ART. 9.—Radiotelegraphists who have obtained a second-class certificate in radiotelegraphy shall only undergo the examination to obtain a first-class certificate after three months have elapsed from the date of the last examination.

ART. 10.—Candidates who have been found unqualified after two consecutive examinations cannot undergo a further test without the special and exceptional authorisation of the Ministry of Marine (Direzione generale di artiglieria e armamenti).

ART. 11.—The issue of duplicate international certificates in radiotelegraphy is forbidden without the special authorisation of the Ministry of Marine (Direzione generale di artiglieria e armamenti).

ART. 12.—Radiotelegraphists must undertake to maintain the secrecy of correspondence.

ART. 13.—All violations of the secrecy of correspondence, of the International Radiotelegraph Convention and the relative regulations, and of the general rules governing the working of radiotelegraph stations open to public service will be punished by the temporary or permanent withdrawal of the radiotelegraphist's certificate, according to the seriousness of the infraction committed by the radiotelegraphist, irrespective of any more severe punishment that may be imposed.

ART. 14.—The present decree will enter into force from the day of its publication in the *Gazzetta ufficiale*.

We order that the present decree, to which has been affixed the seal of State, be inserted in the official collection of laws and decrees of the Kingdom of Italy, and we enjoin its observance upon all those whom it may concern.

Given this day, November 4, 1919, at San Rossore.

VITTORIO EMANUELE,
Sechi-Chimienti.

Seen, The Keeper of the Seals :
Mortara.

APPENDIX A.

PROGRAMME OF EXAMINATIONS FOR THE GRANTING OF GOVERNMENT CERTIFICATES IN RADIOTELEGRAPHY.

Diagram of the various radiotelegraph apparatus used and the working of the individual parts.

A perfect knowledge of such apparatus, its adjustment and method of removing faults.

Tuning of a station. Rules relative thereto. Cimoscopi (?)

Receiving apparatus and the mode of using them.

Sources of energy which feed radiotelegraph

apparatus: Dynamos, alternators, transformers, converter groups and converters. Accumulators and their maintenance.

Measures necessary in the practice (working) of radiotelegraphy. Voltmeters, ammeter, methods of insulation.

Antennæ and earth.

Precautions to avoid damage to the material and staff during transmission.

Protection devices of the oscillatory circuits.

Perfect knowledge of the general working rules of radiotelegraph stations open to public service, and also of the International Radiotelegraph Convention and the Service Regulations annexed thereto.

Perfect knowledge of the conventional abbreviations.

Knowledge of foreign languages (optional).

Duties of the radiotelegraphist as regards the radiotelegraph service.

Secrecy of correspondence.

Rome, 4th November, 1919.

Seen, by order of His Majesty the King,
SECHI,
Minister of Marine.

JAMAICA

THIS "Land of Wood and Water" is the largest of the British West Indian Islands, covering an area of 4,450 square miles, and situated about 90 miles south of Cuba, between latitude $17^{\circ} 43'$ and $18^{\circ} 32' N.$; its longitude stretching from $76^{\circ} 11'$ to $78^{\circ} 21' W.$ It was discovered on May 3rd, 1494, by Columbus, and named after St. James. The Governor is assisted by a Privy Council and a Legislative Council, the latter consisting partly of nominated and partly of elected members. There are two wireless stations for public correspondence with ships.

ADMINISTRATION.

The Laws and Regulations under which radiotelegraphy is administered comprise the following :—

A—Telegraph Control Law, 1904.

B—Direct West India Cable Company's Law, 1909.

C—Regulations under Law of 1904.

D—Further Rules and Regulations.

E—Regulations under the Defence of the Island Law.

THE TELEGRAPH CONTROL LAW (7) OF 1904.

A 1. No person shall, within the Colony or any of its Dependencies, establish, maintain or use any telegraphic apparatus, mechanism, or contrivance, of what nature or kind soever the same may be, without due permission or licence under the hand of the Governor previously obtained for that purpose.

It is hereby expressly declared that what is commonly known as "wireless telegraphy," including the Marconi apparatus and any similar or other mechanism or contrivance whatsoever for the transmission of telegraphic messages without the employment of wires or cables, is a telegraphic apparatus, mechanism or contrivance within the meaning of this Section.

2. It shall be lawful for the Governor in Privy Council from time to time to make and as he shall see fit repeal, alter or vary rules and regulations for all or any of the following purposes, viz :—

Permitting or licensing any person to establish, maintain, or use any telegraphic apparatus, mechanism, or contrivance, whether for the service of the public or for any private purpose ;

Attaching conditions, restrictions, and limitations to the exercise of the privilege by such permission or licence conferred ;

Providing suitable penalties and forfeitures for the contravention of the prohibition above contained in Section 1 of this law, and to the breach of any rule or regulation made thereunder, and providing for the recovery thereof, summarily or otherwise ; provided that the penalty (over and above forfeitures) to be imposed for any one offence shall in no case exceed a fine of Two Hundred Pounds, or in default of payment thereof imprisonment, with or without hard labour, for a period not exceeding twelve months ;

The exercise of all such powers and control over telegraphic establishments (by temporarily entering into possession thereof or

otherwise) as may be necessary for the public safety, whether at all times, or in any case of emergency which may arise.

And generally for the better carrying out of the purposes of this law.

Such rules and regulations shall come into force as from the date of publication thereof in the *Jamaica Gazette*.

3. Nothing in this law contained shall invalidate or impair any legal right already possessed by any telegraph or cable company, relative to the laying down or landing of any telegraphic cable, the removal, renewal, maintenance, and use thereof, or any other like matter.

4. Law 1 of 1903 is hereby repealed.

LAW 21 OF 1909.

THE DIRECT WEST INDIA CABLE COMPANY'S LAW, 1909.

B Whereas the Direct West India Cable Company, Limited, is desirous of establishing a wireless installation for communication between ships and the shore in Jamaica;

And whereas under the provisions of Law 7 of 1904, entitled "The Telegraph Control Law, 1904," no person shall establish, maintain or use within the Island of Jamaica, or any of its Dependencies, any apparatus or machine whereby communication by wireless telegraphy can be held between the said Island and ships, without having first obtained the sanction of and a licence from the Governor;

And whereas a licence to erect such a wireless station has been granted to the Direct West India Cable Company, Limited, by the Governor of Jamaica.

Be it enacted by the Governor and Legislative Council in Jamaica as follows:—

1. The protection, rights, powers, and facilities already granted to the Direct West India Cable Company, Limited, under Law 16 of 1898, entitled "The Direct West India Cable Company's Law, 1898," are granted and extended for the purposes of wireless telegraphy installation to be installed by the company or worked and maintained by them in so far as they may be applicable to the satisfactory and efficient working and maintenance of a wireless station or stations.

2. The Government of Jamaica shall acquire for the use and at the expense of the company a piece of land of sufficient dimensions at a place to be selected by the company and approved by the Government suitable and convenient for the economical erection, main-

tenance, and working of the installation, and when acquired such piece of land shall be conveyed to the company in fee simple, or if the Government of Jamaica possesses a piece of land of sufficient dimensions at a place approved by the company suitable and convenient for the economical erection, maintenance, and working of the installation and which the Government considers it desirable the company should have, the Government may sell the said piece of land at a price to be mutually agreed upon, or the Government may rent it to the company on such terms as may be agreed on during the period of the licence or for so long as the company may continue to work a wireless station or stations.

The acquisition of land by the Government of Jamaica under this section shall be deemed as an acquisition for public works within the meaning of the Public Lands Acquisition Law, 1897 (Law 31 of 1897).

REGULATIONS.

It will be noted that under Clause 2 of the Telegraph Control Law (7), 1904, the Governor in Privy Council has the power of making rules and regulations, and a set of rules were accordingly promulgated during the year 1909, under which the working of wireless telegraphy is now being administered in Jamaica. These rules read as follows:—

C 1. Any licence granted under Law 7 of 1904 shall only entitle the licensee to establish, maintain and use that particular class of telegraph apparatus, mechanism, or contrivance mentioned in the licence. Every licence granted under the said law shall make mention of and fully describe the particular class of telegraphic apparatus, mechanism or contrivance which the applicant proposes to establish, maintain and use.

2. Every person establishing, maintaining or using any telegraphic apparatus, mechanism or contrivance in contravention of Section 1 of the Telegraph Control Law, 1904 (Law 7 of 1904), shall be liable to penalty not exceeding two hundred pounds, or, in default of payment, to be imprisoned with or without hard labour for a period not exceeding twelve months, and the telegraphic apparatus, mechanism or contrivance so established, maintained or used shall be liable to be forfeited to the Government of Jamaica.

3. Every person licensed under this law, who uses any telegraphic apparatus, mechanism or contrivance, for which he has not a licence shall be liable to the penalty and forfeiture mentioned in Rule 2 hereof, if the Resident Magistrate thinks fit to order such forfeiture.

4. Every person licensed under this law who acts contrary to the terms of this licence shall be liable to the penalty and forfeiture mentioned in Rule 2 hereof, if the Resident Magistrate thinks fit to order such forfeiture.

5. Proceedings for penalty and forfeiture under these rules shall not be taken except upon the authority of the Attorney-General.

6. Proceedings for the recovery of any penalty and for any forfeiture under these rules shall be of a summary nature and shall be taken before the Resident Magistrate for Kingston.

FURTHER RULES.

D *Further Rules and Regulations made by the Acting Governor in Privy Council under the Telegraph Control Law, 1904, Law 7 of 1904.*

1. All apparatus for wireless telegraph on board a merchant ship in the territorial waters of this colony shall be worked in such a way as not to interfere with (a) naval signalling, or (b) the working of any wireless telegraph station lawfully established, installed or worked in the colony or the territorial waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. No apparatus for wireless telegraph on board a merchant ship shall be worked or used whilst such ship is in any of the harbours of the colony except with the special or general permission in writing of the Governor.

3. These rules and regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

4. If at any time in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy the use of the wireless telegraphy on board merchant ships whilst in the territorial waters shall be subject to such further rules and regulations as may be made by the Governor from time to time, and such rules and regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

5. The master of any merchant ship on board of which apparatus for wireless telegraphy shall be worked or used contrary to these rules and regulations shall on summary conviction before a Resident Magistrate be liable to a penalty not exceeding two hundred pounds, and in default of payment to be imprisoned with or without hard labour for a period not exceeding twelve months.

REGULATION UNDER THE DEFENCE OF THE ISLAND LAW.

E Whereas by the powers conferred by Law 9 of 1915, the Defence of the Island Law, 1915, the Governor in

Privy Council on the 7th day of August, 1917, made certain Regulations called the Defence of the Island (Consolidation) Regulations, 1917:

And whereas the said Regulations have been amended from time to time by the Governor in Privy Council:

And whereas it is expedient further to amend the said Regulations in manner hereinafter appearing:—

Now, Therefore, the Governor by and with the advice of Privy Council doth order and it is hereby ordered as follows:—

After Regulation 43 the following Regulation shall be inserted:—

43A. (1) Every British sea-going ship of sixteen hundred tons gross tonnage or upwards in respect of which a licence to instal wireless telegraph apparatus has been granted by the Governor in Privy Council shall be provided with a wireless telegraph installation, and shall maintain a wireless telegraph service, and shall be provided with two certified operators, together with suitable accommodation for the apparatus and operators.

(2) Application to the Governor in a form prescribed by him for such a licence shall, unless a licence has before the making of this regulation been granted in respect of the ship, be made on or before the 1st day of May, 1918, by the owner of every such ship which is registered in Jamaica.

(3) The Governor shall, and when wireless telegraph apparatus and the services of operators become available for the purpose, cause licences to be issued in respect of such ships as in the opinion of the Governor should in the national interests be fitted with such apparatus, and the licences shall specify the date as from which the carrying of such apparatus, under this regulation is to be compulsory, the character of the apparatus, and the qualifications of the operators.

(4) The Governor may:—

(a) Extend the time mentioned in the licence as the time within which any apparatus is to be provided; and

(b) exempt any ship from the obligations imposed by this regulation.

(5) If the provisions of this regulation or the terms of any licence granted thereunder are not complied with in the case of any ship, the master or owner of the ship shall be guilty of a summary offence against these regulations, and if any master fails to make an application in accordance with this regulation he shall be guilty of a summary offence against these Regulations, and in either case if the ship is at any time subsequently found at a port or off within the territorial waters adjoining Jamaica the ship may be seized and detained.

(6) In this Regulation expressions have the same meaning as in the Merchant Shipping Acts, 1894 to 1914.

Made by the Governor in Privy Council this 9th day of April, 1918.

D. H. HALL,
Clerk, Privy Council.

JAPAN

THE total area of Japan is 24,794.36 square *ri* (the Japanese *ri* is about 2.5 English square miles). This is exclusive of Korea, Formosa, and Sakhalin, the sum of whose area amounts to 18,664.02 square *ri*. The realm ruled by the Emperor Yoshihito lies geographically between 21° 45' and 50° 56' N. latitude, and between 119° 18' and 156° 32' E. longitude.

CONTROL.

The Department of Communications controls all Government stations and inspects all private stations in Japan. These are divided as follows:—

Public service to ships	10
Government traffic only	4
Public restricted service	1
Public transocean traffic	1
Private traffic	1

Besides these stations, the Korean Government has five Government stations, but they are not yet opened for public communication. The Formosan Government has one land station, and the Government General of Kwantung possesses three Government stations, all open for public communication. In addition, there are many Navy and Army stations under the control of the Navy and Army Departments.

Wireless work in the Department of Communications is divided into two sections: (a) The Research Laboratory, and (b) the Installation and Inspecting Section.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Mr. Nardkichi Yoneda	Director-General of Posts and Telegraphs	Tokyo
Mr. Utarō Noda ..	Minister of Communications ..	Tokyo
Mr. Toyosuke Hada ..	Vice-Minister of Communications ..	Tokyo

WIRELESS RESEARCH LABORATORY.

Official.	Title.	Address.
Dr. W. Torikata ..	Chief of Wireless Research Laboratory	No. 2801, Sanno, Omori, near Tokyo
Mr. E. Yokoyama	Wireless Engineer	No. 2, Uenosakuragicho, Shitayaku, Tokyo
Mr. K. Kitamura	Assistant Wireless Engineer ..	Hiraiso, Ibarakiken
Baron T. Kikuchi	Assistant Wireless Engineer ..	No. 124, Takebayacho, Kioshikawa, Tokyo
Mr. N. Marumo ..	Assistant Wireless Engineer ..	No. 20, Aoyama Kitamachi 7, near Tokyo
Mr. E. Tsumori ..	Assistant Wireless Engineer ..	No. 151, Shirokanemazatocho, Shitayaku, Tokyo
Mr. Y. Nozuki ..	Assistant Wireless Engineer ..	Isohama, Ibarakiken

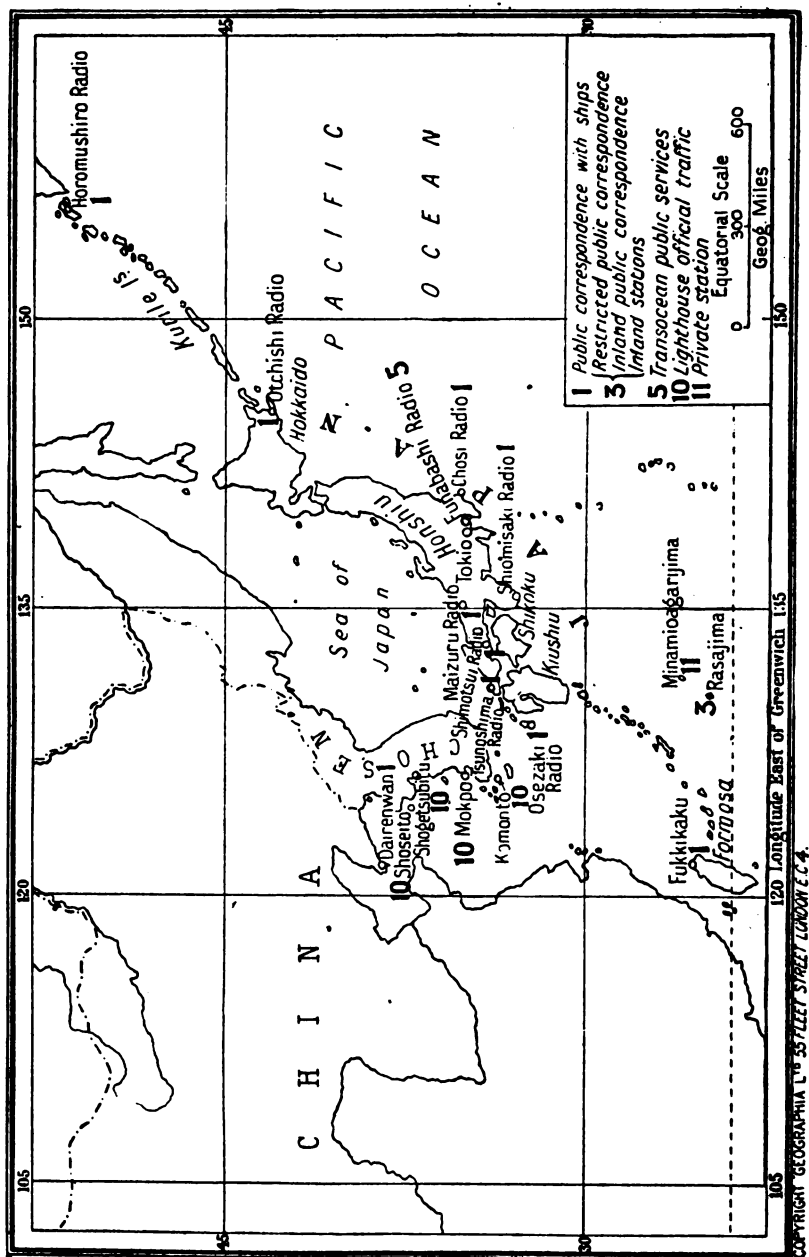

WIRELESS INSTALLATION AND INSPECTING SECTION.

Official.	Title.	Address.
Mr. M. Saeki ..	Chief of Wireless Installation and Inspection	No. 23, Kasumicho, Azabuku, Tokyo
Mr. T. Nakagami	Wireless Engineer	No. 82, Kikuzaka, Hongo, Tokyo
Mr. Y. Yoshida ..	Assistant Wireless Engineer ..	No. 30, Nagasaka, Azakuku, Tokyo
Mr. N. Wakamatsu	Assistant Wireless Engineer ..	No. 21, Shirokanedaimachi, 2 Shibaku, Tokyo
Mr. U. Koyama	Assistant Wireless Engineer ..	No. 324, Shirokanesankocho, Shibaku, Tokyo

ORGANISATION.

The first wireless experiment in Japan was carried on, in 1896, according to the conduction method, and electric-wave telegraphy has formed a subject of Japanese research since 1897, its practical utility being first sufficiently proved by the experience of the Japanese Navy in the Russo-Japanese War. The first commercial wireless station was erected in May, 1908, at Choshi, about 80 miles east of Tokyo. Since that time the number of stations has been largely increased.

There are two leading companies manufacturing wireless apparatus in

Japan—the Annaka Wireless Works and Nippon Radio Works. Of these, the Annaka Works has the larger output, and has manufactured nearly 80 per cent. of Japanese wireless apparatus now in use.

At the Tokyo Naval Arsenal Research Laboratory steady progress has been made in scientific research. In 1919 wireless telephony was installed on war vessels, thereby assuming great importance from a military standpoint. The feature of this invention is its simplicity compared with others of the kind. Commander Hattori, Engineer Hayashi and Engineer Matsuda, who took a leading part in the perfection of this invention, have been honoured with decorations in recognition of their distinguished service. Thanks to the strenuous efforts of the Laboratory, the study on frequency changers was also crowned with success. In comparison with their progress, originality and other features are shown in the manufacture of vacuum tubes in Japan.

A large wireless station is now working in Formosa constructed by the Japanese Navy with materials produced in Japan. It was opened for service early in 1920.

The Fukushima Wireless Station now under construction is expected to be completed very shortly, and will have cost 900,000 yen. The new station will mainly be used for communications in the Pacific in general and with the United States in particular.

In recognition of the satisfactory result of the study on wireless telephony in the Navy, Messrs. Fusakichi, Hayashi and Oishi each received a medal for his services.

A monthly magazine named *Musen-no-Nippon*, or *Wireless Press*, has been started by Mr. Aqira Kajima, of the Nippon Radio Company, and is the only magazine of its kind in Japan.

ADMINISTRATION.

The first wireless regulations in Japan were promulgated in April, 1908, under the Telegraph Law of 1900. A number of additions and modifications have since been made of these regulations, and these are now incorporated in the Wireless Telegraph Law, which was promulgated and took effect in 1915. The texts of these laws and regulations now in force are shown in the following pages in accordance with the list below :—

A—Wireless Telegraph Law No. 26.

B—Wireless Telegraph Regulations No. 16 (Japanese reference No. 41-48).

D—Foreign Wireless Telegraph Regulations.

C—Regulations relating to Private Wireless Telegraphs.

E—Regulations relating to Qualifying Examinations for Operators of Private Wireless Telegraphs.

WIRELESS TELEGRAPH LAW.

(Law No. 26, June 19th, 1915.)

ART. 1.—All wireless telegraphs and telephones shall be under the control of the Government.

ART. 2.—Wireless telegraphs and telephones referred to below may be privately established with the permission of the responsible Minister, to be determined by an Order.

(i) Installations on board vessels with the object of assuring safety to navigation.

(ii) Installations on board vessels for communication between vessels engaged in a specific business belonging to one person, with the object of facilitating such business.

(iii) Installations on board vessels or on land for the exclusive use of private persons and communicating with telegraph offices for the dispatch and receipt of telegrams, but disconnected from public telegraph, telephone, wireless telegraph or wireless telephone communications,

(iv) Installations on board vessels or on land with the object of facilitating a specific business belonging to one person by mutual communication on land or between land and vessel, disconnected from public telegraph, telephone, wireless telegraph or wireless telephone communications, but to which the preceding clause is not applicable.

(v) Installations with the exclusive object of carrying out experiments in connection with wireless telegraphy or telephony.

(vi) Installations recognised as necessary by the responsible Minister, but not coming within the purview of the preceding clauses.

ART. 3.—Restrictions relating to private wireless telegraph and telephone apparatus, their installation and employment, together with the qualifications of persons operating private wireless telegraphs, will be determined by an Order.

ART. 4.—Private wireless telegraphs and

telephones must not be used for purposes other than those for which they were established. Provided that their use shall not be prevented for signals of distress at sea, meteorological reports, time signals and in other cases, to be determined by an Order, where public utility is recognised by the responsible Minister.

ART. 5.—Wireless telegraphs and telephones installed on foreign ships may only be used in accordance with the provisions of Article 2. Provided that their use shall not be prevented for Signals of Distress at sea and for communications with telegraph and telephone offices whilst on voyage.

ART. 6.—The responsible Minister may, by the issue of an Order, cause private wireless telegraphs or telephones to be used for the public service or for communications necessary for military purposes.

In cases coming within the purview of this Article the responsible Minister may, where deemed necessary, send officials to carry out the required operation.

ART. 7.—Where the responsible Minister deems it necessary in the interests of the public communications or on military grounds, he may withdraw his sanction from private wireless telegraphs or telephones or order changes in their equipment.

ART. 8.—Where the responsible Minister deems it necessary for the sake of public security, he may order a restriction of or suspension in the working of or the removal of instruments and accessories belonging to private wireless telegraphs or telephones or wireless telegraphs or telephones installed on foreign vessels.

In cases coming within the purview of this Article, the responsible Minister may, where deemed necessary, send competent officials to seal up instruments and accessories or to effect their removal.

ART. 9.—Where persons responsible for private wireless telegraphs or telephones have contravened this Law, Orders based on this Law, or provisions arising therefrom, the responsible Minister may withdraw his sanction from such wireless telegraphs or telephones or order the suspension of their operations.

ART. 10.—Where sanction has been withdrawn from wireless telegraphs or telephones established by private persons the dismantling of their apparatus and mountings will be required by order of the responsible Minister. This applies also in the case where private wireless telegraphs or telephones have ceased operations.

ART. 11.—Where private wireless telegraphs or telephones or telephones or telephones established on foreign vessels have been called upon to deal with signals of distress at sea, such service must not be refused.

ART. 12.—Immediately on receipt of signals of distress at sea, wireless telegraphs or telephones shall acknowledge them and report to the wireless telegraph or telephone most conveniently situated for purposes of rescue.

In cases coming within the purview of this Article, where request has been made for communication on specific matters, such communication should immediately be made regardless of the provisions of this Article.

ART. 13.—Where the responsible Minister has ascertained that any person has illegally set up a wireless telegraph or telephone, he may appoint competent officials to enter such

establishment, inspect the apparatus and mountings thereof, effect the removal of instruments and accessories, and take other steps appropriate to the circumstances.

ART. 14.—The Government may, for the purpose of establishing wireless telegraphs or telephones to meet the needs of public communications, require the use of part of a vessel, and in case of necessity order special provision and equipment. Under the provisions of this Article a suitable rent for accommodation and actual cost of special provision and equipment will be paid by the Government on application.

ART. 15.—Matters relating to the administration of wireless telegraphs, wireless telephones, telegraphs, telephones, mails, postal money orders and post office savings, or signals of distress at sea, time signals and meteorological reports may as determined by an Order be communicated free of charge by the wireless telegraphs or telephones provided for the public service.

ART. 16.—Persons who have set up wireless telegraphs or telephones without permission, or have made use of wireless telegraphs or telephones set up without permission, or those who have made use of private wireless telegraphs or telephones after permission has been withdrawn will be subject to imprisonment with hard labour for a period not exceeding one year or to a fine not exceeding one thousand yen.

In cases coming within the purview of this Article, where wireless telegraphs or telephones have been placed at the disposal of other persons in return for money or commodities, they shall be confiscated, and the total sum of money or value of commodities already disbursed or handed over shall be collected.

ART. 17.—Persons using private wireless telegraphs or telephones for purposes other than those for which they were established will be subject to a fine not exceeding one thousand yen.

In cases coming within the purview of this Article, where wireless telegraphs or telephones have been placed at the disposal of other persons in return for money or commodities, they shall be confiscated, and the total sum of money or value of commodities already disbursed or handed over shall be collected.

Persons applying to and having messages sent by private wireless telegraphs or telephones will be subject to a fine not exceeding one hundred yen.

ART. 18.—Persons contravening the provisions of Article 5 or disobeying Orders based on this Law for restricting or suspending the use, changing the equipment of or removing or dismantling wireless telegraphs or telephones will be subject to a fine not exceeding one thousand yen. Where persons engaged in the business of wireless telegraphs or telephones have used them in opposition to Orders for their restriction or suspension, this provision shall apply also to such persons.

ART. 19.—Persons refusing without just cause to furnish the use of wireless telegraphs or telephones under the provisions of Article 6 or of vessels or failing to make special provision or equipment under the provisions of Article 14, will be subject to a fine not exceeding one thousand yen.

ART. 20.—Persons violating the secrecy of wireless telegraph or telephone messages coming under treatment at telegraph or telephone offices will be subject to imprisonment with

hard labour for a period not exceeding one year or to a fine not exceeding two hundred yen.

Where persons engaged in the business of wireless telegraphs or telephones have divulged the secrets of messages under the provisions of this Article they will be subject to imprisonment with hard labour for a period not exceeding two years or to a fine not exceeding five hundred yen.

The offences dealt with in this Article must be established by prosecution.

ART. 21.—Persons illegally evading charges connected with wireless telegraphs or telephone or causing other persons to evade them will be subject to a fine not exceeding two hundred yen.

Where persons engaged in the business of wireless telegraphs or telephones have committed acts referred to in the preceding paragraph, they will be subject to imprisonment with hard labour for a period not exceeding one year or to a fine not exceeding five hundred yen.

ART. 22.—Persons dispatching false communications by wireless telegraph or telephone with the object of causing harm to other persons will be subject to imprisonment with hard labour for a period not exceeding two years or to a fine not exceeding five hundred yen.

Persons dispatching false communications by wireless telegraph or telephone with the object of adversely affecting the public welfare will be subject to penal servitude for a period not exceeding five years or to a fine not exceeding one thousand yen.

Persons dispatching by wireless telegraph or telephone reports of shipping casualties when there are in fact no shipping casualties will be subject to imprisonment with hard labour for a period of not less than three months and not exceeding ten years.

Persons engaged in the business of wireless telegraphs or telephones who have committed acts referred to in the first clause will be subject to imprisonment with hard labour for a period not exceeding five years or a fine not exceeding one thousand yen; in the second clause to penal servitude for a period not exceeding ten years; in the third clause to a term of imprisonment with hard labour of not less than one year.

ART. 23.—Where persons engaged in the business of wireless telegraphs have without just cause opened, damaged, concealed or thrown away telegrams sent by wireless telegraphy and coming under treatment at telegraph offices, or have delivered them to persons other than their proper recipients, they will be subject to penal servitude for a period not exceeding three years or to a fine not exceeding five hundred yen. Provided that cases coming within the purview of Articles 253 and 259 of the Criminal Code shall be dealt with according to that Code.

ART. 24.—Where persons engaged in the business of wireless telegraphs or telephones have, without just cause, neglected to deal with general public telegrams or communications necessary for military purposes, or have caused them to be delayed, they will be subject to imprisonment with hard labour for a period not exceeding one year or to a fine not exceeding two hundred yen.

Where persons engaged in the business of wireless telegraphs or telephones have, without just cause, failed to deal with reports of distress to vessels under the provisions of

Articles 11 or 12, or have caused them to be delayed, they will be subject to a term of imprisonment with hard labour of not less than one year.

Persons obstructing communication of reports of distress at sea will similarly be dealt with under the preceding clause.

ART. 25.—Persons obstructing, or committing acts calculated to obstruct, general public communications or communications necessary for military purposes sent by wireless telegraph or telephone will be subject to penal servitude for a period not exceeding seven years or a fine not exceeding five hundred yen.

ART. 26.—Unsummed attempts to contravene the provisions of the last ten Articles are punishable.

ART. 27.—Persons opposing, hampering or avoiding the competent officials appointed under this Law in the execution of their duty or failing to answer their questions or making false statements during the inspection required under the provisions of Article 13 will be subject to a penalty not exceeding one hundred yen.

ART. 28.—The provisions of the Telegraph Law, Articles 4, 5, 11 to 21, 23, 24 and 45 apply to wireless telegraphs and telephones employed for the general public service and communications necessary for military purposes.

SUPPLEMENTARY REGULATIONS.—The date of coming into force of this Law will be fixed by Imperial Ordinance.

The above Wireless Telegraph Law came into force on November 1st, 1915. Imperial Ordinance No. 186, October 25th, 1915.

WIRELESS TELEGRAPH REGULATIONS, No. 16.

DATED APRIL 8TH, 1908.

B ART. 1.—The expression "wireless telegram" means any telegram to be transmitted by wireless telegraphy.

ART. 2.—In the present Regulations the term "coast station" means any telegraph office on land equipped with wireless telegraph apparatus, and the term "ship station" means any telegraph office on board a ship equipped with wireless telegraph apparatus.

ART. 3.—Wireless telegrams shall bear the following, abbreviated instruction:—
"R A" in the case of Romanised telegrams.

ART. 4.—The name of a coast station through which a wireless telegram destined for a ship station is to be transmitted shall be indicated within parentheses in the address of the telegram, but such indication shall not be counted in the number of words even in the case of a Romanised telegram.

In case such coast station cannot transmit the telegram, but there is another coast station which is able to do so, the intermediary of the latter may be resorted to. If a telegram destined for a ship can be delivered direct to the addressee from a telegraph office on land, it may be delivered from such office without the use of wireless telegraphy.

(a) Wireless telegrams to be transmitted by way of intermediate ship station, with the exception of those handed in at a ship station, shall bear the following abbreviated instruction:—

"R S" in the case of Romanised telegrams.
Such intermediary transmission can in no circumstances be made more than once.

ART. 5.—If the sender of a wireless telegram destined for a ship station wishes to indicate the term during which his telegram is to be kept at the coast station, the number of days shall be inserted in the telegram as paid instruction.

Wireless telegrams without such instruction will be retained at the coast station for nine days from the day of handing in. However, in case the transmission of a telegram cannot be effected on account of the ship's station leaving out of the radius of action of the coast station or for any other reasons, the telegram may not be retained, if the retention is deemed unnecessary.

ART. 6.—If the sender wishes to prolong the term of retention mentioned in Art. 5, application to that effect shall be made to the coast station before the expiration of the term. The same applies to further prolongation of the term. In such case, the term of retention will be nine days, unless specially indicated.

The application shall contain the date of handing in, number of characters or words, and the names of the sender and addressee of the wireless telegram.

The sender may make the application mentioned in paragraph 1 through the office of origin. If he wishes it notified to the coast station by telegraph, he shall pay the charge for a paid service telegram for the purpose.

ART. 7.—The transmission of a wireless telegram is to be effected when both the sending and receiving offices are within the guaranteed range of action of each other.

ART. 8.—In the case of ships' distress, wireless telegrams informing the name of the ship in distress the location and condition of the doomed vessel and any other particulars necessary for rescue, shall be treated by coast or ship stations with absolute priority suspending all other communications.

ART. 9.—Paid service telegrams concerning enquiry, rectification, and stoppage of a wireless telegram to which reply is required can be exchanged only between telegraph offices on land.

ART. 10.—"Urgent telegrams," "redirected telegrams," and "telegrams with acknowledgment of receipt" are admissible between telegraph offices on land.

The sender of a wireless telegram with acknowledgment of receipt will be notified of the date and time at which the coast station has transmitted the telegram to the ship station.

(a) Telegrams of the same text originating from the same ship station or from the same telegraph office on land, and passing through the same coast station, may be made a multiple telegram, so far as concerns the transmission between wireless telegraph stations or between telegraph offices on land, as the case may be, no matter whether the addressees of such telegrams be in different localities or they be served by different offices of destination. The telegram shall bear the following abbreviated instruction instead of that for an ordinary multiple telegram:

"S M" in the case of Romanised telegrams.

Paragraph 2 of Article 4 is not applicable to the multiple telegram mentioned in the preceding paragraph when it is to be distributed to two or more ship stations, unless every copy of such telegram can be transmitted through the same coast station or

delivered from the same telegraph office on land.

(b) Reply-paid wireless telegrams shall bear the abbreviated instruction for "reply paid," "urgent reply paid," or "collected reply paid" completed by the mention of the prepaid amount. If a prepaid amount is 60 sen in the case of *kana* telegrams, and 75 sen in the case of Romanised telegrams, the mention of the amount is not required.

ART. 11.—Wireless telegrams are subject to the following charge for the operation at a coast station or a ship station in addition to the ordinary telegraph charge. It is provided, however, that the ordinary telegraph charge is not levied on a telegram which is to be transmitted only by wireless telegraphy.

For Government and Ordinary Telegrams :

Coast Charge.—For a *kana* telegram, 20 sen up to fifteen characters ; 5 sen for every additional five characters or less. For a Romanised telegram, 25 sen up to five words ; 5 sen for every additional word.

Ship Charge.—Ditto.

For Press Telegrams :

Coast Charges.—20 sen for every fifty characters or fraction thereof.

Ship Charge.—Ditto.

(a) The following charge is levied in the same way as mentioned in the preceding Article on a supplementary copy of a multiple wireless telegram.

For Government and Ordinary Telegrams :

Coast Charge.—For a *kana* telegram, 10 sen ; for a Romanised telegram, 15 sen.

Ship Charge.—Ditto.

For Press Telegrams :

Coast Charge.—One-half the charge for the original telegram.

Ship Charge.—Ditto.

(b) If, in the case where Paragraph 2 of Article 4 is applied, the amount paid fall insufficient, the deficiency is collected from the addressee. In the case of a multiple telegram the amount to be collected is divided by the number of copies, and the quotient shall be the sum collected from one addressee.

ART. 12.—Wireless telegrams are free from special charge applicable to telegrams handed out of the ordinary hours of duty.

ART. 13.—The following charges for a wireless telegram shall be refunded less the amount which had been appropriated for another charge :—

(1) The charges pertaining to the transmission by wireless telegraphy when not effected.

(2) The charges pertaining to the transmission on telegraph lines when not effected.

ART. 14.—An application for the refund of charges for a wireless telegram handed in at a ship station may be sent in through any telegraph office.

ART. 15.—The term of retention mentioned in Articles 5 and 6 is not reckoned in the period of delay giving rise to refunds.

ART. 16.—Matters not expressly provided for in this Ordinance are subject to the other regulations relating to inland telegrams. Provided that the Regulations relating to Telegrams, Articles 71, 114, 121, 126 to 130, 146 to 148, 148 (vi) to 148 (x), Ordinance No. 46, issued by the Department of Communications in September, 1900, shall not apply.

(a) With the exception of Article 9 to Article 10 (b) and the proviso in Article 16, the regulations in this Ordinance shall apply

in the treatment of connected service between wireless telegraphs and the reciprocal dispatch and receipt of telegrams on land. Provided that, if deemed necessary by the Department of Communications, charges for such service shall be specially fixed.

The treatment of, and special fixing of charges for, wireless telegrams referred to in the preceding clause will be separately notified.

FOREIGN WIRELESS TELEGRAPH REGULATIONS.

C The following supplementary regulations came into operation on July 1st, 1913, and apply to all Japanese possessions:—

ART. 1.—Foreign wireless telegrams are understood to be those which are treated according to the regulations of the London International Radiotelegraphic Convention or to the regulations concerning the radiotelegraphic service concluded between the Government of the Empire and foreign Governments or companies.

ART. 2.—The rates to be charged for foreign messages through Japanese coast and ship stations are as follows:—

(1) Coast station rate, 24 yen (fr. 0.60) per word.

(2) Ship station rate, 16 yen (fr. 0.40) per word.

The coast station rate referred to in the preceding paragraph includes the rate applicable to the transmission on telegraph lines for wireless messages originating in or destined for the Japanese Empire or Southern Manchuria or for ship's stations and the Japanese telegraph service. As regards urgent wireless messages for transmission over land lines, an extra 10 yen (fr. 0.25) will be charged.

ART. 3.—The rates to be charged for foreign radiotelegrams through foreign coast or ship stations will be indicated separately.

ART. 4.—The ordinary rate for foreign wireless messages accepted by a Japanese ship station for transmission through a foreign coast station will be fixed by the owners of the said foreign coast station.

ART. 5.—For the acknowledgment of receipt of foreign wireless messages handed in at a Japanese telegraph office and destined for a ship station and transmitted thereto through a Japanese wireless coast station, the rate for the acknowledgment of receipt of interior telegrams for transmission between Japan and Southern Manchuria will be charged.

ART. 6.—At the request of the receiver, or of the person empowered to receive messages for and on behalf of the receiver, wireless messages may be retransmitted only over Japanese land lines.

ART. 7.—When the Japanese coast station given by the sender of a foreign wireless message destined for a ship cannot transmit the said message it may be transmitted through another Japanese coast station, provided such station is suitable for the purpose. This provision also applies in case the Japanese ship station cannot transmit a foreign wireless message to a Japanese coast station mentioned by the sender and where another Japanese coast station exists and which is capable of performing the duty.

ART. 8.—Japanese ship stations cancel foreign wireless messages when they are not in a position to transmit the same to the corresponding stations.

ART. 9. (i)—Should a foreign wireless message be cancelled in accordance with Article 8, the

sender shall be at once advised and the money paid by him returned without delay.

(ii) Foreign wireless telegrams passing between the Imperial [Japanese] Telegraph Office in Shanghai and Imperial ship stations through the intermediary of Imperial coast stations and, as circumstances require, ship stations may be entered in the Japanese language.

(iii) Article 3, Article 4, clauses i and ii and Article 5, clause 1, of the Wireless Telegraph Regulations, Ordinance No. 16 of the Department of Communications, issued in April, 1908, provide for foreign wireless telegrams in Japanese.

(iv) Reply prepaid foreign wireless telegrams in Japanese must be marked "reply prepaid," followed by the amount paid for reply.

(v) Foreign wireless telegrams dispatched or received at the places announced separately will be transmitted through the intermediary of telegraph offices specially indicated.

(vi) The treatment of foreign wireless telegrams in accordance with the preceding Article is subject to the general regulations relating to foreign telegrams.

ART. 10.—Matters not specially provided for in this Ordinance, as regards Japanese telegrams, foreign telegrams in Japanese, and other items, are subject to the general regulations relating to foreign telegrams.

REGULATIONS RELATING TO PRIVATE WIRELESS TELEGRAPHS.

(Ordinance No. 46, Department of Communications, October 26th, 1915.)

D ART. 1.—The words "disconnected from public communications" in clauses iii and iv Article 2, of the Wireless Telegraph Law mean that the location for fitting up private wireless telegraph apparatus must be outside the boundaries of direct telegram delivery or telephone subscription or on vessels on which no telegraph office is established.

ART. 2.—Wireless telegraphs set up in accordance with clause v, Article 1, of the Wireless Telegraph Law are limited to provision for experiments connected with the science and apparatus of wireless telegraphy.

ART. 3.—Permission will be given to the furnishing of vessels with aerial apparatus and its use for wireless telegraphy by private persons.

ART. 4.—The apparatus and equipment of private wireless telegraphs, except in specially indicated cases, will be required to conform with the following clauses:—

(i) The apparatus must be capable of transmitting eighty *kana* characters or twenty European words per minute.

(ii) The receiving apparatus must be capable of receiving messages transmitted on electric wavelengths of from 100 to 1,800 metres.

(iii) The power supplied to the transmitting circuit corresponding to the distance required to be reached in the daytime must not exceed the following standards (measured at the primary coil of the transformer or at some point corresponding thereto).

Required daytime distance. Electric power.
20 naut. miles, not exceeding ½ kilovolt amps.

100	"	"	"	1	"	"
200	"	"	"	1	"	"
300	"	"	"	2	"	"
400	"	"	"	3	"	"
500	"	"	"	7	"	"

(iv) The electric waves should be pure and suffer but little diminution. The installation must be capable of using waves of such length as may be specifically indicated between 100 and 1,800 metres.

ART. 5.—The establishment and maintenance of private wireless telegraphs required to be installed at certain telegraph offices in accordance with clause iii, Article 2, of the Wireless Telegraph Law will be carried out by the Communications Office having local jurisdiction or a first-class post office dealing with branch administrative business.

Persons establishing private wireless telegraphs under this Article must be responsible for the supply of and expenditure on articles required for their establishment in accordance with details furnished by the Communications Office having local jurisdiction or the first-class post office dealing with branch administrative business, and must further pay expenses of maintenance.

ART. 6.—Persons proposing to establish private wireless telegraphs must append to their application documents inscribed with particulars under the following headings, submitting the whole to the Minister of Communications. Changes occurring under headings (i) to (iv) must similarly be notified.

(i) The object of the installation and grounds for its necessity.

(ii) Site of installation (full address or name of vessel).

(iii) Plan of construction (nature of apparatus, method of mounting, height of electric standards [masts], electric power, distance required to be reached in the daytime, details of supplementary equipment where required).

(iv) Hours open for operation.

(v) Nature of vessel, gross tonnage, owners, course navigated, and regular port of mooring (the principal home port of anchorage should be taken as the regular port of mooring).

(vi) Time required for completion.

The site of installation on vessels under heading (ii) and the plan of construction under heading (iii) should be illustrated by separate drawings.

ART. 7.—Where changes have been made in details under headings (v and vi) of the preceding Article, they must at once be notified to the Minister of Communications. In the case where the regular port of mooring has been changed such change must be notified also to the Communications Office having jurisdiction over, or the first-class post office dealing with branch administrative business at, the former port of mooring.

ART. 8.—When the fitting up and construction of a private wireless telegraph have been completed, the fact must at once be notified to the Minister of Communications.

ART. 9.—When the Minister of Communications has received a report under the preceding Article, he will send inspectors to examine the apparatus and fittings, after which a licence will be granted. Provided that where a special inspection is not deemed necessary a licence may be issued forthwith. If deemed specially desirable by the inspectors under this Article a temporary licence will be issued for the opening of operations by the private wireless telegraph concerned.

ART. 10.—When a private wireless telegraph establishment is to be closed up, a notification

to this effect must be sent to the Minister of Communications seven days earlier. Similar notice must be given in the case of suspension of a private wireless telegraph establishment.

ART. 11.—When a private wireless telegraph establishment has been closed up, the aerials must be removed immediately, and, unless special instructions have been given, apparatus specially pertaining to wireless telegraphy—dynamoes, secondary electric batteries, distributing apparatus, electromotors, motor generators, transformers, electric standards, transmitters, receivers, meters, etc.—must be dismantled and removed within ten days. Where sanction to a private wireless telegraph has been withdrawn the same provision applies.

ART. 12.—When a change is made in the proprietorship of a wireless telegraph installation, a written application for permission, jointly signed with both old and new names, must be submitted to the Minister of Communications.

Where, owing to succession on the decease of the proprietor or other causes, joint signatures cannot be obtained, a certificate to this effect must be appended to the application.

ART. 13.—The length of electric waves and the call signal to be adopted by a private wireless telegraph will be decided by the Minister of Communications.

ART. 14.—When a private wireless telegraph has been sanctioned by the Minister of Communications details of the installation under the following headings will be officially announced. This applies also to changes effected therein :—

(i) Name of person setting up installation.

(ii) Object of installation.

(iii) Site of establishment.

(iv) Call signal.

(v) Ordinary range of distance.

(vi) Method of fitting up.

(vii) Electric wavelength used.

(viii) Hours open for operation.

ART. 15.—Operators of private wireless telegraphs are required to possess the proper qualifications in conformity with the Regulations relating to Qualifying Examinations for Operators of Private Wireless Telegraphs. Provided that exception be made in the case of operators of private wireless telegraphs established in accordance with clause v, Article 2, of the Wireless Telegraph Law, who have received the special sanction of the Minister of Communications.

ART. 16.—Proprietors of private wireless telegraphs must notify the Minister of Communications of all appointments or dismissals of operators in the employ. In the case of appointments, copies of antecedents form, certificate of physical examination and certificate of eligibility awarded on qualifying examination for operators of private wireless telegraphs must be appended.

ART. 17.—Where the Minister of Communications has ascertained that an operator of a private wireless telegraph is incompetent in the performance of his duties he may order the dismissal of such operator.

ART. 18.—A private wireless telegraph establishment shall not begin operations until a licence or temporary licence has been received in accordance with Article 9.

ART. 19.—When a private wireless telegraph establishment has begun operations the Minister of Communications must at once be notified accordingly. Provided that when the installation is one set up in accordance with clause iii, Article 2, of the Wireless Telegraph Law, notification will be required seven days before the opening of operations.

This Article applies also to reopening of operations after notification of suspension has been made in accordance with Article 10.

ART. 20.—The employment of private wireless telegraphs is required to conform with the following paragraphs. Provided that exception be made in the case of communications falling within the purview of Articles 22 to 24.

(i) Only when not causing disturbance to messages sent by the general public or to military communications.

(ii) In the case of installations on vessels, only whilst on voyage.

(iii) In the case of installations set up in conformity with clause v, Article 2, of the Wireless Telegraph Law, only when not causing disturbance to communications from other wireless telegraphs.

ART. 21.—Communications sent by private wireless telegraphs must be in Morse symbols, and the method of transmission, except where special instructions are issued, must conform with the following provisions:—

(i) Before making a call, the receiver must be regulated to the best degree of perception to determine whether a message is already in transmission. A call must not be made until such message, if any, is completed.

(ii) When making a call the "begin communication" signal — • — • — must first be sent, followed by the call signal of the party signalled, repeated three times, then the introductory signal — • — • — followed by own call signal, repeated three times.

(iii) When the signalled party replies, he must send the "begin communication" signal — • — • — followed by the signalling party's call signal repeated three times, then the introductory signal — • — • — followed by his own call signal and the "clear for transmission" signal — • — • —. This applies also in the case of a reply to the call under provision vi.

(iv) When there is no reply from the signalled party to the call made under provision ii, repeat the signals in proper order three times at intervals of two minutes. If there is still no reply, allow fifteen minutes to elapse, then make the call again in the same manner.

(v) When communicating with the signalled party by means of the international shipping signals, continue the call by sending the international shipping signal PRB.

(vi) When wishing to detect a wireless message within own range, use the "Inquiry signal" — • — • — • — • — and make the call provided under (ii).

(vii) When the signalled party replies, begin the required message immediately, and at its ending send the "end communication" signal — • — • — • — and own call signal, followed by the "clear for transmission" signal — • — • — • —.

(viii) When the signalled party has comprehended the message, he must immediately signify its receipt by sending

the signal "understand communication"

— • — • — • — • —
(ix) When mutual messages have been completed, both parties must exchange the "finished" signal — • — • — • — • — and their own call signals.

(x) When in the case of an experimental message sent out by a wireless telegraph established in accordance with clause v, Article 2, of the Wireless Telegraph Law the call signal of another party is not required, repeat own call signal three times and after ascertaining that there is no danger of hindering another message, begin the required communication, and at its ending send the "end communication" signal — • — • — • — • — a down call signal. Provided that such communication must not exceed twenty minutes in duration.

ART. 22.—When dispatching a signal of distress at sea by private wireless telegraph, the preliminary "ship in danger" signal, — • — • — • — • — • — should be repeated at frequent intervals according to circumstances followed by the name of vessel in distress, position, and details of conditions and other matters likely to facilitate rescue. If it is desired to get into touch with a specified wireless telegraph a continued series of the "ship in danger" signal — • — • — • — • — • — should be followed by the call signal of the station signalled.

ART. 23.—When a private wireless telegraph detects the "ship in danger" signal — • — • — • — • — • — accompanying a message of distress at sea, it must suspend all other messages and immediately reply, and report details in the order specified in the last Article to another wireless telegraph situated at the most convenient point for purposes of rescue. Provided that where the message of distress includes a request for specified action before transmitting the report or for specified items to be included therein, such request must be complied with.

In the case of a continued series of the "ship in danger" signal — • — • — • — • — • — being followed by the call signal of a specified station, only in the event of no reply being received therefrom should the responsive steps be taken prescribed in the last paragraph.

ART. 24.—When sending out by private wireless telegraph a necessary warning of danger to navigation, repeat the preliminary navigation alarm signal TTT ten times at short intervals, then transmit necessary details, after which, allowing an interval of ten minutes to elapse, repeat the alarm three times. When a private wireless telegraph detects the navigation alarm signal TTT accompanying a necessary warning of danger to navigation, it must suspend all other messages.

ART. 25.—A private wireless telegraph shall not be prevented, in cases of messages coming under the provisions of the last three Articles only, from exceeding the prescribed limit of electric power or wavelength used. Provided that, immediately after such use, the prescribed limits shall be reverted to.

ART. 26.—When a telegraph office has sent out by wireless telegraphy the private "suspend communication" signal — • — • — • — • — all private wireless telegraph messages within such office's range of distance must be suspended until the private "renew communication" signal — • — • — • — • — • — is issued.

ART. 27.—A private wireless telegraph shall not be prevented, in the cases referred to below, from operating outside the objects for which it was established.

(i) When deemed necessary to exchange messages with other wireless telegraphs concerning communications coming within the purview of Articles 22 to 24.

(ii) When deemed necessary to exchange messages with other wireless telegraphs in connection with meteorological and time signals or the adjustment of apparatus.

(iii) When rendered necessary to communicate with a telegraph office equipped with wireless telegraph apparatus, following instructions issued by such office.

(iv) When deemed necessary to exchange messages with military wireless telegraphs to meet the requirements of military communications.

ART. 28.—When a private wireless telegraph has received a request from another wireless telegraph to exchange messages for the purpose of adjusting apparatus, it shall respond thereto, provided there is no danger of obstruction.

ART. 29.—The Minister of Communications shall specially instruct the Wireless Telegraph Inspection Bureau to test a private wireless telegraph with a view to ascertaining whether it is properly employed and whether its communications are in order.

ART. 30.—When sending instructions to a private wireless telegraph relating to its communications, the Wireless Telegraph Inspection Bureau will prefix to its call signal the wireless telegraph inspecting signal **•••••** in order to distinguish its message from general communications.

ART. 31.—Where an order is sent direct to an operator relating to the restriction or suspension of operations by the private wireless telegraph operated by him or the removal of its apparatus and accessories, the person responsible for the installation will be separately notified.

ART. 32.—When a vessel with a private wireless telegraph on board comes within the wireless telegraph range of a telegraph office it must briefly report to such office its direction and distance therefrom, together with the direction in which the vessel is moving. When about to withdraw from the range of such office a similar report must be sent.

ART. 33.—The person responsible for a private wireless telegraph must report to the Minister of Communications, at the same time giving details, on all circumstances falling under the following headings:—

(i) When special restrictions have been imposed on the equipment and operation of the wireless telegraph concerned in foreign waters. Provided that exception be made where such restriction has been officially announced.

(ii) When messages have been sent in accordance with Articles 22–24.

(iii) When cases of contravention of the Wireless Telegraph Law or the Regulations connected therewith on the part of a private or foreign wireless telegraph have been detected.

(iv) When matters have arisen calling for special attention in regard to the results of wireless telegraphy or other features.

ART. 34.—The person responsible for a private wireless telegraph must keep a journal and

cause the operator to record therein the items coming under the following headings:—

(i) Time of beginning and end of messages, and wireless station signalled.

(ii) Nature of message.

(iii) The circumstances coming under Articles 27 and 33, and the steps taken in accordance therewith.

(iv) In the case of private wireless telegraphs established in accordance with Clause v, Article 2, of the Wireless Telegraph Law, the results of experiments.

(v) In addition to the matters under the above headings, references for future use. Communication journals as prescribed in this Article must be preserved for fifteen months, counting from the month following that in which they are completed.

ART. 35.—The person responsible for a private wireless telegraph must affix in his operating room, where they can easily be seen, his certificate, together with copies of the penal clauses of the Wireless Telegraph Law and a list of the essential objects for which the installation was established.

ART. 36.—The Minister of Communications will from time to time specially send officials to examine reports, and documents connected therewith, on the apparatus mounting and operations of private wireless telegraphs, in such cases the officials concerned will carry proof of their competency.

ART. 37.—Documents to be sent in under the provisions of Articles 7, 8, 10 and 19 may be replaced by telegrams.

ART. 38.—Documents to be submitted under this Ordinance to the Minister of Communications, with the exception of those coming under the preceding Article, must all be passed through the Communications Office having jurisdiction over, or the first-class post office dealing with branch administrative business at, the place of a land installation or the regular port of mooring of a vessel having an installation.

Supplementary Regulations.

ART. 39.—The provisions of Articles 1 to 3, 5 to 14, 18 to 20, 22 to 38, apply to private wireless telephones, and the provisions of Articles 22 to 24, 26, 29 to 31 and 36 apply to wireless telegraphs or telephones installed on foreign vessels.

ART. 40.—This Ordinance comes into force on November 1st, 1915.

REGULATIONS RELATING TO QUALIFYING EXAMINATIONS FOR OPERATORS OF PRIVATE WIRELESS TELEGRAPHS.

E (Ordinance No. 48, of the Department of Communications, October 26th, 1915.)

ART. 1.—Persons aged seventeen or above qualifying for posts as operators of private wireless telegraphs will be examined and approved according to the following classification:—

Class I.—Persons capable of operating private wireless telegraphs set up under the provisions of the Wireless Telegraph Law, Article 2.

Class II.—Persons capable of acting as assistant operators of private wireless telegraphs set up under the provisions of the Wireless Telegraph Law, Article 2 (except those set up under clause iii) and of private wireless telegraphs set up under the provisions of clause iii of the same Article.

Class III.—Persons capable of acting as assistant operators of private wireless telegraphs set up under the provisions of the Wireless Telegraph Law, Article 2, clause v, and of private wireless telegraphs set up under the provisions of any one of the clauses of the same Article.

Art. 2.—Examinations will be carried out by the Qualifying Examination Committee for Operators of Private Wireless Telegraphs appointed by the Minister of Communications. The subjects for examination are as follows:—

(1) Wireless Telegraphy: Theory (for Class I only), adjustment and use of apparatus (for Classes I and II only).

(2) Practical Electric Telegraphy: Transmission of a message in Japanese and a European language and reception of a message by sounder. Standard of speed to be—for Class I, eighty *katakana* characters (syllables) or twenty European words per minute; and for Classes II and III, fifty *katakana* characters (syllables) or twelve European words per minute.

(3) Wireless Telegraph Laws and Regulations: General Laws and Ordinances relating to wireless telegraphs (for Classes I and II only); Laws and Ordinances relating to private wireless telegraphs (for Class III only).

(4) English language: Rudiments (for Classes I and II only).

Art. 3.—The Minister of Communications will award certificates of eligibility (form No. 1) to successful candidates in the examination.

Art. 4.—Persons who have had not less than two years' practical experience in the public telegraph or wireless telegraph service or in military wireless telegraphy may be granted certificates of eligibility according to the following classification without undergoing examination, on review by the Qualifying Examination Committee for Operators of Private Wireless Telegraphs.

(1) Persons engaged in the public wireless telegraph service—for Class I or lower.

(2) Persons engaged in military wireless telegraphy—for Class II or lower.

(3) Persons engaged in the public telegraph service—for Class III.

These provisions apply also in the case of persons holding second or third-class certificates of eligibility according to the following classification:

(1) Persons holding second-class certificates of eligibility who have been engaged for not less than two years as assistant operators of private wireless telegraphs established in accordance with the Wireless Telegraph Law, Article 2, clause iii—for Class I.

(2) Persons holding third-class certificates of eligibility who have been engaged for not less than two years as assistant operators of private wireless telegraphs—for Class II.

Art. 5.—Persons holding a certificate of study for completion of training in wireless telegraphy, practical electric telegraphy, and Wireless Telegraph Laws, and Regulations, in accordance with the classifications determined by the Ministry of Communications, with the object of engaging in wireless telegraphy, may be granted certificates of eligibility, for Class I or lower, on review.

Art. 6.—Examinations will be held annually. Date, place and other details thereof will be announced in the *Official Gazette*. Provided that if deemed necessary by the Minister of Communications extra examinations may be held at special times.

Reviews by the examiners will take place according to circumstances.

Art. 7.—Candidates for examination must submit to the Minister of Communications before the appointed date an application in writing (Form No. 2), appending thereto a statement of antecedents (Form No. 3), an abstract of the Census Register, and a photograph.

Art. 8.—Candidates for examination must pay an examination fee of two yen in Class I and one yen in Classes II and III, affixing to the application form a revenue stamp for the amount.

Fees already paid for examination cannot be refunded to candidates failing to pass the examination or to those disqualified under the provisions of Article 9.

Art. 9.—Where the Qualifying Examination Committee for Operators of Private Wireless Telegraphs have detected false statements in a form of antecedents or improper behaviour during examination, they will disqualify the candidate concerned.

Where the facts of a case coming under the provision of this Article are discovered after the candidate has passed the examination, his certificate of eligibility will be invalidated.

Art. 10.—The names of successful candidates will be announced in the *Official Gazette*.

Art. 11.—Where the holder of a certificate of eligibility has changed his name or lost or damaged his certificate, he may apply to the Minister of Communications for a revision or renewal thereof.

Applicants under this provision must pay a fee of thirty sen for revision or renewal of certificate affixing to the letter of application a revenue stamp for the amount.

Additional Regulation.

This Ordinance comes into force on November 1st, 1915.

(Form No. 1.)

Certificate of Eligibility awarded on Qualifying Examination for Operators of Private Wireless Telegraphs.

Name
Address
Date of birth
Eligible for Class No.

This is to certify that the above-named is qualified in the class designated in accordance with the Regulations relating to Qualifying Examinations for Operators of Private Wireless Telegraphs.

Name (seal)
President of Qualifying Examination Committee for Operators of Private Wireless Telegraphs.
Date

The certification of the President of the Qualifying Examination Committee for Operators of Private Wireless Telegraphs is sanctioned and a certificate of eligibility hereby granted.

(This certificate of eligibility falls within the category of Class A (B) certificates under the provisions of the Regulations relating to Business annexed to the International Wireless Telegraph Convention of London, and the holder of this certificate declares his acceptance of the obligation strictly to preserve the secrecy or communications under the whole of the Regulations.)

(Seal) Minister of Communications.
Date

Notes :—

- (1) On the back, in the cases of Classes I and II, appears a translation in a foreign language.
(2) The paragraph in parentheses appears in the cases of Classes I and II.

(Form No. 2.)

(2) The revenue stamp must not be cancelled.

JUGO-SLAVIA

THIS country was formed by the fusion, under the terms of the European Peace Treaty, of Servia, Montenegro, and the provinces of Bosnia and Herzegovina, which were annexed by Austria in 1908.

COPYRIGHT "GEOGRAPHIA" LTD 35 FLEET STREET LONDON E.C. 4

Conditions are too unsettled in this territory for us to be able to obtain much information in regard to radiotelegraphy therein, but the annexed map will show the position of the existing wireless stations, and we hope that by the time our next volume is issued that some further particulars concerning the organisation and administration of wireless telegraphy will be available.

KENYALAND COLONY AND EAST AFRICAN PROTECTORATE

THE territory covered under the above title extends from the Umba to the Juba River, and inland as far as the borders of Uganda; certain mainland dominions of the Sultan of Zanzibar (these having been leased to Great Britain for an annual rent), and the erstwhile colony of German East Africa.

The Administration is conducted by a Governor and Commander-in-Chief, assisted by an Executive and a Legislative Council.

CONTROL.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
Mr. J. Gosling	Postmaster-General	Nairobi.
Mr. L. E. Caine	Chief Telegraph Engineer	Do
Mr. H. J. W. Ridley	Assistant Telegraph Engineer	Do.
Mr. J. K. Creighton	Telegraph Engineer	Do.
Mr. G. F. Pall	Wireless Telegraph Engineer	Mombasa
Mr. A. Kane	Do. do.	Do.
Mr. J. Gornall	Do. Do.	Do.
Mr. G. E. Hughes	Do. Do.	Do.
Mr. F. Wrigglesworth	Do. Do.	Do.

ORGANISATION.

At present there are two radio stations open for public traffic in this territory—one at Mombasa and the other at Kismayu, in Jubaland, whilst the construction of a third station is contemplated.

The Mombasa station is equipped with a 5 kilowatt synchronised spark, with a spark frequency of 600 per second. The note emitted is pure musical and somewhat high. This plant is only used when the state of the atmosphere will not permit the small plant to be used, the particulars of which are as follows:—

A 1½ kilowatt synchronous direct-coupled plant capable of transmitting to ships a distance of 350 nautical miles. The usual frequency of the discharger is 750 per second, which has been found to give the best results in this locality.

The Kismayu station is equipped with a 3 kilowatt synchronous spark set having a frequency of 600 per second.

A radio service is maintained with Mombasa as a means of communication with Jubaland.

At present there are no private or experimental stations in the territory, neither have any licences been issued for ship stations registered therein. An aerodrome is in contemplation for Kisumu on the shores of Lake Victoria Nyanza.

ADMINISTRATION.

Radiotelegraphy is administered under the following:—

A—Wireless Telegraphy Ordinance, 1913.

B—Experimental Licence issued thereunder.

WIRELESS TELEGRAPHY ORDINANCE, 1913.

A 1. This Ordinance may be cited as "The Wireless Telegraphy Ordinance, 1913."

2. The expression "wireless telegraphy" means any system of communication by telegraph as defined by the Indian Telegraph Act, 1883, without the aid of any wire connecting the points from and at which the messages or other communications are sent and received.

Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

3. The Governor may, whenever he shall deem it expedient to do so, license the establishment of any wireless telegraph station or the installation or working of any apparatus for wireless telegraphy in any place in the Protectorate or on board any British ship registered in the Protectorate.

4. (1) No person shall establish any wireless telegraph station or install or work any apparatus for wireless telegraphy in any place in the Protectorate or on board any British ship registered in the Protectorate except under and in accordance with a licence granted in that behalf by the Governor.

(2) Every such licence shall be in such form and for such period as the Governor may determine and shall contain such terms, conditions and restrictions on and subject to which the licence is granted as the Governor shall consider desirable in the public interest.

5. (1) If any person establishes a wireless

telegraph station without a licence in that behalf or installs or works any apparatus for wireless telegraphy without a licence in that behalf he shall be liable to a fine not exceeding one thousand and five hundred rupees or to imprisonment of either description for a term not exceeding twelve months and in either case be liable to forfeit any apparatus for wireless telegraphy installed or worked without a licence, but no proceedings shall be taken against any person under this Ordinance except with the previous sanction of the Attorney-General.

(2) If a Magistrate is satisfied by information on oath that there is reasonable ground for believing that a wireless telegraph station has been established without a licence in that behalf or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any ship within the jurisdiction without a licence in that behalf he may grant a search warrant to any police officer to enter and inspect the station, place, or ship, and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

6. (1) The Governor may make regulations for all or any of the following matters:—

(i) for prescribing the form and manner in which applications for licences under this Ordinance are to be made;

(ii) for prescribing the fees payable on the grant of any licence;

(iii) for regulating the manner in which apparatus for wireless telegraphy on board a merchant ship, whether British or foreign, in the waters of the Protectorate shall be worked so as to prevent interference with naval signalling or the working of any

wireless telegraph station lawfully established, installed, or worked in the Protectorate or the waters thereof and so as not to interrupt or interfere with the transmission of any wireless messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea;

(iv) for prohibiting, except with the special or general permission of the Postmaster-General of the Protectorate, the working or using of any apparatus for wireless telegraphy on board a merchant ship, whether British or foreign, whilst such ship is in any of the harbours of the Protectorate;

(v) for prohibiting or regulating in case at any time in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy on board merchant ships, whether British or foreign, in the waters of the Protectorate, the use of wireless telegraphy on board such ships while in such waters by such further rules as the Governor may see fit to make from time to time and either in all classes or in such cases as may be deemed desirable.

(2) Provided that no regulations made in respect of the matters described in paragraphs (iii) (iv) and (v) of this section shall apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

7. When an applicant for a licence proves to the satisfaction of the Governor that the sole object of obtaining the licence is to enable him to conduct experiments in wireless telegraphy

a licence for that purpose shall be granted subject to such special terms, conditions, and restrictions as the Governor may think proper, but shall not be subject to any rent or royalty.

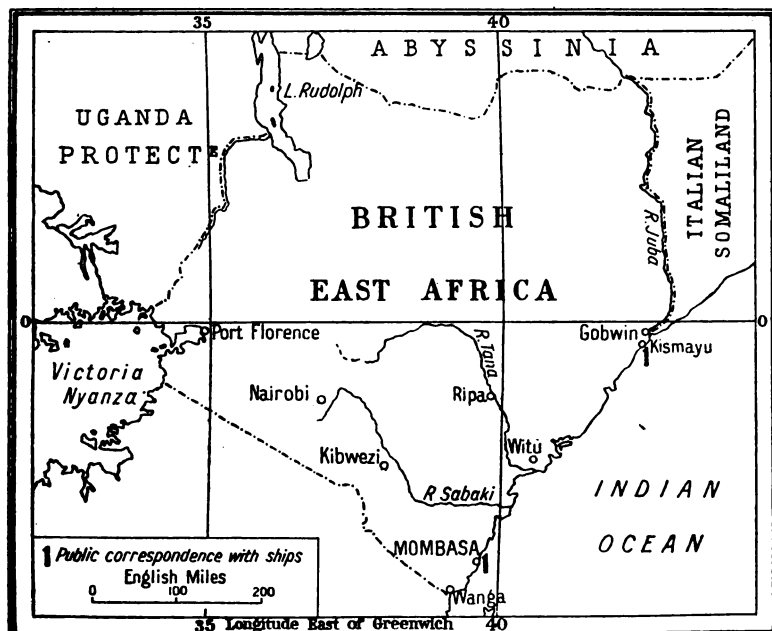

8. (1) Every omission or neglect to comply with and every act done or attempted to be done contrary to the provisions of this Ordinance or of any Regulation made thereunder or in breach of the conditions and restrictions subject to or upon which any licence has been issued shall be deemed to be an offence against this Ordinance and for every such offence not otherwise specially provided for the offender shall in addition to the forfeiture of any articles seized be liable to a fine of seven hundred and fifty rupees.

(2) All convictions, forfeitures, and fines under this Ordinance or any Regulations thereunder may be had and recovered before a Magistrate of the first class, and every such Magistrate shall have jurisdiction to pass any sentence authorised by this Ordinance on any European or other non-Native convicted of an offence against this Ordinance notwithstanding anything in any Ordinance or law limiting the jurisdiction of such Magistrate over Europeans and non-Natives.

9. The Wireless Telegraph Ordinance, 1908, is hereby repealed: Provided however—

(1) Every licence granted under the said Ordinance and in force at the commencement of this Ordinance shall be deemed to have been granted under this Ordinance.

(2) All Regulations made under the said Ordinance and in force at the commencement of this Ordinance shall be deemed to have been made under this Ordinance and shall continue in force until other provision is made.

COPYRIGHT: "GEOGRAPHIA" LTD. 33 FLEET STREET LONDON E.C.4.

LICENCE.

B In exercise of the powers conferred upon me by Section 7 of the Wireless Telegraphy Ordinance, 1913, I, Edward Northey, Major-General of His Majesty's Forces, Knight Commander of the Most Distinguished Order of Saint Michael and Saint George, Companion of the Most Honourable Order of the Bath, Governor and Commander-in-Chief of the Colony of Kenya and the East African Protectorate, do hereby license and authorise residing at to conduct experiments in wireless telegraphy and for such purpose to import Wireless Telegraph apparatus and instal the same at such places as the Postmaster-General shall approve

subject to the conditions and restrictions following, that is to say:—

1. All apparatus utilised pursuant to the provisions of this licence shall be used solely for the purpose of scientific study in wireless telegraphy and in no case shall the licensee instal apparatus capable of being used for the purpose of sending wireless signals, or use the receiving apparatus for the purpose of receiving either private messages or for any commercial telegraph traffic whatsoever.

2. This licence shall remain in full force and operation for
date hereof. from

Given under my hand at Nairobi this
day of 1920.

Governor and Commander-in-Chief.

KOREA

(See JAPAN.)

KWANTUNG

(See JAPAN.)

LADRONE ISLANDS

(See map on p. 139.)

LATVIA

(See map on p. 389.)

THIS State, alternatively known under the appellation Lettland, has only recently gained its independence, having been formed out of the erstwhile Russian Empire. The country constitutes that part of the territory lying immediately around the Gulf of Riga.

Owing to the political situation it has been impossible to obtain any particulars in regard to the organisation and administration of wireless telegraphy in that country, but it has been ascertained that there are two wireless stations working. These are situated respectively at Riga and Libau.

LEEWARD ISLANDS

THE Leeward Islands consist of the five Presidencies of: (1) Antigua with Barbuda and Redonda; (2) St. Kitts and Nevis with Anguilla; (3) Dominica; (4) Montserrat; and (5) The Virgin Islands with Sombrero. The Colony is under one Governor who resides at Antigua. The Presidencies of St. Kitts and Dominica are under Administrators and the Presidencies of Montserrat and the Virgin Islands under Commissioners, the Administrators and Commissioners being subject to the instructions of the Governor. The administrative centre and the residence of the Governor-in-Chief is St. John's, Antigua, lying in 17° 6' N. latitude, 61° 45' W. longitude.

ADMINISTRATION.

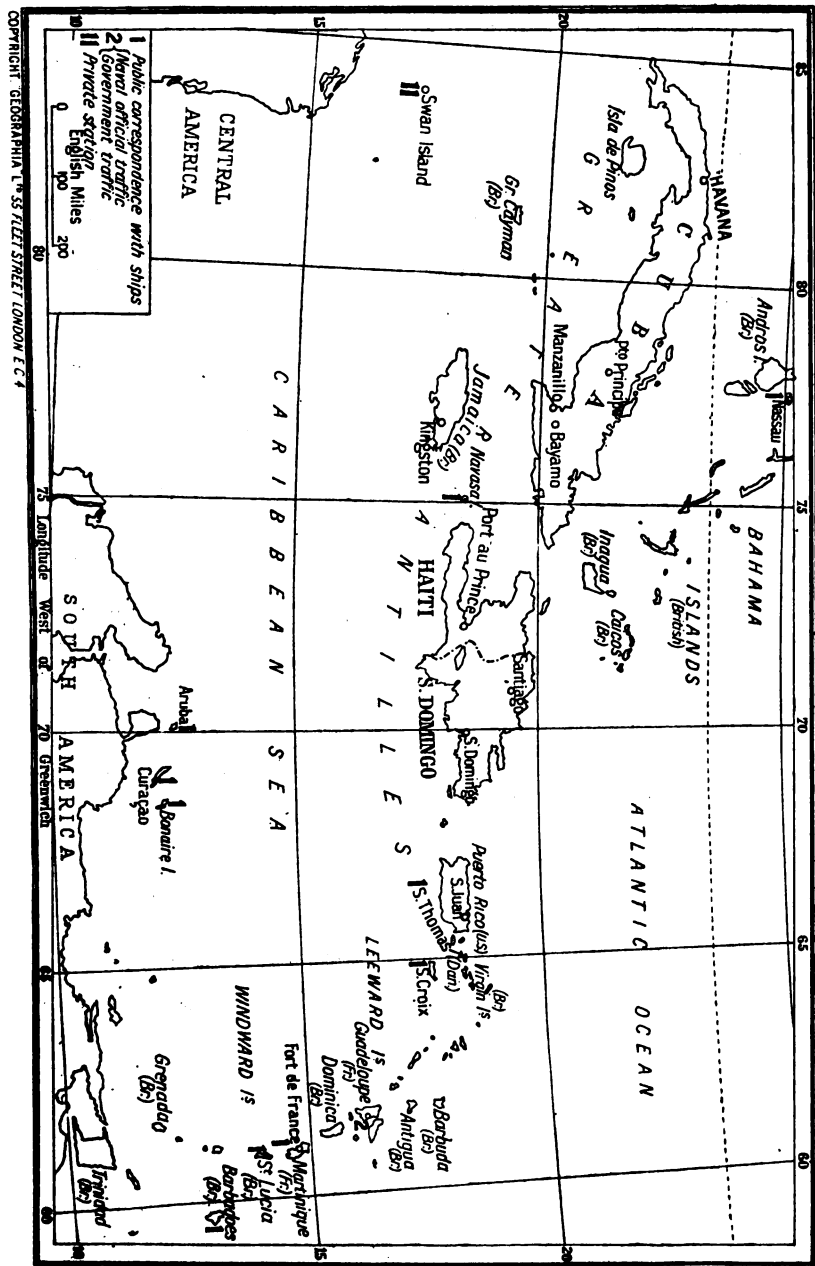

No wireless stations exist, but wireless telegraphy would be administered under:—

A—Ordinance No. 11, 1913.

B—Regulations made thereunder in 1913, and

C—Further Regulations dated 28th August, 1917.

Similar legislation is in force in the other islands under the same administration.

ANTIGUA, NO. 11 OF 1913.

A An Ordinance to consolidate and amend the law relating to wireless telegraphy.

Be it ordained by the Governor and Legislative Council of Antigua as follows :

1. This Ordinance may be cited for all purposes as "The Wireless Telegraphy Consolidation Ordinance, 1913."

2. In this Ordinance "Wireless Telegraphy" means any system of communication by telegraph without the aid of any wire connecting the points from and at which the messages or other communications are sent or received ; Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

3. (1) No person shall establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place or on board any ship registered in the Colony except under and in accordance with a licence granted in that behalf by the Governor-in-Council.

(2) Every such licence shall be in such form and for such period as the Governor-in-Council may determine, and shall contain the terms, conditions and restrictions on and subject to which it is granted.

4. No person shall work any apparatus for wireless telegraphy installed on any merchant ship, whether British or foreign, while that ship is in the territorial waters of the Presidency, otherwise than in accordance with regulations under this Ordinance.

5. (1) The Governor-in-Council may from time to time make regulations for carrying into effect the purposes of this Ordinance, and such regulations shall on publication in the *Gazette* have the same effect as if enacted in this Ordinance.

(2) The regulations in the Schedule to this Ordinance shall have effect except in so far as they may be amended or rescinded by regulations made under the authority of this section.

(3) If at any time in the opinion of the Governor-in-Council an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in territorial waters of the Presidency shall be subject to such further regulations as may be made by the Governor-in-Council from time to time, and such regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

6. If a Magistrate is satisfied by information on oath that there is reasonable ground for suspecting that a wireless telegraph station has been established without a licence in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place, or on board any merchant ship without a licence in that behalf or contrary to the provisions of any regulations made under this Ordinance or of any licence granted under this Ordinance, he may grant a search warrant to any Police Officer or any person appointed in that behalf by the Chief Inspector of Police and named in the warrant, and a warrant so granted shall authorise the Police Officer or person named therein to enter and inspect the station, place or ship and to seize

any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

7. (1) Any person guilty of an offence against any provisions of this Ordinance or any of the regulations made thereunder shall be liable on summary conviction for every such offence to a fine not exceeding fifty pounds, and upon such conviction the Court may order that any apparatus for wireless telegraphy in connection with which the offence was committed shall be seized and forfeited.

(2) Proceedings under this Ordinance shall be taken on the complaint of the Chief Inspector of Police or of any person thereto authorised by him in writing.

8. Ordinance No. 12 of 1903 entitled "An Ordinance to regulate the establishment of Wireless Telegraphy" and Ordinance No. 7 of 1913 entitled "An Ordinance to amend the Wireless Telegraphy Ordinance, 1903," are hereby repealed.

Passed the Legislative Council the 14th day of October, 1913.

Dated at Antigua the 23rd day of October, 1913, in the fourth year of His Majesty's reign.

SCHEDULE—SECTION 5 (2).

REGULATIONS.

B 1. All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of the Presidency shall be worked in such a way as not to interfere with

(a) Naval signalling, or

(b) the working of any wireless telegraph station lawfully established, installed or worked in the Presidency or the territorial waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. In these Regulations "Naval Signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and Naval stations, or between a ship of His Majesty's Navy or a Naval Station and any other wireless telegraph station whether on shore or on any ship.

3. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in any harbour or bay of the Presidency except with the special or general permission of the Governor-in-Council.

4. For the purpose of any proceedings under these Regulations the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship.

5. Any summons or other document in any proceedings under these Regulations shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in command or charge of the ship.

6. These Regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

REGULATIONS.

MADE BY THE GOVERNOR-IN-COUNCIL.

C Whereas it is provided by section 5 (3) of the Wireless Telegraphy Consolidation Ordinance, 1913, that if at any time, in the opinion of the Governor-in-Council, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy the use of wireless telegraphy on board merchant ships while in the territorial waters of the Presidency shall be subject to such further regulations as may be made by the Governor-in-Council from time to time; and such regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

And whereas in my opinion such emergency as aforesaid has arisen :

Now I do hereby rescind the further Regulations made under the said Ordinance on the 8th day of September, 1914, and make the following Regulations, namely :—

1. The radiotelegraph stations on board ships (other than ships requisitioned by His Majesty's Government) shall not be worked whilst such ships are within a harbour of the Presidency and for the proper enforcement of the above.

(a) Ships of British register in harbours of the Presidency must completely disconnect their aerial wires from their radio apparatus, the ends of such wires being

suspended entirely clear of the radiotelegraph cabin, preferably from the main rigging, in such a manner as to show that they are properly disconnected.

(b) Ships of foreign register in a harbour of the Presidency must, subject to the provisions of the following sub-sections (c) take down their aerial wires completely and disconnect the same from their radiotelegraph apparatus.

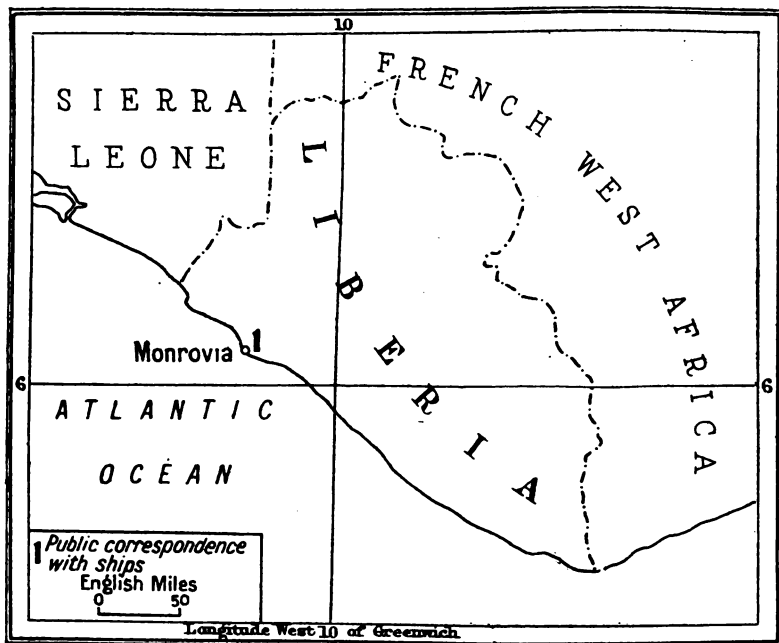

(c) Ships of foreign register remaining in the harbour of the Presidency for less than twelve hours may at the discretion of the Governor be permitted to leave their aerials up, provided the same are disconnected in accordance with the provisions of sub-section (a) of this Regulation.

2. The Governor may at his discretion direct that the operating room of any ship (other than a ship requisitioned by His Majesty's Government) in a harbour of the Presidency be sealed or order any other steps to be taken affecting the radiotelegraph station on board any such ship.

3. Every person failing to obey and conform with the provisions of these Regulations or with any directions given by the Governor under the same shall be guilty of an offence and shall be liable on summary conviction to the penalties under the Ordinance provided.

Made by the Governor-in-Council, under section 5 (3) of the Wireless Telegraphy Consolidation Ordinance, 1913, this 28th day of August, 1917.

LIBERIA

COPYRIGHT "GEOGRAPHIA" LTD 55 FLEET STREET LONDON E.C. 4

THE only independent "black" republic in the Old World, owes its inception (in 1847) to an effort on the part of American and European slave emancipators to found a country for freed negro slaves in the continent which formed the original home of the race. It lies on the west coast of Africa, approximately between 5° and 10° N. latitude and 7° and 11° W. longitude, possessing about 350 miles of coast line. The executive authority is vested in a President, a Vice-President, and a Council of six Ministers, and the legislative power in a Parliament of two Houses, known respectively as the Senate and House of Representatives.

Wireless telegraphy is represented by a station situated at Monrovia, under the jurisdiction of the French Government, which is open for public correspondence with ships.

LUXEMBOURG

(See map on p. 229.)

THIS small Grand Duchy lies roughly about 150 miles from the nearest sea coast, and is bounded on the east by Germany, on the south by France, and on the west by Belgium. Formerly (from 1815 to 1866) it formed part of the now dissolved Germanic Confederation, but under the terms of the Treaty of London, dated 11th May, 1867, it is declared neutral territory, and its integrity and independence guaranteed. The country is governed by a Chamber of Deputies of 53 members, elected for six years, with half renewed every three years. Its total area is about 1,000 square miles, and it possesses a population of about 260,000.

ORGANISATION.

A receiving wireless telegraph station will be erected by the State at the capital city of Luxembourg, with the object of receiving daily French Official Time and Meteorological information.

ADMINISTRATION.

No law fixing conditions under which wireless apparatus may be installed is in existence, although a certain number of amateurs are in possession of receiving apparatus.

The Grand Duchy of Luxembourg has not adhered to the London Radiotelegraphic Convention; it has, however, made a declaration to the Berne Bureau in accordance with Article 48 of that Convention.

MADAGASCAR

(See FRANCE.)

MALAYA

(See map on p. 139.)

Comprising (1) The Federated Malay States;
(2) Malay States not included in the Federation.

(1) Federated States.

THE first division under which the component parts of Malaya are grouped consists of the Federated States. They lie on the mainland of the Malay Peninsula, and are closely connected with the Straits Settlements. They comprise the States of Perak, Selangor, Negri Sembilan, and Pahang, which have by a Treaty dated 1895 renewed their arrangements with the British Government. They are administered under the advice of a Chief Secretary with residents in each State, subject to the instructions of the High Commissioner, who is also Governor of the Straits Settlements, and resides at

Singapore. The Chief Secretary to the Government is located at Kuala Lumpur. Their total area amounts to 27,506 square miles.

There are two wireless stations open for public service with ships and one for Government traffic only.

ADMINISTRATION.

Wireless telegraphy is regulated by:—

A—Enactment No. 7 of 1913, and

B—Rules under the above Enactment.

The text of both the enactment and the rules made under its provisions will be found below.

ENACTMENT NO. 7 OF 1913.

A An Enactment to make better provision for the regulation of Wireless Telegraphy.

July 30th, 1913.

It is hereby enacted by the Rulers of the Federated Malay States in Council as follows:—

1. (1) This enactment may be cited as "The Wireless Telegraphy Enactment, 1913," and shall come into force upon the publication thereof in the *Gazette*.

(2) The Enactments specified in the schedule are amended by deleting from the interpretation of "Telegraph" in section 2 of each of the said Enactments the words "whether worked with or without lines of wires."

2. (1) In this Enactment the expression "wireless telegraphy" means any system of communication by telegraph as defined by "The Telegraphs Enactments, 1905," without the aid of any wire connecting the points from and at which the messages or other communications are sent and received;

The expression "locally owned ship" means a ship owned wholly by the Government of the Federated Malay States or of any of them or by subjects of any of the rulers of the said States or by bodies corporate established under and subject to the laws of the said States or of any of them and having their principal place of business within the said States or by any person residing within the said States.

(2) Nothing in this Enactment shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

3. The Chief Secretary to Government may, whenever he shall deem it expedient to do so, license the establishment of any wireless telegraph station or the installation or working of any apparatus for wireless telegraphy in any place in the Federated Malay States or on board any locally owned ship.

4. (1) No person shall establish any wireless telegraph station or install or work any apparatus for wireless telegraphy in any place in the Federated Malay States or on board any locally owned ship except under and in accordance with a licence granted in that behalf by the Chief Secretary to Government.

(2) Every such licence shall be in such form and for such period as the Chief Secretary to Government may determine and shall contain such terms, conditions and restrictions on and subject to which the licence is granted as the Chief Secretary to Government shall consider desirable in the public interest.

5. (1) If any person establishes a wireless telegraph station without a licence in that behalf or installs or works any apparatus for wireless telegraphy without a licence in that behalf, he shall be liable to a fine not exceeding

one thousand dollars or to imprisonment of either description for a term not exceeding twelve months and in either case be liable to forfeit any apparatus for wireless telegraphy installed or worked without a licence, but no proceedings shall be taken against any person under this Enactment except with the previous sanction of the Public Prosecutor.

(2) If a Magistrate is satisfied by information on oath that there is reasonable ground for believing that a wireless telegraph station has been established without a licence in that behalf or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any ship within the jurisdiction without a licence in that behalf he may grant a search warrant to any police officer to enter and inspect the station, place or ship and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

6. (1) The Chief Secretary to Government may make rules for all or any of the following matters:—

(a) for prescribing the form and manner in which applications for licences under this Enactment are to be made;

(b) for prescribing the fees payable on the grant of any licence;

(c) for regulating the manner in which apparatus for wireless telegraphy on board a merchant ship, whether a locally owned ship, a British or a foreign ship, in the waters of the Federated Malay States shall be worked so as to prevent interference with naval signalling or the working of any wireless telegraph station lawfully established, installed or worked in the Federated Malay States or the waters thereof and so as not to interrupt or interfere with the transmission of any wireless messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea;

(d) for prohibiting except with the special or general permission of the Director of Posts and Telegraphs, Federated Malay States, the working or using of any apparatus for wireless telegraphy on board a merchant ship, whether a locally owned ship, a British or a foreign ship, whilst such ship is in any of the harbours of the Federated Malay States;

(e) for prohibiting or regulating, in case at any time in the opinion of the Chief Secretary to Government an emergency has arisen in which it is expedient for the public service that the Government should have control over the transmission of messages by wireless telegraphy on board merchant ships, whether locally owned ships, British or foreign ships, in the waters of the Federated Malay States, the use of wireless telegraphy on board such ships while in such waters

by such further rules as the Chief Secretary to Government may see fit to make from time to time and either in all cases or in such cases as may be deemed desirable.

(2) No rules made in respect of the matters described in paragraphs (c), (d) and (e) of sub-section (1) shall apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

7. When an applicant for a licence proves to the satisfaction of the Chief Secretary to Government that the sole object of obtaining the licence is to enable him to conduct experiments in wireless telegraphy, a licence for that purpose shall be granted subject to such special terms, conditions, and restrictions as the Chief Secretary to Government may think proper, but shall not be subject to any rent or royalty.

8. (1) Every omission or neglect to comply with and every act done or attempted to be done contrary to the provisions of this Enactment or of any rule made thereunder or in breach of the conditions and restrictions subject to or upon which any licence has been issued shall be deemed to be an offence against this Enactment and for every such offence not otherwise specially provided for the offender shall, in addition to the forfeiture of any articles seized, be liable to a fine not exceeding five hundred dollars.

(2) All convictions, forfeitures and fines under this Enactment or any rules made thereunder may be had and recovered before the Court of a Magistrate of the First Class.

SCHEDULE.

Pahang ..	8 "	" "

RULES.

UNDER "THE WIRELESS TELEGRAPHY ENACTMENT, 1913."

B In exercise of the powers vested in him by section 6 of "The Wireless Telegraphy Enactment, 1913," the Chief Secretary to Government has made the following rules:—

1. All apparatus for wireless telegraphy on board a merchant ship, whether a locally owned ship, a British or a foreign ship, in the waters of the Federated Malay States shall be worked in such a way as not to interfere with (a) naval signalling or (b) the working of any wireless telegraph station lawfully established installed or worked in the Federated Malay

States or the waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. (i.) No apparatus for wireless telegraphy on board a merchant ship, whether a locally owned ship, a British or a foreign ship, shall be worked or used whilst such ship is in any of the harbours of the Federated Malay States.

(ii.) To ensure the proper enforcement of paragraph (i.) of this rule—

(a) Locally owned ships and British ships in harbours of the Federated Malay States shall completely disconnect their aerial wires from their radio apparatus, the ends of such wires being suspended entirely clear of the radiotelegraph cabin, preferably from the main rigging, in such a manner as to show that they are properly disconnected.

(b) Foreign ships in harbours of the Federated Malay States shall take down their aerial wires completely and disconnect the same from their radiotelegraph apparatus; provided that foreign ships remaining in a harbour of the Federated Malay States for less than twelve hours may, at the discretion of the Harbour Master or other competent local authority, be permitted to leave their aerials up, if the same are disconnected in the manner described in the last preceding clause;

(c) The operating room of any locally owned or British or foreign ship shall, in any case where the Harbour Master or other competent local authority so directs, be sealed up and kept sealed up while such ship is in a harbour of the Federated Malay States, and such other steps may be taken as to the Harbour Master or other competent local authority seem expedient.

3. If at any time, in the opinion of the Chief Secretary to Government, an emergency has arisen in which it is expedient for the public service that the Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships, whether locally owned ships, British or foreign ships, while in the waters of the Federated Malay States shall be subject to such further rules as may be made by the Chief Secretary to Government from time to time, and such rules may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

4. These rules shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

5. Expressions defined in "The Wireless Telegraphy Enactment, 1913," have in these rules the meanings thereby assigned to them.

(2) Non-Federated States.

These comprise Johore, Kedah, Perlis, Kelantan and Trengganu. The relations of Johore with Great Britain are defined in the Treaty of 1885, amended by an agreement dated May 12th, 1914, whereby the Sultan exacts and acts upon the advice of a British officer called his General Adviser. With regard to the other four States, rights of suzerainty, administration and control were transferred by Siam to Great Britain under a Treaty dated March 10th, 1909.

At present there are no wireless stations in these States and consequently no radiotelegraphic enactments.

MALTA

THIS island, $17\frac{1}{2}$ miles long by $8\frac{1}{2}$ miles broad, forms the headquarters of the British Mediterranean Fleet and the principal coaling station for merchant vessels, as well as the Navy, in the Mediterranean. The language of the people is a corrupt dialect of Arabic. The Knights of St. John, who possessed the island from 1530 to 1798, raised the stupendous fortifications which rendered Malta so long militarily formidable. The island was finally recognised as a British dependency by the Congress of Vienna in 1814, and is ruled by a Governor, assisted by an Executive Council and a "Council of Government." In 1920 a partial measure of home rule was adopted.

CONTROL AND ORGANISATION.

The administration of wireless telegraphy in Malta and its dependencies is under Naval control. There are three stations, one of which is open for public service to ships.

ADMINISTRATION.

Wireless telegraphy in the Colony is administered under the provisions of Telegraph Ordinance No. I of 1904, as amended by Telegraph Ordinance No. III of 1909, but wireless telegraphy is not specifically mentioned in either, and they are therefore not printed here. Regulations under these Ordinances have been made by His Excellency the Governor and are reprinted in full below.

A—Government Notice No. 258 of December 24th, 1909.

B—Section 28, Malta Defence Regulations.

COPYRIGHT GEOGRAPHICAL INSTITUTE, 25 FLEET STREET LONDON E.C.

GOVERNMENT NOTICE, No. 258.

A It is hereby notified for general information, that His Excellency the Governor, in exercise of the powers vested in him by Article 41 of Ordinance No. I of 1904, as amended by Ordinance No. III of 1909, has been pleased to make the following regulations respecting the use of wireless telegraph apparatus on merchant ships, whether British or foreign, while in the territorial waters of these Islands.

By command, E. P. S. ROUPELL,
Acting Lieutenant-Governor and Chief Secretary to Government.

Lieut.-Governor's Office, The Palace, Valetta,
December 24th, 1909.

REGULATIONS RESPECTING THE USE OF WIRELESS TELEGRAPH APPARATUS ON MERCHANT SHIPS, WHETHER BRITISH OR FOREIGN, WHILE IN THE TERRITORIAL WATERS OF MALTA AND ITS DEPENDENCIES.

1. All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of these Islands shall be worked in such a way as not to interfere with—

(a) Naval signalling; or

(b) the working of any wireless telegraph station lawfully established, installed or worked in these Islands or the territorial waters thereof;

and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used whilst such ship is in any of the harbours of these Islands, except with the special or general permission in writing of the Lieutenant-Governor.

3. If at any time in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that the Government shall have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships whilst in the territorial waters shall be subject to such further rules as may be made by the Governor from time to time, and such rules may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

4. These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

SECTION 28, MALTA DEFENCE REGULATIONS.

B PROHIBITION AGAINST POSSESSION OF WIRELESS TELEGRAPHIC APPARATUS, ETC.

No person shall, without the written permission of the Governor, make, buy, sell, or have in his possession or under his control any apparatus for the sending or receiving of messages by wireless telegraphy, or any apparatus intended to be used as a component part of such apparatus; and no person shall sell or give any such apparatus to any person who has not obtained such permission as aforesaid, and any person having in his possession or under his control any such apparatus, whether with or without the permission of the Governor, shall on demand deliver the apparatus to the Governor, or as he may direct; and if any person contravenes the provisions of this regulation he shall be guilty of an offence against these regulations.

Where it appears to the Governor that there

are reasons to suspect that any person having in his possession any apparatus for sending or receiving messages by telegraphy, wireless telegraphy, telephony or other electrical or mechanical means is using or about to use the same for any purpose prejudicial to the public safety or the defence of these Islands, he may, by order, prohibit that person from having any such apparatus in his possession, and may take such steps as are necessary for enforcing the order, and if that person subsequently has in his possession any apparatus in contravention of the order, he shall be guilty of an offence against these regulations.

For the purpose of this regulation, any apparatus ordinarily used as a distinctive component part of apparatus for the sending or receiving of messages by wireless telegraphy shall be deemed to be intended to be so used unless the contrary is proved.

Any person possessing private telephone installations or any apparatus capable of being used for transmitting telephone messages shall give notice to the Superintendent of Police of any such installation or apparatus, and if he fails to do so he shall be guilty of a summary offence against these regulations.

MARIANNE ISLANDS

(See map on p. 139.)

MARSHALL ISLANDS

(See map on p. 356.)

MARTINIQUE

(See FRANCE.)

MAURITIUS

MAURITIUS lies in the Indian Ocean, 500 miles east of Madagascar, and comprises a total area of about 720 square miles. It possesses but one wireless installation, and that is open to public service with ships.

The Colony was formerly ceded to Great Britain by the Treaty of Paris of 1814. Under letters patent of 1885, 1901, 1904, and 1912 partially representative institutions have been granted. The Administration of the Colony and its dependencies is vested in a Governor, assisted by an Executive Council and a Council of Government.

ADMINISTRATION.

The legislation affecting Wireless Telegraphy in Mauritius was originated by an Ordinance (No. 33) issued in 1903 investing the Governor with certain administrative powers. This was amended by the "Wireless Telegraphy" (Amendment) Ordinance (No. 25) of 1912. These have since been consolidated by Ordinance No. 11 of 1913, and three sets of Regulations have been framed thereunder, as follows:—

- A**—Ordinance No. 11 of August 22nd, 1913 (to Consolidate the Laws on Wireless Telegraphy).
- B**—Regulations framed under Ordinance No. 11 of 1913 (Art. 4) (August 22nd, 1913).
- C**—Additional Regulations respecting the transmission of messages by Wireless Telegraphy.
- D**—Regulations governing the transmission of messages by Wireless Telegraphy through Rose Belle Station to and from Merchant Ships at sea.

COPYRIGHT, GEOGRAPHIA LTD 55 FLEET STREET LONDON E.C.4

ORDINANCE No. 11.

August 22nd, 1913.

A Be it Enacted by the Governor, with the advice and consent of the Council of Government, as follows:—

1. *Definition of "Wireless Telegraphy."*—In this Ordinance "Wireless Telegraphy" means any system of communication by telegraph without the aid of any wire connecting the points from and at which the messages or other communications are sent or received; Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

2. *Licence for "Wireless Telegraphy."*—(1) A person shall not establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place or on board any ship registered in the Colony except under and in accordance with a licence granted in that behalf by the Governor.

(2) Every such licence shall be in such form and for such period as the Governor may determine, and shall contain the terms, conditions and restrictions on and subject to which it is granted.

3. *Apparatus aboard ships.*—A person shall not work any apparatus for wireless telegraphy installed on any merchant ship, whether British or foreign, while that ship is in the territorial waters of the Colony, otherwise than in accordance with regulations under this Ordinance.

4. *Regulations.*—(1) The Governor in Executive Council may from time to time make regulations for carrying into effect the purposes of this Ordinance.

(2) If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in the territorial waters of the Colony shall be subject to such further regulations as may be made by the Governor from time to time, and such regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

5. *Search Warrant.*—If a Magistrate is satisfied by information on oath that there is reasonable ground for suspecting that a wireless telegraph station has been established without a licence in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any merchant ship without a licence in that

behalf or contrary to the provisions of any regulations made under this Ordinance or for any licence granted under this Ordinance he may grant a search warrant to any police officer or any person appointed in that behalf by the Inspector-General of Police and named in the warrant, and a warrant so granted shall authorise the police officer or person named therein to enter and inspect the station, place or ship and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

6. *Penalties.*—Any person who shall offend against any provision of this Ordinance or any of the regulations made thereunder shall be liable to a fine not exceeding five hundred rupees (Rs. 500) and upon such conviction the Court may order that any apparatus for wireless telegraphy in connection with which the offence was committed shall be seized and forfeited.

7. *Repeal Clause.*—Ordinances No. 33 of 1903 and 25 of 1912 are repealed.

8. *Short Title.*—This Ordinance may be cited as "The Wireless Telegraphy (Amendment) Ordinance, 1913."

Passed in Council at Port Louis, Island of Mauritius, this twenty-ninth day of July, One thousand nine hundred and thirteen.

B REGULATIONS FRAMED UNDER THE WIRELESS TELEGRAPHY ORDINANCE No. 11 OF 1913 (ARTICLE 4).

1. Apparatus for wireless telegraphy on board a merchant ship shall not be worked or used while such ship is in any harbour or bay of the Colony except with the special or general permission of the Governor.

2. Apparatus for wireless telegraphy on board a merchant ship in the territorial waters of the Colony shall not be worked in such a way as to interfere with

(a) Naval signalling, or

(b) The working of any wireless telegraph station lawfully established, installed or worked in the Colony or the territorial waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

3. In these regulations "Naval Signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and Naval Stations, or between a ship of His Majesty's Navy or a Naval

station and any other wireless telegraph station whether on shore or on any ship.

4. For the purpose of any proceedings under these Regulations the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship.

5. Any summons or other document in any proceedings under these Regulations shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in command or charge of the ship.

6. These Regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

7. Any person who shall offend against any of these Regulations shall be liable to a fine not exceeding five hundred rupees (Rs. 500), and any apparatus for wireless telegraphy in connection with which the offence was committed may be seized and forfeited.

8. The Regulations published under Government Notification No. 19 of January 25th, 1913, are hereby repealed.

Made by His Excellency the Governor in Executive Council at a meeting held on August 22nd, 1913.

C ADDITIONAL REGULATIONS RESPECTING THE TRANSMISSION OF MESSAGES BY WIRELESS TELEGRAPHY.

(MADE UNDER ARTICLE 4 OF THE WIRELESS TELEGRAPHY ORDINANCE NO. 11 OF 1913.)

1. Telegrams for transmission to ships at sea will in all cases be held at the Wireless Station until the ship in question arrives within range, *i.e.*, telegrams will not be transmitted to a ship which is approaching the Island until she has called the wireless station for the first time.

2. In the case of a ship going away from the Island the telegram will be transmitted immediately on receipt at the wireless station unless she is known to have already passed out of range. In this case and in all cases where the transmission of the telegram by wireless

proves to be impossible, the sender will be informed by service advice from the post office at which he handed in his telegram, and will be refunded the wireless charges.

Made by the Governor in Executive Council at a meeting held on the twenty-sixth day of December, 1913.

D REGULATIONS GOVERNING THE TRANSMISSION OF MESSAGES BY WIRELESS TELEGRAPHY THROUGH ROSE BELLE STATION, TO AND FROM MERCHANT SHIPS AT SEA.

(MADE UNDER ARTICLE 4 OF THE WIRELESS TELEGRAPHY ORDINANCE NO. 11 OF 1913.)

1. Messages received by wireless telegraphy from merchant ships at sea will be handed in at Rose Belle Post Office by an officer or agent of the wireless station and will be transmitted to any of the telegraph offices of the Colony for delivery to the addressee subject to the following conditions and charges:—

(a) A terminal charge will be made at the rate of R. 0.02 cents. of a rupee per word.

(b) The usual end portage charges from the post office of destination to the addressee will be made.

2. Messages for transmission to merchant vessels at sea will also be accepted at any of the telegraph offices in the Colony subject to the following conditions and charges:—

(a) The charge for messages shall be at the rate of 62 cents. of a rupee per word.

(b) The charge for portage from Rose Belle Post Office to the wireless station shall be 50 cents. of a rupee.

(c) Every message shall bear the supplementary word "wireless" for which a charge of 2 cents. of a rupee will be made.

3. The rules and regulations for the acceptance and transmission of messages by wireless telegraphy shall be in accordance with the rules and regulations of the Mauritius Post Office and Telegraphs for the time being in force.

4. Messages in code will not be transmitted or received by wireless telegraphy.

5. Regulations published under Government Notices No. 94 of 31st May, 1910, and No. 47 of 25th February, 1920, are repealed.

Made by the Governor in Executive Council, at a meeting held on the ninth day of July, one thousand nine hundred and twenty.

MEXICO

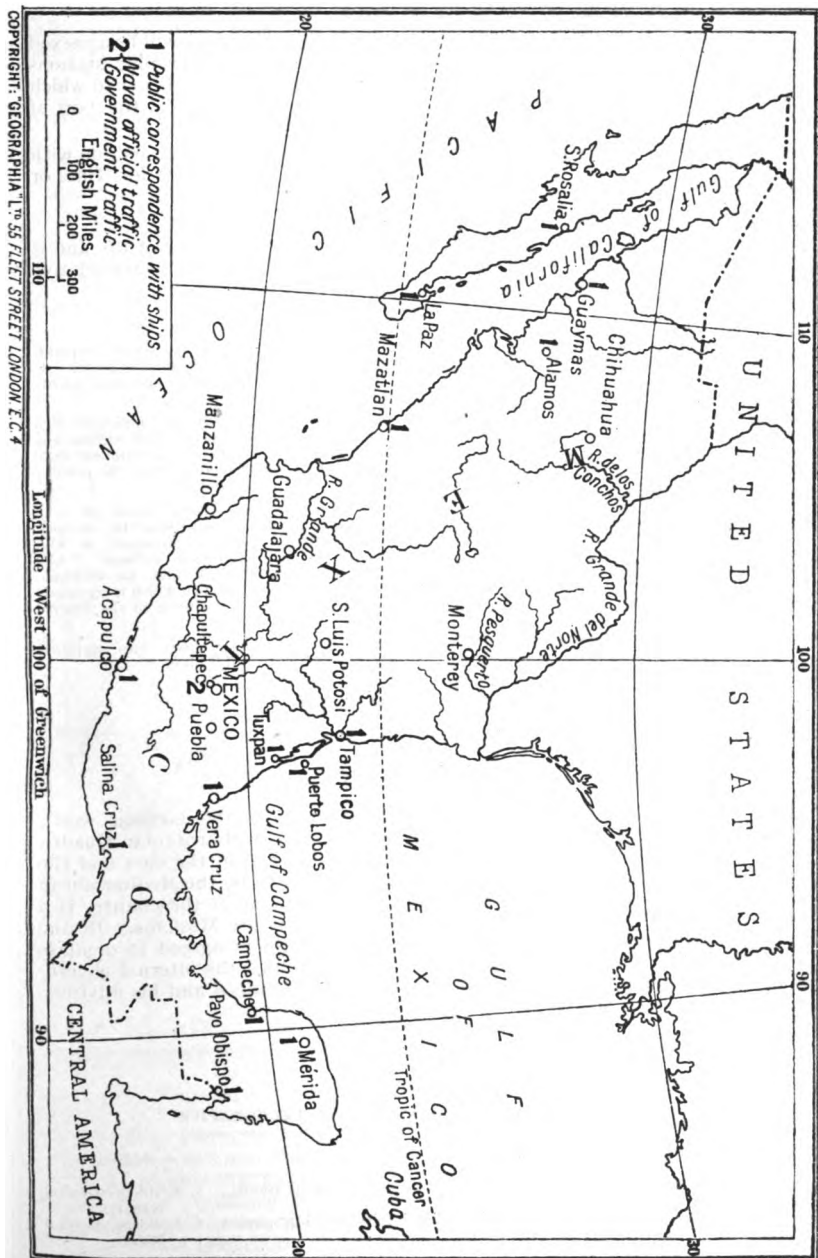

OCCUPYING an important position in the southern part of the Continent of North America. With an extensive seaboard both on the Atlantic and Pacific Oceans Mexico stretches from 15° 0' to 32° 30' N. latitude, and lies between 87° 0' and 117° 0' W. longitude. It covers an area of 768,883 square miles, and comprises 27 States and three Territories, besides the Federal District of Mexico.

CONTROL.

The National Radiotelegraphic Service is controlled by the Director-General of National Telegraphs, whose officials constitute the Executive in all matters referring thereto. The Radiotelegraphic Service is actually in charge of the Technical Department of the Director-General himself.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Sr. M. Mendez	Director-General of National Telegraphs ..	Mexico City

ORGANISATION.

Forms of licences for erection of stations and for operators will be annexed to the Law in the course of being codified. The radiotelegraphic stations open for public service to ships are fourteen in number, in addition to which we may include the installation which was recently completed at the port of Salina Cruz.

There are at present no radiotelegraphic arrangements in connection with aviation, nor do the *National Stations* maintain any service for Time or Weather Signals.

ADMINISTRATION.

A National Radiotelegraphic Law is in course of being drawn up, and it is expected it will shortly come into force. The only extant decree relative to radiotelegraphy runs as follows:—

A—Decree of October 19th, 1916.

A ART. I.—The establishment and exploitation of Radiotelegraphic Stations is forbidden in the Mexican Republic except under the express authorisation of the Federal Government, which can only accord it on the terms and under the conditions which are contained in the Regulations attached to the said Law.

ART. II.—Anyone who without the authorisation of the Federal Government establishes a Radiotelegraphic Station shall be liable to a penalty of 500-1,000 pesos, or imprisonment from 1 to 11 months, or shall suffer a combination of both penalties in accordance with the seriousness of the offence. Moreover, all apparatus, machines, and accessories forming part of the installation shall be sequestered for the benefit of the State.

ART. III.—If any corporation which installs a Radiotelegraphic Station be a company or

any other responsible body, direct responsibility with regard to the infraction of this law is vested in the person of the directors, agents or administrators.

ART. IV.—Any persons who make use of a Radiotelegraphic Station installed without the authorisation of the Federal Government shall be liable to a punishment of half the penalty enacted in ART. II preceding.

ART. V.—Any persons who make use of a Radiotelegraphic Station without the authorisation of the Federal Government, or who intercept a communication between Public Departments, or who divulge its contents, shall be liable to the penalty which is contained in ART. 770 of the Penal Code of the Federal District.

ART. VI.—This Law enters into operation from the date of its publication.

MONTSERRAT

(See LEEWARD ISLANDS.)

MOROCCO

KNOWN to the natives as "Maghreb-el-Aksa" (the farthest west), Morocco is an empire sometimes spoken of as the Mauritanian Quadrilateral. It lies in North West Africa between Algeria on the east and the Atlantic Ocean on the west, and is bounded on the north by the Mediterranean and on the south by the Sahara Desert. The language of the country is a dialect of Arabic, and the majority of its inhabitants are Moslems. By the Conference of Algeciras, held in 1906, France and Spain agreed to organise the police force and customs of the coast towns, whilst the internal government of the country lies mainly in the hands of the Sultan and his advisers.

(a) FRENCH ZONE.

CONTROL.

The present arrangements are as follows:—

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
M. le Colonel Apiano ..	Directeur du Service des Communications..	Résidence Général Rabat.
M. Walter	Directeur de l'Office des Postes Télégraphes et Téléphones	Résidence Général Rabat.

The Directeur du Service des Communications at the Residency General is in control, through a controlling station at the Residency General, of all wireless telegraph stations, Civil, Military, and Naval, in the French zone.

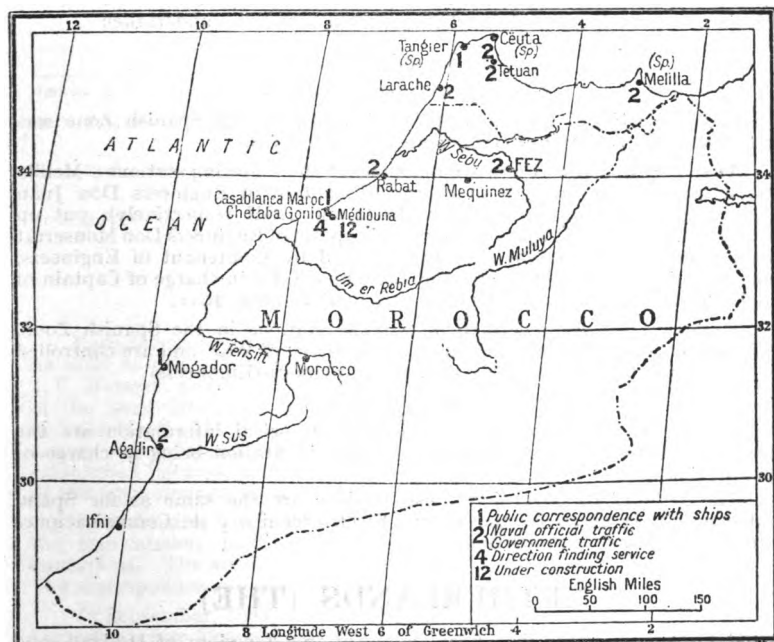

N.B.—This control station is not the same as the Rabat Station CNF which is now in disuse or used only for reception of certain purely official communications.

ORGANISATION.

The question of establishing wireless telegraph stations in Morocco first arose in 1906, when the Shereefian Government decided to erect several stations. A company was formed at Tangier, called the Société Internationale de la Télégraphie Sans Fil, which received the concession to instal the service. Its director was M. Henri Popp, a French engineer. The company did not exist long, however, for in 1908 the Shereefian Government bought it out, M. Popp remaining as manager and chief engineer.

The first stations to be established were Tangier and Casablanca, in 1907. Next came Rabat, in 1908, and Mogador at the end of the same year.

In 1910 M. Popp died, and was succeeded by M. Biarnay, under whose direction the Fez station was established during the summer and autumn

of 1911. Since then the Shereefian Government has created no further stations. The French Military Authorities, however, have stations all over the French Zone, including one at Agadir. Portable military wireless telegraphy installations have been in use by French mobile columns since 1911.

The present organisation consists of the Shereefian Government station at Tangier, Casablanca, Mogador, Rabat, and Fez. Of these the first three only are for public use, the stations at Fez and Rabat being solely for military use. Wireless telegraphy in the French Zone forms a Government monopoly.

The various military and civil posts all over Morocco (French Zone)

keep the Service des Communications at the Residency General informed of meteorological conditions at their several posts, and the Service des Communications also receives the Eiffel Tower, Madrid, Algiers, etc., news, and hands it on to the Aviation Militaire and the Bureau de Meteorologie Militaire; but this is only for military use.

It has been suggested that this news might be made public, and means of doing so, and Regulations for publishing wireless news for aviation and meteorological purposes, are now under consideration.

Such Regulations will be grounded on, or in accordance with the agreements formulated at the recent Convention Internationale de Navigation Aérienne.

ADMINISTRATION.

Military wireless telegraph stations keep headquarters at Rabat informed as regards meteorological conditions for the use of the military Aeronautical Bureau.

The current Laws and Regulations governing wireless telegraphy consist of the Radiotelegraphic Convention of London, 1912.

No licences are given, and it is *not* probable that legislation for the grant of licences for working wireless telegraphy will shortly be undertaken.

(b) SPANISH ZONE.

CONTROL AND ORGANISATION.

The first wireless telegraph station installed in the Spanish Zone was that of Melilla (call letters EGB), erected in July, 1918.

At the present time there are in existence the following stations: Melilla (EGB), erected in July, 1918, in charge of Captain of Engineers Don Juan Reig Valerino; Ceuta and Tetuan (EGD and EGK respectively), put up in July, 1911, and July, 1914, in charge of Captain of Engineers Don Monserrat Fenech Munoz, Diploma of the Staff, assisted by Lieutenant of Engineers, Don Antonio Guerindian Ponte, and Larache (EGF), in charge of Captain of Engineers Don Jesus Prieto Rincon, put in December, 1911.

These are the only permanent wireless stations in the Spanish Zone. They are all under the jurisdiction of the Ministry of War, and are controlled by the Centro Electro-tecnico y de Comunicaciones (Engineers).

ADMINISTRATION.

Existing arrangements as regards meteorological information are the same as those for Spanish Stations, the Madrid Station being in charge of this service.

The Regulations governing these stations are the same as for Spain, and licences are given by the Centro Electro-tecnico y de Comunicaciones after the necessary examinations.

NETHERLANDS (THE)

THE Netherlands is the official name of the Kingdom of Holland, and possesses the same signification as its old English title of the "Low Countries." During the fourteenth century the Countship of Holland and Earldom of Flanders became appanages of the Dukes of Burgundy, and through them passed under Spanish rule, which, tyrannically exercised, ended in the establishment of the Netherlands Republic. At the close of the seventeenth century the Stadtholdership was revived for a time in the person of William, Prince of Orange, who became King of England. The **B**atavian Republic (a combination of Holland and Belgium) was established by the French at the end of the eighteenth century, and this was later converted into a Kingdom under Louis Bonaparte. The Orange family was

recalled after Napoleon's fall; but Belgium seceded from the "United Kingdom" in 1830. The present Queen Wilhelmina is a scion of the House of Orange.

The eleven provinces into which Holland is divided lie between 50° 46' and 53° 34' N. latitude, extending from 3° 22' to 7° 14' E. longitude. They cover a total area of 12,761 square miles. Holland is a constitutional monarchy, the executive being vested in the King or Queen (acting through the Ministers), and the power to make laws in the King or Queen with Parliament ("Staten Generaal"). The Parliament consists of two chambers, of which the second is directly elected by the people and the first by the "Provinciale Staten." The chief commercial cities are Amsterdam and Rotterdam, the court capital and centre of administration being located at The Hague (Den Haag).

CONTROL.

Except in so far as the Navy, the Army, and the Colonies are concerned, wireless telegraphy is placed in the hands of the Director-General of Posts and Telegraphs under the supervision of the Minister of Waterways.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Minister A. A. H. W. Koning	Minister of Waterways ..	Zyne Excellentie den Minister van Waterstaat te 's Gravenhage
Mr. E. P. Westerveld ..	Director-General of Posts and Telegraphs	Den Heer Directeur Generaal der Posteryen en Telegrafie te 's Gravenhage
Mr. A. E. R. Collette ..	Chief Engineer, Director of Telegraphs	Den Heer Hoofdingenieur Directeur der Telegrafie te 's Gravenhage
Mr. H. J. Nierstrasz ..	Inspector of Coast and Ship Radiotelegraph Service	Den Heer Inspecteur bij den dienst der Kust-en Scheepsradiotelegrafie Scheveningen-Haven

ORGANISATION.

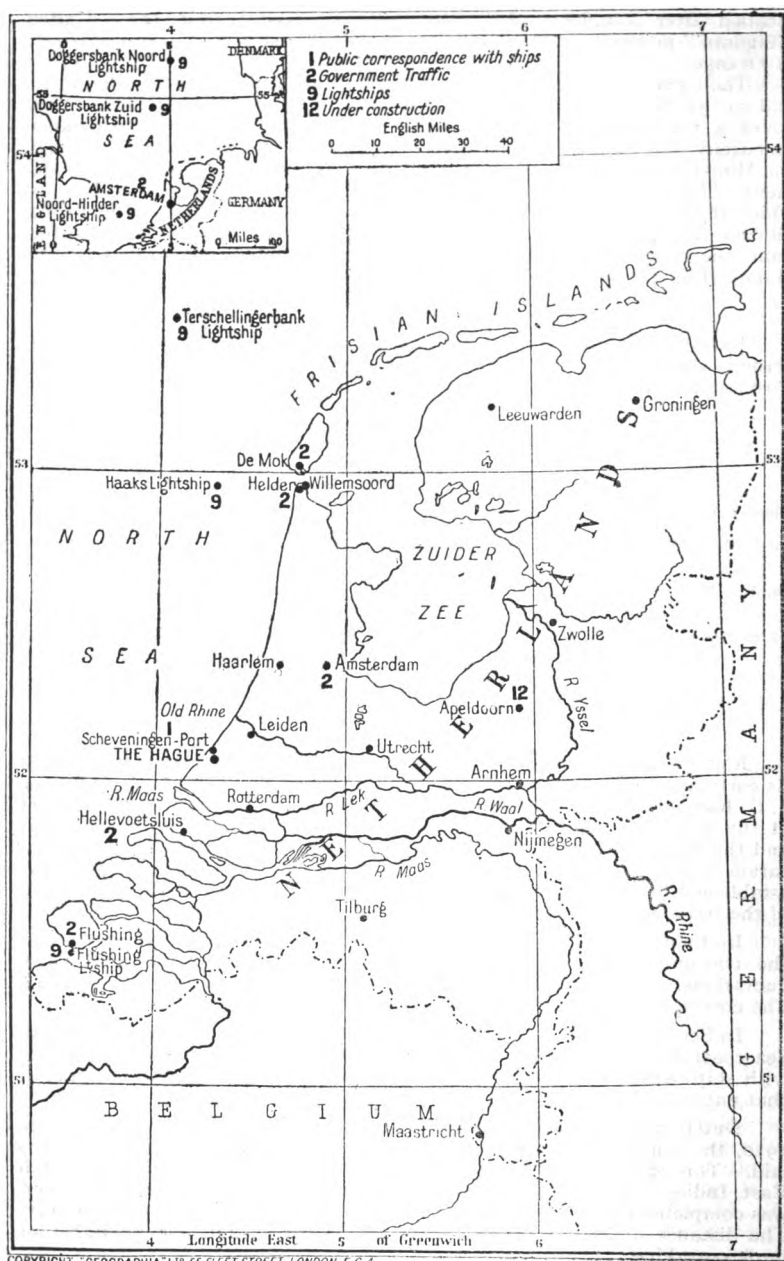

Radiotelegraphy has from its initiation attracted much interest in Holland. As early as 1899 a commission (Messrs. B. J. R. Engelbregt, C. J. de Vriese, J. C. Ramaer, and Dr. L. Bleekrode) was appointed to report on the subject of the possibility of wireless communication between the lightship *Maas* and the Hook of Holland (16 km.). In the beginning of 1902 this communication was sufficiently ascertained. In the same year wireless traffic was established between the railway stations Enkhuizen and Stavoren on behalf of the ferry steamer between the two places.

In February, 1904, a Marconi station was opened at Amsterdam for the transmission to Broomfield, in Essex, of press messages and stock quotations. The messages were published in the newspaper *Het Handelsblad*. The correspondence was of private nature, and ceased after some time.

In September, 1904, the Government station, Scheveningen Port (North Sea coast, near The Hague), was opened for general public correspondence with ships at sea. Scheveningen was the first Government coast station of that nature in Europe.

Dutch radiotelegraphy has extended in all directions. On August 9th, 1920, the foundation stone of a station at Kootwyk, near Apeldoorn, was laid. This station is destined for direct communication with the Dutch East Indies. The receiving station situated at Sambeek, near Boxmeer, was completed earlier, and test service messages are received there regularly. The distance of 60 km. between these two stations makes them suitable for duplex-working.

In the course of 1920 a meteorological service was established on behalf

COPYRIGHT "GEOGRAPHIA" L^{te} 55 FLEET STREET LONDON E.C.4

of aviation between the military radiostation at Soesterberg and the station of the Air Ministry at London.

Since August 2nd, 1920, the military station Bé (Vossegat) is sending regularly weather reports from the Koninklyke Meteorologisch Instituut.

On August 9th, 1920, a regular radioservice open for public correspondence was established between Rotterdam and Düsseldorf. Telegrams to Germany are sent by this route only at the request of sender.

Since June, 1920, a Government committee has been studying the desirability of erecting direction-finding stations on the Dutch coast.

LAND STATIONS (NETHERLANDS).

January 1st, 1920.

Official correspondence ; Naval stations, (Aerodromes and Army stations not included)	5
Government station open for public service with ships	1
Government station open for public service (Land traffic)	1

Moreover there are a large number of amateur stations only suitable for reception.

Stations for public correspondence with ships ..	5
Stations for restricted public correspondence with ships	2
Stations under construction	1

LAND STATIONS (CURAÇAO).

Public correspondence with ships	3
--	---

A permit has been granted for the working of some stations on board river boats of the police at Rotterdam. Other private stations have been allowed for scientific and similar purposes. Temporary permits have also been granted to the Stock-Jobbing Union at Amsterdam for radiotelephonic publications of rates during time of Exchange and to a station at Ymuiden for radiotelephonic correspondence with fishing boats. For stations only suitable for reception a permit is not necessary.

Stations on ships at sea may not be established or worked by private enterprise without a licence issued by the Queen. The general conditions which are imposed are laid down in the form given below (E).

ADMINISTRATION.

The regulation of radiotelegraphy was first instituted by including a clause relating to wireless in the Telegraph and Telephone Act of 1904. This Act has been supplemented and amended, as far as radiotelegraphy and telephony are concerned, by the Act of March 21st, 1919. This Act, which became effective on November 15th, 1919, also includes the regulations concerning radio stations not destined for general public service, which hitherto were fixed in the Royal Decree of March 6th, 1905. It includes, furthermore, the provisions for the use of stations on vessels of foreign nation-

ality within territorial waters and in waters within the territory of the kingdom, as well as for the acknowledgment of foreign licences (Art. 9, Radiotelegraph Convention of London). On May 10th, 1906, a further Royal Decree fixed a Provisional Tariff for the Telegraphic Communication of Wireless Reports and Distress Signals from ships at sea. The text of the Telegraph and Telephone Act and the above-mentioned Decree will be found below, so far as they appertain to radiotelegraphy.

In 1919 Parliament passed the Bill (presented by the Minister of Agriculture, Industries and Commerce in 1916) to give effect to the International Convention for the Safety of Life at Sea. This Act (Shipping Convention Act of April 5th, 1919) is in agreement with the Articles of the Convention, but has not yet come into force.

The Netherlands possesses important colonies in the East Indies, as well as in South America, and the wireless laws and regulations current in those colonies are appended in the following pages.

The text (so far as radiotelegraphy is concerned) of the following enactments figure below :—

- A**—Telegraph and Telephone Act, 1904 (supplemented and amended by the Act of March 21st, 1919).
- B**—Royal Decree of the 10th May, 1906.
- C**—Regulation for Colony of Curaçao.
- D**—Regulation for Dutch East Indies.
- E**—Form of Licence for Ship Stations.
- F**—Prescriptions issued by the Minister of Waterways regarding the working of foreign vessels within territorial waters or on waters within the territory of the kingdom.

TELEGRAPH AND TELEPHONE ACT OF 1904.

A The Telegraph and Telephone Act of 1904 mainly refers to the ordinary wired services, and it has not been judged worth while, therefore, to reprint it in full here.

According to Article II of this Act, a licence granted by the Queen is necessary before telegraphs and telephones can be established or worked by private enterprise. The Act also contains the terms under which the licence is issued and the conditions binding on the licensee.

The above provision is also applicable to wireless telegraphy.

Article III prescribes that for the establishment and the use of radiotelegraph and telephone stations not destined for general public service an authorisation from the Minister of Waterways is required.*

ART. IIIA.—It is forbidden to work radiotelegraphs and telephones, be they destined for public service or not, on board vessels other than of Dutch nationality when within territorial waters, or in waters within the territory of the kingdom, unless it be done in accordance with the prescriptions fixed by the Minister of Waterways (see "F").

For the radiotelegraphs and telephones referred to in the first part of this Article neither licence nor authorisation is required, unless they are within the territorial waters of the kingdom and without the licence required in virtue of the International Telegraph Convention (with Regulations) of London such as

* NOTE.—Stations only suitable for the reception of radiotelegraphic signals are not considered as radiotelegraph and telephone stations.

it is at present constituted (*Staatsblad* 1913, No. 132) or may be constituted, also as it may be modified for the Netherlands.

B Decree of May 10th, 1906, relating to the fixing of provisional tariff for telegraphic communications for reports and distress signals received by radiotelegraphic means from ships at sea.

ART. 1.—The Government Office with radiotelegraphic service at Scheveningen Harbour shall report by telegraph, to those who have notified themselves for the purpose, the communications from ships and distress signals received by way of radiotelegraphy.

ART. 2.—The reports referred to in Article 1 shall be supplied within the Netherlands subject to the payment by the addressee of a coast charge of 1 florin for the present for each communication, increased by an amount of 50 cents if the telegram to be drawn up does not contain more than 10 words, and of 25 cents above this for each successive 10 words or fraction thereof.

Nevertheless, the reports herein mentioned may also be supplied against such a fixed price per year as shall be fixed by our Minister of Waterways, Commerce and Industry for each interested party, taking into consideration both the number and the extent of the required information and also the above-named tariff.

In supplying the reports referred to in this Article to interested parties outside the Netherlands, the above-mentioned costs will be increased by the foreign telegraphic tariff applying thereto.

ART. 3.—This Decree shall come into operation on the second day after the date of the *Staatsblad* and the *Staatscourant* in which it is published.

Our Minister of Waterways, Commerce and Industry is entrusted with the execution of this

Decree, which shall be published simultaneously in the *Staatsblad* and in the *Staatscourant*, and a copy whereof shall be sent to the State Council.

REGULATIONS FOR TELEGRAPHIC SERVICE IN THE DUTCH COLONY OF CURAÇAO.

(See map on p. 311.)

Publication No. 52 of 1909. (21st September.)

C The Governor of Curaçao, in view of the desirability of replacing by new regulations the decree of the 30th October, 1873, regulating the inland and foreign telegraph communication of the colony as well as that of the 27th September, 1884, regulating telephonic communication, and having received the sanction of the Colonial Council, has determined on the following decree:—

ART. 1.—In this decree it is understood that telegraphs and telephones refer to the usual line-telegraphs and telephones as well as to radiotelegraphs and telephones.

ART. 2.—No telegraphs and telephones may be installed on any of the islands of the colony by others than the Government, unless a special permit is granted. Besides the special conditions, made in each case, the general rules are:—

(a) The erection, maintenance and exploitation should be carried out to the satisfaction of the Governor.

(b) The tariffs, conditions of use and service regulations must be submitted for the approval of the Governor.

(c) The concession may be granted absolutely or conditionally, but for no longer period than 25 years.

(d) The concession may be withdrawn by the Governor if the above rules or the special conditions are not followed.

ART. 3.—It is forbidden, without the permission of the Governor, to use radiotelegraphs or telephones, fitted on board foreign or private-owned Dutch ships, in the ports or anchorages of the colony, unless in special circumstances, the exigencies of good seamanship render it necessary to do so.

ART. 4.—Everybody may make use of telegraphs and telephones under the existing regulations. The transmission of telegrams or the conversation by telephone may be stopped or refused if in conflict with the safety of the colony, public order, or common decency.

The reasons for refusal or stoppage should be communicated to the party concerned.

The decision of the Governor may be invoked in such cases.

ART. 5.—For the public interest the Governor may put telegraph and telephone service under control or partially suspend it for an indefinite period.

ART. 6.—In case of war, or if any of the islands of the colony be placed under martial law, if so desired the telegraphs and telephones may be put under Government control.

ART. 7.—Imprisonment of one day to six months and fines from 10 florins to 1,000 florins conjointly or separately will be inflicted on those who erect or exploit telegraphs and telephones, without the permission required as specified in Art. 2; or who on board private-owned ships, make unlawful use of the same (Art. 3).

The instruments may, in so far as they are owned by the guilty parties, be confiscated.

ART. 8.—Anyone who wilfully damages or destroys telegraph and telephone works, including cables, in use for public benefit, will be punished with imprisonment from three months to three years.

Anyone who causes such damage as is referred to above, through neglect, may be punished with imprisonment of one day to one month or a fine of 1 florin to 100 florins.

ART. 9.—Deals with the punishment of crimes committed in which telephones are used.

ART. 10.—Libellous, offensive and indecent expressions used over the telephone, will be considered as uttered in public.

ART. 11.—Violation of the secrecy of telegraphs and telephones is punishable in accordance with Arts. 137 and 327 of the existing law.

ART. 12.—Owners of property have to allow, if it is necessary, work to be done on it in connection with the erection of public telegraphs.

ARTS. 13, 14, 15 and 16 deal with the use of private property in the erection of telegraph and telephone lines.

ART. 17.—All precautions should be taken to prevent lightning being conducted along cables or lines.

ART. 18.—The above may be referred to as "Telegraaf- en Telefoon-Verordening 1909," adding the number of the publication.

ART. 19.—Decrees of 30th October, 1873 (P.B. 1874, No. 1) and of 27th September, 1884 (P.B. 1884, No. 14) as well as P.B. 1892, No. 27, are withdrawn.

ART. 20.—Concessions relating to the erection of telegraphs and telephones on any of the islands of the Colony of Curaçao, granted before this decree comes into force, will be treated as coming under the regulations in force when they were made.

REGULATIONS FOR TELEGRAPH SERVICE IN THE DUTCH EAST INDIES.

6th October, 1876.

(See map on p. 139.)

D The old regulations issued by decree of 31st March, 1858, concerning the electro-magnetic telegraphs should now be superseded and new regulations as hereunder be brought into force.

Regulations concerning the erection and use of telegraphs in the Dutch East Indies.

ART. 1.—No telegraphs may be erected or used without permission of the Government, except those exclusively owned and used privately.

ART. 2.—The conditions for permission to erect such telegraphs will be fixed in each case separately.

ART. 3.—The Governor-General has the right to take possession of all telegraphs or to stop their exploitation.

ART. 4.—If telegraphs are erected without permission open for public traffic, a fine of from 200 florins to 1,000 florins can be inflicted.

ART. 5.—Owners of property have to allow, if it is necessary, work to be done on it in connection with the erection of public telegraphs.

ART. 6.—They should give access to officials and not interfere with the work done and the lines erected.

ART. 7.—If they refuse access they will be fined from 25 florins to 100 florins.

ART. 8.—They have a right to compensation for damage done to their property.

ART. 9.—Everybody has a right to have telegrams sent under the conditions laid down in the service regulations.

ART. 10.—The State or the Telegraph Company is not responsible for the transmission of telegrams in general or within a certain time.

ART. 11.—Punishment for embezzlement or opening of telegrams, communication of their contents to outsiders, etc., will be inflicted in accordance with the existing laws.

ART. 11a.—Telegrams, the contents of which are of danger to the State, or in conflict with the law, or of an obscene character, will not be accepted or delivered.

ART. 12.—Punishment in accordance with the existing laws is to be inflicted on every official who falsifies telegrams and on those who knowingly profit by the misuse of such telegrams.

ART. 13.—Damage to telegraph works or material is punishable with imprisonment and penal servitude.

ART. 14.—The Head of the Local Council may order, on request of the Chief of the Telegraph Service, the removal of everything impeding the efficiency of that service.

The above was published in the *Official Gazette (Staatsblad)* of the Dutch East Indies, and the regulations also apply to Telegraphs or Telephones, whereby the apparatus at both ends is not connected with wires or conductors (Decree of 7th December, 1903. *Staatsblad*, No. 405, supplemented by Decree of 8th September, 1905. *Staatsblad*, No. 403).

LICENCE FOR SHIP STATIONS.

E ART. 1.—In this licence is meant—By Convention: the Radiotelegraphic Convention with final protocol, signed in London on July 5th, 1912, and all alterations and additions, that may be made thereto.

By Regulations: the Regulations belonging to this Convention with all alterations and additions that may be made thereto.

ART. 2.—The licence is given for an indefinite period, and may be withdrawn at any time, after one year's notice.

The licence, or an authentic copy of it, should always be kept on the ship. It must be shown on request abroad if asked for by the persons authorised herein.

ART. 3.—*System*.—The licensee is obliged to choose a system capable of communication with the Government stations opened for public radiograms, and to make the installation comply with the International Laws and Regulations. The antenna input should be such as to enable a decrease down to 10 per cent. of the maximum input. If an emergency set is required, as set forth in Art. XI of the International Regulations, the source of power, and eventually the other parts of the installation, must be fitted on or above the upper deck, and, furthermore, are subject to the rules to be made therefor by the Director-General of Posts and Telegraphs. In case the position of the wireless cabin does not give the telegraphist direct

communication with the bridge, without leaving the operating room, direct communication must be established as may be required by the Director-General of Posts and Telegraphs.

ART. 4.

Hours of Service.

A. *First Class*.—On ship stations belonging to the first class, as stipulated in Art. 13, s. 3, of the Regulations, a continuous service is maintained. Except in cases of *force majeure* these rules should not be discarded without consent of the Director-General of Posts and Telegraphs.

B. *Second Class*.—On ship stations belonging to the second class, as stipulated in Art. 13, sec. 3, of the Regulations, the service is maintained during the hours indicated in the official list of radiotelegraphic stations. The hours of service are fixed in consultation with the Director-General of Posts and Telegraphs. Except in cases of *force majeure*, these rules should not be discarded without consent of the Director-General of Posts and Telegraphs.

C. *Third Class*.—Here the article only stipulates that the ship station belongs to the third class as indicated in Art. 13, sec. 3, of the Regulations.

ART. 5.

Information.

As for the station on shipboard the licensee is obliged to provide the Director-General of Posts and Telegraphs with all facilities and information necessary for the fulfilment of all legal requirements.

ART. 6.

Approval of the Ship Station and its Operators.

No station on shipboard may be worked before the Director-General of Posts and Telegraphs has approved of the installation, as well as of the numbers, class and ability of the operators. A written document approving of the installation is handed over by the Director-General of Posts and Telegraphs, and should be hung up close to, or inside, the operating room. Any change made must be approved of in the same way.

Officers authorised by the said Director-General of Posts and Telegraphs must always be admitted for the purpose of testing whether the plant still fulfils the requirements. Any examination effected in this way is registered on the said document.

As a proof that the operators are competent, a certificate containing the name of the holder mentioning the class, is issued by the Director-General of Posts and Telegraphs. Moreover, it is stated thereon that the bearer is under an obligation to the said Director-General of Posts and Telegraphs of keeping secret any telegrams that might come to his knowledge by virtue of his position on board ship.

This certificate may be withdrawn if it is evident to the Director-General of Posts and Telegraphs that the holder no longer fulfils the requirements, or that he has failed to observe the conditions of this licence.

Alterations to the installation of the ship station falling under any rule of the Convention or the Regulations, and changes concerning the operators must be at once reported to the said Director-General of Posts and Telegraphs.

ART. 7.

Authorisation to work Station.

The licensee is authorised to exchange telegrams with stations opened to public correspondence, as well as with stations not destined for public wireless traffic, as far as

this does not interfere with public correspondence; both authorisations hold good, subject to their not infringing any private rules which might be in force at any of these stations. All communication by a ship station must cease immediately upon the request of a Dutch coast station open to public correspondence.

ART. 8.

Wavelength.

In addition to the wavelength of 600 and 300 metres provided for in Art. 3 of these Regulations, other wavelengths less than 600 metres are used in some cases according to the provisions made by the Director-General of Posts and Telegraphs.

ART. 9.

Places where Transmission is Prohibited.

Apart from the conditions of the Regulations appertaining thereto, it is hereby forbidden without the consent of the Director-General of Posts and Telegraphs, given with due regard to the relevant conditions, to use the ship stations within Dutch territorial waters or any Dutch waters inside those limits, unless under special conditions the requirements of good seamanship make contravention of this rule a necessity.

ART. 10.

Cessation of Traffic.

The working of a ship station is suspended either completely or partly as soon as it is judged necessary to the general interest. Upon the order of the Director-General of Posts and Telegraphs, the service may be suspended at certain places or daily during certain hours.

ART. 11.

Approval according to Art. 2 of the Telegraph and Telephone Act.

The remaining conditions concerning the use, Service Regulations, and the rate of wages and hours of duty of the operators, are submitted for the approval of the Minister of Waterstaat.

ART. 12.

Exchange of Telegrams.

The conditions of the Dutch Telegraph and International Regulations, and further, the conditions concerning the public Dutch radiotelegraph service, as well as all modifications and supplements thereto, refer to the exchange of telegrams.

ART. 13.

Ship Tax.

The ship tax amounts to

ART. 14.

Accountancy.

The settlement of taxes takes place according to the rules to be fixed by the Director-General of Posts and Telegraphs.

ART. 15.

Secrecy of Correspondence.

The licensee is obliged to observe secrecy in regard to all telegrams which might come to his knowledge by means of the ship station. He must make sure that no person other than the operator in charge of the station has any opportunity of learning the contents of said telegrams.

ART. 16.

Forwarding of Documents.

The forwarding of documents concerning the radiotelegraphic service must take place under the rules of the Director-General of Posts and

Telegraphs made according to the restrictions mentioned in Art. XI of the Regulations.

ART. 17.

Precautions.

The licensee is obliged to take all precautions desired by the Minister of Waterstaat within the period fixed in the licence.

ART. 18.

Control.

Officers appointed by the Director-General of Posts and Telegraphs are authorised to control the working of the station and its operators, and to supervise the station service generally. If required they may also take temporary control of the station, upon showing a written and signed authorisation.

ART. 19.

Distress Signals.

For sending or receiving distress signals it is allowed to depart from the conditions of this concession, provided this deviation is necessary for the benefit of the ship in distress. For the distress signal (which may also be given in cases of other accidents than those which may occur to the ship concerned) no other signal may be used except the signal $\bullet \bullet \bullet \text{---} \bullet \bullet \bullet$, unless approved by the Director-General of Posts and Telegraphs.

ART. 20.

Meteorological Telegram, Time Signals, and other Signals.

The licensee is obliged to adhere to the rules which are made by or on behalf of the Minister of Waterstaat with reference to meteorological telegrams, time signals, and other signals.

ART. 21.

Authorisation and Obligations Outside the Territorial Waters of the (Dutch) Kingdom.

Outside the territorial waters of the Kingdom the rules of this licence are valid in so far as they are not contradictory to the Laws and Regulations which hold good in the locality in question.

ART. 22.

Other Rules and Regulations.

Moreover, the licensee is subject to and henceforth obliged to adhere to all Regulations referring to radiotelegraphy which are prescribed or will be prescribed by Dutch law; by the Convention and the Regulations; or by any other International agreement to which Holland accedes or will accede; as well as to any modifications which may be deemed necessary for the execution of such Regulations.

ART. 23.

Withdrawal of Licence.

This licence may be withdrawn—

1. If within a year no use is made of it.
2. By not adhering to the prescriptions of the Telegraph and Telephone Act of 1904 (Official Collection of Laws No. 7), under which prescriptions this licence is granted, or by not adhering to any rule mentioned in the said national or international legal prescriptions.
3. If the ship mentioned at the beginning of this licence ceases to be a Dutch ship.

ART. 24.

Further Obligations of the Licensee.

A. *First Class.*—The licensee is under an obligation to give immediate notice to the Director-General of Posts and Telegraphs when an altered service Regulation in consequence of

Art. 4, last paragraph, of this licence is introduced, also when the ship on which the station has been fitted is out of commission or changes owners.

B. *Second Class.*—The licensee is under an obligation to give immediate notice to the Director-General of Posts and Telegraphs when an altered service Regulation in consequence of Art. 4, last paragraph, of this licence is introduced; and also when the ship on which the station has been fitted is out of commission or changes owners.

C. *Third Class.*—The licensee is under an obligation to give immediate notice to the Director-General of Posts and Telegraphs if the ship on which the station has been fitted is out of commission or changes owners.

ART. 25.

Violation of Rules.

In addition to the withdrawal of licence mentioned in Art. 23, except in cases of *force majeure*, the licensee is fined from F. 10 to F. 1,000, at the discretion of the Minister of Waterstaat, for each violation of any rule laid down in this licence, of the said national or international legal prescriptions, as mentioned herein, and is fined from Fl. 1 to Fl. 100 for each day, after the period fixed for paying the fines, that he fails to adhere to the rules of this agreement.

Dating from the day on which the decision to withdraw the licence in consequence of Art. 23 has been taken, fines are no longer due. This article may be applied immediately the said Minister decides the legal grounds for administering a fine; or the legality of a claim on grounds of *force majeure*.

In addition to the fine, the said Minister will decide to what cause the violation is due, to enable him to take action according to the contents of Art. 12 of the Regulations.

ART. 26.

Acceptance.

A declaration of agreement must be forwarded to the Director-General of Posts and Telegraphs, within the period fixed by him, intimating an acceptance of the terms of this licence.

PRESRIPTION ISSUED BY THE MINISTER OF WATERWAYS.

Regulations which are prescribed by the Minister of Waterways and which in as far as they do not differ from any international agreement, to which the Netherlands are, or will be bound, are valid for foreign radiotelegraphic or telephonic ship stations which are within territorial waters or in waters within the territory of the Kingdom.

ART. 1.—1. It is forbidden to use radiotelegraphs or telephones be they destined

for public service or not, installed on board of foreign ships within Dutch territorial waters or waters within the territory of the Kingdom, unless the prescriptions of this disposition are observed.

2. Moreover shall, as far as waters within the territorial limits of the Kingdom are concerned, those stations only may be worked by consent of the Director-General of Posts and Telegraphs when due regard is given to the conditions prescribed in said permit.

3. Contravention of the rules as set forth in parts 1 and 2 of this article is allowed under special conditions, the requirements of good seamanship should make this necessary.

ART. 2.—1. Foreign ship stations may exchange telegrams or have a conversation with radiotelegraph or telephone stations destined for public service under reserve of the special rules, which might be valid for any one of these stations.

2. The exchange of traffic with stations not destined for public service is permitted under reserve of the special rules which might be valid for any one of these stations, and in so far as in the opinion of one or more public stations, the general public radio telegraphic or telephonic service is not interfered with.

3. All traffic of foreign ship stations is immediately to be suspended, as soon as such is requested by any Dutch coast station open for general public service.

ART. 3.—1. It is forbidden that by means of foreign ship stations hindrance should be given to the exploitation or the use of Government radiotelegraphs and telephones be they destined for public service or not, or to the exploitation of other radiotelegraphs and telephones destined for public service.

2. Foreign ships must cease working of their stations as soon as they observe or when they are informed, that their working gives rise to an interference as described in part 1 of this article.

ART. 4.—1. The Minister of Waterways may suspend the working of foreign ship stations either completely or partly as soon as it is judged necessary.

2. The Director-General of Posts and Telegraphs has equal competency as far as it concerns suspension at certain places or daily during certain hours.

The licensees of foreign ship stations are subject to and henceforth obliged to adhere to all Regulations referring to radiotelegraphy or telephony which are prescribed by the International Radio Telegraph Convention with final protocol and Regulations of London such as it is at present (Staatsblad 1913 No. 132), of, later on, also for Holland, might be modified, either are or shall be prescribed by any other International agreement to which Holland accedes or will accede.

NEW CALEDONIA

(See FRANCE.)

NEWFOUNDLAND

(See map on p. 165.)

THE Island of Newfoundland lies between 46° 37' and 52° 39' north latitude; its longitude stretching from 52° 35' to 59° 25' west. Its north-western side is bounded by the Gulf of St. Lawrence, whilst the Straits

of Belle Isle divide it from the North American Continent. It is triangular in shape (almost equilateral), with Cape Bauld on the north, Cape Race on the south-east, and Cape Ray on the south-west.

Newfoundland ranks as the oldest British Colony, having been formally occupied by Sir Humphrey Gilbert in August, 1583. A Governor was first appointed in 1728, and in 1855 "Responsible Government" was accorded.

The Executive is vested in a Governor aided by an Executive Council with a legislature of two houses.

Hon. Mr. W. W. Halfyard	Minister of Posts and Telegraphs	do.
Hon. Mr. Arthur Mews, C.M.G.	Deputy Colonial Secretary	do.
Mr. H. W. Le Messurier, J.P., C.M.G. . .	Deputy Minister of Customs	do.

Mr. H. W. Le Messurier, C.M.G., the Deputy Minister of Customs, refuses clearance to any vessels of Newfoundland Register not licensed in conformity with the Acts, or whose operators are not in possession of provisional service certificates issued by the Minister of Posts.

ORGANISATION.

The Colony is proud of its association with the first wireless message flashed across the Atlantic. This was received by Senatore Marconi himself on Signal Hill, an eminence overlooking the narrows of St. John's. Newfoundlanders hope that ere long some suitable memorial may be erected on Signal Hill of this epoch-making event.

In 1906 an agreement was made under which the Marconi Wireless Telegraph Company of Canada undertook to operate all the Labrador stations during the fishing season of each year, the Newfoundland Government to pay the company an annual royalty, and the revenue accruing from this traffic to go to the company, who further agreed to forward all traffic over the Newfoundland Government Postal Telegraph System.

The success of this arrangement prompted the Government to propose an extension of the system on the Labrador Coast by two or more stations—the Marconi Company to erect and operate the stations under the terms of the agreement. In the summer of 1913 stations were accordingly erected by the Marconi Company at Cape Harrison and Makkovik. In 1911 it was agreed to establish a station between Indian Harbour and Cape Harrison to complete the chain on the Labrador Coast.

After further negotiations, an important agreement was concluded in December, 1912, which covers the following points: The old agreement terminating in 1916 is extended for a further period of ten years, terminating in 1926; all other undertakings entered into in the earlier agreement will be continued until 1926. The Marconi Company has erected and is operating a station at Fogo, on the east coast of Newfoundland—this station to be the property of the Marconi Company, and to be exempt from the Government tax of \$4,000 during the currency of the agreement.

The Sealing Industry forms an important item in the industrial activities of the Colony, and the disaster of 1914 (wherein the *Southern Cross* was lost with all hands) led to the instalment of wireless equipment on the fleet of sealers, which was made compulsory by legislation to that effect.

At the present time the following stations exist:—

Public service to ships	6
Government service only	1
Public inland traffic	9
Direction-finding service	1
Ship stations	17

ADMINISTRATION.

The general Regulation of Wireless is governed by the Posts and Telegraph Acts, 1891 to 1906.

We subjoin :—

- A**—Act of 1905 (Cap. VII).
- B**—Post and Telegraph Act, 1906.
- C**—Wireless Telegraphy (Steamers) Act, 1914.
- D**—Wireless Licence.
- E**—Provisional Certificate for Wireless Operators.

THE ACT OF 1905, CAP. VII.

A This Act refers to taxes upon business transacted by telegraph and telephone companies within and in transit through the Colony. Clause 2, Section 2, reads as follows :—

A sum equal to one per cent. in manner hereinafter provided, of the total amount received by or due to the company in respect of all telegraphic messages passing over the land lines of the company or transmitted or received by any wireless method of telegraphy to or from any place within this Colony from or to any other place within this Colony during a period of twelve calendar months ending on the first day of May of each year : Provided that this subsection shall not apply to messages which originate or are delivered in any place outside the Colony.

The first of such payments shall be made on the 30th day of June, 1906, in respect of the period of twelve months ending on the preceding first day of May.

Section 4 of the same Clause (2) reads as follows :—

A sum of four thousand dollars (\$4,000) in respect of every wireless telegraph station or other means of communication by wireless methods of telegraphy between this Colony and any place, ship or vessel outside this Colony, for the time being belonging to or worked by or on behalf of the company which now is or hereafter shall be established in this Colony.

The first of such payments shall be made on the 30th day of June, 1906 : Provided that if the Governor in Council is satisfied that any such wireless telegraph station or other such means of communication is established for the purpose only of reporting passing ships or vessels, he may dispense the payment of such last-named sum and discharge the company from liability therefor in respect of such station or means of communication.

Clause 1 (1) of the Act of June 15th, 1905, Cap. XXI, reads :—

Whenever in the opinion of the Governor an emergency shall have arisen in which it is expedient for the public service that the Government of the Colony shall have control over the transmission of messages over any telegraph line, telephone line, or by any other form of telegraphy, it shall be lawful for the Governor in Council at any time to assume and for any length of time retain possession of any telegraph line, telephone, or any form of telegraphy in this Colony, and of all things necessary for the efficient working thereof, and may for the same time require the exclusive service of the operators and other persons employed in working such telegraph line, telephone, or any form of telegraphy ; and the company or other proprietor of such telegraph line, telephone

or any form of telegraphy, shall give up possession thereof, and the operators and other persons so employed shall, during the time of such possession, diligently and faithfully obey such orders and transmit and receive such despatches as they are required to receive and transmit by any officer duly authorised by the Governor in Council, and every company or other proprietor, operator or person violating any of the provisions of this section shall incur a penalty not exceeding one hundred dollars (\$100) for every refusal or neglect to comply with the requirements thereof, such penalty to be recovered by action in the name of the Minister of Finance and Customs, in a summary manner before a Stipendiary Magistrate or Justice of the Peace.

POST AND TELEGRAPH ACT, 1906.

B 1. (1) A person shall not establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy, in any place in this Colony or on board any ship registered in this Colony, except under and in accordance with a licence granted in that behalf by the Postmaster-General, with the consent of the Governor in Council.

(2) Every such licence shall be in such form and for such period as the Postmaster-General may determine, and shall contain the terms, conditions, and restrictions on and subject to which the licence is granted, and any such licence may include two or more stations, places or ships.

(3) If any person establishes a wireless telegraph station without a licence in that behalf, or installs or works any apparatus for wireless telegraphy without a licence in that behalf, he shall be guilty of a misdemeanour, and be liable on conviction in a summary manner before a Stipendiary Magistrate to a penalty not exceeding fifty dollars, and on conviction on indictment to a fine not exceeding five hundred dollars or to imprisonment, with or without hard labour, for a term not exceeding twelve months, and in either case be liable to forfeit any apparatus for wireless telegraphy installed or worked without a licence, but no proceedings shall be taken against any person under this Act except by order of the Postmaster-General.

(4) If a Stipendiary Magistrate is satisfied by information on oath that there is reasonable ground for supposing that a wireless telegraph station has been established without a licence in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any ship as aforesaid without a licence in that behalf, he may grant a search warrant to any police officer or any officer appointed in that behalf by the Postmaster-General, and named in the warrant, and a warrant so granted shall authorise the

officer named therein to enter and inspect the station, place or ship, and to seize any apparatus which appears to him to be used, or intended to be used, for wireless telegraphy therein.

(5) When a fine under this Act is imposed by a Court, Judge or Magistrate, and the master or owner of any ship is ordered to pay the same and the same is not paid at the time and in the manner prescribed, the Court, Judge or Magistrate making the order may, in addition to any other powers they may have for the purpose of compelling payment, direct the amount remaining unpaid to be levied by distress and sale of the ship, her tackle, furniture and apparel.

(6) The Postmaster-General may make regulations for prescribing the form and in which applications for licences under this Act are to be made, and, with the consent of the Governor in Council, the fees payable on the grant of any such licence.

(7) The expression "wireless telegraphy" means any system of communication by telegraph as defined in "The Post and Telegraph Acts, 1891 to 1904," without the aid of any wire connecting the points from and at which the messages or other communications are sent and received.

2. This Act shall be read with and form part of "The Post and Telegraph Acts, 1891 to 1904," and the said Acts and this Act may be cited as "The Post and Telegraph Acts, 1891 to 1906."

WIRELESS TELEGRAPHY (STEAMERS) ACT.

C The following Act respecting the provision of wireless telegraphy on steamers engaged in the trade of Newfoundland was passed on September 4th, 1914:—

1. Every steamer to which this Act applies shall be provided:—

(1) With a wireless telegraph installation approved of by the Minister of Marine and Fisheries;

(2) With at least one qualified wireless operator approved of by the Postmaster-General;

(3) With a Morse signalling apparatus approved by the Minister of Marine and Fisheries;

(4) With at least one person on board capable of operating such signalling apparatus and of reading signals from other ships.

2. The wireless telegraphy installation provided on a ship to which this Act applies shall be maintained in good order and shall be attended to by an operator qualified as aforesaid in accordance with rules and regulations to be made by the Governor in Council under this Act for the purposes thereof.

3. No steamer to which this Act applies shall receive a clearance at any Custom House for the Seal Fishery or otherwise unless and until the Collector is satisfied that the provisions of this Act in respect of said steamer have been complied with.

4. If any requirement of this Act is not complied with in the case of any steamer to which this Act applies, the master or owner shall be liable for each offence to a fine of twenty-five hundred dollars, to be recovered in a summary manner before a Stipendiary Magistrate.

5. This Act shall apply to any steamer which ordinarily is engaged in prosecuting

the Seal fishery from any port of this Colony, when engaged in the Seal fishery or when carrying more than sixty persons; and to any other vessel carrying passengers from or within this Colony when named by the Governor in Council in a Proclamation to be published in the *Royal Gazette*.

6. Nothing in this Act shall affect the obligation to obtain a licence for a wireless telegraphy installation under "The Postal and Telegraph Acts, 1891 to 1906," or prevent the Governor in Council or other person exercising a like control over such wireless telegraphy in times of war or otherwise as may be exercised in respect of other wireless telegraphy.

W. 19
D SHIP LICENCE No.
19....

COLONY OF NEWFOUNDLAND.

"LICENCE TO USE WIRELESS TELEGRAPHY."

Issued in accordance with the provisions of the London Convention, of 1912.

The herein named resident of is hereby licensed to establish and operate a wireless telegraph station on board the ship for the term or period commencing on the first day of April, nineteen hundred and and terminating on the thirty-first day of March, nineteen hundred and and to instal and operate at such station the apparatus mentioned in the schedule hereto, on payment of the sum of one dollar, being the licence fee for the privilege above named.

This licence is subject to the following terms, conditions and restrictions:—

1. In this licence, the following words and expressions shall have the several meanings hereinafter assigned to them unless there be something, either in the subject or context, repugnant to such construction, that is to say:

The expression "marine signalling" means signalling by means of any system of wireless telegraphy between two or more ships, between ships and shore stations and any other wireless telegraph station, or between shore stations and ships.

2. (1) The licensee shall not establish, instal or operate any apparatus for wireless telegraphy, except the apparatus hereinafter called the "licensed apparatus," specified in the said schedule hereto.

(2) No tolls, fees or other consideration shall be received, levied or collected by the licensee until the same have been approved of by the Government of Newfoundland.

3. (1) The licensee shall so operate the licensed apparatus as not to interfere with the working of any wireless telegraph station established in Newfoundland, or with marine signalling on the waters or territory of Newfoundland or neighbouring waters or territory.

(2) With a view to preventing such interference as aforesaid, the licensee shall comply with all directions which shall be given to the licensee by the Postmaster-General and with all rules prescribed by the Postmaster-General for observance by his licensees:

(a) With respect to all arrangements to be adopted for the purposes of syntony or enabling the messages exchanged by means of the licensed apparatus to be distinguished from those emanating from any other wireless telegraph station;

(b) With respect to any alternation of messages which the Postmaster-General may think necessary; and

(c) Generally with respect to avoiding interference between one wireless telegraph station and another.

(3) The licensed apparatus shall not, without the consent of the Postmaster-General, be altered or modified in respect of any of the particulars mentioned in the schedule hereto.

4. The licensee shall, if so required in writing by the Postmaster-General, cease to operate the licensed apparatus for such period (not exceeding hours in any one day) as may be specified by the Postmaster-General.

5. Subject to the provisions of this licence, and in accordance with the regulations issued from time to time by the Postmaster-General, the licensee shall transmit and receive messages by means of the licensed apparatus to and from any coast station or to and from any other ship without regard to the particular system of wireless telegraphy installed at such coast station or on such other ship, on equal terms without favour or preference, whether as regards rates of charge, order of transmission or otherwise.

6. The licensee shall not be obliged to transmit and receive commercial messages by means of the licensed apparatus to and from a ship station on a ship registered in a country which does not adhere to the International Radiotelegraphic Convention, unless instructed so to do by the Postmaster-General in his regulations.

7. (1) If and whenever any Department of the Government shall require the licensee, his servants or agents to transmit, by means of the licensed apparatus, any message on His Majesty's service (including messages to and from ships of His Majesty's Royal Navy or Newfoundland or Canadian (Government vessels), such messages shall have priority over all other messages, and the licensee, his servants and agents shall, as soon as reasonably may be, transmit the same, and shall, until transmission thereof, suspend transmission of all other messages, and the rates to be charged on such messages shall not exceed half the rates charged the ordinary public.

(2) The licensee shall not be entitled to claim any compensation in respect of the suspension of the transmission of messages as aforesaid.

8. The licensee shall, so far as possible, receive from all other stations all requests for assistance and all signals of distress and retransmit them with the least possible delay to the proper authorities by means of the licensed apparatus or any other means in his power.

9. The licensee shall not divulge to any person (other than properly authorised officials of the Government or a competent legal tribunal) or make any use whatever of any message coming to the knowledge of the licensee and transmitted by marine signalling or by any system of wireless telegraphy.

10. All messages transmitted by means of the licensed apparatus shall be copied in full in registers to be kept by the licensee for that purpose, and in such registers each of such messages shall be accompanied by its identifying number and date and full particulars of its places of origin and ultimate destination and such further particulars as the Postmaster-General shall from time to time reasonably require to be shown, messages on His Majesty's service being in such registers distinguished from other messages. The licensee shall preserve all used message forms written and printed, and transcripts of messages and all other papers

for such period as is from time to time prescribed by the Regulations of the International Radiotelegraphic Convention, and such registers and message papers shall be open to the inspection of the Postmaster-General or his officers thereto authorised at the head office of the licensee, in between the hours of 10 a.m. and 5 p.m., on every day except Sunday or a public holiday.

11. The Postmaster-General or his officers may, from time to time and at all reasonable times, enter upon the herein licensed station, for the purpose of inspection, and may inspect any apparatus fixed or in use in such station, for the purpose of sending and receiving messages by wireless telegraphy and all other telegraphic instruments and apparatus fixed or being in such stations, and the working and user of such apparatus and telegraphic instruments.

12. The licensee shall prepare a detailed return of the messages handled by the licensed station during each month on the forms provided for that purpose by the Postmaster-General and shall forward the same to the Postmaster-General at the end of each month.

13. (1) The licensee shall observe at the station the provisions of the International Radiotelegraphic Convention as adhered to by His Majesty in respect of the Colony of Newfoundland and the detailed regulations from time to time made thereunder for carrying such provisions into effect.

(2) The licensee shall operate the licensed apparatus in accordance with any regulations which may be issued from time to time by the Postmaster-General.

14. Except with the consent in writing of the Postmaster-General the licensee shall not assign or sublet this licence.

15. The licensed apparatus at the said ship station shall be worked only by a person or persons holding a certificate or certificates issued by the Postmaster-General.

Certificates shall be granted to persons of such technical proficiency, and shall be in such form and subject to such conditions as the Postmaster-General may from time to time prescribe.

16. The licensees shall carry this licence on the ship on which the ship station is established under this licence, and also such documents as may be prescribed by the Postmaster-General, for the purpose of enabling the licensee to communicate with coast stations in accordance with the rules and regulations of the International Radiotelegraphic Convention of Berlin, 1906.

17. (1) If, and whenever, in the opinion of the Postmaster-General or any officer in command of one of His Majesty's ships of war, an emergency shall have arisen in which it is expedient for the public service that the Government shall have control over the transmission of messages by the licensed apparatus, it shall be lawful for the said Postmaster-General, by warrant under his hand, to direct and cause the licensed apparatus or any part thereof to be taken possession of in the name and on behalf of His Majesty and to be used for His Majesty's service and, subject thereto, for such ordinary services as to the said Postmaster-General may seem fit, and in that event, any person authorised by the said Postmaster-General may enter upon the stations of the licensee, and take possession thereof and use the same as aforesaid.

(2) The Postmaster-General or any officer in command of one of His Majesty's ships of war may when he considers such an emergency

as aforesaid to have arisen, instead of taking possession of the stations of the licensee, direct and authorise such persons as he may think fit to assume the control of the transmission of messages by the licensed apparatus, either wholly or partly and in such manner as he may direct, and such persons may enter upon the licensee's premises accordingly, or the said Postmaster-General or officer may direct the licensee to submit to him all messages tendered for transmission or arriving by the licensed apparatus or any class or classes of such messages, to stop or delay the transmission of any messages or deliver the same to him or his agent and generally to obey all such directions with reference to the transmission of messages as the said Postmaster-General or officer may prescribe, and the licensee shall obey and conform to all such directions.

3. In any such case as aforesaid, if the licensee shows that during the exercise of any of the powers aforesaid, his receipts for the licensed apparatus with respect to which the said powers have been exercised have been less than his receipts from the same source during a corresponding period, the Government shall pay to the licensee, as compensation for any loss of profit sustained by the licensee by reason of the exercise by the Postmaster-General of any of the powers hereby reserved, such sum as may be settled between the Postmaster-General and the licensee by agreement or as in case of difference may be determined by arbitration. Provided always that no such compensation as aforesaid shall be paid if and so far as the powers hereby reserved to the Postmaster-General are exercised for the purpose of preventing direct communication with any of His Majesty's enemies, and, save with the consent of the Postmaster-General no such compensation shall be paid if and so far as the powers aforesaid are exercised for the purposes of preventing direct or suspected communication with any of His Majesty's enemies or of protecting the interests of His

Majesty under the apprehension of impending war.

18. In case of any breach, non-observance or non-performance by or on the part of the licensee of any of the terms or conditions herein contained and on the part of the licensee to be observed and performed, then and in any such case, the Postmaster-General may, by writing revoke and determine these presents, and the said licences, powers and authorities and each and every of them shall absolutely cease, determine and become void.

19. Nothing in these presents contained shall prejudice or affect the right of the Postmaster-General, from time to time, to establish, extend, maintain and work any system or systems of wireless telegraphic communication (whether of a like nature to that hereby licensed or otherwise) in such manner as he shall in his discretion think fit, neither shall anything herein contained prejudice or affect the right of the Postmaster-General, from time to time, to enter into agreements for or to grant licenses relative to the working and user of wireless telegraphs (whether of a like nature to those hereby licensed or otherwise), or the transmission of messages in any part of Newfoundland, by means of wireless telegraphy, with or to any person or persons whosoever upon such terms as he shall, in his discretion, think fit.

20. Any notice, request or consent (whether expressed to be in writing or not), to be given by the Postmaster-General under these presents may be under the hand of any authorised officer, for the time being, of the Newfoundland Postal Telegraph Department and may be served by sending the same by registered letter to the licensee, and any notice to be given by the licensee, under these presents, may be served by sending the same by registered letter addressed to the Postmaster-General, St. John's, Newfoundland.

Newfoundland.

NEW GUINEA

(See map on p. 139.)

NEW HEBRIDES

(See PACIFIC ISLANDS.)

NEW ZEALAND

THE Dominion of New Zealand lies about 1,200 miles south-east of the mainland of Australia, and consists of three main islands in the South Pacific Ocean, known as the North, South, and Stewart Islands. They stretch between 33° 0' and 53° 0' S. latitude; their longitude varying from 160° 0' E. to 173° 0' W. The Colony includes several groups of smaller islands, and lying at some distance from those which form the centre of the Dominion.

The initial discovery is attributed to the Dutch explorer, Abel Jansen Tasman, who visited the South Island on December 13th, 1642. The first settlement of Europeans was made in 1814, British sovereignty was proclaimed in 1840, and the independence of the Colony dates from May 3rd, 1841. The constitution rests upon the Act of 1852, under which the Executive authority is vested in a Governor-General assisted by a Council of Ministers with a legislature of two houses.

CONTROL.

The Post and Telegraph Department is responsible for the administration of wireless telegraphy in New Zealand. The permanent head of this Department is the Secretary of the General Post Office at Wellington.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Hon. Mr. J. G. Coates	Postmaster-General and Minister of Telegraphs.	Wellington
Mr. R. B. Morris	Secretary, Post and Telegraph Department	Wellington
Mr. A. T. Markman	First Assistant Secretary	Wellington
Mr. G. McNamara	Assistant Secretary	Wellington
Mr. E. A. Shrimpton, M.I.E.E. ..	Chief Telegraph Engineer	Wellington
Mr. A. Gibbs, A.M.I.E.E. ..	Assistant Telegraph Engineer	Wellington
Mr. H. A. Huggins	Controller of Savings Bank and Accounts	Wellington

No licences are granted for amateur or experimental stations in New Zealand, and the erection of such stations is prohibited.

ORGANISATION.

The first wireless installation was placed in the tower of the General Post Office at Wellington in June, 1910, and experiments were carried out with different wireless systems. Later on a "Telefunken" set was installed, and a wireless telegraph office opened for commercial work on July 26th, 1911. At that time there were not more than half a dozen ships fitted with wireless apparatus trading to the Dominion; now quite a number of New Zealand ships carry wireless apparatus, as well as a large number of vessels registered in other countries and trading to New Zealand ports.

On October 14th, 1912, the G.P.O. station was replaced by one of $2\frac{1}{2}$ -kw. upon Mount Wakefield, immediately behind the City of Wellington. At this station, known as "Radio-Wellington," a continuous service is maintained.

On October 24th, 1912, a $2\frac{1}{2}$ -kw. station was established on the roof of the Post Office at Auckland. The normal range of these $2\frac{1}{2}$ -kw. stations is 300 miles by day and 600 miles by night.

The installation of a wireless set of 2½-kw. power of the Government cable steamer *Tutanekai* was completed on June 20th, 1912. The equipment has been found to be of much service in aiding in the work of the repair of submarine cables.

A wireless station was opened at CHATHAM ISLANDS on September 18th, 1913, connecting this group of islands with the mainland of New Zealand and extending the range of communication eastward.

The high-power stations at Awanui and Awarua were opened for public business on December 18th, 1913. These stations are of 30 kw. primary power Telefunken system, and were undertaken primarily for defence purposes. They are required to communicate with Sydney during the day as well as at night.

At the present time five stations in New Zealand are open for public service with ships.

ADMINISTRATION.

In July, 1914, regulations were made for the control of ships carrying wireless telegraph apparatus while within the territorial waters of New Zealand. The Regulations relating to ship stations were also amended by new Regulations issued on September 7th, 1914.

A—Extracts from the Post and Telegraph Act (Part X), 1908.

B—Extracts from Amendment Acts of 1911 and 1913.

C—Regulations under Act of 1913. (Ships not registered in New Zealand.)

D—Regulations (affecting ships registered in New Zealand).

E—Regulations as to ships being provided with Wireless (October, 1913).

F—Form of Ship License.

POSTS AND TELEGRAPHS ACT.

A The following extracts from Part X of the Post and Telegraph Act, 1908, and from the Post and Telegraph Amendment Acts, 1911 and 1913, relate to wireless telegraphy in the Dominion:—

162. The Governor may from time to time establish stations for the purpose of receiving and transmitting telegraph messages within New Zealand or between New Zealand and parts beyond New Zealand by what is commonly known as "wireless telegraphy," including in that expression every method of transmitting messages by electricity otherwise than by wires, whether such method is in use at the time of the coming into operation of this Act, or is hereafter discovered or applied.

163. The provisions of Part VII of this division of this Act shall, as far as is applicable, *mutatis mutandis*, extend and apply to stations established under this part of this Act, and to communications by wireless telegraphy.

164. Every person who erects, constructs, or establishes any station or plant capable of transmitting or receiving wireless telegraphic signals without having first obtained the consent of the Governor in Council is liable to a fine not exceeding five hundred pounds, and any plant, machinery, instruments, and material used by him for such purpose may be forfeited and dealt with as the Minister directs.

Part VII of this division of the Act referred to deals with the construction and regulation of electric lines. It authorises the Governor to establish electric lines and purchase lines and plant. He may make regulations as to the management, working and maintenance of any telegraph. Any officer or person employed in the working of any telegraph who improperly divulges the contents of any telegram transmitted or presented for trans-

mission by such telegraph, or the purport of such telegram, is liable to a fine not exceeding one hundred pounds, or to imprisonment with hard labour for any period not exceeding six months.

EXTRACTS FROM AMENDMENT ACTS OF 1911 AND 1913.

POST AND TELEGRAPH (AMENDMENT) ACT, 1911.

B 3. (1) The Minister of Telegraphs may, in accordance with regulations to be made in that behalf by the Governor in Council, grant licences for the installation and working of apparatus for wireless telegraphy (within the meaning of Part X of the principal Act) on board any ship registered in New Zealand, and whether on the high seas or in New Zealand waters.

(2) Subject to any such regulation, every such licence shall be in such form and for such period, and shall contain such terms, conditions, and restrictions, as the Minister of Telegraphs thinks fit.

(3) The Governor may by Order in Council make such regulation as he thinks proper as to the granting of such licences, and as to the form, period, terms, conditions, and restrictions thereof and as to the fees payable in respect thereof.

POST AND TELEGRAPH (AMENDMENT) ACT, 1913.

9. (1) The Governor may from time to time, by Order in Council, make such regulations as he thinks proper governing the use of wireless telegraph apparatus on merchant ships whether foreign ships or British ships not registered in New Zealand, while within the territorial waters of New Zealand.

(2) Such regulations may provide for the detention of any merchant ship on which a breach of the regulations has been made pending the institution and determination of

proceedings in respect of such breach and the recovery of any fine imposed in respect thereof.

REGULATIONS UNDER ACT OF 1913.
AFFECTING SHIPS NOT REGULATED IN NEW ZEALAND.

C The following regulations are for the control of ships carrying wireless telegraph apparatus while within territorial waters of New Zealand.

Whereas by Section 9 of the Post and Telegraph Amendment Act 1913 (hereinafter termed "the said Act"), it is provided that the Governor may from time to time by Order in Council make such regulations as he thinks proper governing the use of wireless telegraph apparatus on merchant ships, whether foreign ships or British ships not registered in New Zealand, while within the territorial waters of New Zealand, and that such regulations may provide for the detention of any merchant ship on which a breach of the regulations has been made pending the institution and determination of proceedings in respect of such breach and the recovery of any fine imposed in respect thereof:

Now, therefore, His Excellency the Governor of the Dominion of New Zealand, in pursuance and exercise of the power and authority conferred upon him by the said Act, and acting by and with the advice and consent of the Executive Council of the said Dominion, doth hereby make the following regulations; and doth hereby order that such regulations shall have effect on and from the date of publication of this Order in Council in the *New Zealand Gazette*.

FURTHER REGULATIONS.

1. In these regulations, if not inconsistent with the context:—

"Territorial waters of New Zealand" means and includes all tidal waters included within the Dominion of New Zealand, and all parts of the open sea within one marine league of the coasts of that Dominion measured from low-water mark.

"Minister of Telegraphs" means the Minister of Telegraphs for the time being.

"Wireless Telegraphy" has the same meaning as in Section 162 of the Post and Telegraph Act, 1908.

"Telegraph" has the same meaning as in Section 119 of the Post and Telegraph Act, 1908.

"Naval signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and naval stations, or between a ship of His Majesty's Navy or a naval station and any other wireless telegraph station, whether a coast station or a ship station.

"The Admiralty" means the Commissioners for executing the office of Lord High Admiral of the United Kingdom of Great Britain and Ireland.

"Coast station" means a wireless telegraph station which is established on land or on board a ship permanently moored, and which is open for the service of correspondence between the land and ships at sea.

"Ship station" means a wireless telegraph station established on board a ship which is not permanently moored.

2. These regulations shall apply only to foreign merchant ships and to British merchant ships not registered in New Zealand, while such British or foreign ships are within the territorial waters of New Zealand.

3. All apparatus for wireless telegraphy on board a merchant ship while in the territorial waters of New Zealand shall be worked in such a way as not to interfere with Naval signalling, or with the working of any wireless telegraph station lawfully established, installed or worked in the Dominion of New Zealand or the territorial waters thereof; and, in particular, the said apparatus shall be so worked as not to interrupt or interfere with the transmission of messages between wireless telegraph stations established on ships at sea and wireless telegraph coast stations.

4. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in any of the harbours of the Dominion of New Zealand, except with the consent in writing of the Minister of Telegraphs.

5. The foregoing regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

6. If and whenever an emergency shall have arisen in which it is expedient in the public interest that His Majesty's Government shall have control over the transmission of messages by the said apparatus, it shall be lawful for any officer of His Majesty's Navy or Army, or for any other person authorised in that behalf by the Admiralty, or by the Minister of Telegraphs, to take possession of or to cause the said apparatus or any part thereof to be taken possession of in the name and on behalf of His Majesty, and to be used for His Majesty's service and subject thereto for such ordinary services as to the said officer or person may seem fit; and in that event any person authorised by the said officer or person may enter upon any ship on which such apparatus is installed and take possession of the said apparatus and use the same as aforesaid.

7. Any such officer or person may in such event as aforesaid, instead of taking possession of the said apparatus as aforesaid, direct and authorise such persons as he may think fit to assume the control of the transmission of messages by the said apparatus, either wholly or partly, and in such manner as he may direct, and such persons may enter upon any ship on which the said apparatus is installed accordingly; or the said officer or person may direct the person or persons in charge of the said apparatus to submit to him, or any person authorised by him, all messages tendered for transmission or arriving by the said apparatus, or any class or classes of such messages, to stop or delay the transmission of any messages, or deliver the same to him or his agent, and generally to obey all such directions with reference to the transmission of messages as the said officer or person may prescribe, and the said person or persons in charge of the said apparatus shall obey and conform to all such directions.

8. If any breach of these regulations is committed by any person on board any ship while in the territorial waters of New Zealand, the person so committing the same and the owner and master of the ship shall be severally liable on summary conviction to a fine not exceeding £100.

9. Whenever the Minister of Telegraphs or the Secretary of the Post Office has reasonable cause to believe or suspect that any breach of these regulations has been committed on board any ship while in the territorial waters of New Zealand, he may give notice in writing to the Collector of Customs at any port in New

Zealand to detain the ship, under Section 9 of the Post and Telegraph Amendment Act, 1913, until the sum of £100, or such smaller sum as may be specified in the notice, has been deposited with the collector by or on behalf of the owner of the ship.

10. If on the receipt of that notice, or at any time within three months thereafter, the ship is found within such port, the Collector of Customs shall withhold the certificate of clearance of the ship, under Section 35 of the Customs Act, 1913, until and unless the aforesaid sum is deposited with him or the aforesaid notice of detention is withdrawn.

11. If within six months after the date of the offence in respect of which the ship has been detained a conviction for that offence is obtained against any person, the sum so deposited shall be available for the satisfaction of any fine and costs imposed or awarded by the conviction, and the residue, if any, shall be returned to the person by whom the deposit was made.

12. If within the period of six months aforesaid no such conviction is obtained, the sum so deposited shall be returned to the person by whom it was deposited.

WIRELESS TELEGRAPH REGULATIONS FOR SHIP STATIONS.

AFFECTING SHIPS REGISTERED IN NEW ZEALAND.

D Whereas by Order in Council dated the twentieth day of November, one thousand nine hundred and eleven and published in the *New Zealand Gazette* of the twenty-third day of November, one thousand nine hundred and eleven, regulations were made under the authority of the Post and Telegraph Amendment Act, 1911 (hereinafter termed "the said Act"), as to the granting of licences for the installation and working of apparatus for wireless telegraphy on board any ship registered in New Zealand, and whether on the high seas or in New Zealand waters, and as to the form, period, terms, conditions, and restrictions thereof, and as to the fees payable in respect thereof: And whereas it is desirable to revoke such regulations, and to make others in lieu thereof.

Now, therefore, His Excellency the Governor of the Dominion of New Zealand, in pursuance and exercise of the power and authority conferred upon him by the said Act, and of all other powers and authorities in that behalf enabling him, and acting by and with the advice and consent of the Executive Council, of the said Dominion, doth hereby revoke the regulations made by the above-mentioned Order in Council, and in lieu thereof doth hereby make the following regulations for the purposes hereinbefore mentioned; and doth hereby order that such regulations and the revocation of the regulations first before recited shall have effect on and from the date of publication of this Order in Council in the *New Zealand Gazette*.

REGULATIONS.

1. In these regulations, if not inconsistent with the context:—

"Minister of Telegraphs" means the Minister of Telegraphs for the time being.

"Wireless Telegraphy" has the same meaning as in Section 162 of the Post and Telegraph Act, 1908.

"Telegraph" has the same meaning as in

Section 119 of the Post and Telegraph Act 1908.

"Naval signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and naval stations, or between a ship of His Majesty's Navy or a naval station and any other wireless telegraph station, whether a coast station or a ship station.

"The Admiralty" means the Commissioners for executing the office of Lord High Admiral of the United Kingdom of Great Britain and Ireland.

"The International Telegraph Convention" and the "International Telegraph Regulations" means respectively the International Convention of St. Petersburg dated the 10th-22nd July, 1875, and the service regulations made thereunder; and include respectively any modifications of the convention or regulations made from time to time.

"The Radiotelegraph Convention, 1912," means the convention signed at London on the 5th day of July, 1912, and the service regulations made thereunder; and includes any modification of the convention or regulations made from time to time.

"Coast station" means a wireless telegraph station which is established on land or on board a ship permanently moored, and which is open for the service of correspondence between the land and ships at sea.

"Ship station" means a wireless telegraph station established on board a ship which is not permanently moored.

2. The Minister of Telegraphs may, at the request of any person or company desirous of establishing, installing, working, and using on ships belonging to such person or company, and registered in New Zealand, apparatus for wireless telegraphy, grant to such person or company (hereinafter called "the licensee") a licence, in the form of the Schedule hereto, for the period, upon the terms, and subject to the conditions and restrictions hereinafter appearing.

3. Each ship station is bound to exchange radiotelegrams with any coast station, or with any other ship station, without distinction as to the radiotelegraph system adopted by that station.

4. Each ship station shall be of such class mentioned in Article 13 of the Service Regulations annexed to the Radiotelegraph Convention, 1912, as is specified in the licence issued in respect thereof, and the equipment of the station, hours of duty observed, and other requirements shall be appropriate to such class in accordance with the provisions of the Radiotelegraph Convention, 1912.

5. The apparatus used at all ship stations shall, as far as possible, be in keeping with scientific and technical progress. The waves emitted must be as pure and as little damped as possible.

6. The apparatus must be capable of transmitting and receiving at a speed of at least equal to twenty words per minute, the word being reckoned at the rate of five letters.

7. The apparatus shall be so constructed as to be capable of using wavelengths of 600 to 300 metres as measured by the standard of measurement in use by the Post and Telegraph Department for the time being; and such other wavelengths not exceeding 600 metres as shall be authorised from time to time by the

Minister of Telegraphs; Provided always that the wavelength of 600 metres shall normally be used for communication, and, further, that the wavelength of 1,800 metres may be used for transmission in the exceptional case referred to by Article 35 (2) (a) of the Service Regulations annexed to the Radiotelegraph Convention, 1912; Provided, further, that only wavelengths of 600 metres shall be used by the licensee during the period of any war in which the United Kingdom is engaged.

8. The licensed apparatus shall not be used by the licensee, or by any other person either on behalf or by permission of the licensee, for the transmission or receipt of messages except messages authorised by these regulations; and the licensee shall not, except with the consent in writing of the Minister of Telegraphs, send or receive messages from or at the licensed apparatus when in any harbour in the Dominion of New Zealand.

9. (1) The licensee shall not by the transmission of any message by means of the licensed apparatus or otherwise by the use of the licensed apparatus, interfere with naval signalling.

(2) If the Admiralty are of opinion that the working of the licensed apparatus at any ship station is inconsistent with the free use of naval signalling, the licensee shall, when required in writing by the Minister of Telegraphs so to do, close the said station.

(3) These provisions for the protection of naval signalling shall be construed to be without prejudice to the generality of any other provisions of the licence.

10. The licensee shall observe the International Telegraph Convention and International Telegraph Regulations so far as the said convention and regulations are capable of being applied to wireless telegraphy in common with ordinary land and submarine telegraphy.

11. The licensee shall observe the provisions of any regulations from time to time made under the provisions of the Post and Telegraph Act, 1908, and its amendments, by the Governor in Council or by the Minister of Telegraphs in relation to the conduct of wireless telegraph business, so far as the same are applicable to the licensee.

12. The licensee shall observe the provisions of the Radiotelegraph Convention, 1912.

13. The licensee shall comply with all such directions and observe all such rules as may be given or made by the Minister of Telegraphs from time to time for the purpose of preventing interference with the working of any other wireless telegraph station, and for enabling the messages exchanged by means of the licensed apparatus to be distinguished from those emanating from any other wireless telegraph station.

14. The licensed apparatus shall not, without the consent of the Minister of Telegraphs be altered or modified in respect of any of the particulars referred to in the licence issued in respect thereof, and such apparatus shall at all times be maintained in good working order.

15. Except as provided in these regulations, the licensee shall transmit messages by means of the licensed apparatus on equal terms, without favour or preference, whether as regards rates of charge, order of transmission, or otherwise.

16. The licensee shall, so far as possible, receive from ships and light stations all requests

for assistance and all signals of distress, and shall answer such requests and signals and retransmit them with the least possible delay, and with priority over all other messages to the proper authorities by means of the licensed apparatus or by any other means in the power of the licensee.

17. The licensed apparatus at ship stations shall be worked only by a person or persons holding a certificate or certificates issued or recognised by the Minister of Telegraphs. Certificates shall be granted to persons of British nationality possessing the qualifications prescribed by the Radiotelegraph Convention, 1912, and shall be in such form and subject to such conditions, directions, or rules as the Minister of Telegraphs shall from time to time prescribe: and such certificates may at any time be withdrawn at the discretion of the Minister of Telegraphs in case of misconduct, or breach on the part of the holder of the Radiotelegraph Convention, 1912, or of any conditions, directions, or rules prescribed by the Minister of Telegraphs for the guidance of operators or for the working of such ship stations.

18. (1) The licensee, his servants and agents, shall not divulge the contents or the purport of the contents of any message, or make any use whatever of any message coming to his or their knowledge, other than to the addressee or his authorised agent, or to properly authorised officials of His Majesty's Government or of the Minister of Telegraphs, or to a competent legal tribunal.

(2) The licensee shall render to the Minister of Telegraphs such accounts as the Minister of Telegraphs shall direct in respect of all charges due or payable under the Radiotelegraph Convention, 1912, in respect of messages exchanged between the licensed ship stations and coast stations, and shall pay to the Minister of Telegraphs, at such times and in such manner as the Minister of Telegraphs shall direct, all sums which shall be due from the licensee under such accounts.

19. The licensee shall keep full accounts, records, and registers of all messages transmitted by means of the licensed apparatus; and in such registers each of such messages shall be accompanied by its identifying number and date, and full particulars of its place of origin and of ultimate destination, and such further particulars as the Minister of Telegraphs shall from time to time reasonably require to be shown. The licensee shall preserve all used message forms written and printed, and transcripts of messages, and all other papers for such period as is from time to time prescribed by the Radiotelegraph Convention, 1912, and, in default of any provisions on the subject in the said convention, for such period as is from time to time prescribed by the International Telegraph Regulations; and such registers and message papers shall be open to the inspection of the Minister of Telegraphs or his authorised officers.

20. The Minister of Telegraphs, and any agent authorised in that behalf in writing by him, may at all reasonable times enter upon any licensed ship station for the purpose of inspecting, and may inspect, any apparatus fixed or being in such station for the purpose of sending and receiving messages by wireless telegraphy, and all other telegraphic instruments and apparatus fixed or being in such station, and the working and user of such apparatus and telegraphic instruments.

LICENCE FOR THE INSTALLATION AND WORKING OF APPAR

Name of Ship on which Station established.	Class of Ship Station under the Radio- telegraph Convention, 1912.	Call Signal.	Nature of Services Performed.	Hours of Service.	Normal Range of Signalling in Nautical Miles.	
					By Night.	By Day.
(1)	(2)	(3)	(4)	(5)	(6)	(7)

21. The licensee shall carry on every ship on which a ship station is established a print or copy of the licence, certified under the hand of an appropriate officer of the Minister of Telegraphs to be a true copy, and shall produce such print or copy for inspection if required to do so by the competent authorities of the countries where the ship calls, and also such documents as may be prescribed by the Minister of Telegraphs for the purpose of enabling the licensee to communicate with coast stations and ship stations, in accordance with the Radiotelegraph Convention, 1912.

22. (1) Every licence shall be in force from the date of the granting thereof until the 31st December of the year in which it is issued, and no longer; but may be renewed from year to year.

(2) The licensee shall pay to the Minister of Telegraphs for and in respect of the licence granted, and of every renewal thereof, a royalty of 5s. in respect of each ship station included in the licence.

(3) All royalties payable under any licence shall be payable on the date of the granting or renewal thereof, as the case may be.

23. Except with the consent in writing of the Minister of Telegraphs, the licensee shall not assign, underlet, or otherwise dispose of or admit any other person or body to participate in the benefit of any licence.

24. If and whenever an emergency shall have arisen in which it is expedient in the public interest that His Majesty's Government shall have control over the transmission of messages by the licensed apparatus, it shall be lawful for any officer of His Majesty's Navy or Army, or for any other person authorised in that behalf by the Admiralty, or by the Minister of Telegraphs, to take possession of or to cause the licensed apparatus or any part thereof to be taken possession of in the name and on behalf of His Majesty, and to be used for His Majesty's service and subject thereto for such ordinary services as to the said officer or person may seem fit; and in that event any person authorised by the said officer or person may enter upon any ship on which any such appa-

ratus is installed and take possession of the said apparatus and use the same as aforesaid.

25. Any such officer or person may in such event as aforesaid, instead of taking possession of the licensed apparatus as aforesaid, direct and authorise such persons as he may think fit to assume the control of the transmission of messages by the licensed apparatus either wholly or partly and in such manner as he may direct, and such persons may enter upon any ship on which any apparatus is installed accordingly; or the said officer or person may direct the licensee, his servants or agents, to submit to him, or any person authorised by him, all messages tendered for transmission or arriving by the licensed apparatus, or any class or classes of such messages, to stop or delay the transmission of any messages or deliver the same to him or his agent, and generally to obey all such directions with reference to the transmission of messages as the said officer or person may prescribe, and the licensee, his servants or agents, shall obey and conform to all such directions.

26. In any of the following cases, that is to say:—

(a) In case any sum of money which ought to be paid by the licensee to the Minister of Telegraphs under or by virtue of these regulations shall be in arrear and unpaid for one calendar month after the time at which the same ought to be paid under or by virtue of the provisions herein contained; or

(b) In case of any breach, non-observance, or non-performance by or on the part of the licensee, his servants or agents, of any of the provisions (other than a provision for the payment of money) or conditions herein contained,—

then and in any such case the Minister of Telegraphs may, by notice in writing, revoke and determine the licence as to all or any of the ship stations thereby licensed, and thereupon the said licence shall absolutely cease, determine, and become void as to all or any of the said ship stations, as the case may be, but without prejudice to any right of action or

DULE.

System of Radiotelegraphy with the Characteristics of the System of Emission.	Wave-lengths (in Metres).	Source and Maximum Output.	Maximum to be normally taken by Sending Instruments.	If Alternator is used. Number of Cycles per Second.
(8)	(9)	(10)	(11)	(12)

remedy which shall have accrued to His Majesty under these regulations or otherwise.

27. Nothing in these regulations shall prejudice or affect the right of the Minister of Telegraphs from time to time to establish, extend, maintain, and work any system or systems of telegraphic communication (whether of a like nature to those licensed hereunder or otherwise) in such manner as he shall in his discretion think fit. Neither shall anything herein contained prejudice or affect the right of the Minister of Telegraphs from time to time to enter into agreements for or to grant licences relative to the working and use of telegraphs (whether of a like nature to those licensed hereunder or otherwise) or the transmission of messages in any part of New Zealand by means of wireless telegraphy, or by any other means, with or to any person or persons whomsoever, upon such terms as he shall in his discretion think fit. And (save as in these regulations expressly provided) nothing herein contained shall be deemed to authorise the licensee to exercise any of the powers or authorities conferred on or acquired by the Minister of Telegraphs by or under the Post and Telegraph Act, 1908.

28. Any notice, request, or consent (whether required to be in writing or not) to be given by the Minister of Telegraphs under these regulations may be under the hand of the Secretary for the time being of the Post and Telegraph Department, and may be served by sending the same in a registered letter addressed to the licensee at the office or place of residence for the time being of the licensee, or, if such notice, request, or consent relates to any particular ship station, by delivery to the master of the ship upon which such station is installed; and any notice to be given by the licensee under these regulations may be served by sending the same in a registered letter addressed to the Secretary, General Post Office, Wellington.

29. All licences heretofore issued under the regulations hereby revoked shall continue in force, subject to the regulations under which they were issued, until the expiry of the current

term thereof, but shall not be capable of renewal under the regulations so revoked.

**REGULATIONS
AS TO SHIPS BEING PROVIDED WITH WIRELESS
TELEGRAPHY APPARATUS.
ORDER IN COUNCIL.**

E At the Government House, at Wellington, this twentieth day of October, 1913.

Whereas it is enacted by Section 50 of the Shipping and Seamen Amendment Act, 1909, that the Governor may from time to time by Order in Council make regulations requiring ships registered in New Zealand, and carrying passengers, to be provided with apparatus for transmitting messages by means of wireless telegraphy, and may by such regulations prescribe fines not exceeding fifty pounds for any breach thereof by the owner or master of a ship. And whereas it is desirable to make such regulations:

Now, therefore, His Excellency the Governor of the Dominion of New Zealand, in exercise of the hereinbefore recited power and authority, and acting by and with the advice and consent of the Executive Council of the said Dominion, doth hereby make the following regulations, and doth hereby order that they shall come into force on July 1st, 1914:

Provided that, if in his opinion the circumstances justify it, the Minister of Marine may exempt any steamship from the operation of these regulations, and may limit the time for which any such exemption shall be in force.

REGULATIONS.

1. Every steamship registered in New Zealand, and carrying passengers, which is engaged in the foreign or inter-colonial trade, except steamships trading to the Chatham, Auckland, Campbell, and Antipodes Islands, and every home trade steamship which is authorised by her ordinary survey certificate to carry not less than 150 passengers at sea, shall not leave or attempt to leave any port in

NICARAGUA

THIS Central American State lies between Costa Rica on the south and Honduras on the north. Its area is estimated at 49,200 square miles, and it possesses a coast line of about 300 miles on the Atlantic, whilst that on the Pacific Ocean stretches for about 200 miles.

The present constitution came into force on April 5th, 1913. It vests the executive functions in a President, and the legislative power in a Congress of two houses. On February 18th, 1916, a treaty between Nicaragua and the United States was ratified, which laid down the conditions for the acquisition by the latter of naval bases on the Pacific and Atlantic coasts and of the projected canal route.

CONTROL.

The control of any stations which the Government might establish on its own account would be vested in the Minister of Progress and Public Works (*Ministerio de Fomento*) and the Postmaster-General.

ORGANISATION.

With regard to wireless telegraphy, none of the installations at present existing in Nicaragua is owned by the Government. The United States Government possesses a station in Managua, the capital of the Republic, and there are two stations owned by private companies on the Atlantic Coast. These stations (with the exception of that owned by the American Government) have been erected under contract with the Government of the Republic, and are subject to the provisions of the London Radiotelegraphic Convention of 1912. Only one of them is open to public service with ships.

A small station has also been erected at the Eden Mines in Pis Pis mining district at the expense of the company, and is used exclusively by the firm.

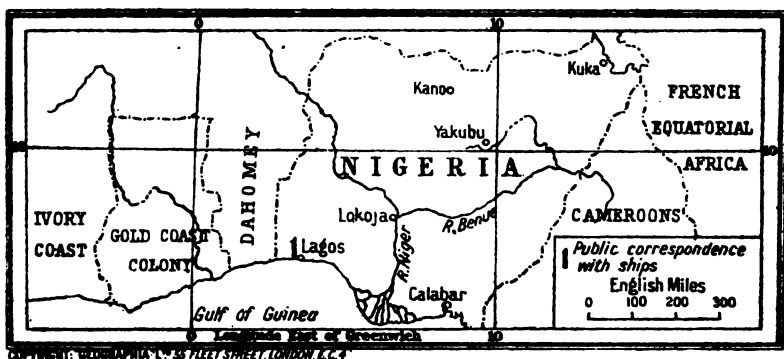

ADMINISTRATION.

No special legislation bearing on the subject has been promulgated in the country. The above-mentioned convention constitutes the only law at present applicable to Nicaragua in the case of wireless telegraphy.

NIGERIA

THIS territory comprises the Colony and Protectorate of Nigeria and the approximate area is 336,000 square miles.

The Colony is practically identical with the old Colony of Lagos, and comprises an area of 1,400 square miles. The Protectorate is divided into the Northern and Southern Provinces, which almost coincide with the old Protectorate of Northern and Southern Nigeria.

The Governor and Commander-in-Chief of the Colony is *ex officio* the Governor and Commander-in-Chief of the Protectorate. The Northern and Southern Provinces are each administered by a Lieutenant-Governor. The Colony is administered by the Lieutenant-Governor of the Southern Province.

An Executive Council advises the Governor both for the Colony and Protectorate. The Legislative Council confines its operation to, and considers, the laws and estimates of the Colony. The Nigerian Council is an advisory and deliberate body.

CONTROL AND ORGANISATION.

There is only one wireless station in Nigeria—at Lagos—and this was erected by the African Direct Telegraph Company in 1912. It is open to public service with ships. The Postmaster-General controls the wireless services.

ADMINISTRATION.

Wireless telegraphy is administered under:—

A—The Wireless Telegraph Ordinance, 1916.

B—Regulations made under the Ordinance of 1916.

THE WIRELESS TELEGRAPHY ORDINANCE, 1916.

A 1. *Short Title.*—This Ordinance may be cited as the Wireless Telegraphy Ordinance, 1916.

2. *Definition.*—Definition: "Wireless Telegraphy" means any system of communication by telegraph without the aid of any wire connecting the points from and at which the messages or other communications are sent or received.

3. *Licence for Wireless Telegraphy.*—(1) A person shall not establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place or on board any ship registered in Nigeria except under and in accordance with a licence granted in that behalf by the Governor.

(2) Every such licence shall be in such form and for such period as the Governor may determine, and shall contain the terms, conditions and restrictions on and subject to which it is granted.

4. *Apparatus Aboard Ships to be Worked in Accordance with Regulations.*—A person shall not work any apparatus for wireless telegraphy installed on any merchant ship, whether British or foreign, while that ship is in the territorial waters of Nigeria, otherwise than in accordance with regulations made under this Ordinance.

5. *Regulations.*—(1) The Governor may make regulations for carrying into effect the purposes of this Ordinance.

(2) If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in the territorial waters of Nigeria shall be subject to such further Regulations as may be made by the Governor and such Regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

6. *Search Warrant.*—If a Magistrate is satisfied by information on oath that there is reasonable ground for suspecting that a wireless telegraph station has been established without a licence in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any merchant ship without a licence in that behalf, or contrary to the provisions of any Regulations made under this Ordinance or of any licence granted under this Ordinance, he may grant a search warrant to any police officer or any person appointed in that behalf by a superior officer and named in the warrant, and a warrant so granted shall authorise the police officer or person named therein to enter and inspect the

station, place or ship, and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

7. *Penalties and Procedure.*—Any person who shall offend against any provision of this Ordinance or any of the Regulations made thereunder shall be liable to a fine of fifty pounds, and the Court may order that any apparatus for wireless telegraphy in connection with which the offence was committed shall be seized and forfeited.

8. *Saving Section as Regards Electrical Apparatus.*—Nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than that of wireless telegraphy.

9. *Repeal No. 12 of 1913 of Southern Nigeria and Chapter 55 of the Laws of Northern Nigeria.*—The Wireless Telegraphy Ordinance, 1913, and the Wireless Telegraphy Proclamation are hereby repealed.

REGULATIONS MADE UNDER THE WIRELESS TELEGRAPHY ORDINANCE, 1916.

B The following Regulations are made by His Excellency the Governor-General under and by virtue of the provisions of section 5 of the Wireless Telegraphy Ordinance, 1916 :—

1. All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of Nigeria shall be worked in such a way as not to interfere with :—

- (a) Naval signalling, or
- (b) the working of any wireless telegraph station lawfully established, installed or

worked in Nigeria or the territorial waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. In these Regulations "Naval signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and Naval Stations, or between a ship of His Majesty's Navy or a Naval Station and any other wireless telegraph station whether on shore or on any ship.

3. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in any harbour or bay or waters of Nigeria except with the special or general permission of the Governor.

4. For the purpose of any proceedings under these Regulations the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship.

5. Any summons or other document in any proceedings under these Regulations shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in command or charge of the ship.

6. These Regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

Made by His Excellency the Governor this 10th day of November, 1916.

NORWAY

THE most westerly of the Scandinavian nations emerged from the obscurities of myth and legend in the ninth century, and, after a vigorous separate national existence, was united with Sweden and Denmark under Queen Margaret by the Union of Kalmar in 1397. In 1814 Norway separated from Denmark, and Charles XIII of Sweden established his rule over the two countries. This co-partnership endured until the peaceful revolution of 1905 restored to the Norwegians their complete independence.

Norway covers an area of 124,130 square miles, and is ruled by a King with the co-operation of the Norwegian Parliament, which bears the historic title of "Stor-thing." Its capital is Christiania, picturesquely situated on a fjord, which owes its patronymic to the city.

CONTROL.

Radiotelegraphy is organised under the supervision of the Telegraph Department; whilst for naval and military purposes the War Office and Admiralty exercise jurisdiction over their own wireless section.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Colonel T. Heftye..	Telegraph Department : Director-General of Telegraphs	Christiania
Mr. H. Petersen ..	Radio Engineer and Chief of Wireless Department	Christiania (Telegraph Department)
Capt. H. Nickelsen	Director of Wireless Department of the Navy	Horten (Navy Yard)
Comdr. F. Bugge	Inspector Wireless Department of the Navy..	Horten (Navy Yard)

ORGANISATION.

The first wireless stations to be erected and opened for public correspondence were those at Sörvaagen and Röst, both completed in 1906. Radiotelegraphic communication was established in 1911 between Norway and Spitzbergen, and has been maintained ever since. The important Transatlantic long-distance station at Stavanger is now completed, whilst at Christiania another high-power installation has been erected for communication with the northern part of the country and abroad.

The latest available statistics enumerate :—

Stations for public service to ships	7
Stations for Government traffic only	2
Stations for public restricted service	2
Stations for Transatlantic public traffic	1
Stations under construction	3
Installations on Norwegian merchant vessels ..	about 300

A Norwegian company has been formed under the title of "Norsk Marconi Kompani A/S" at Christiania. This company is working in conjunction with Marconi's Wireless Telegraph Co., Ltd., London, and has the sole rights of the Marconi patents for Norway. The company intends to start a factory for the manufacture of wireless apparatus, etc.

The technical manager of the new company is Commander B. Gottwaldt, of the Royal Norwegian Navy, and the commercial management is in the hands of Messrs. Storm & Bull, Ltd., of Christiania.

There are at present no wireless clubs or societies.

ADMINISTRATION.

The Laws and Regulations under which wireless is administered in this country appear in the following pages in accordance with the list appended hereto :—

- A**—Law of July 24th, 1914.
- B**—Law of August 18th, 1914.
- C**—Regulations.
- D**—Ship Licence.
- E**—Certificate for Wireless Telegraphists.
- F**—Notice to Mariners.
- G**—Royal Proclamation Prohibiting Wireless in Territorial Waters, dated June 2nd, 1917.

LAW OF JULY, 1914.

A Law of July 24th, 1914, supplementing and amending the Law of April 29th, 1899, relating to the forwarding of communications by aid of telegraphic conductors or such like installations and relating to the repeal of Law No. 2 of July 16th 1907 :—

Section 1.—On ships which sail under the Norwegian flag and which do not belong to the Norwegian Navy, stations or installations for telegraphing or telephoning by wireless both within and without the boundaries of the Kingdom may only be installed and worked after an authorisation obtained in advance, which will be granted by the King, or whoever may be authorised thereto, on certain definite conditions for a stipulated period of time. The permission may at any time be withdrawn if the conditions imposed are not adhered to.

Detailed Rules and Regulations relating to the fitting up and working of such stations or installations shall be drawn up by the King.

On ships which sail under a foreign flag and

are within Norwegian territorial waters wireless telegraphing and telephoning can only be carried on—even if they have permission for same from the authorities of the foreign country—subject to observance of the provisions which are made with respect thereto by the King or whomsoever he may have authorised for the purpose, who may, moreover, forbid all telegraphing or telephoning from such ships, whenever circumstances may be considered to require it.

Section 2.—The exceptions mentioned in the Law of April 29th, 1899, under Section 1, 2nd paragraph, relating to the working of plant which may be used by a commune or private person for his own use, or such as railways may instal for their own working, shall not apply so far as the working of installations for wireless telegraphy or telephony are concerned.

Section 3.—Any infractions of the aforementioned conditions shall be punished pursuant to the provisions laid down in the Law of April 29th, 1899, Section 6.

Moreover, any transgression of the rules or provisions which are drawn up with regard to Section 1 of the present Law shall be punished by fines.

Section 4.—This Law shall come into force immediately. The Law of July 16th, 1907, containing additions and amendments to the Law of April 29th, 1899, relating to the forwarding of communications by means of telegraph lines or similar installations, is hereby repealed.

LAW OF AUGUST, 1914.

B The following paragraph, taken from the "Law of August 18th, 1914," amending the Law of April 29th, 1899, relates directly to Wireless Telegraphy:—

Within the boundaries of Norway, or its territorial waters, stations and installations for wireless telegraphy and telephony may only be erected or worked after permission has been obtained from the King or whomsoever he may authorise thereto, and on such conditions as are laid down in the said permission.

REGULATIONS.

C The following regulations are based on the Law of July 24th, 1914:—
1. No radiotelegraphic station on board a foreign vessel within the limits of Norwegian territorial waters can be used without a special licence.

Application for such licence must be made to the Ministry of Telegraphs, which Ministry, after consultation with the Ministry of Marine, will decide on the application.

2. The licence granting the right to use wireless telegraph stations within the radius of Norwegian territorial waters may be limited to definite places and to fixed hours of the day.

Wireless transmission of messages must be stopped immediately on the order of the Ministry of Telegraphs, Ministry of Marine, or of any coast station established by the aforesaid Ministries.

3. If the vessel is in a Norwegian port situated within a radius of 5 kilometres from the nearest telegraph station, the station on board the vessel cannot communicate either with Norwegian coast stations or with foreign coast stations.

Without a special licence, a wireless station on board a vessel in a Norwegian port cannot be used for the exchange of messages with other ship stations unless for the purpose of advising accidents.

4. However, the preceding provisions do not apply to foreign ships of war, as far as the interchange of messages between themselves is concerned.

It is the duty, nevertheless, of stations on board foreign warships to conform to the provisions in Article 2, Paragraph 2, above.

5. If a station is used when a ship is in Norwegian territorial waters this station must conform to the provisions of the International Telegraphic Convention and the regulations appended thereto.

NORWEGIAN LICENCE CONDITIONS.

D *Conditions for erection and working of Radiotelegraph and Radiotelephone stations on board ships (ship stations).*

FORM OF LICENCE.

According to the Law of 24th July, 1914, and the Royal Decree of the 30th August,

1913, permission is hereby given to.....

to erect and work on board the ship.....
a Radiotelegraph Station (Radiotelephone Station) on accordance with the Table of Particulars on the last page of this form. The permission is valid from.....to.....

..... and is given on the following conditions.

1. The station shall belong to the..... class of stations as specified in the International Radiotelegraph Convention Service Regulations, Art. XIII b, and will thus have..... service.

2. The installation shall be effected in every respect in accordance with the installation plan approved by the Telegraph Department, and must not be departed from without the agreement of the said department. Ships belonging to the 1st and 2nd classes must be provided with emergency Radiotelegraph installations, as laid down in the existing Radiotelegraphic Service Regulations.

3. The holder of the licence shall, as far as the erection and working of the station is concerned, be under the obligation in every respect to adhere to existing international agreements with annexed regulations concerning Radiotelegraphy and Telephony when such international agreements have been adhered to by Norway, and further he shall abide by such regulations as may be issued by the Department for Public Works or by the Telegraph Department.

4. The Telegraph Department shall have the right, in the interests of the service and (after conferring with the Naval Department) to require any alterations to be made in the wavelengths employed as given in the above-mentioned Table of Particulars within the limits laid down in the regulations either as a temporary or permanent measure in the working of the station.

5. The holder of the licence shall recognise the importance of keeping the station in the best possible condition in order to ensure good working.

6. The station shall be under the obligation to forward telegrams to and from persons on board, with due regard to existing general rules for such work. Further, the station shall be obliged to communicate with other ship or coast stations without regard to the system of apparatus employed at those stations.

7. The answering of signals from ships in distress and the correspondence caused thereby shall have priority over all other correspondence.

8. During the ship's stay in a Norwegian Port the station must not be used for communication either with Norwegian or with Foreign coast stations. Neither shall the station, while the ship is in a Norwegian port, be used for communication with other ship stations without special permission, or unless such communication is effected with a view to prevent accidents. Special permission is granted by the Telegraph Department after conferring with the Naval Department.

9. The call signal of the station is.....
10. The tax due to the ship station is.....
.....(ore) {..... centimes) per word with a minimum of.....(ore) {..... centimes) per message.

11. The service on board must be performed by one telegraphist, or, for ship stations of class I, by two or more telegraphists holding a certificate issued by the Telegraph Department.

This certificate states that the telegraphist concerned possesses the knowledge and abilities as prescribed in the existing International Regulations.

The granting of such certificate depends upon the passing of an examination arranged by the Telegraph Department. Petty Officers and Seamen belonging to the Navy's staff of mechanics, and who are specially trained as Radiotelegraphists for the Navy, are entitled to such certificate when they can prove to the Telegraph Department that they have the necessary knowledge of the handling of telegrams and when they procure from the authority concerned in the Navy, a testimonial to the effect that they satisfy the International Regulations as far as their knowledge of the instruments, ability, etc., is concerned. Without the permission of the Telegraph Department other than Norwegian subjects must not be employed for the service on board.

The holder of the licence will take the best possible care that the contents of messages do not come to the knowledge of unauthorised persons.

The telegraphist will make the usual promise of secrecy.

12. The holder of the licence is responsible for the charges that are due for the transmission of the messages sent from the ship station, including the charge for the coast station.

The Telegraph Administration, on its side, pays to the holder of the licence the charges that are due to the ship station for the messages addressed to the ship. "Journals" (abstract) should be kept in respect of the correspondence (traffic). These "Journals," together with the originals of the transmitted messages and such other documents as may be required, are to be sent to the Telegraph Department, as far as possible, at the end of each month.

The mutual settlement of the charges will take place quarterly or monthly, as may be arranged between the Telegraph Department and the holder of the licence. However, with the agreement of the Telegraph Department the holder of the licence may make other arrangements for the accounting of stations on ships that are exclusively engaged in foreign waters. Such arrangements may be made with the Administrations to which the coast stations that the ships usually make use of belong. Similarly, the Telegraph Department may make arrangements other than those mentioned above with Foreign Administrations.

13. The station is subject to such supervision as may be decided by the Department for Public Works, and one or more of the Officials appointed by the Department for Public

Works or by the Telegraph Department should be given opportunity to inspect the station.

For the supervision of the station the holder of the licence has to pay a certain fee that will be decided by the Department.

14. When State or other public reasons so demand it, the Department for Public Works or the Naval Department may partly or entirely prohibit the transmission of any kind of traffic correspondence at the station without admitting any claim for compensation. Likewise, in the interests of the service, the Telegraph or Naval Department can prohibit with the same effect all correspondence from the station, either at certain places or at certain times of the day.

15. The Norwegian State has the right to take over the station with six months' notice against compensation, the amount of which will be fixed after valuation, should it not be possible to arrive at an amicable adjustment.

The valuation will be made by a Committee of three members, whereof one member is nominated by the owner, one by the Telegraph Department and one by the Department for Public Works.

The member nominated by the Department for Public Works will be the Chairman of the Committee.

The questions put before the Committee will be decided solely by majority of votes.

In case the owner has not, within thirty days after the reception of the invitation, made any such nomination as mentioned above, or in case the member nominated by him fails to attend, the valuation will then with obligatory effect be decided by the other nominees.

In case of equal voting the vote of the Chairman shall decide the matter.

In the valuation regard shall only be paid to the technical value of the station at the moment of valuation, the income, etc., derived from the station not being taken into account.

The valuation shall take place within a time-limit fixed by the Telegraph Department and will be at the public expense.

16. The licence shall become null and void in case:—

(a) Use is not made of it within a year of its issue.

(b) Breach is made of any of its regulations.

(c) The ship ceases to fly the Norwegian flag.

17. Disputes as to the intent and meaning of this licence shall, with obligatory effect, be decided by the King.

The Telegraph Department,

Christiana.....19

SCHEDULE.

System	Type of Installation.	Normal range (by day).	Wave-lengths (the normal wave to be underlined).	Description of Power Supply.	Description of Transmitting and Receiving Instruments. (Detailed sketch of connections attached.)	Remarks

CERTIFICATE.

E It is hereby testified, that..... has in a satisfactory manner stood the test or radiotelegraphists, ordered by the Telegraph Administration, comprising:—

(a) Management of apparatus, and knowledge of their action.

(b) Transmitting and receiving by the ear with the speed ordered for a certificate of..... Class.

(c) Regulations.

With reference to above, and as..... has made the promise of secrecy fixed for telegraph officials, there is hereby given to..... a certificate of..... Class, as radiotelegraphist on board ships.

The Telegraph Administration, Kristiania, the.....

NOTICE TO MARINERS.

F The State Telegraph Department issued in December, 1908, the following "Notice to Mariners" applying to wireless telegraph equipments on board ships in Norwegian territorial waters:—

1. Wireless telegraph or wireless telephone stations on board foreign vessels must not be operated, except by special permission, within Norwegian territorial waters. Requests for such permission must be sent to the Telegraph Department, which will communicate its decision after conference with the Marine Department.

2. Permission to operate the stations on board foreign vessels within Norwegian territorial boundaries may be restricted to certain fixed places, or to certain fixed periods of the 24 hours. Correspondence by means of the wireless apparatus shall be at once suspended whenever it shall be so desired by the Telegraph Department, the Marine Department, or by any one of the coast stations under their authority.

3. During the stay of a vessel in a Norwegian harbour, within a distance of 5 kilometres (2½ miles) from the nearest telegraph station, the station on board a foreign vessel must not be employed for telegraphing either with Norwegian or foreign coast stations. Without a special permission, the station during a vessel's stay in a Norwegian harbour must not be employed for communicating with other ship stations except for the purpose of preventing accidents.

4. The regulations above-mentioned do

not, however, apply to stations on board vessels of war belonging to foreign powers, which carry on mutual correspondence. Such stations are, however, bound to submit themselves to the regulations contained in the second clause of Section 2.

5. Whenever the station on board a foreign vessel is employed during her stay in Norwegian territorial waters, this shall be done subject to the regulations contained in the International Telegraph Convention, with the rules pertaining thereto.

PROHIBITION AGAINST THE USE OF WIRELESS TELEGRAPH IN NORWEGIAN TERRITORIAL WATERS.

G Pursuant to Act of July 24th, 1914, the following is ordained:—

1. All use of wireless telegraph from ships of belligerent powers is forbidden in Norwegian ports, the whole area of the naval ports included. Such ships as mentioned are therefore during their stay in such ports to have their aerials (antenna) lowered and, if required by the authorities, to have their wireless stations sealed.

2. In Norwegian territorial waters the use of wireless telegraph from ships of belligerent powers is likewise generally forbidden. Merchant vessels of belligerent powers shall therefore, while in Norwegian territorial waters, have their aerials (antenna) lowered, and, if required by the authorities, have their wireless stations sealed.

3. In Norwegian ports, the whole area of the naval ports included, all use of wireless telegraph from Norwegian merchant vessels and foreign merchant vessels of non-belligerent powers is forbidden, unless it be done in order to prevent disasters. The authorities may, if it be considered desirable, also subject such ships to further restrictions, require their aerials (antenna) lowered and their wireless stations sealed.

Order to control that these provisions are observed by all concerned is issued to Norwegian warships, naval and military authorities, pilotage, customs, harbour and police authorities, as well as by pilots serving on board of such vessels as above mentioned.

Infringements are liable to punishment.

K. FR. DAWES,

Admiral Commander-in-Chief,

K. OSTBYE.

Kristiania, June 2nd, 1917.

NYASALAND PROTECTORATE

(See map on p. 377.)

THIS Colony was constituted on May 14th, 1891, as the "British Central Africa" Protectorate, and so remained until 1907, when it assumed its present appellation. Its area covers 39,573 square miles, the trade centre being Port Herald, Chiromo (Lower-Shiré), Kota-Kota, Karonga, and Forts Johnston (Lake Nyasa). Communication is maintained by river steamer with the port of Chinde on the Indian Ocean littoral.

It is administered (under the Colonial Office) by the Governor and Commander-in-Chief, assisted by an Executive and an Administrative Council

ADMINISTRATION.

Wireless Telegraphy is not at present in operation, although provision

has been made in the Statute Book for its regulation if ever it be introduced, as follows :—

WIRELESS ORDINANCE, 1908.

1. This Ordinance may be cited as "The Wireless Telegraphy Ordinance, 1908."

2. No person shall establish or use any apparatus or installation for the purpose of operating wireless telegraphs without a licence from the Governor.

Any person contravening this section shall be liable on conviction to a fine not exceeding £100 or to imprisonment with or without hard labour for a term not exceeding twelve months with or without the option of a fine, and in addition any apparatus or installations in respect of which an offence under this section is

omitted may be forfeited and sold or disposed of as the Governor may direct.

3. The Governor in Council may from time to time make, and when made shall publish in the *Gazette*, rules prescribing the terms and conditions upon which licences to establish or use apparatus or installations for the purpose of operating wireless telegraphs may be granted, and may impose a penalty on conviction for breach of any rules so made of a fine not exceeding £50 or imprisonment with or without hard labour for a term not exceeding six months with or without the option of a fine, and such Rules may further provide for forfeiture and sale or disposal as the Governor may direct of any such apparatus or installations as aforesaid.

PACIFIC ISLANDS

BEFORE the war, the islands in the Pacific were divided with regard to European supervision between Germany, France, and Great Britain. The former has now disappeared completely from the Pacific. It is not yet possible to include particulars concerning the French spheres of influence, and we therefore for the present confine ourselves to the British.

The High Commissioner of the Western Pacific (assisted by deputies) exercises jurisdiction in accordance with an Order in Council of 1893, for the purpose of carrying out the provisions of the Pacific Islanders' Protection Acts of 1872 and 1875, and to settle disputes between British subjects living in these islands. The authority of the High Commissioner extends over all the Western Pacific not within the limits of Fiji, New Zealand, Queensland, or New South Wales, or the jurisdiction of any civilised power, and includes the Southern Solomon Islands and the various small groups in Melanesia.

The New Hebrides are ruled under the joint administration of British and French officials, in accordance with the Anglo-French Convention of 1906.

The principal groups consist of the British Solomon Islands, the Gilbert and Ellice Islands, the Tonga or Friendly Islands, the Phoenix Islands, Pitcairn Islands, and the New Hebrides.

Of these only Fanning Island (which under an Order in Council of January 27th, 1916, was included in the Gilbert and Ellice Colony) is connected by cable with the rest of the world.

With regard to the other islands, the only telegraphic communication is by means of wireless, and we are able to print below the Wireless Regulations in force in the Gilbert and Ellice Colony, wherein the centre of administration (at Ocean Island) is able to exchange official and public correspondence with Nauru, Tulagi and Apia. We also print regulations promulgated by the joint administration of the New Hebrides.

GILBERT AND ELLICE COLONY

THIS group comprises 31 islands, with a number of islets depending upon them, and lies between latitude 4° N. and 10° S.; its longitude being 169° E. to 158° W. The total area approximates to 200 square miles. Out of a population of about 32,000, four hundred are Europeans and three hundred and fifty Asiatics, the remainder being Polynesians and Micronesians.

The Government Headquarters are located at Paanopa, Ocean Island, which is also the scene of important operations by the Pacific Phosphate Company.

CONTROL AND ORGANISATION.

Radiotelegraphy is a Government monopoly, though licences may be granted for private erection and working. There are at present three Government land stations for public service. The first station, a 5-kw. Marconi set, was installed at Ocean Island at the end of 1915. The others are at Fanning and Washington Islands respectively. There are no existing or projected stations designed for aviation or meteorological purposes and no time or weather programme is in force at any of the existing stations.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Mr. C. R. Keyte	Officer in Charge	Ocean Island
Mr. G. L. G. Tilford	Acting Officer in Charge	Ocean Island

ADMINISTRATION.

The following are the rules and regulations at present in force :—

A—King's Regulation No. IX of 1912.

B—Rules under the provisions thereof.

KING'S REGULATION No. IX OF 1912.

TO GOVERN THE USE OF WIRELESS TELEGRAPHY IN THE WESTERN PACIFIC.

A 1. This Regulation may be cited as "The Wireless Telegraphy Regulation, 1912."

2. The Wireless Telegraphy Regulation, 1907, is hereby repealed.

3. (1) It shall not be lawful for any person to establish, instal or use any apparatus for the purpose of electrical communication by means of wireless telegraphy in any protectorates, islands, or places within the jurisdiction of the High Commissioner for the Western Pacific specified in the schedule hereto without a licence to do so first obtained from the said High Commissioner.

(2) A licence under this section shall be subject to such terms and conditions as may be prescribed by any rules made under this regulation and to such other terms and conditions as the High Commissioner may from time to time prescribe.

4. The High Commissioner may make rules from time to time to carry out the provisions of this regulation and in particular to regulate the use of apparatus for wireless telegraphy on board merchant ships, whether British or foreign vessels, while in the territorial waters of the protectorates or islands or places aforesaid.

5. Any person who contravenes the provisions of this Regulation or of any rules made hereunder, or fails to observe and perform the terms and conditions of a licence granted by the High Commissioner hereunder or prescribed by any rules aforesaid, shall be liable to a penalty not exceeding one hundred pounds and to the forfeiture of any apparatus established, installed or used for the purpose aforementioned.

6. This Regulation shall not apply to the islands of the Pacific Ocean known as the New Hebrides, including the Banks Islands and Torres Islands.

SCHEDULE.

The British Solomon Islands Protectorate, The Gilbert and Ellice Islands Protectorate, The Union (Tokelau) Islands, The Phoenix

Islands, Fanning Island, Washington Island, Christmas Island and all other islands in the Western Pacific not being within the jurisdiction of the Commonwealth of Australia or any of the states thereof or of the Dominion of New Zealand or of any civilised Power.

B RULES TO REGULATE THE USE OF WIRELESS TELEGRAPH APPARATUS ON MERCHANT SHIPS IN THE WESTERN PACIFIC, MADE BY THE HIGH COMMISSIONER UNDER THE PROVISIONS OF THE WIRELESS TELEGRAPHY REGULATION, 1912.

1. These rules may be cited as the Wireless Telegraphy Rules, 1917.

2. All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of the protectorates, islands and places specified in the Schedule to the Wireless Telegraphy Regulation, 1912, shall be worked in such a way as not to interfere with—

(a) Naval signalling; and

(b) The working of any wireless telegraph station, lawfully established, installed or worked in those protectorates, islands or places or the territorial waters thereof;

and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

3. (a) The apparatus for wireless telegraphy on board a merchant ship shall not be worked whilst such ship is within a harbour in any colony, protectorate or island specified in the Schedule to the Wireless Telegraphy Regulation, 1912.

(b) For the proper enforcement of the above every ship of British register in any such harbour shall completely disconnect its aerial wires from its radio apparatus, the ends of such wires being suspended entirely clear of the radiotelegraph cabin, preferably from the main rigging, in such a manner as to show they are properly disconnected.

(c) Every ship of foreign register in any such harbour shall, subject to the provisions of the

following subsection (d) take down its aerial wires completely and disconnect the same from its radiotelegraph apparatus.

(d) A ship of foreign register remaining in any such harbour for less than twelve hours, may, at the discretion of the Resident Commissioner or other Government officer in charge of the colony, protectorate or island to which such harbour belongs, be permitted to leave its aërials up, provided the same are disconnected in accordance with the provisions of subsection (b) of this rule.

4. If at any time, in the opinion of the High Commissioner, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on

board merchant ships while in the territorial waters aforesaid shall be subject to such further rules as may be made by the High Commissioner from time to time, and those rules may prohibit or regulate that use in all cases or in such cases as may be deemed desirable.

5. It shall be the duty of the master of a ship to see that the requirements of these rules are carried out.

6. These rules shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

7. The rules made on December 16th, 1912, are hereby repealed.

Dated this twenty-ninth day of August, 1917.

NEW HEBRIDES

THE New Hebrides consist of four groups of islands, the Banks, Torres, Central, and Southern, lying between 12° and 20° south latitude and 165° and 170° east longitude. The four groups, which have an estimated area of 5,500 square miles, comprise some fifty to sixty islands, large and small, of which the largest are Santo (Espirito Santo), Malekula, and Efate. The islands are administered by a Condominium established under a Convention between Great Britain and France, signed on October 20th, 1906, each country being represented by a Resident Commissioner. The seat of Government is at Vila, in the island of Efate. The laws of the two nations apply to their respective nationals in the group, as also such joint regulations as may be passed by the Resident Commissioners, or the High Commissioners for Great Britain and France under the authority of the Convention referred to. Natives are subject to regulations similarly enacted.

CONTROL AND ORGANISATION.

An agreement was arrived at in 1913 between the British and French Governments to establish a wireless telegraph station in the New Hebrides at the joint expense of the two Governments. In March, 1915, a contract was entered into with the Société Française Radio-électrique for the erection of such a station at Vila on the island of Efate. In October, 1915, the engineer and operator, together with the material, arrived at Vila, and on September 1st, 1916, the installation was completed, and the station opened to the public.

Wireless telegraphy in the New Hebrides is practically a State monopoly. No provision is made for licences for private installations, which are prohibited, except with the permission of the administration. The Resident Commissioners are responsible for the control of radiotelegraphic activity in the islands. The only station at present is the land station of Vila, which is directly controlled by Government and is open for public service to ships.

There are no firms or companies engaged in the manufacture of wireless apparatus, and no wireless societies or clubs.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
Mr. M. King	H.B.M. Resident Commissioner	Vila
Mr. Marcel Courtois ..	Officer in Charge Wireless Station and Sole Operator..	Vila

ADMINISTRATION.

Two joint regulations affecting wireless telegraphy have been issued by the Condominium administration, the first dated January 7th, 1909, No. 1,

"The Wireless Telegraph Regulation, 1909," the other the "Wireless Telegraph (Ships) Regulation, No. 3, of 1916."

The texts of these appear below:—

A—Regulation dated 1909.

B—Wireless Telegraph (Ships) Regulation, 1916.

**A JOINT REGULATION TO REGULATE THE
INSTALLATION OF WIRELESS TELEGRAPHY
IN THE NEW HEBRIDES.**

A 1. From the date of the passing of this regulation it shall be unlawful for any person to use or establish in any of the islands of the New Hebrides, including the Banks and Torres Islands, any apparatus or installation for the purpose of electrical communication by wireless telegraphy without a licence first obtained from the Resident Commissioners conjointly such licence to be granted on such terms and conditions as the Resident Commissioners aforesaid may from time to time determine.

2. Any person offending against the provisions of the preceding section or failing to comply with the terms and conditions of a licence when granted by the Resident Commissioners under the provisions of this regulation shall be liable to a penalty not exceeding twenty pounds and to forfeit any apparatus used or established for the purpose aforementioned.

3. Offences against this regulation shall be justiciable by the Joint Court contemplated by the tenth Article of the Anglo-French Convention of the twentieth day of October, one thousand nine hundred and six, and pending the establishment of such court by the court of the nation to which or to whose legal system the accused may belong.

4. This regulation may be cited as "The Wireless Telegraphy Regulation, 1909."

Published and exhibited at the Public Offices of the Resident Commissioners for His Britannic Majesty and for the French Republic this seventh day of January in the year one thousand nine hundred and nine.

**A JOINT REGULATION TO CONTROL THE USE
OF WIRELESS TELEGRAPH APPARATUS ON
MERCHANT VESSELS IN THE NEW
HEBRIDES.**

B 1. From the date of the passing of this regulation all apparatus for wireless telegraphy on board merchant ships in the territorial waters of the New Hebrides shall be worked in such a way as not to interfere with:

(a) Naval signalling;

(b) The working of any wireless telegraph station lawfully established, installed or worked in the New Hebrides or the territorial waters thereof; and

(c) The transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. No apparatus for wireless telegraph on board a merchant ship shall be worked or used while the ship is in any of the harbours of the New Hebrides except with the joint special or general permission of the Resident Commissioners.

3. The Resident Commissioners shall have power to issue such further rules as to them may seem expedient for the control of wireless telegraphy on merchant vessels and for the censorship of messages transmitted from such vessels while in the territorial waters of the Group.

4. Any infraction of this regulation shall be punishable by the Joint Court with a money penalty of from one to twenty pounds and imprisonment for one day to one month or with one or other of these penalties.

5. This regulation may be cited as the "Wireless Telegraph (Ships) Regulation, 1916."

Published and exhibited in the Public Offices of the Resident Commissioners for Great Britain and the French Republic, at Vila, in the New Hebrides, this 30th day of October, 1916.

TONGA ISLANDS

O THERWISE known as the Friendly Islands, this group remained, until 1899, a neutral territory in accordance with the Declaration of Berlin, April 6th, 1886. Under the terms of the Anglo-German Agreement (November 14th, 1899), subsequently accepted by the United States, the Tonga Islands fell practically under the protectorate of Great Britain, which was proclaimed on May 10th, 1900. The present King is George Tubou II, born June 18th, 1874. The Legislative Assembly meets annually. It is composed of seven nobles, elected by their peers, seven elected representatives of the people and the seven Ministers of the Crown. Elections are held triennially.

Lack of means of rapid communication with the outside world has severely handicapped traders, growers and other residents of the Tongan group of islands.

Their long term of isolation is now ended, for direct wireless communica-

tion has been established between Nukualofa and Suva (Fiji Islands) and Apia (Samoan Islands).

The entire apparatus, which includes the latest magnifying valve receivers, power plant, storage batteries and specially designed masts, was manufactured by Amalgamated Wireless (Australasia), Ltd., at that company's works in Sydney, and erected by Australian engineers.

CONTROL.

A department of Telegraphs and Telephones was inaugurated at the time of the erection of the wireless station, under whose jurisdiction fall all matters concerning radiotelegraphy and radiotelephony.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Mr. J. R. Land (<i>Not yet appointed</i>)	Officer in Charge of Telegraphs and Telephones .. Assistant Wireless Officer	Nukualofa Nukualofa

The station of Nukualofa is owned and controlled by the Tongan Government and handles commercial traffic.

ORGANISATION.

Nukualofa Radio (the only station yet erected in the Friendly Islands) was opened for commercial traffic on December 30th, 1919. The station works with Suva (Fiji), Apia (Samoa) and ships, as under, local time :—

9.50 a.m. clears with Suva on 600 metres ; 11.50 a.m. clears with Apia, using a transmitting wavelength of 1,200 metres (Apia transmits on 2,000 metres) ; 2.50 p.m. second clearance with Apia as above ; 3.50 p.m. second clearance with Suva on 600 metres ; 8 p.m. to 10 p.m., on watch, during which time clearances are again effected with Suva and Apia (both on 600 metres) and also with any ships within range and having traffic.

Telegrams are delivered between the hours of 9 a.m. and 4 p.m. No portorage charge is imposed on delivered telegrams. These are delivered within a one-mile radius of the wireless station. Telegrams for persons residing outside the mile radius are either posted to the addressee or delivered to an authorised agent residing within the mile radius.

ADMINISTRATION.

As regards the European population, Tonga comes under King's Regulation No. IX of 1912. (*See* Gilbert and Ellice Colony under "Pacific Islands.") The use of wireless stations on merchant ships is controlled by the "Wireless Telegraphy Rules, 1917," made under the above-mentioned King's Regulation. An Ordinance is in effect regulating the use of wireless by Tongan natives. (*See* A below.)

A—An Ordinance to govern the use of wireless telegraphy in the Kingdom of Tonga. (No. 5 of 1918.)

AN ORDINANCE

TO GOVERN THE USE OF WIRELESS TELEGRAPHY IN THE KINGDOM OF TONGA. (No. 5 of 1918.)

A Be it enacted by the King by the advice and with the consent of the Privy Council as follows :—

1. The short title of this Ordinance shall be The Wireless Telegraphy Ordinance, 1918.

2. It shall not be lawful for any Tongan to establish maintain or use in the Kingdom of Tonga any apparatus or instrument for the purpose of electrical communication by means

of wireless telegraphy without having previously obtained from the Privy Council a licence in that behalf to be granted on such terms and conditions as may be prescribed by any rules made under this Ordinance and on such other terms and conditions as the Privy Council may from time to time think fit to prescribe.

3. It shall be lawful for His Majesty the King in Council from time to time to make rules :—

(a) Prescribing the manner in which licences under this Ordinance are to be applied for and granted and the fees payable on the grant of such licence.

(b) Generally for the purpose of carrying this Ordinance into effect.

4. Any person who contravenes the provisions of this Ordinance or of any rules made hereunder or fails to observe or perform the terms or conditions of a licence granted hereunder or prescribed by any rules aforesaid shall be liable on conviction to a fine not exceeding fifty pounds or in default of payment to imprisonment for any term not exceeding six months and the apparatus or instrument in respect of which

such conviction was obtained may by order of the magistrate before whom such conviction was obtained be forfeited.

5. All proceedings under this Ordinance may be taken before a Police Magistrate and the mode of procedure shall be according to the law in force for the time being in respect of other offences punishable on conviction before a Police Magistrate.

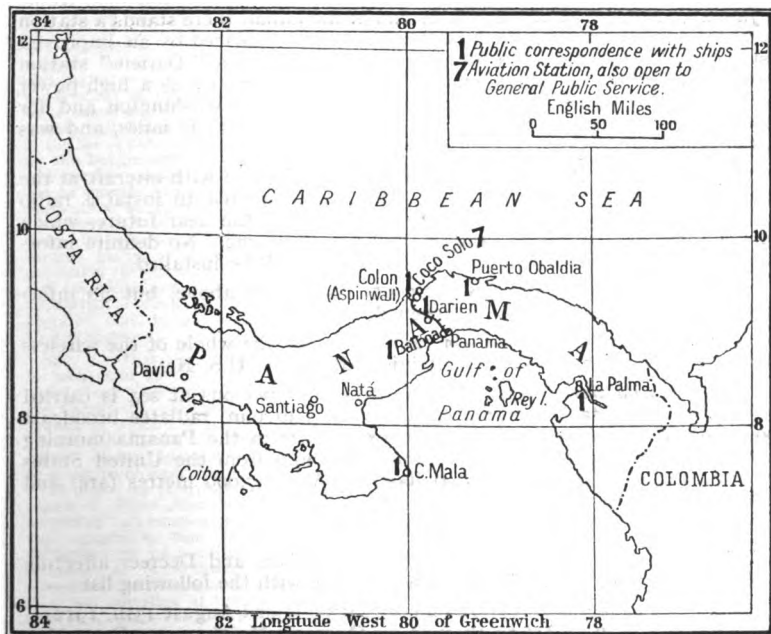

March 5th, 1918.

PANAMA (CANAL ZONE)

THE idea of a Canal through the Isthmus of Panama originated with a Spanish engineer in 1530. Monsieur de Lesseps laboured on its construction from 1882 to 1894, when the United States Government took over the undertaking. This action of the U.S.A. followed closely on the establishment of a separate Republic of Panama (a secession from the U.S. of Colombia), which took place on November 23rd, 1903. The American Canal was opened for traffic on August 15th, 1914.

The American-controlled zone consists of a strip of land 10 miles in width, extending across the Isthmus a distance of 50 miles. The rights of sovereignty are vested in the U.S.A. under a Treaty signed on February 26th, 1904.

The zone is ruled by a Governor, who reports through the Secretary of War to the President and conducts the government according to the authority invested in him by Acts of Congress and Executive orders. In periods of crisis or times of war the supreme command is vested in the Commanding Officer of the Troops, designated as the Panama Canal Department of the U.S.A. Army.

CONTROL.

Radiotelegraphy in the zone is administered by the Navy Department of the United States. All wireless stations on the Isthmus are under control of the Commandant, 15th Naval District, Balboa Heights, Canal Zone, and under the immediate supervision of the Communication Superintendent, 15th Naval District.

Under agreement between the Republic of Panama and the United States of America Radiotelegraphic Communication within the Republic, as well as in the Canal Zone, remains under the control of the U.S.A. This arrangement rests on Decree No. 130 of August 29th, 1914, signed by the President of the Panama Republic.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Capt. L. R. Sargent, U.S.N.	Marine Superintendent Panama Canal and Commandant 15th U.S. Naval District	Balboa Heights
Lt.-Com. F. L. Riefkohl ..	Communication Superintendent 15th U.S. Naval District	Balboa Radio Station Fort Amador

ORGANISATION.

The first radio station erected was situated in the Republic of Panama within the municipal limits of the City of Colon, in 1906, and the reservation there established is still the site of a successor to this pioneer station.

The small station established at Porto Bello, Panama, in 1909, was closed on May 13th, 1914. The Colon station, established on March 1st, 1910, was re-equipped with improved apparatus, and opened to commercial traffic in January, 1913. At Balboa (Pacific end of the Canal) there stands a station opened for commercial business in June, 1913, and replaced by an improved installation on the same site in 1914. The well-known "Darien" station (located alongside the Canal, midway between the oceans) is a high-power installation, designed primarily for communication with Washington and for naval vessels at sea. It possesses a sending radius of 3,000 miles, and was placed in regular service on April 5th, 1915.

There is a Naval Radio Station for communication with aircraft at the Naval Air Station, Coco Solo, C.Z. It is contemplated to instal a radio telephone transmitter at that station some time in the near future, which will be available for use in handling commercial traffic. No definite information is available as to the time when this set will be installed.

There have been some developments not shown above, but no information concerning them has yet been disclosed.

There are no wireless clubs or radio societies, the whole of the wireless operations being controlled and administered by the U.S. Navy.

An unofficial news service for the benefit of persons at sea is carried on by the Colon station, which each day at 3.30 p.m. radiates broadcast about 200 words of news made up of extracts from the Panama morning papers, whilst Press despatches obtained by radio from the United States are re-broadcasted at 5 a.m. by Balboa (NBA) on 7,000 metres (arc) and 2,400 metres spark.

ADMINISTRATION.

We publish below the text of the various Acts and Decrees affecting radiotelegraphy in the Canal Zone in accordance with the following list :—

A—Act to regulate Radio Communication issued August 13th, 1912.

B—Section 6 of Act to Provide for Opening, Maintenance, Protection and Operation of the Panama Canal (dated August 24th, 1912).

C—Extracts from Rules and Regulations for the Operation and Navigation of the Panama Canal, dated August 15th, 1919.

D—Notice concerning Commercial Service at Naval Stations, dated September 1st, 1913.

E—Circular *re* Compulsory Wireless, dated July 23rd, 1914.

F—Circular *re* Free Radio Service, dated November 17th, 1914.

AN ACT TO REGULATE RADIO COMMUNICATION.

A Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That a person, company, or corporation within the jurisdiction of the United States shall not use or operate any apparatus for radio communication as a means of commercial intercourse among the several States, or with foreign nations, or upon any vessel of the United States engaged in interstate or foreign commerce, or for the transmission of radiograms or signals the effect of which extends beyond the jurisdiction of the State or Territory in which the same are made, or where interference would be caused thereby with the receipt of messages or signals from beyond the jurisdiction of the said State or Territory, except under and in accordance with a licence, revocable for cause, in that behalf granted by the Secretary of Commerce and Labour upon application therefor; but nothing in this Act shall be construed to apply to the transmission and exchange of radiograms or signals between points situated in the same State: Provided, that the effect thereof shall not extend beyond the jurisdiction of the said State or interfere with the reception of radiograms or signals from beyond said jurisdiction; and a licence shall not be required for the transmission or exchange of radiograms or signals by or on behalf of the Government of the United States, but every Government station on land or sea shall have special call letters designated and published in the list of radio stations of the United States by the Department of Commerce and Labour. Any person, company, or corporation that shall use or operate any apparatus for radio communication in violation of this section, or knowingly aid or abet another person, company, or corporation in so doing, shall be deemed guilty of a misdemeanour, and on conviction thereof shall be punished by a fine not exceeding five hundred dollars, and the apparatus or device so unlawfully used and operated may be adjudged forfeited to the United States.

SEC. 2.—That every such licence shall be in such form as the Secretary of Commerce and Labour shall determine and shall contain the restrictions, pursuant to this Act, on and subject to which the licence is granted; that every such licence shall be issued only to citizens of the United States or Porto Rico or to a company incorporated under the laws of some State or Territory or of the United States or Porto Rico, and shall specify the ownership and location of the station in which said apparatus shall be used and other particulars for its identification and to enable its range to be estimated; shall state the purpose of the station, and, in case of a station in actual operation at the date of passage of this Act, shall contain the statement that satisfactory proof has been furnished that it was actually operating on the above-mentioned date; shall state the wavelength or the

wavelengths authorised for use by the station for the prevention of interference and the hours for which the station is licensed for work; and shall not be construed to authorise the use of any apparatus for radio communication in any other station than that specified. Every such licence shall be subject to the regulations contained herein, and such regulations as may be established from time to time by authority of this Act or subsequent Acts and treaties of the United States. Every such licence shall provide that the President of the United States in time of war or public peril or disaster may cause the closing of any station for radio communication and the removal therefrom of all radio apparatus, or may authorise the use or control of any such station or apparatus by any department of the Government, upon just compensation to the owners.

SEC. 3.—That every such apparatus shall at all times while in use and operation as aforesaid be in charge or under the supervision of a person or persons licensed for that purpose by the Secretary of Commerce and Labour. Every person so licensed who in the operation of any radio apparatus shall fail to observe and obey regulations contained in or made pursuant to this Act or subsequent Acts or treaties of the United States, or any one of them, or who shall fail to enforce obedience thereto by an unlicensed person while serving under his supervision, in addition to the punishments and penalties herein prescribed, may suffer the suspension of the said licence for a period to be fixed by the Secretary of Commerce and Labour not exceeding one year. It shall be unlawful to employ any unlicensed person or for any unlicensed person to serve in charge or in supervision of the use and operation of such apparatus, and any person violating this provision shall be guilty of a misdemeanour, and on conviction thereof shall be punished by a fine of not more than one hundred dollars or imprisonment for not more than two months, or both, in the discretion of the court, for each and every such offence: Provided, that in case of emergency the Secretary of Commerce and Labour may authorise a collector of customs to issue a temporary permit, in lieu of a licence, to the operator on a vessel subject to the radio ship Act of June twenty-fourth, nineteen hundred and ten.

SEC. 4.—That for the purpose of preventing or minimising interference with communication between stations in which such apparatus is operated, to facilitate radio communication, and to further the prompt receipt of distress signals, said private and commercial stations shall be subject to the regulations of this section. These regulations shall be enforced by the Secretary of Commerce and Labour through the collectors of customs and other officers of the Government as other regulations herein provided for.

The Secretary of Commerce and Labour may, in his discretion, waive the provisions of any or all of these regulations when no interference of the character above mentioned can ensue.

The Secretary of Commerce and Labour

may grant special temporary licences to stations actually engaged in conducting experiments for the development of the science of radio communication, or the apparatus pertaining thereto, to carry on special tests, using any amount of power or any wavelengths, at such hours and under such conditions as will insure the least interference with the sending or receipt of commercial or Government radiograms, of distress signals and radiograms, or with the work of other stations.

In these regulations the naval and military stations shall be understood to be stations on land.

REGULATIONS.

1. *Normal Wavelength.*—Every station shall be required to designate a certain definite wavelength as the normal sending and receiving wavelength of the station. This wavelength shall not exceed 600 metres or it shall exceed 1,600 metres. Every coastal station open to general public service shall at all times be ready to receive messages of such wavelengths as are required by the Berlin Convention. Every ship station, except as hereinafter provided, and every coast station open to general public service shall be prepared to use two sending wavelengths, one of 300 metres and one of 600 metres, as required by the international convention in force: Provided, that the Secretary of Commerce and Labour may, in his discretion, change the limit of wavelength reservation made by Regulations 1 and 2 to accord with any international agreement to which the United States is a party.

2. *Other Wavelengths.*—In addition to the normal sending wavelength all stations, except as provided hereinafter in these regulations, may use other sending wavelengths: Provided, that they do not exceed 600 metres or that they do exceed 1,600 metres: Provided further, that the character of the waves emitted conforms to the requirements of Regulations 3 and 4 following.

3. *Use of a "Pure Wave."*—At all stations if the sending apparatus, to be referred to hereinafter as the "transmitter," is of such a character that the energy is radiated in two or more wavelengths, more or less sharply defined, as indicated by a sensitive wavemeter, the energy in no one of the lesser waves shall exceed 10 per cent. of that in the greatest.

4. *Use of a "Sharp Wave."*—At all stations the logarithmic decrement per complete oscillation in the wave trains emitted by the transmitter shall not exceed two-tenths, except when sending distress signals or signals and messages relating thereto.

5. *Use of "Standard Distress Wave."*—Every station on shipboard shall be prepared to send distress calls on the normal wavelength designated by the international convention in force except on vessels of small tonnage unable to have plants insuring that wavelength.

6. *Signal of Distress.*—The distress call used shall be the international signal of distress:—
● ● ● — — — ● ● ●

7. *Use of "Broad Interfering Wave" for Distress Signals.*—When sending distress signals, the transmitter of a station on shipboard may be tuned in such a manner as to create a maximum of interference with a maximum of radiation.

8. *Distance Requirement for Distress Signals.*—Every station on shipboard, wherever

practicable, shall be prepared to send distress signals of the character specified in Regulations 5 and 6 with sufficient power to enable them to be received by day over sea a distance of 100 nautical miles by a shipboard station equipped with apparatus for both sending and receiving equal in all essential particulars to that of the station first mentioned.

9. *"Right of Way" for Distress Signals.*—All stations are required to give absolute priority to signals and radiograms relating to ships in distress; to cease all sending on hearing a distress signal; and, except when engaged in answering or aiding the ship in distress, to refrain from sending until all signals and radiograms relating thereto are completed.

10. *Reduced Power for Ships near a Government Station.*—No station on shipboard, when within fifteen nautical miles of a naval or military station, shall use a transformer input exceeding one kilowatt, nor, when within five nautical miles of such a station, a transformer input exceeding one-half kilowatt, except for sending signals of distress or signals or radiograms relating thereto.

11. *Intercommunication.*—Each shore station open to general public service between the coast and vessels at sea shall be bound to exchange radiograms with any similar shore station and with any ship station without distinction of the radio systems adopted by such stations, respectively, and each station on shipboard shall be bound to exchange radiograms with any other station on shipboard without distinction of the radio systems adopted by each station, respectively.

It shall be the duty of each such shore station during the hours it is in operation, to listen in at intervals of not less than fifteen minutes and for a period of not less than two minutes, with the receiver tuned to receive messages of 300 metre wavelengths.

12. *Division of Time.*—At important seaports and at all other places where naval or military and private or commercial shore stations operate in such close proximity that interference with the work of naval and military stations cannot be avoided by the enforcement of the regulations contained in the foregoing regulations concerning wavelengths and the character of signals emitted, such private or commercial shore stations as do interfere with the reception of signals by the naval and military stations concerned shall not use their transmitters during the first fifteen minutes of each hour, local standard time. The Secretary of Commerce and Labour may, on the recommendation of the Department concerned, designate the station or stations which may be required to observe this division of time.

13. *Government Stations to Observe Division of Time.*—The naval or military stations for which the above-mentioned division of time may be established shall transmit signals or radiograms only during the first fifteen minutes of each hour, local standard time, except in case of signals or radiograms relating to vessels in distress, as hereinbefore provided.

14. *Use of Unnecessary Power.*—In all circumstances, except in case of signals or radiograms relating to vessels in distress, all stations shall use the minimum amount of energy necessary to carry out any communication desired.

15. *General Restrictions on Private Stations.*—No private or commercial station not engaged

in the transaction of *bona fide* commercial business by radio communication or in experimentation in connection with the development and manufacture of radio apparatus for commercial purposes shall use a transmitting wavelength exceeding 200 metres, or a transformer input exceeding one kilowatt, except by special authority of the Secretary of Commerce and Labour contained in the licence of the station: *Provided*, That the owner or operator of a station of the character mentioned in this regulation shall not be liable for a violation of the requirements of the third or fourth regulations to the penalties of \$100 or \$25, respectively provided in this section unless the person maintaining or operating such station shall have been notified in writing that the said transmitter has been found, upon tests conducted by the Government, to be so adjusted as to violate the said third and fourth regulations, and opportunity has been given to said owner or operator to adjust said transmitter in conformity with said regulations.

16. *Special Restrictions in the Vicinities of Government Stations.*—No station of the character mentioned in regulation 15 situated within five nautical miles of a naval or military station shall use a transmitting wavelength exceeding 200 metres or a transformer input exceeding one-half kilowatt.

17. *Ship Stations to Communicate with Nearest Shore Station.*—In general, the ship-board stations shall transmit their radiograms to the nearest shore station. A sender on board a vessel shall, however, have the right to designate the shore station through which he desires to have his radiograms transmitted. If this cannot be done, the wishes of the sender are to be complied with only if the transmission can be effected without interfering with the service of other stations.

18. *Limitations for Future Installations in Vicinities of Government Stations.*—No station on shore not in actual operation at the date of the passage of this Act shall be licensed for the transaction of commercial business by radio communication within fifteen nautical miles of the following naval or military stations—to wit: Arlington, Virginia; Key West, Florida; San Juan, Porto Rico; North Head and Tatoosh Island, Washington; San Diego, California; and those established or which may be established in Alaska and in the Canal Zone; and the head of the department having control of such Government stations shall, so far as is consistent with the transaction of governmental business, arrange for the transmission and receipt of commercial radiograms under the provisions of the Berlin convention of 1906 and future international conventions or treaties to which the United States may be a party, at each of the stations above referred to and shall fix the rates therefor, subject to control of such rates by Congress. At such stations and wherever and whenever shore stations open for general public business between the coast and vessels at sea under the provisions of the Berlin convention of 1906 and future international conventions and treaties to which the United States may be a party shall not be so established as to insure a constant service day and night without interruption, and in all localities wherever or whenever such service shall not be maintained by a commercial shore station within 100 nautical miles of a naval radio station, the Secretary of the Navy shall, so far as is consistent with the transaction of governmental

business, open naval radio stations to the general public business described above, and shall fix rates for such service, subject to control of such rates by Congress. The receipts from such radiograms shall be covered into the Treasury as miscellaneous receipts.

19. *Secrecy of Messages.*—No person or persons engaged in or having knowledge of the operation of any station or stations shall divulge or publish the contents of any messages transmitted or received by such station, except to the person or persons to whom the same may be directed, or their authorised agent, or to another station employed to forward such message to its destination, unless legally required so to do by the court of competent jurisdiction or other competent authority. Any person guilty of divulging or publishing any message, except as herein provided, shall, on conviction thereof, be punishable by a fine of not more than \$250 or imprisonment for a period of not exceeding three months, or both fine and imprisonment, in the discretion of the Court.

Penalties.—For violation of any of these regulations, subject to which a licence under sections 1 and 2 of this Act may be issued, the owners of the apparatus shall be liable to a penalty of \$100, which may be reduced or remitted by the Secretary of Commerce and Labour, and for repeated violations of any of such regulations the licence may be revoked.

For violation of any of these regulations, except as provided in Regulation 19, subject to which a licence under section 3 of this Act may be issued, the operator shall be subject to a penalty of \$25, which may be reduced or remitted by the Secretary of Commerce and Labour, and for repeated violations of any such regulations, the licence shall be suspended or revoked.

Sec. 5.—That every licence granted under the provisions of this Act for the operation or use of apparatus for radio communication shall prescribe that the operator thereof shall not wilfully or maliciously interfere with any other radio communication. Such interference shall be deemed a misdemeanour, and upon conviction thereof the owner or operator, or both, shall be punishable by a fine of not to exceed \$500 or imprisonment for not to exceed one year, or both.

Sec. 6.—That the expression "radio communication" as used in this Act means any system of electrical communication by telegraphy or telephony without the aid of any wire connecting the points from and at which the radiograms, signals, or other communications are sent or received.

Sec. 7.—That a person, company, or corporation within the jurisdiction of the United States shall not knowingly utter or transmit or cause to be uttered or transmitted, any false or fraudulent distress signal or call or false or fraudulent signal, call, or other radiogram of any kind. The penalty for so uttering or transmitting a false or fraudulent distress signal or call shall be a fine of not more than \$2,500 or imprisonment for not more than five years, or both, in the discretion of the court, for each and every such offence, and the penalty for so uttering or transmitting, or causing to be uttered or transmitted, any other false or fraudulent signal, call, or other radiogram shall be a fine of not more than \$1,000 or imprisonment for not more than two years, or both, in the discretion of the court, for each and every such offence.

SEC. 8.—That a person, company, or corporation shall not use or operate any apparatus for radio communication on a foreign ship in territorial waters of the United States otherwise than in accordance with the provisions of sections 4 and 7 of this Act and so much of section 5 as imposes a penalty for interference. Save as aforesaid, nothing in this act shall apply to apparatus for radio communication on any foreign ship.

SEC. 9.—That the trial of any offence under this Act shall be in the district in which it is committed, or if the offence is committed upon the high seas or out of the jurisdiction of any particular State or district the trial shall be in the district where the offender may be found or into which he shall be first brought.

SEC. 10.—That this Act shall not apply to the Philippine Islands.

SEC. 11.—That this Act shall take effect and be in force on and after four months from its passage.

Approved, August 13th, 1912.

EXTRACT FROM ACT.

(Dated August 24th, 1912.)
TO PROVIDE FOR OPENING, MAINTENANCE,
PROTECTION AND OPERATION OF THE PANAMA
CANAL.

B SEC. 6.—That the President is authorised to cause to be erected, maintained, and operated, subject to the International Convention and the Act of Congress to regulate radio communication, at suitable places along the Panama Canal and the coast adjacent to its two terminals, in connection with the operation of the said Canal, such wireless telegraphic installations as he may deem necessary for the operation, maintenance, sanitation, and protection of said Canal, and for other purposes. If it is found necessary to locate such installations upon territory of the Republic of Panama, the President is authorised to make such agreement with said Government as may be necessary, and also to provide for the acceptance and transmission by said system, of all private and commercial messages, and those of the Government of Panama, on such terms and for such tolls as the President may prescribe: *Provided*, That the messages of the Government of the United States and the departments thereof, and the management of the Panama Canal, shall always be given precedence over all other messages. The President is also authorised, in his discretion, to enter into such operating agreements or leases with any private wireless company or companies as may best insure freedom from interference with the wireless telegraphic installations established by the United States.

EXTRACT FROM RULES AND REGULATIONS.

(Dated August 15th, 1919.)

C 40. *Radio Communication.* — As soon as radio communication can be established with the Canal, vessels should report their names, nationality, length, draft, tonnage, whether or not they desire to pass through the Canal, require coal, provisions, supplies, repairs, to go alongside of a wharf, the use of tugs, probable time of arrival, length of stay in port, or any other matters of importance or interest. If this information has been previously communicated through agents or otherwise to the captain of the port,

it will not be necessary to report by radio; but the probable time of arrival should always be sent.

41. Control of radio communication is entirely in the hands of the radio shore stations. No vessel will be allowed to interfere in the slightest degree with the Canal radio stations; upon an order being received by a vessel at any time while within the waters under the control of the Canal to discontinue using radio, even if in the midst of transmission of a message, she shall immediately comply.

42. Upon a ship's arriving within the 15-mile limit, and until leaving the 15-mile limit of the Canal Zone, she shall transmit only with low power, not exceeding one-half kilowatt.

43. Messages to stations will be sent only to Colon station (NAX) when in Gatun Locks and to northward thereof, and only to Balboa station (NBA) when in Miraflores Locks and to southward thereof; between these two points ships may work to either station, preferably to the nearer one; the high-power station (Darien) at Radio will not handle commercial work and will not be called for Canal business except in case of emergency.

44. All messages between ships in the Canal Zone and ships at sea must be forwarded through the nearer shore station.

45. Messages from ships in the Caribbean Sea for ships in the Pacific waters, or *vice versa*, shall be routed through the Canal Zone shore stations.

46. All vessels fitted with radio, after leaving the terminal harbour to pass through the Canal, shall keep an operator on watch until the further terminal harbour has been reached; this applies to the time when they are anchored in Gatun Lake, while passing through the locks, or moored to the lock walls, or to any of the wharves in the Canal proper as well as when they are under way. Messages relating to the ship's movements and the Canal business shall take precedence over all commercial messages.

47. Pilots on vessels passing through the Canal shall have the right to use a vessel's radio freely for the transaction of the Canal business.

48. Under the direction of the pilots, vessels will from time to time report their progress through the Canal; accidents to machinery, propellers, steering gear, equipment, or anything else that may delay them or require assistance; any sickness or casualties that require medical attendance from Canal officials; or any other matters of importance that may arise.

49. No radio tolls, either coast station or forwarding, will be imposed against ships on radiograms transmitted by ships on Canal business. There will be no charge made against the Panama Canal, by Canal Zone land lines or radio stations, for the transmission of radiograms to ships on Canal business.*

50. No vessel will be allowed to communicate with any lock or signal station while in transit through the Canal, except through the pilot; all messages of any kind must be sent through him. This does not apply to vessels moored at the terminals at Cristobal or Balboa, before entering or after having passed through the Canal, which may wish to communicate through the terminal stations.

* As Amended by Executive Order of November 4th, 1914.

51. Vessels in transit through the Canal can communicate with the lock and signal station through the pilots, both by the international code and special signals; information on this subject may be obtained from the Governor of the Panama Canal.

118. In thick and foggy weather vessels will not be allowed to enter the Canal or leave locks or mooring station until the weather has cleared. Vessels in transit, when overtaken by thick or foggy weather, must immediately take every precaution and make preparation to anchor or moor at the first available place, and so remain until the weather clears. Vessels equipped with radio, when overtaken by thick or foggy weather, should immediately so report, in order that the proper fog signals may be made at the mooring stations on the approach of such vessels.

RADIO SERVICE.

Control of Radio.—The United States Government controls radio in the Republic of Panama and contiguous waters. The U.S. Naval Communication Service maintains three Naval Radio Stations in the Canal Zone; coastal stations at Colon and Balboa, and a high-powered station at Darien. In the Republic of Panama it maintains Naval Radio Stations at Cape Mala, La Palma, and Puerto Obaldia. The Cape Mala Radio Station, located at Cape Mala, R. P., at the south-west entrance to the Bay of Panama, is connected by telegraph with the Canal Zone and all telegraph offices in the Republic of Panama. The Radio Stations at La Palma and Puerto Obaldia are located in outlying sections of the Republic of Panama which have no telegraph connections, and are primarily for intercommunication between these districts and other sections of the Republic of Panama and the Canal Zone, through Balboa Radio. Control of radio communication is entirely in the hands of these stations. No vessel will be allowed to interfere in the slightest degree with the Canal radio stations; upon an order being received by a vessel at any time while within the waters under the control of the Canal to discontinue using radio, even if in the midst of transmission of a message, she shall immediately comply.

Commercial Radiograms.—All Naval Radio stations given above, except Darien, are open to commercial traffic.

Canal Business Radiograms.—With the exception of Darien, all Naval Radio Stations given above will handle Canal business addressed to the proper officials of the Panama Canal, its departments and subsidiary companies. No receiving or forwarding charge will be made by the Naval Radio Stations for this service. The first word in the address of such messages should be "GOVT" (Example: "GOVT Port Captain Cristobal.") to show that they are official messages on Canal business. The shore stations reserve the right to decide whether a message is official or commercial in character.

Stations to be Called.—Ships on the Atlantic side will communicate only with Colon (NAX). Ships on the Pacific within 50 miles of Balboa will communicate only with Balboa (NBA). Ships in the Pacific when more than 50 miles from Balboa will communicate with Cape Mala (NNT), from which station messages are relayed to the Canal Zone or Republic of Panama by telegraph. Ships in the Canal, when to the Northward of Darien will work

Colon (NAX), when to the Southward of Darien work Balboa (NBA).

Ships will communicate through nearest shore station. On arriving within range of a shore station ships should send a (TR) position report, furnishing data required by Article 28, Service Regulations Affixed to the International Radiotelegraphic Convention, London, 1912. Due to the large amount of radio work in the vicinity of the Canal, and the necessity of reducing interference to a minimum, ships should send the required position report whether they have messages to transmit or not. This is desired in order that the calling of vessels by shore stations having messages for such ships may be reduced to a minimum. Upon receiving a position report from a ship, the shore station will know that the ship is in range and will immediately deliver any messages on file for that ship. Any ship which desires to communicate with a shore station, and has not previously submitted a (TR) report to that station, will be requested to submit such report before any messages are accepted from it.

All TR reports received are given to the Port Captain concerned and to the vessel's agents (if known).

Balboa Radio (NBA) is a distant control (Receiving) station, therefore, in case of emergency, Balboa Radio may be called and communication with it established, though Balboa may at the time be transmitting.

Hours of Service.—Colon, Balboa, and Cape Mala maintain a constant watch, day and night.

La Palma and Puerto Obaldia maintain daily schedules of watches.

EXTRACT FROM SUPPLEMENT TO RULES.

(Dated September 1st, 1913.)

COMMERCIAL SERVICE AT NAVAL RADIO STATIONS.

D Beginning September 1st, 1913, the radio stations of the United States Navy at Colon and Balboa are handling special classes of commercial radiograms, heretofore prohibited, as follows:—

1. Reply paid messages (where both message and answer can be prepaid by the sender).

2. Messages calling for repetition of messages (for verification only). Charge for repeating back is one-fourth the charge for the original message.

3. Radiograms to be delivered by mail. (If received from a ship, these will be mailed from the radio station. "Ocean letters" will be mailed by the ship at the first port of call, or at any port of call designated).

4. Multiple radiograms. These are messages addressed either to several persons at same address or to same person at several addresses served by the same radio station. These messages when received from sea will be separated and sent as so many individual messages over the land wire.

5. Radiograms calling for acknowledgment of receipt. (Such acknowledgment is restricted to notification of date and hour at which the coast station delivered the radiogram to ship addressed; and may be sent by either mail or telegram).

6. Paid service notices. (Sent in order to correct address or text to cancel a message, etc.)

Both stations, Colon and Balboa, are connected by direct wire with the Panama railroad telephone system and radiograms can be filed at any local office. Attention is invited to the fact that no collect messages are handled, and no commercial messages are handled, between stations which are connected by cable or telegraph, as, for instance, to Key West or Port Lincoln.

The time of arrival of all Panama railroad boats is given to the telephone control at Colon as soon as received, and can be obtained there upon request without calling the radio station at Colon.

E EXECUTIVE ORDER. WIRELESS APPARATUS ON OCEAN- GOING VESSELS.

Published in Circular No. 601-16, dated Culebra, C.Z., July 23rd, 1914.

To Require Ocean-going Vessels to be Filled with Wireless Apparatus.

By virtue of the authority vested in me, I hereby establish the following order for the Canal Zone:—

SEC. 1.—From and after the first day of July, 1915, it shall be unlawful for any ocean-going steamer of the United States, or of any foreign country, carrying fifty or more persons including passengers and crew, to leave or attempt to leave any port of the Canal Zone unless such steamer shall be equipped with an efficient apparatus for radio communication in good working order in charge of a person skilled in the use of such apparatus, which apparatus shall be capable of transmitting and receiving messages for a distance of at least 100 miles, night or day: *Provided*, That the provisions of this order, shall not apply to steamers plying only between the Canal Zone and ports less than 200 miles therefrom.

SEC. 2.—The master or other person being in charge of such vessel which leaves or attempts to leave any port of the Canal Zone in violation of any of the provisions of this order shall, upon conviction, be fined in a sum not to exceed Five Thousand Dollars (\$5,000), and any such fine shall be a lien upon such vessel, and the vessel may be liable therefor in the District Court of the Canal Zone, and the leaving or attempting to leave by any vessel from each and every port of the Canal Zone shall constitute a separate offence.

SEC. 3.—This order shall take effect from and after this date July 9th, 1914.

EXECUTIVE ORDER.

FREE RADIO SERVICE FOR CANAL BUSINESS.
Published in Circular No. 601-33, dated Balboa Heights, C.Z., November, 17th, 1914.

Amending Paragraph 49 of the "Rules and Regulations for the Operation and Navigation of the Panama Canal and Approaches Thereto, Including All Waters Under its Jurisdiction."

F By virtue of the authority vested in me under the Panama Canal Act, paragraph 49 of the "Rules and Regulations for the Operation and Navigation of the Panama Canal and Approaches Thereto, Including All Waters Under Its Jurisdiction," promulgated by Executive Order No. 1990, dated July 9th, 1914, is hereby amended to read as follows:—

49.—No radio tolls, either coast station or forwarding, will be imposed against ships on radiograms transmitted by ships on Canal business. There will be no charge made against the Panama Canal, by Canal Zone land lines or radio stations, for the transmission of radiograms to ships on Canal business.

PANAMA (REPUBLIC OF)

(See paragraph in italics, page 362.)

PARAGUAY

THE inland republic of South America known as Paraguay is divided into two distinct portions by the river bearing the same name. The first Spanish Colony was settled in 1535, and the country remained under Spanish rule until 1811. After a number of vicissitudes, the present constitution was proclaimed on the 25th November, 1870. The legislative authority is vested in a Congress of two houses, the executive being entrusted to a President, assisted by five Ministers.

CONTROL.

There are three wireless stations in Paraguay at present open to the public, their control being vested in the Director of Posts and Telegraphs. These stations are situated at Asuncion, the capital of the Republic (or—more strictly—Lambaré, on the outskirts thereof), Concepcion, and Encarnacion. They are identical in capacity and possess a radius of 300 miles by day and 600 miles by night. They were erected by Siemens Schuckert in accordance with a contract made with that firm and the Paraguayan Government in 1913. The Asuncion (Lambaré) station was completed in December, 1914, that at Concepcion in March, 1915, and that at Encarnacion was taken over by the Government in February, 1916.

There are no privately owned stations. The Government has instituted a wireless telegraph school which is attached to the College of Military and Naval Cadets.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Dr. Luis A. Riart	Minister of Interior	Avenida Colombia, Asuncion
(Vacant)	Director-General of Posts and Telegraphs	Calle Yegros, Esq. Bermejo, Asuncion
Juan B. Tendil	Head of Telegraph Office	431 Calle Oliva, Asuncion
Francisco Fernandez ..	Technical Inspector	Calle 14 de Julio, Asuncion

ORGANISATION.

The Paraguayan wireless service is at present confined to the interior of the country, for the Governments of Paraguay and Argentina have not yet been able to come to a working agreement for the maintenance of a public service. An agreement, however, has been entered into by the two Governments to use wireless as an auxiliary to relieve congestion or breakdown of the line system. (*See Convention below.*)

The three Government installations are not confined to a specific Government service, but are available for the public service within the country, and occasionally, on emergency, for communication with the exterior.

The War Department have seven subsidiary, or portable, installations for use at the five military centres and on the armed patrol steamers.

ADMINISTRATION.

There are no special laws or regulations affecting the subject, but the text of the Convention referred to above will be found below.

A—Convention between Paraguay and Argentina.

CONVENTION.

A The following is the text of a Convention entered into between the Governments of Paraguay and the Argentine Republic.

Date of the Convention,
November 15th, 1918.

Plenipotentiaries—

For Paraguay: Dr. Eusebio Ayala.

For Argentina: Dr. José María Cantilo.

After an interchange of credentials, which were found in order, the following agreement was signed, the object of which is to facilitate communication between the two countries mentioned.

1. For the telegraphic interchange between Argentina and Paraguay radiotelegraphic methods will be used as an auxiliary whenever owing to the amount of traffic or breakdowns in the terrestrial lines—it may become necessary to use wireless in order to maintain an uninterrupted service.

2. Both the Argentina and the Paraguay offices will use for the exchange of messages the Posadas and Formosa stations, one at a time, or the two if necessary. The two manage-

ments will see to it that the traffic is distributed in such a way as to ensure the quickest service between the hours between 12 noon and 12 midnight, Argentine time. The wavelengths will be of the standard damped type of 600 metres.

3. Whenever it is required, and should it be impossible to carry through the exchange over the stations named in the preceding article, the service may be taken off directly between Buenos Aires and Asuncion.

4. In all matters referring to transmission rates, accounts and service regulations, the Argentine and Paraguay regulations at present in force in the telegraphic service will apply.

5. This Convention will come into effect thirty days after its ratification by the contracting parties, and either party may withdraw at any time by giving 90 days' notice previous to the date when the suspension of the service is intended to take effect.

This Convention is made out in duplicate and signed by the two plenipotentiaries whose seals have been affixed, and they have agreed that the exchange of the ratification will take place in the city of Asuncion within thirty days from this date.

PEMBA

(See ZANZIBAR.)

PERIM

(See map on p. 161.)

PERSIA

THE agreement entered into with the Shah's Government lends an added interest to this country's relations with Persia. The country

COPYRIGHT "GEOGRAPHIA" L^o 55 FLEET STREET LONDON, E.C. 4

is divided into 33 provinces, and according to the most reliable estimates covers an area of about 630,000 square miles. The population exceeds nine millions.

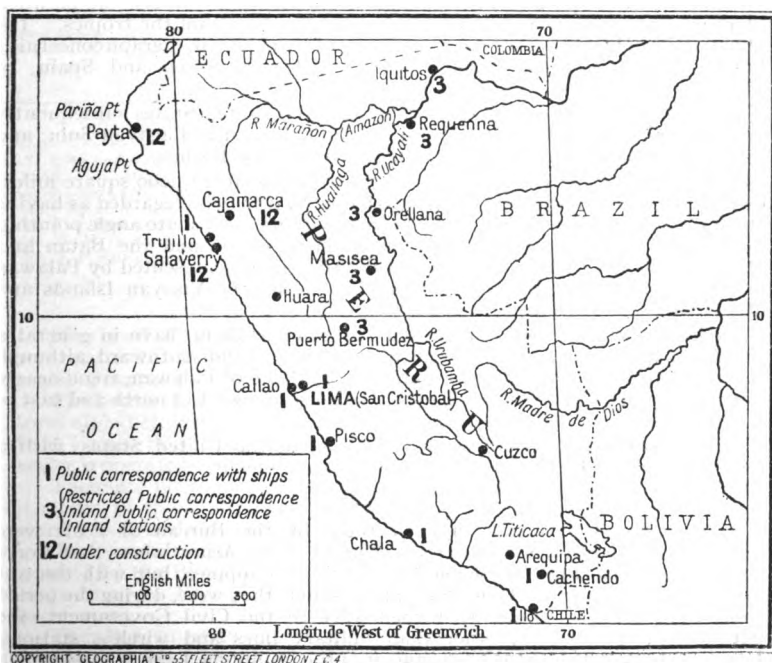

The map shows the wireless stations in operation in Persia and on the Persian Gulf, all of which are in the hands of the British Military Authorities. The largest of these is at Jask on the Gulf of Oman. The French Legation in Tehran and the Persian Cossack Division also possess a small wireless apparatus each, but they are chiefly used as receiving stations and are not believed to have the power necessary to transmit any distance.

The wireless station at Bahrein was erected by the Indo-European Telegraph Department in January, 1916, and is controlled by the Director, Indo-European Telegraph Department, Karachi, India. There is one clerk in charge and two operators, and the station is open for Government and commercial traffic.

No Laws or Regulations exist, as yet, in regard to the administration of wireless in this country.

PERU

THE Republic of Peru, formerly the most important Spanish Vice-royalty in South America, declared its independence on July 28th, 1821, but was not actually free until three years later. Its constitution was proclaimed on November 10th, 1860, and entrusts the executive power to a President, the legislation being in the hands of a Senate and House of Representatives.

Territorially it is divided into twenty departments and three provinces, the total area being estimated at 532,617 square miles. The capital city is Lima, which is closely connected with Callao, its port on the Pacific coast.

CONTROL.

The control of radiotelegraphy is directed by the Ministerio de Fomento (Minister for Progress and Public Works).

OFFICIAL CONTROLLING WIRELESS TELEGRAPHY.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
Señor Don Ing. Tamayo . .	Director del Servicio Radiotelegraphica del Peru . .	Lima

ADMINISTRATION.

There are fourteen radiotelegraphic stations open to public service in Peru, but no special legislation has been issued, the wireless service being subject to the same regulations as the ordinary wired service, differing therefrom only with regard to rates.

PHILIPPINE ISLANDS

THE Philippine Islands form a part of the great archipelago known as the East Indies. They lie south-east of the continent of Asia, nearly south of the Japanese Islands and north of Borneo and Celebes; between the meridians of $116^{\circ} 40'$ and $126^{\circ} 34'$ east longitude, and between the parallels of $4^{\circ} 40'$ and $21^{\circ} 10'$ north latitude, that is entirely within the tropics. The boundaries and the limits of the group are set forth in the paragraph concerning limits in the Treaty of Paris between the United States and Spain, of December 10th, 1898.

In addition to the lands thus delimited, the United States subsequently acquired from Spain the little group of islands known as Cagayan Sulu, and nine other small islands, lying off the north coast of Borneo.

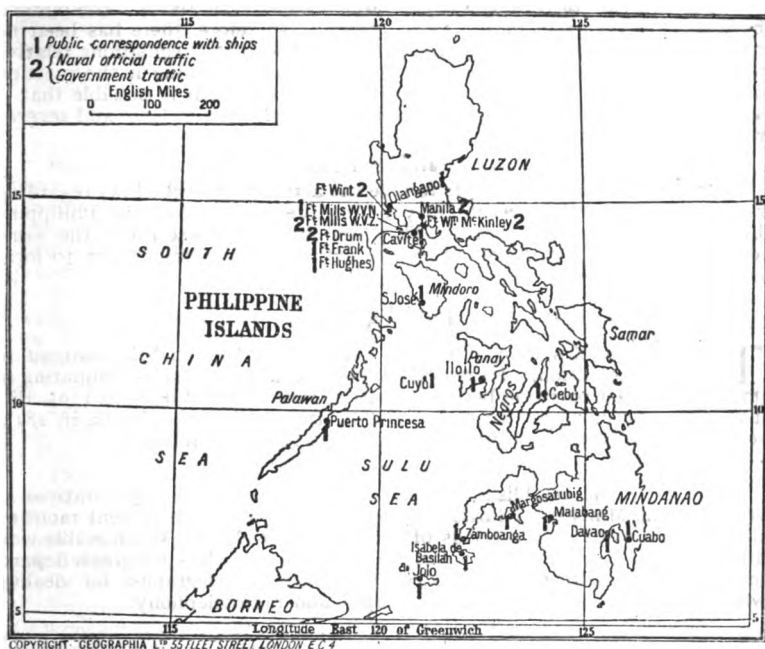

The Philippine Islands have an area of about 115,000 square miles. Considering the Philippine Archipelago by itself, it may be regarded as having the form of a triangle, open at the base and with its most acute angle pointing northward, this being represented by northern Luzon and the Batan and Babuyan Islands. The western leg of the triangle is represented by Palawan and dependent islands, and the eastern one by the Visayan Islands and Mindanao, with the Sulu sea lying between them.

These islands, and the mountain ranges upon them, have in general a trend which may be roughly described as northward and southward, although certain of them, such as that forming the backbone of Palawan, trend nearly north-east and south-west, while others trend to the west of north and east of south.

The Philippine Islands are a possession of the United States, with a representative and practically autonomous government.

CONTROL.

Several of the stations now operated by the Bureau of Posts were originally erected by the Signal Corps, United States Army, when that Corps operated the telegraph and cable lines of the Philippines, but with the rest of the telegraph system of the Philippine Islands they were, during the period from 1903 to 1907 gradually turned over to the Civil Government, the entire telegraph system, other than military lines and wireless stations, being now controlled by the Government of the Philippine Islands and forming a part of the Bureau of Posts.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
U.S. Army and Naval Stations		
Lieut. T. N. Alford ..	Philippine Communication Superintendent ..	Manila
Insular Government Stations		
Hon. Mr. D. Jakosalem ..	Secretary of Commerce and Communications ..	Manila
Mr. José Topacio ..	Acting Director of Posts ..	Manila
Mr. W. H. Howard ..	Radio Engineer and Technical Adviser ..	Manila
Mr. V. P. Villanueva ..	Electrical Engineer of the Bureau of Posts ..	Manila

ORGANISATION.

Nearly all of the commercial wireless traffic of the Philippines is between shore stations, which form an integral part of the telegraph system of the Insular Government.

The Continental Morse alphabet is used on the wireless, and the American Morse alphabet on land and cable lines; and the radio laws and regulations of the United States are conformed to as far as local conditions permit. The service is operated and maintained almost entirely by Filipinos.

There are no wireless societies, nor amateur or privately owned stations on record in the Philippines. There is one ship station on a Government owned vessel, and several ship stations on privately owned vessels.

There are fifteen land stations open for general public service, ten of them operated by the Bureau of Posts. These include five operated by the United States Army or Navy, but not ship stations licensed by the United States Government.

The Bureau of Posts has an extensive programme for the erection of additional wireless stations, and the erection of 18 new wireless stations in different parts of the archipelago is now under way.

The Bureau of Posts stations are designed strictly for commercial business and the relief of the cable system. Therefore, there has been no provision for radio compass stations, nor are there any regulations relative to aviation at present. The Bureau of Posts is, however, taking up the question of aerial mail service between the various islands, and it is possible that if such should become a reality there would be regulations in force and several radio compass stations erected.

ADMINISTRATION.

At present it is not possible to give the actual text of the laws regarding radio work, for they have not as yet been presented before the Philippine Legislative bodies for passage. They are, however, practically the same as those in force in the United States, with a few exceptions due to local conditions.

POLAND

THE historic Kingdom of Poland has recently been rightly restored to its former position. Its record has been an unhappy one, culminating in its third and last partition between Austria, Prussia and Russia in 1795, this division being subsequently rearranged by the Congress of Vienna in 1815, so that the original shares of Prussia and Austria were diminished.

CONTROL.

Normally the establishment and control of radiotelegraph stations is vested in the Ministry of Posts and Telegraphs, but at the present moment these functions lie in the hands of the Ministry of War. When stable conditions are restored it is proposed to establish a wireless telegraph department (as a branch of the Ministry of Posts and Telegraphs) for dealing with all matters relative to radiotelegraphy and radiotelephony.

COPYRIGHT "GEOGRAPHIA" L^{td} 55 FLEET STREET LONDON E.C.4

OFFICIAL CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Dr. Wladislaw Steslowicz ..	Minister of Posts and Telegraphs	Warsaw

ORGANISATION.

In anticipation of a great development of wireless telegraphy and telephony after the termination of the military operations, an Inter-Ministerial Commission has already been formed as in France, Italy and Russia, for the purpose of studying the problems connected with the further development of wireless telegraphy, which is regarded as one of the most important of the up-to-date means of communication over long distances.

There exist in Poland three permanent wireless stations : A 5-kw. Telef. (Telefunken) at Warsaw, a 4-kw. Poulsen at Cracow, and a 5-kw. Telef. and 4-kw. Poulsen at Posen, which, in addition to military service, are also doing service for aviation and meteorology, as well as for the Foreign Missions and the Press. There are also a number of military field stations.

The above-mentioned Inter-Ministerial Commission is collecting material on this subject, and benefits in a large measure from the experience gained by the military wireless stations.

The Central Wireless station acts mostly as a transmitting station, which is explained by its situation in the capital, which is the seat of the highest military and civil authorities, but it also receives a small quantity of press *communiqués*, whereas the Posen and Cracow wireless stations are almost exclusively engaged in receiving press *communiqués* sent to the capital by wire or by telephone.

Experts have been appointed to examine a project for the construction of a large wireless station at Warsaw of 200 to 300 kilowatt power for communication with America, whereas if the station is used for communication with European stations only, it will have a power of some tens of kilowatts.

After the results of the experiments with a receiving station fitted with a "frame antenna," a station of this type will be erected at Warsaw in the near future exclusively for receiving press news. The Polish permanent wireless stations are receiving systematically commercial and meteorological *communiqués* from all most important foreign places, whilst the Warsaw Central Station is transmitting daily a press and meteorological *communiqué*.

ADMINISTRATION.

The existing rules and regulations respecting the wireless service are of a temporary nature, and for military use only, and for obvious reasons cannot be given here.

PORTO RICO

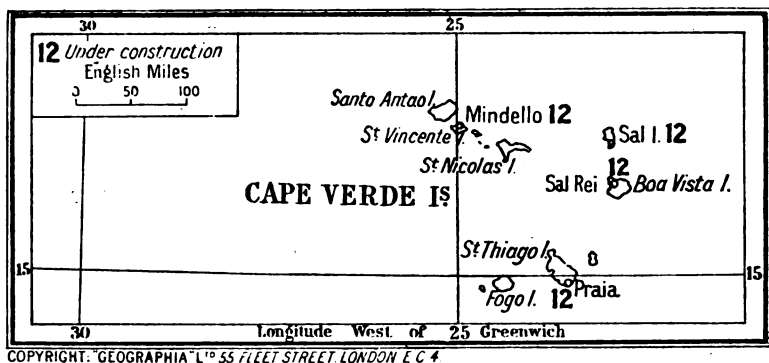

(See PUERTO RICO.)

PORTUGAL

(See map on p. 414.)

AN independent State since the twelfth century, "England's Oldest Ally" remained a monarchy till 1910. On October 5th of that year the Republic was proclaimed, and on August 20th, 1911, the present constitution was established. Affairs are administered by a President, the two Chambers reserving to themselves the legislative functions.

Portugal is a country with 5,500,000 inhabitants, and has a superficial area of 49,792 square miles (including the archipelago of the Azores and Madeira Island). She claims to be the pioneer colonising nation of the modern world.

From 1418 to 1557, the great exploration period of the Portuguese, they conquered vast territories in Africa, Asia, America and Oceania, some of which they lost in India and America, when Brazil proclaimed its independence in the year 1822. Nevertheless, the Portuguese colonies still cover an area of 1,111,572 square miles.

CONTROL.

The radiotelegraphic service in Portugal is a state monopoly. No private individual is allowed to erect or work wireless, and may not even own a simple receiver. The only exception made is that in favour of shipping companies, which are allowed to have wireless stations on board their vessels.

ORGANISATION.

Portugal's first experiments in wireless telegraphy date from 1905, and were conducted with two small Telefunken stations on a war vessel and the fortress of Cascaes, by the staff of the Posts and Telegraphs. The results, however, were not very satisfactory. Later on, Alvares, Captain of Engineers,

carried out experiments on a small scale with two Deereet stations having coherer receivers. In 1907 the first fixed station was set up at the School of Torpedoes and Electricity at Valle de Zebro (*Escola de Torpedos e Electricidade*).

With this Naval station a series of experiments were made, and it was here that the first studies in wireless originated, and the first officers and sailors of the Portuguese Marine received instruction.

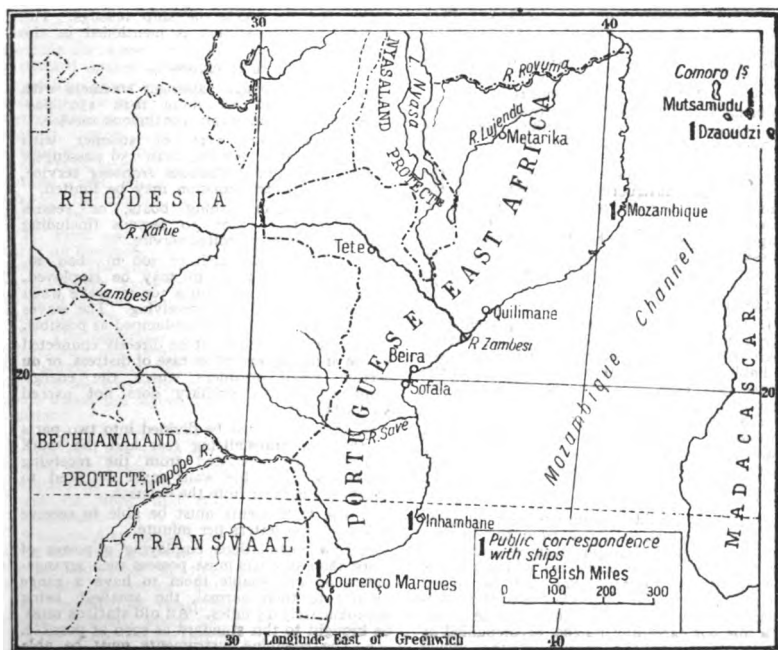

The whole work of installation, tests, and tuition was directed by the naval officer who, at the time, was the instructor at the School of Torpedoes and Electricity, and who was in charge of the Wireless Telegraphy Department.

Nowadays the School of Torpedoes and Electricity at Valle de Zebro, besides having the old apparatus for instruction, possesses a complete Marconi station with all the receivers used in the Navy, and continues to be a Naval School for officers and sailors.

Radiotelegraphy has made considerable headway, especially in the Portuguese Colonies.

Contracts have been entered into between the Colonial Office and the Marconi Company for stations at Timor (Java) and a network of stations at Angola (West Africa). A complete system of installations has been arranged for São Thomé (Gulf of Guinea) and for Mozambique (East Africa). The present Minister of Colonies, Dr. Alexandre de Vasconcellos e Sá, is responsible for the execution of this project.

The Administration of Posts and Telegraphs have also purchased a 5-kw. station for Terceira Island (Azores).

ADMINISTRATION.

The current laws and regulations reprinted below comprise :—

A—Act of July 15th, 1913.

B—Regulations.

C—Decree of April 8th, 1916.

D—Decree of March 29th, 1917.

THE ACT OF JULY 15TH, 1913.

A 1. On the expiration of a period of three months from the approval of the Regulations for the execution of the present law, no Portuguese steam vessel, with accommodation for more than fifty passengers (including crew), shall be permitted to sail from any port without having installed a wireless telegraph apparatus of the system which suits it best, in good working order, and capable of despatching and receiving radiotelegrams within a radius of action which must never be less than 100 miles.

(a) From this provision those steamers are excepted which navigate only between ports situated at distances of less than 200 miles.

(b) For steam vessels, which navigate in the Colonies where there are coastal radiotelegraph stations, and which only occasionally come to the Metropolis, the period granted for the installation of wireless telegraphy, to which the present article refers, shall be six months.

2. The wireless telegraph material of a vessel, and the respective service of transmission and reception of radiotelegrams, shall be under the charge of one or more duly qualified telegraphists.

§ The number of telegraphists, their qualifications, and that of the indispensable auxiliary staff, the organisation of their technical instruction, provisions with respect to the service of supervision, conditions of the installation of the apparatus, and the official verification of their working, shall be determined pursuant to the Regulation drawn up for the execution of the present law.

3. It is the province of the captain of the vessel to give instructions and orders for the complete carrying out of the laws and regulations in force with respect to the radiotelegraphic service, and he shall exercise the necessary supervision, carrying out and causing to be carried out any provisions which he may consider advantageous for the good working of the said service.

4. The captain shall be held responsible for any negligence in complying with the requirements of Article 1, and on conviction he shall be liable to a fine not exceeding Rs.200 and the suspension of his master's certificate for one year.

5. Negligence or failure on the part of the captain to carry out the provisions of Article 3 shall render him liable to a fine not exceeding Rs.50, which may be accompanied with imprisonment not exceeding one month after the first offence.

6. If there should be a disaster, stranding or loss of the vessel, resulting from the lack of vigilance of the telegraph staff, and the said fault was due to the negligence of the captain in failing to carry out and causing to be carried out the provisions in force relating to the radiotelegraph service, the captain shall be liable to a fine not exceeding Rs.200, accompanied or not, according to the gravity of the offence

with suspension of his certificate for a period of from one to five years.

If the serious injury, or the death, of one or more persons should result from the disaster, the penalties applicable shall be respectively those laid down in Articles 368 and 369 of the Penal Code.

7. The offences referred to in Articles 4, 5 and 6 constitute maritime crimes, and shall be judged by the Commercial Maritime Tribunal pursuant to the disciplinary Code of the Mercantile Marine.

8. All the wireless apparatus intended for Portuguese vessels shall be exempt from Customs and Municipal Duty.

9. Any legislation contrary hereto is hereby repealed.

REGULATIONS.

B The following regulations were issued on August 29th, 1913 :—

1. Ships may be equipped with any wireless telegraph apparatus which is in keeping with scientific progress.

2. The shipping or any other company may establish and work a wireless telegraph station on board ship. The station must possess a licence granted by the Government of the nationality to which the ship belongs. The "class" of the station is mentioned in the licence.

3. There are three classes :—

(a) Long voyage passenger steamers with accommodation for more than 150 passengers must maintain continuous service.

(b) The same type of steamer with accommodation for less than 150 passengers must maintain continuous receiving service, whereas the transmission may be limited.

(c) Cargo or fishing boats, or vessels carrying more than 50 persons (including crew), may have limited service.

4. and 5. Wavelength of 300 m., 600 m. and more than 1,800 m. may be employed. Small boats may work on a 300 m. wave when sending, but 600 when receiving. The waves must be as pure and as undamped as possible.

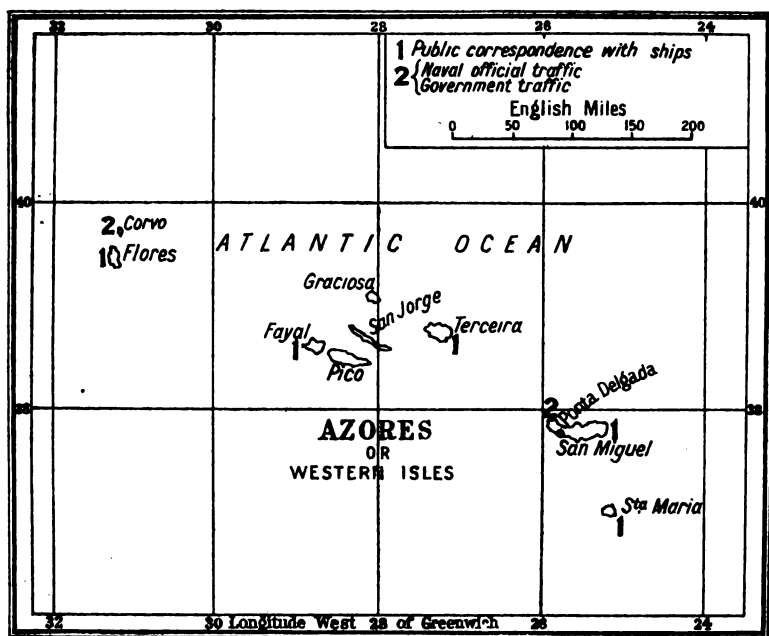

The oscillator must not be directly connected to the antennæ, except in case of distress, or on certain small steamers where the energy employed in the primary does not exceed 50 watts.

6. The cabin must be divided into two parts so that the transmitting gear and the spark gap may be separated from the receiving apparatus. Double walls must be used to isolate the interior from the exterior.

7. The instruments must be able to receive and send 100 letters per minute.

8. New installations employing a power of more than 50 watts must possess such arrangements as will enable them to have a range inferior to their normal, the smallest being approximately 15 miles. All old stations must be brought to this standard as soon as possible.

9. The receiving instruments must be able

COPYRIGHT "GEOGRAPHIA L^{da} 55 FLEET STREET LONDON E.C. 4"

to tune for waves up to 600 m., being highly protected against perturbations.

10. The power measured at the terminals of the generator must not exceed 1 kw. in normal circumstances. An increase is allowed when a station desires to communicate with a land station other than the nearest, at a distance of more than 200 miles from the nearest land station, and when, in exceptional circumstances, the communication cannot be effected with 1 kw.

11. First and second-class steamers must carry an emergency set in as safe a place as is possible. The emergency set must be able to work for six hours at least at a distance of 80 miles for first class, and 50 miles for second-class steamers.

12. The apparatus must be operated by a telegraphist who possesses a certificate from the Portuguese Government, or, in urgent cases and for one trip only, from any other Government which has signed the International Convention :

13. There are two certificates :—

(a) 1st Class (same as International).

(b) 2nd Class (12 words, adjustment of apparatus, knowledge of each instrument and its work, and rules *re* handling of telegrams).

Service.—Any member of the crew able to assist the telegraphist in his work, and possessing a knowledge of the operation of the apparatus, may be an "auxiliary" operator.

14. Second-class telegraphists may be employed on board where the wireless service is only for the shipping company's requirements or on fishing vessels, or they may act as

assistants in cases where there is already one first-class operator. On first-class steamers two first-class telegraphists must be employed.

15. On second-class steamers, one first-class and one second-class telegraphist should be employed; on third-class vessels one second-class telegraphist will suffice.

Service.—As long as land stations do not exist in the Portuguese Colonies, Portuguese steamers plying there are allowed to carry one first-class telegraphist and one "auxiliary."

16. Transmitting must be performed by a first or a second-class telegraphist, except in urgent cases.

17. The certificates state that the telegraphist has taken an oath of secrecy with regard to the correspondence.

18. The captain has authority over the working of the station.

19. Portuguese operators are preferred.

20. Should none be obtainable, foreigners may be employed if they are in possession of the Portuguese Government's certificate.

In urgent cases where no certificated telegraphist is available, provisional certificates may be issued for one voyage.

21. Certificates are supplied by the Commission after the examination of the telegraphist.

22 and 23. Captains are also bound by an oath of secrecy.

32. All telegrams sent and received on board must be registered by the captain on forms supplied by the Government. The date and hour of the sending or reception of these telegrams must be indicated.

33. Only the telegraphists and the captain are allowed to enter the wireless cabin.

34. The wireless room and the bridge must be connected by either a speaking tube or a telephone, unless they are within easy distance of one another.

DECREE OF APRIL 8TH, 1916.

C This decree forbids the installation of either wireless transmitting or receiving stations, but Government can authorise the setting up of receiving stations only.

These said stations, when authorised by Government, are subject to its control, and whenever Government may judge convenient, it may withdraw the same authorisation without any indemnification.

The owners of these stations have to pay in advance the tax of Escudos \$5.50 per annum.

Anyone who sells wireless material is obliged to send to the Government a statement of the material sold, with the names of the persons who have purchased it to identify them. Those who do not fulfil this identification will pay the fine of Escudos \$20.00 to \$100.00, and all the material that he has for sale will be seized by the Government, and will belong to the Government. In case of a second offence he will be prosecuted.

The owner of any receiving station, or any person who may have made use of the same station, and who divulges contents of messages that have been received by such station incurs a penalty.

In case of a second offence he is subject to imprisonment for six months to a year, and a fine.

DECREE OF MARCH 29TH, 1917.

D In consideration of the highest interest of the State, it is undesirable in the existing circumstances that private persons should possess wireless apparatus of any kind, or make use of the same apparatus.

It has been decided that it is desirable to confine the employment of such apparatus to schools of observatories, so as to limit the risk of misuse; and availing ourselves of the authorisation granted by the Executive Power by the Laws Nos. 373 and 491 of September 2nd, 1915, and March 12th, 1916,

We decree by the proposal of the Minister of Works and Social Providence, the following:—

ART. 1.—It is expressly forbidden to private persons to possess or make use of wireless

apparatus and fittings, or to import or sell to the public the said apparatus and accessories.

ART. 2.—The owners—whatever they may claim to be its purpose—of apparatus and wireless accessories without conducting wires, will have to deliver the said articles for deposit against receipt; in Lisbon, at the warehouses of the Material of the Posts and Telegraphs; in Oporto, at the Secretary's Office of the Second Electric Circumpection; and in the other capitals of the administrative districts of the continent and adjacent islands, at the Secretary's Offices of the Electric Sections and Sub-sections, or of the Post and Telegraph Service.

The deliveries in deposit to which this article refers will have to be effected for the Continent of the Republic, in the maximum period of five days from the date when this Decree is published in the "Diário do Governo"; for the adjacent islands in the same period reckoned from the date when the same daily paper reaches there.

ART. 3.—The apparatus and wireless fittings without conducting wire that are in the Government Teaching Institutions, and at the Astronomical and Meteorological Observatories, in the first case for the purpose of demonstration, and in the second case for scientific tests, are to be under the safe keeping of the directors of the same institutions and observatories, and will be used only for those purposes and in the presence of the said directors and under their entire responsibility, in the presence of the respective teachers and observers.

ART. 4.—He who transgresses the stipulations of this Decree incurs a penalty of Escudos \$20.00 to \$100.00, which will be fixed and collected by the Administration of Posts and Telegraphs; when it is paid voluntarily, the same Administration will order all the material to be seized, which will then belong to the Government.

In case of a second offence the fine will be fixed at its maximum.

If the fine is not paid voluntarily, the transgressors will be handed over to the judiciary, in order to be judged and the penalty imposed by the correctional police.

In Lisbon and Oporto the jurisdiction will concern the tribunal of transgressions.

ART. 5.—This Decree will come into force immediately, and will be valid to the end of the European War, after which the apparatus and wireless fittings which were voluntarily delivered will be returned to their owners, against receipt as to the conditions of Article 2.

ART. 6.—All legislation to the contrary is hereby revoked.

PORTUGUESE EAST AFRICA

(See PORTUGAL.)

PORTUGUESE GUINEA.

(See map on p. 234.)

THIS Portuguese Colony, situated on the West Coast of Africa, is bounded by the limits fixed by the Convention with France held on May 12th, 1886, and is entirely enclosed on the land side by French possessions. The chief products are oilseed, ivory, wax, rubber and hides. The capital city is Bolama.

ORGANISATION.

The wireless telegraph installation has not yet been inaugurated, but all the apparatus has been received and there are three stations in the course of erection.

ADMINISTRATION.

No laws or regulations exist yet for the administration of wireless telegraphy in this territory.

PORTUGUESE WEST AFRICA

This Colony, otherwise known as Angola, possesses a coast line of over 1,000 miles and is bounded on the north by the French Congo, on the east by the Belgian Congo, and on the south by British South Africa. The colony has been in the possession of the Portuguese since 1575, with the exception of a period of seven years (1641-1648), when it belonged to Holland. The territory is under the jurisdiction of a Governor-General, whose headquarters are at Loanda, the capital.

CONTROL.

Radiotelegraphy in the Colony constitutes a Government monopoly. All matters in relation thereto are in the care of a Board, under the presidency of the Governor. The Director of the Radiotelegraphic Service and the leading officials have a seat on this Board.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Commander Luiz Couceiro ..	Director of Radiotelegraphy	Loanda
Sr. Arnaldo de Paiva Carvalho ..	Assistant Engineer	Loanda

There are also a number of station superintendents, telegraphists, electricians and mechanics. Up to the present no stations other than Government stations are allowed. There are no aviation or meteorological stations.

ORGANISATION.

The decree for the creation of a wireless service in the Province of Angola was gazetted in Lisbon on September 23rd, 1918. The scheme includes: One 15-kw. station at Loanda; twenty-two 3-kw. stations at Cabinda, Maquela, Encoge, Malange, Luio, Saurimo, Novo Redondo, Lobito, Huambo, Quanza, Moxico, Caquengue, Mossamedes, Lubango, Mulongo, Cuanhama, Posto A, Cuangar, Cangamba, Caiundo, Dirico and Luati; nine 1½-kw. field stations (type F); two ½-kw. pack stations for the army.

These are followed by three field stations, for public and official service, situated respectively, and as a temporary measure, at Loanda, Novo Redondo and Lobito. The three latter are in the nature of experimental stations for testing the best means of arranging for future traffic. Up to the end of July, 1920, the traffic in words between these stations was as follows:—

Loanda (CRL)	262,376
Novo Redondo (CRN)	166,638
Lobito (CRO)	167,548

By the end of 1920 there had been open to public traffic, including shipping, coast stations at:—

Loando	15- and 3-kw.
Novo Redondo	3-kw.
Lobito	3-kw.
Mossanedes	3-kw.
Cabinda	3-kw.

together with the inland station of Huambo (of 3-kw.), situated 350 kilometres from the coast. All the stations are fitted with the Marconi Rotary Disc.

ADMINISTRATION.

The Laws, Regulations, etc., governing the administration of wireless telegraphy in this territory are identical with those used in Portugal.

PUERTO RICO

THE island of the "Greater Antilles" group in the West Indies known under the Spanish name of Rich Harbour lies with regard to latitude between 17° 50' and 18° 30' N.; its longitude ranging from 65° 30' to

COPYRIGHT: GEOGRAPHIA L^{td} 55 FLEET STREET LONDON E.C. 4

67° 15' W., and its total area comprising 3,606 square miles. The capital, San Juan, is 1,400 miles from New York and 982 from Key West, Florida. It is administered by a Governor appointed by the President of the United States, with a Cabinet composed of an Attorney-General, a Commissioner of Education, a Commissioner of Agriculture and Labour, a Commissioner of the Interior, a Commissioner of Health, and a Treasurer of Porto Rico; and a Senate and a House of Representatives elected for four years. With the exception of the Attorney-General and the Commissioner of Education, who are appointed by the President of the United States for four years, all of the other members of the Cabinet are appointed by the Governor with the advice and consent of the Senate of Porto Rico, also for four years.

CONTROL AND ORGANISATION.

The regulation of wireless telegraphy rests in the hands of the U.S. Navy Department, Washington, D.C., and no clubs or societies exist in the island. There are private stations worked by the South Porto Rico Sugar Company of Porto Rico (sugar factory), at Ensenada, P.R., connecting with Central Romana (a similar company in the Republic of Santo Domingo). The Ensenada station, owned by the South Porto Rico Sugar Company, is being operated under a general commercial licence granted by the U.S. Navy Department, Washington, D.C. It communicates directly with the Romana station, the Santo Domingo City public station, and San Pedro de Macoris station, in the Republic of Santo Domingo; also with ships at sea.

There are two stations belonging to, controlled and operated by, the Navy Department of the United States in Porto Rico, one in the city of San Juan and the other in the city of Cayey, P.R.

ADMINISTRATION.

The Laws and Regulations affecting radiotelegraphy in this island are identical with those current in the United States of America.

RHODESIA

CECIL RHODES, the "Colossus of South Africa" (*floruit* 1853-1902) has bequeathed his name to British Colonies covering an area of over 438,575 square miles. Rhodesia is bounded on the south by the Transvaal, on the north by the Congo State, and the Kenyaland Colony. On the east lies Portuguese East Africa, and on the west the Belgian Congo, Bechuanaland, and Portuguese West Africa.

For administrative purposes this vast territory is divided into Northern and Southern Rhodesia, the Rhodesian Chartered Company governing under the prescription of British Orders in Council.

Northern Rhodesia

In this Administrative Division the headquarters are located at Livingstone, and the district is mainly agricultural.

ORGANISATION.

With regard to Aviation Stations in this territory, aerodromes were constructed at Abercorn (close to Lake Tanganyika), Ndola, Broken Hill and Livingstone (the three latter being all on the railway line) in connection with the Cairo to Cape air flight, and these are to be maintained.

Southern Rhodesia

CONTROL.

Wireless Telegraphy is under the control of the Department of the Administrator, and the principal assistants of the Postmaster-General in such

matters are the Government Electrical Inspectors at Salisbury and Bulawayo. There are no wireless clubs or societies.

COPYRIGHT "GEOGRAPHIA" LTD 55 FLEET STREET LONDON E.C. 4

ORGANISATION.

No licences have yet been issued for wireless installations in Southern Rhodesia, and the form of licence has not been fixed.

ADMINISTRATION.

Southern Rhodesia, whose centre is at Salisbury, regulates radiotelegraphy within its border by the "Electric Telegraph Amendment Ordinance" of 1904, and sundry Notices of 1912, the text of which will be found below.

It is possible that legislation and regulations will become necessary in connection with aerial navigation which is now in course of development, and efforts are being made to secure, as far as possible, uniformity with the proposed laws and regulations of the Union of South Africa on this subject.

No permanent arrangements have yet been made for the transmission of time and weather and meteorological signals.

A—Electric Telegraph Amendment Ordinance, 1904.

B—Postal Notice No. 55 of 1912.

C—Government Notice No. 391 of 1912.

TELEGRAPH (AMENDMENT) ORDINANCE.

A The term "electric telegraph" whenever used in the "Electric Telegraph Act, 1861," or any law amending the same or relating to "electric telegraphs," shall be interpreted as including any system or means of conveying signs, signals, or communications by electricity, magnetism,

electro-magnetism, or other like agency, and whether with or without the aid of wires, and including the system commonly known as wireless telegraphy, or aëtheric signalling, and any improvements or developments of such system; and the term "line of electric telegraph" shall be interpreted as including any apparatus, instrument, mast, standard, wire,

substance, matter, or thing whatever, which is, or may be, used for the purpose of sending, transmitting, conveying, or receiving such signs, signals, or communications.

2. The meaning of the term "person" shall be further extended so as to include individuals, partnerships, companies, and corporations.

3. The provision of the first section of the said Act as to its application to Southern Rhodesia shall be read and construed as including the territorial waters thereof.

4. Within Southern Rhodesia, or the territorial waters thereof, no person not thereto expressly authorised by some law shall erect or make use of any mast, standard, or apparatus of any kind, for the purpose of signalling without wires by means of electricity, magnetism, electro-magnetism, or other like agency, or shall erect or construct any line of electric telegraph, except under a licence to be granted by the Administrator.

5. The Administrator may authorise the issue of a licence for the establishment or use of any apparatus or installation for the transmission of signs, signals, or communications, by electric telegraph, with or without the aid of wires, and may revoke the same at any time, and there shall be payable annually in respect of such a licence such sum not exceeding One Hundred Pounds sterling, as may be fixed by regulation.

6. The terms and conditions of such licence, and the duration thereof, shall be subject to such regulations as may from time to time be made by the Administrator.

7. Any person who shall establish or use, or attempt to establish or use, any such apparatus or installation as is mentioned in Sections 1 and 4 of this Ordinance, in contravention of the provisions thereof, or of any other law relating to electric telegraphs, or of any regulation thereunder, shall be liable upon conviction to forfeit all apparatus so used, and to a penalty not exceeding Two Hundred and Fifty Pounds, and, in default of payment, to imprisonment, with or without hard labour, for a period not exceeding three months, and, in case of a second or subsequent conviction, in addition to such forfeiture to a penalty not exceeding Five Hundred Pounds, or in default of payment to imprisonment, with or without hard labour, for a period not exceeding six months.

8. Any Magistrate or Justice of the Peace before whom information shall be given on oath by credible persons, that the provisions of this Ordinance are being, or have been, or are likely to be infringed, may issue a search warrant, and authorise the seizure of any instruments, apparatus or appurtenances reasonably suspected to be intended for use in such contravention.

9. Notwithstanding the provisions of Section 4 of "The Electric Telegraph Act, 1861," all regulations made under the authority of that Act shall be published in the *Gazette*, and be subject, *mutatis mutandis*, to the provisions of Section 7 of Act No. 5 of 1883 of the Cape of Good Hope.

10. This Ordinance may be cited as the "Electric Telegraph Amendment Ordinance, 1904," and shall be read as one with "The Electric Telegraph Act, 1861," of the Cape of Good Hope, and the "Telegraph Protection Ordinance, 1901," and the said laws may be cited together as the "Electric Telegraph Laws, 1861 to 1904."

POSTAL NOTICE No. 55 OF 1912.

B Public attention is hereby directed to the provisions of the "Electric Telegraph Amendment Ordinance, 1904," under which no person not thereto expressly authorised by some law shall erect or make use of any mast, standard or apparatus of any kind for the purpose of signalling without wires by means of electricity, magnetism, electro-magnetism or other like agency, or shall construct any line of electric telegraph except under a licence to be granted by the Administrator.

The term "Line of Electric Telegraph" is defined as any apparatus, instrument, mast, standard, wire, substance, matter or thing whatever which is or may be used for the purpose of sending, transmitting, conveying or receiving signs, signals, or communications.

All persons having, or desiring to have, such lines of electric communication, including telephone lines, whether on their private property or otherwise, are hereby notified that application for licence to use such lines must be made to the Administrator through the Postmaster-General.

The licence fees payable in respect of such lines, as published in Government Notice No. 391 of 1912 are as follow:—

(a) 1s. per annum for a private telephone or telegraph line exclusively on the private property of the person constructing and using the same;

(b) 10s. per annum for a private telephone or telegraph line passing beyond the boundaries of the owner's land. (The licence does not confer any right to erect telephone or telegraph lines outside the boundaries of the applicant's land, and the applicant must make his own arrangements in this regard);

(c) £50 per annum for any installation of wireless telegraphy or telephony.

All persons having in use lines of electric communication which have not been authorised by the Administrator are hereby notified that unless the required permission be applied for within one month of the date of publication of this Notice they will render themselves liable to the penalties provided in Section 7 of the Telegraph Ordinance above referred to.

GOVERNMENT NOTICE.

No. 391 of 1912.

DEPARTMENT OF POSTS AND TELEGRAPHS.

The Treasury, Salisbury,

December 19th, 1912.

C It is hereby notified for public information that His Honour the Acting Administrator, with the advice of the Executive Council, has been pleased to approve of the following Regulations regarding the issue of licences for installations of private telephones, telegraphs, or other means of electric communication, whether with or without wires, in terms of section 5 of the "Electric Telegraph Amendment Ordinance, 1904."

By command of His Honour the Acting Administrator in Council.

P. D. L. FLYNN, Acting Treasurer.

When any person is authorised to establish

or use any means of electric communication as defined in the "Electric Telegraph Amendment Ordinance, 1904," the Postmaster-General may issue to such person an annual licence for the use of such line on payment in advance of the undermentioned fees, namely:—

(a) 1s. per annum for a private telephone or telegraph line exclusively on the private property of the person constructing and using the same;

(b) 10s. per annum for a private telephone or telegraph line passing beyond the boundaries of the owner's land. (The licence does not confer any right to erect telephone or telegraph lines outside the boundaries of the applicant's land, and the applicant must make his own arrangements in this regard);

(c) £50 per annum for any installation of wireless telegraphy or telephony.

ROUMANIA

THE country was formed by the fusion of the two Principalities of Moldavia and Wallachia on December 23rd, 1861, and its first ruler was Colonel Cuza, who had, in 1859, been elected "Hospodar" or "Lord" of the two Principalities. He assumed the Government under the title of Prince Alexandru Joan I. The total population is about six millions. It has not yet been possible to obtain the text of any radiotelegraphic laws and regulations, but it is hoped to include these in our next edition.

The existing wireless stations will be seen upon reference to the annexed map.

CONTROL.

The State alone may own wireless stations in Roumania. Authority to possess installations is, however, given to scientific institutions, and also to those engaging in special wireless research work.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
M. Emile Giurgea ..	Director of Herastreu (Bucharest) Wireless Station ..	Str. Renasterii 6, Bucharest
M. Nicolau Alexandre ..	Chief of the Wireless Station of Baneasa ..	Baneasa, Bucharest
Capt. Emile Geles ..	Chief of the Vaslui Wireless Station ..	Vaslui

The various classes of Radiotelegraphic stations are:—

(1)—Stations for International correspondence—

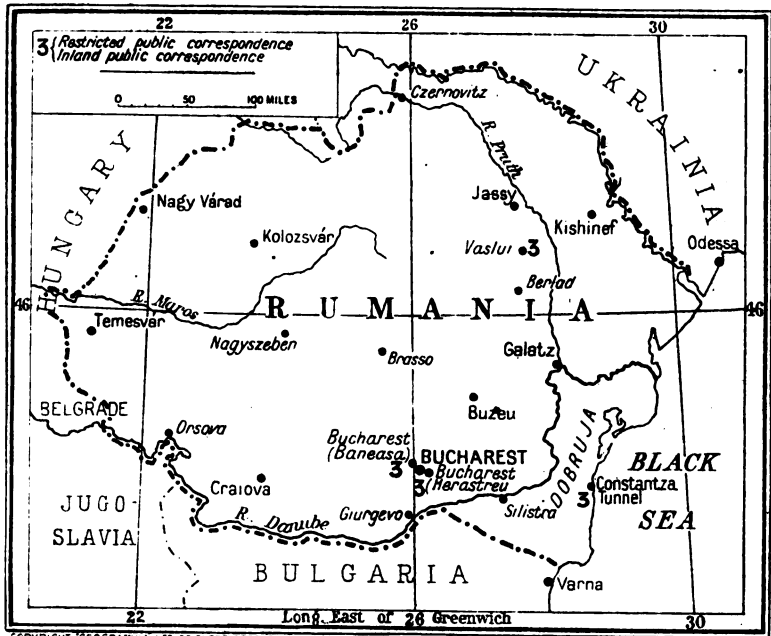

Bucharest (Herastreu),
Bucharest (Baneasa), and
Vaslui (Moldavia).

(2)—Stations for Internal correspondence—

- (i) Military Mobile Stations.
- (ii) Ship Stations.
- (iii) Stations for the River Danube Service.
- (iv) Naval Stations.
- (v) Small Stations for Aviation Service.

ORGANISATION.

In 1915 Bucharest was cut off from telegraphic communication with the West, and an improvised wireless station of 8–10 kw. (50 cycles) was constructed from laboratory apparatus. A second station with an alternator (100 cycles) was also constructed in the Carol Park, Bucharest, by means of which communication was established with Athens, Rome and Paris. Several months later the Ministry of War constructed a new station of about 20 kw. (100 cycles), which only worked over small distances because shortly after-

wards was erected at Herastreu (Bucharest) a 150 kw. station, system S.F.R. spark 1,000 cycles, with a horizontal antenna supported by eight towers 325 ft. high. At the same station there existed an S.F.R. installation of 15 kw. These two S.F.R. stations afforded excellent wireless communication until the evacuation of Bucharest in November, 1916, when the 15 kw. station was installed at Vaslui (Moldavia), where it is still located—and established communication with Salonica and the 150 kw. station at Botosani (North Moldavia), where it worked until the evacuation of the latter town (June, 1917). During the evacuation of Bucharest the Wireless Service was conducted by means of a 12 kw. station constructed by the Roumanians and installed on three wagons. After the evacuation of Botosani, being unable to reinstal at Jassy the 150 kw. station on account of the lack of three-phase current necessary for the electric motors, an improvised station of 15 kw. was constructed, driven by an automobile motor, and which worked at Jassy until December, 1918, establishing communication with Paris, Lyons, Coltano, etc. In January, 1916, the original Jassy station was closed down and re-erected at Bucharest (Military Wireless Station of Baneasa). The principal station at Herastreu (Bucharest), which was destroyed during enemy occupation, is being rebuilt. The eight metal towers, which were carried off by the Armies of Occupation, are being replaced by eight others about 365 ft. high, of which seven are ready. Whilst awaiting the proximate reinstallation of the 150 kw. station, a new 15 kw. station has been constructed on the spark system (600 cycles). The installation will soon be completed by a 50 kw. arc set, and will be fitted for automatic transmission and reception.

Before the evacuation of Bucharest, wireless telegraphy in its relation to meteorology was carried out at the wireless station at Herastreu (Bucharest), and regular communication was instituted with the Meteorological Services of Paris, Salonica and Budapest. As soon as the wireless station of Herastreu

(Bucharest) is reopened, this Meteorological Service will be again inaugurated, and will be worked in conjunction with the aviation centres.

ADMINISTRATION.

Roumania took part in the various International Radiotelegraphic Conferences. The laws concerning radiotelegraphy provide for articles established by Congress. The Radiotelegraphic Service is divided into four parts:—

- (a) International Correspondence (Office of Posts and Telegraphs and Ministry of the Interior).
- (b) Internal Correspondence, Army (Specialist and Aviation Battalion).
- (c) Navy.
- (d) Mercantile Marine (Roumanian Maritime Service and Ministry of Public Works).

RUSSIA

UNTIL March, 1917, this vast area was administered by the late ex-Czar Nicholas II, who was descended, in the female line, from Michael Romanoff, elected Czar in 1613 after the extinction of the House of Rurik. At the date above referred to, the Russian Duma carried through a *coup d'état*, as a result of which Czar Nicholas abdicated.

ADMINISTRATION.

Wireless Telegraphy is very extensively used throughout these wide territories; but we are not at present in a position to do more than reprint the old regulations. As far as can be ascertained, there are 16 wireless stations open for public service to ships and 14 for Government traffic only.

The following Statute and Regulations have been adopted for the institution of an inter-departmental Radiotelegraphic Committee:—

A—Statute.

B—Regulations.

C—Decree of February 20th, 1908.

STATUTE.

A 1. To establish the attached regulations concerning an inter-departmental Radiotelegraphic Committee and the necessary personnel.

2. To make Paragraph 1 effective as from July 1st, 1912.

3. To allot for the expenses of the said Committee (13,200 roubles annually) from the Imperial Treasury commencing from the year 1913 and to debit the expenses for 1912 (amounting to 6,600 roubles) to the anticipated surplus on the estimates for 1912.

REGULATIONS.

B 1. An inter-departmental Committee is instituted for the co-ordination of the work of the various departments relating to the existence and use of the Imperial network of radiotelegraphic and radiotelephonic stations and for the consideration of schemes for the establishment and maintenance of radiotelegraphic and radiotelephonic communication which require preliminary discussion between the departments affected thereby.

This Committee is attached to the Head-

quarters Staff of the Postal Telegraph Department.

2. The Committee shall consist of a President and of permanent members appointed by the Ministries of the Interior, of War, or Marine, of Commerce and Industries, of Routes of Communication and of Foreign Affairs. When schemes for the establishment and exploitation of radiotelegraphic and radiotelephonic stations for the use of the Ministry of Finance or other departments are under consideration representatives of the department in question shall be appointed to attend the meetings of the Committee and have the right to vote.

When legal aspects of radiotelegraphic and radiotelephonic communication are under discussion a representative of the Ministry of Justice shall be invited to attend and shall have the right to vote.

3. The Ministers of the Interior, of War, of Marine, of Routes of Communication, and of Commerce and Industries shall each appoint two members to the Committee and the Ministry of Foreign Affairs shall appoint one member.

When necessary the Ministry of the Imperial Court shall appoint two representatives to attend the meetings of the Committee and the Ministry of Justice or other Ministries shall each appoint one member.

In the event of the representative of any of the Ministries being unable to attend the meetings of the Committee the Ministry in question may appoint a temporary substitute.

4. The President of the Committee and one of the permanent members of each department that furnishes two members must have special scientific and technical knowledge, and any temporary substitute appointed to represent these must be in possession of the same qualifications.

The President of the Committee shall be appointed by His Imperial Majesty on the recommendation of the aforesaid Ministers and the members of the Committee.

The members of the Committee can be appointed without any regard as to their rank.

During the absence of the President the fulfilment of his duties shall devolve upon one of the members appointed by the Minister of the Interior.

5. The duties of the Committee are as follows :—

(a) The examination of schemes which have been worked out by the various departments for radiotelegraphic and radiotelephonic installations with the object of co-ordinating them and of fitting them into a general plan for a network of radiotelegraphic and radiotelephonic stations throughout Russia.

(b) The regulation of the mutual relations between the radiotelegraphic and radiotelephonic stations of different departments during their operations.

(c) The examination of matter relating to communication between ship and shore stations.

(d) The consideration of proposals made by various departments for the issue of new laws, rules, and regulations concerning radiotelegraphic and radiotelephonic communication.

(e) The preparation of materials and questions to be brought forward by Russia for discussion at International Radiotelegraphic and Radiotelephonic Conferences.

(f) The drafting of general technical regulations, rules, and standards relating to radiotelegraphic and radiotelephonic installations.

(g) The investigation of the general requirements of Russia in the matter of specialists in radiotelegraphy and telephony, and in the matter of their education and of the right to radiotelegraphic and radiotelephonic communication.

(h) Action as consultants in connection with questions concerning radiotelegraphic and radiotelephonic communications which may be referred to the Committee by various departments and particularly the examination of and reporting upon the practical value of new inventions relating to radiotelegraphy and radiotelephony.

(i) All other matters and questions concerning radiotelegraphic and radiotelephonic communication.

6. All matters and questions relating to radiotelegraphic and radiotelephonic communication enumerated in Sections (a) to (e) and (h) of the preceding paragraph (5) shall be brought forward

by the various departments for the decision of the Committee.

Matters indicated in Sections (f), (g), and (i) of the same paragraph shall be examined by the Committee either on their own initiative or at the request of the departments interested.

7. Matters shall be submitted to the Committee in accordance with the instructions and resolutions of Ministers or Commanders-in-Chief in a complete form and with a definitely worded request from the department.

8. Communications between the President of the Committee and the Senate or the Chiefs of Headquarters or Chiefs of Departments or their subordinates or Governors shall be made in accordance with Clauses 233-236 of the Institution of Ministries.

9. For the preliminary technical consideration of complicated affairs the Committee shall be empowered to appoint, when required, special sub-committees consisting of members of the Committee who are particularly concerned in the matter and of well-informed persons who may be invited by the Committee and who will have the right to vote at the meeting of the sub-committees. At such meeting a member chosen by the Committee will preside.

10. For the carrying out of scientific and technical researches the Committee shall be permitted to use the laboratories of the Chamber of Weights and Measures and of other institutions in St. Petersburg, under conditions to be defined by special agreement between the Ministry of the Interior and other Ministries.

11. The final preparation and presentation of affairs to the Committee will be performed by one of the permanent members. Matters of a departmental character will be presented by a representative of the Ministry responsible for bringing the matter before the Committee for consideration.

12. The Committee will meet, by order of the President, at the Headquarters of the Postal Telegraph Department, not less than once per month, with the exception of the summer holiday-season, when meetings will be convened as required.

13. To form a quorum at meetings, the attendance is required of the representatives of the department which has introduced the business under discussion, and of at least one permanent member each from the Ministries of the Interior, of War, of Marine, and of Commerce and Industries.

14. All affairs in the Committee shall be decided by a simple majority of votes, each department having only one vote through its representatives. At meetings of sub-committees questions shall be decided by a simple majority of votes of all members of the sub-committee, including experts who may have been invited to attend the meetings.

In case of the votes of two parties being equal, the President shall give the casting vote.

15. In case of a department disagreeing with a decision of the Committee, the latter may, if they consider it necessary, refer the matter to the Council of Ministers.

16. In connection with each matter examined by the Committee a short protocol must be prepared, and signed at the same meeting by all members of the Committee who are present.

Independently of the protocols detailed journals of the meetings will be kept and these will include the opinions of the Committee concerning the business under consideration. In case of a division of votes the protocol and the journal must contain the opinions both of the majority and the minority, together with statement as to the Ministries which were included in each party.

17. The originals of journals and protocols will be kept with the documents of the Committee, but copies of the journals must be communicated within seven days to the Chiefs of Headquarters and to Chiefs of sections of those departments which are represented on the Committee.

18. The procedure to be followed in bringing matters before the Committee must be decided by the Committee and confirmed by the Minister of the Interior by agreement with other Ministers concerned.

19. The secretarial work in connection with the Committees shall be carried out by the secretary of the Committee, by his assistant, and by the officials allotted for the clerical work of the Committee.

20. The Secretary of the Committee shall be chosen by its President, whose choice must be confirmed by the Minister of the Interior. The appointment of the assistant secretary is confirmed by the President of the Committee. Only persons who have received a University education and who have a technical knowledge of radiotelegraphy and radiotelephony will be qualified to hold such posts.

The following are the principal provisions of the Decree concerning wireless telegraphy in Russia of February 20th, 1908 :—

By a "radiotelegraphic station" is understood every installation designated for telegraphic communications and capable of pro-

ducing on the spot or receiving from a distance electro-magnetic waves.

Stations of this kind comprise :—

(1) Stations designated for a special use.

(2) Stations designated for a general use, that is to say, open to accept telegrams from the public.

The form of administration, working, and supervision of radiotelegraphic stations are regulated by the personnel of the Telegraph Service, except in the case of the special and supplementary provisions to be eventually fixed.

The establishment of radiotelegraphic stations for public use and the general management of the Radiotelegraphic Service of the Empire are under the jurisdiction of the General Direction of Posts and Telegraphs. The various Government departments, having established radiotelegraphic stations for their special use, inform the General Direction of Posts and Telegraphs before opening the service at the named stations of their destination, power, range, and technical construction.

The carrying out by scientific associations and schools of public instruction of scientific experiments and researches in radiotelegraphy is subject to an authorisation, by special request, of the Minister for the Interior. These experiments, as well as the working of radiotelegraph stations for purposes of instruction, can be interdicted in cases where such experiments and instructions would exercise a harmful influence on neighbouring radiotelegraphic stations, or, in general, prejudice the interests of others.

Stations on board ships anchored in ports, or sailing near the coasts, are subjected to special regulations decreed by the Minister for the Interior in common accord with the Ministers of War, of the Marine, of Ways and Communications, of Foreign Affairs and of Commerce and Industry.

SAINT HELENA

THIS lonely little island, with an area forty-seven square miles, in the South Atlantic, lies about 800 miles from the nearest land (Ascension Island) and 1,200 miles from the West Coast of Africa. Its claim to fame rests upon the fact that it formed the place of exile of the great Napoleon.

St. Helena is an Admiralty coaling station and a resting place for the Eastern Telegraph Company's cable between Cape Town and St. Vincent (Cape de Verdes). The wireless installation is open for public service with ships.

ADMINISTRATION.

Wireless Telegraphy is administered under the following Ordinance and Regulations :—

A—Wireless Telegraphy Ordinance, 1912.

B—Regulations.

ORDINANCE.

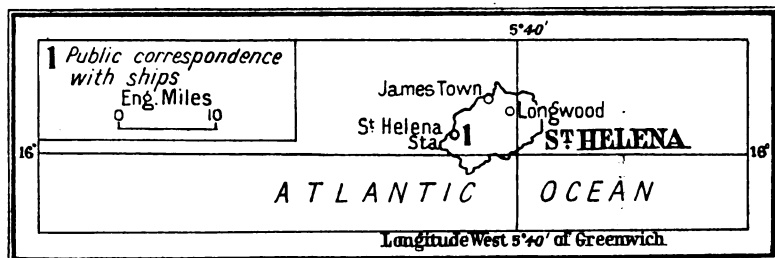

A The following Ordinance provides for the regulation of wireless telegraphy :—

1. From and after the passing of this Ordinance the Governor-in-Council may make regulations as he may deem requisite for regulating the use of wireless telegraphy on merchant

ships whether British or foreign while in the territorial waters of this Colony.

2. The Master of any ship and any person who shall act in contravention of any regulation now published or which may hereafter be published shall be liable on conviction to a penalty not exceeding ten pounds.

3. This Ordinance may be cited as "The Wireless Telegraphy Ordinance, 1912."

COPYRIGHT "GEOGRAPHIA" LTD 55 FLEET STREET LONDON E.C. 4

REGULATIONS.

B Made by the Governor-in-Council under Ordinance No. 7 of 1912, entitled "An Ordinance to provide for the Regulation of Wireless Telegraphy."

1. All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of this Colony shall be worked in such a way as not to interfere with (a) naval signalling or (b) the working of any wireless telegraph station lawfully established, installed, or worked in the Colony or the territorial waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used whilst such ship is in any of the harbours of this Colony except with the special or general permission of the Governor.

3. If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in the territorial waters shall be subject to such further rules as may be made by the Governor from time to time, and such rules may prohibit or regulate such use in all cases as may be deemed desirable.

4. These Regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

SAINT KITTS-NEVIS

(See LEEWARD ISLANDS.)

SAINT LUCIA

(See map on p. 311.)

ST. LUCIA, lying 30 miles north-east of St. Vincent, possesses a total area of 233 square miles. One of the most notable features consists of a twin natural phenomenon known as the Pitons, great conical mountains, which lie at the mouth of Soufrière Bay. Castries, the capital, is on the western coast, near its northern extremity.

CONTROL AND ORGANISATION.

The wireless station, situated on the Morne Fortune overlooking the capital, was erected by the Admiralty in 1915, and is maintained and controlled by that Department. The officer in charge is a naval petty officer telegraphist and the operators are naval ratings.

ADMINISTRATION.

Wireless telegraphy is administered under an Ordinance of 1912 and various Regulations issued on its authority.

A—Wireless Telegraphy Ordinance, 1912.

B—Regulations of November 25th, 1912.

C—Regulations of August 24th, 1914.

D—Regulations affecting Ship Stations, June 9th, 1917.

WIRELESS TELEGRAPHY ORDINANCE.

No. 10 of 1912.

A This Ordinance may be cited as the Wireless Telegraphy Ordinance, 1912.
 2. In this Ordinance "wireless telegraphy" means any system of communication by telegraph without the aid of any wire connecting the points from and at which the messages or other communications are sent or received: Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

3. (a) A person shall not establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place or on board any ship registered in the Colony except under and in accordance with a licence granted in that behalf by the Governor.

(b) Every such licence shall be in such form and for such period as the Governor may determine, and shall contain the terms, conditions and restrictions on and subject to which it is granted.

4. A person shall not work any apparatus for wireless telegraphy installed on any merchant ship, whether British or Foreign, while that ship is in the territorial waters of the Colony, otherwise than in accordance with regulations under this Ordinance.

5. (a) The Governor may from time to time make regulations for carrying into effect the purposes of this Ordinance, and such regulations for carrying into effect the purposes of this Ordinance, and such regulations shall on publication in the *Gazette* have the same effect as if enacted in this Ordinance.

(b) The regulations in the Schedule to this Ordinance shall have effect except in so far as they may be amended or rescinded by regulations made under the authority of this section.

(c) If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in the territorial waters of the Colony shall be subject to such further regulations as may be made by the Governor from time to time, and such regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

6. If a Magistrate is satisfied by information on oath that there is reasonable ground for suspecting that a wireless telegraph station has been established without a licence in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any merchant ship without a licence in that behalf or contrary to the provisions of any regulations made under this Ordinance or of any licence granted under this Ordinance, he may grant a search warrant to any police officer or any person appointed in that behalf by the Chief of Police and named in the warrant, and a warrant so granted shall authorise the police officer or person named therein to enter and inspect the station, place or ship and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

7. (a) Any person who shall offend against any provision of this Ordinance or any of the

regulations made thereunder shall be liable on summary conviction for every such offence to a fine not exceeding fifty pounds, and upon such conviction the Court may order that any apparatus for wireless telegraphy in connection with which the offence was committed shall be seized and forfeited.

(b) Proceedings shall be taken before the First District Court on the complaint of the Chief of Police or of any person thereto authorised by him in writing, and the procedure shall be the same as the procedure for the time being in force in respect of offences punishable on summary conviction.

8. The Wireless Telegraph Ordinance, 1903, is hereby repealed.

SCHEDULE—SECTION 5 (2).

REGULATIONS PASSED NOVEMBER

25TH, 1912.

B All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of the Colony shall be worked in such a way as not to interfere with—

(a) Naval signalling, or

(b) The working of any wireless telegraph station lawfully established, installed or worked in the Colony or the territorial waters thereof; and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. In these regulations "naval signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and naval stations, or between a ship of His Majesty's Navy or a naval station and any other wireless telegraph station whether on shore or on any ship.

3. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in any harbour or bay of the Colony except with the special or general permission of the Governor.

4. For the purpose of any proceedings under these regulations the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship.

5. Any summons or other document in any proceedings under these regulations shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in charge or command of the ship.

6. These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

REGULATIONS PASSED AUGUST

24TH, 1914.

C Whereas by Section 5 (3) of the Wireless Telegraphy Ordinance, 1912, it is enacted that if at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy the use of wireless

telegraphy on board merchant ships while in the territorial waters of the Colony shall be subject to such further regulations as may be made by the Governor from time to time; and such regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

And whereas, in my opinion, such emergency as aforesaid has arisen :—

Now I (the Acting Administrator) do hereby make the following further Regulations namely :—

1. The Governor may appoint any person to take possession and control of the apparatus for wireless telegraphy on board of any merchant ship while in the territorial waters of the Colony.

2. Any person so appointed may enter upon any such ship and take possession of the aforesaid apparatus thereon on behalf of His Majesty, and use the same for His Majesty's Service, and subject thereto for such ordinary services as to the said person may seem fit.

3. Any such person may instead of taking possession of such apparatus as aforesaid direct the master of the ship to submit or cause to be submitted to him all messages intended for transmission or arriving by the said apparatus or any class or classes of such messages, to stop or delay the transmission of any messages or deliver the same to him, and generally to obey all such directions with reference to the transmission of messages as such person may prescribe and the master of the ship shall obey and conform to all such directions. Any

master failing to obey and conform to any such direction shall be liable on summary conviction to the penalties provided under the Ordinance.

REGULATIONS MADE BY THE GOVERNOR.

OPERATION OF SHIP STATIONS WITHIN THE TERRITORIAL WATERS OF THE COLONY.

June 9th, 1917.

D 1. The radiotelegraph stations on board ships (other than His Majesty's ships of war or ships of war of his Allies) shall not be worked whilst such ships are within the territorial waters of the Colony.

2. For the proper enforcement of the above ships of British register in the territorial waters of the Colony must completely disconnect their aerial wires from their radio apparatus, the ends of such wires being suspended entirely clear of the radiotelegraph cabin, preferably from the main rigging in such a manner as to show they are properly disconnected.

3. Ships of foreign register in the territorial waters of the Colony must—subject to the provisions of the following Regulation 4—take down their aerial wires completely and disconnect the same from their radiotelegraph apparatus.

4. Ships of foreign register remaining in the territorial waters of the Colony for less than twelve hours may, at the discretion of the competent naval authority, or the person appointed by the Governor for the purpose, be permitted to leave their aerials up, provided the same are disconnected in accordance with the provisions of Regulation 2 of these regulations.

SAINT VINCENT (B.W.I.)

ST. VINCENT, lying 30 miles south-west of St. Lucia and 97 miles west of Barbados, comprises an area of 140 square miles.

ADMINISTRATION.

No wireless stations exist in this Colony, but wireless telegraphy would be administered under an Ordinance and Regulations which figure below.

A—Wireless Telegraphy Ordinance, 1913.

B—Regulations.

ORDINANCE.

A This Ordinance may be cited as "The Wireless Telegraphy Ordinance, 1913."

2. In this Ordinance "Wireless Telegraphy" means any system of communication by telegraph without the aid of any wire connecting the points from and at which the messages or other communications are sent or received: Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

3. (1) A person shall not establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place or on board any ship registered in the Colony except under and in accordance with a licence granted in that behalf by the Governor.

(2) Every such licence shall be in such form and for such period as the Governor may determine, and shall contain the terms, conditions, and restrictions on and subject to which it is granted.

4. A person shall not work any apparatus for wireless telegraphy installed on any merchant ship, whether British or foreign, while that ship is in the territorial waters of the Colony otherwise than in accordance with regulations under this Ordinance.

5. (1) The Governor in Council may from time to time make regulations for carrying into effect the purposes of this Ordinance, and such regulations shall on publication in the *Gazette* have the same effect as if enacted in this Ordinance.

(2) The Regulations in the Schedule to this Ordinance shall have effect except in so far as they may be amended or rescinded by regulations made under the authority of this section.

(3) If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in the territorial waters of the Colony shall be subject to such

further regulations as may be made by the Governor from time to time, and such regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

6. If a Magistrate is satisfied by information on oath that there is reasonable ground for suspecting that a wireless telegraph station has been established without a licence in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any merchant ship without a licence in that behalf or contrary to the provisions of any regulations made under this Ordinance, or of any licence granted under this Ordinance, he may grant a search warrant to any Police Officer or any person appointed in that behalf by the Chief of Police and named in the warrant, and a warrant so granted shall authorise the Police Officer or person named therein to enter and inspect the station, place, or ship, and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

7. (1) Any person who shall offend against any provision of this Ordinance or any of the regulations made thereunder shall be liable on summary conviction for every such offence to a fine not exceeding fifty pounds, and upon such conviction the Court may order that any apparatus for wireless telegraphy in connection with which the offence was committed shall be seized and forfeited.

(2) Proceedings shall be taken before the Police Magistrate of the First District on the complaint of the Chief of Police or of any person thereto authorised by him in writing, and the procedure shall be the same as the procedure for the time being in force in respect of offences punishable on summary conviction.

8. "The Wireless Telegraph Ordinance, 1904," and "The Wireless Telegraph Amendment Ordinance, 1912," are hereby repealed.

REGULATIONS.

- B** 1. All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of the Colony

shall be worked in such a way as not to interfere with—

(a) Naval signalling, or

(b) the working of any wireless telegraph station lawfully established, installed, or worked in the Colony or the territorial waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. In these Regulations "Naval Signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and Naval Stations, or between a ship of His Majesty's Navy or a Naval Station and any other wireless telegraph station whether on shore or on any ship.

3. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in any harbour or bay of the Colony except with the special or general permission of the Governor.

4. For the purpose of any proceedings under these regulations the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship.

5. Any summons or other document in any proceedings under these Regulations shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in command or charge of the ship.

6. These Regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

7. Regulations made by the Governor in Council on the 17th day of December, 1912, under the authority of the Wireless Telegraphy Ordinances, 1904 and 1912, are hereby repealed

SALVADOR

THE independent Republic of El Salvador is situated on the West Coast of Central America, and occupies an area estimated at 7,255 square miles. The population, according to the Census of 1914, numbers 1,254,151. It originated in the course of the dissolution of the Central American Federation.

COPYRIGHT "GEOGRAPHIA" LTD 55 FLEET STREET LONDON E.C.4

(Guatemala, Salvador, Honduras, Nicaragua, and Costa Rica) which took place in 1839.

The form of Government is Republican, and there are three branches of Administration: (1) The Executive, which comprises the President and Cabinet Ministers; (2) the Legislature or National Assembly; and (3) the Judiciary.

CONTROL AND ORGANISATION.

The first wireless station was erected by the Government and inaugurated in September, 1917. It is situated at the southern end of the city of San Salvador, near the military post "El Zapote." This is a private Government station, and is not open to public service. The station was presented to this Government by the Government of Mexico, and is known by the name of "Estación Venustiano Carranza."

Radiotelegraphy is not a State monopoly, private companies or individuals being allowed to erect or work wireless installations with the consent of the Government, provided that the present contract with the Cable Company be not thereby infringed.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Señor Don Cecilio Bustamante..	Minister of Public Works	San Salvador
Señor Don Ricardo Posada ..	Director of Telegraphs	San Salvador

ADMINISTRATION.

At present there are no special laws regulating wireless telegraphy, and the only publication which deals with this subject is the *Revista Telegrafica*, the official organ issued by the Director-General of Posts and Telegraphs, wherein are reported any such notices and items.

SAMOA ISLANDS

(See map on p. 356.)

SANDWICH ISLANDS

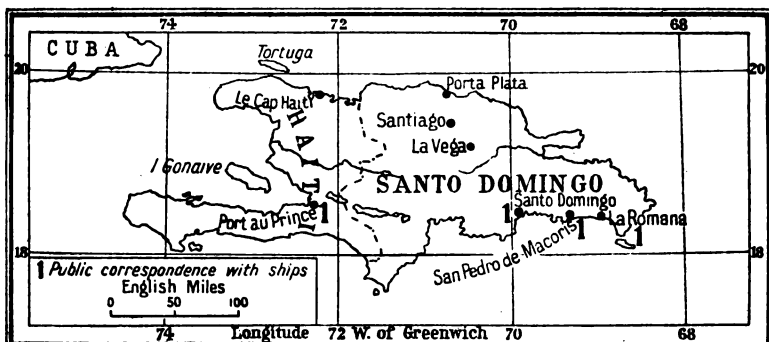

(See UNITED STATES OF AMERICA.)

SANTO DOMINGO (DOMINICAN REPUBLIC)

THE island of Santo Domingo is divided between two States, the Western being the Republic of Haiti, the Eastern the Republic of Santo Domingo. French is the official language of the former, Spanish of the latter. The first constitution of the Dominican Republic bears the date of November 18th, 1844; it has been amended several times, and the one in force at present bears the date of February 22nd, 1908. The President administers the Executive, the Legislative functions devolving on a National Congress with two Chambers, the Senate and Cámara de Diputados (House of Deputies). The United States landed troops in May, 1916, and is supervising the administration for the present. The Republic covers an area of 50,000 square kilometres, and is divided into twelve provinces. The population is calculated at 700,000 inhabitants.

CONTROL.

The supervision of the wireless service is under the control of the Superintendent of Telegraphs, who, in turn, is subordinate to the Director-General of Posts and Telegraphs, under the Department of "Fomento y Comunicaciones."

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Lieut.-Comdr. R. M. Warfield, C.E.C., U.S. Navy	Officer in Charge of the Department of "Fomento y Comunicaciones" ..	Government Palace, Santo Domingo City
Mr. E. H. Hathaway	Director-General of Posts and Tele- graphs	Senate Building, Santo Domingo City
Dr. Eduardo R. Soler, C.E. ..	Superintendent of Telegraphs ..	Santo Domingo City
Mr. F. Lindemuth	Electrical Gunner, U.S.N. ..	Wireless Telegraph, Santo Domingo City
Mr. J. R. Saladin	Chief of Wireless and Telephone Station	San Pedro de Macoris
Mr. Francisco Ortiz	Operator of Radio Station ..	San Pedro de Macoris

ORGANISATION.

The first land wireless station was erected at the capital city of Santo Domingo in 1908. The apparatus, supplied by the de Forest Company of New York, did not work satisfactorily, and despite the using of a power of 20 kw., only established irregular communication with Puerto Rico. After a lapse of five years, a 2-kw. set was installed in September, 1913, and regular public communication was instituted with Puerto Rico. In addition to this publicly owned station, there is a station at La Romana (in the Province of Seybo), owned by the (Sugar Refining) Central Guanica Company in Puerto Rico. The latter relays to the British Cable Company in Puerto Rico, and thus touch is maintained with the outside world. There is also another station open for public service with ships.

In March, 1919, the two kilowatt set in the Radio Station of Santo Domingo was replaced by a new set, which includes one Radio Transmitter "Marconi System," of 5 kilowatts, 500 cycles, of 250 volts, alternating current.

Communication can now be made direct with San Juan, Puerto Rico, without the intervention of the Ensenada Station. The transmission of messages *via* Ensenada is now assured by day as well as by night, excepting when there are electric disturbances. It is also possible to have direct communication with Guantanamo, Cuba, especially at night, and with Port-au-Prince, Haiti.

Two steel towers, each 225 feet high, have been erected for the antennæ, which are 500 feet in length.

A small station belonging to the Republic was installed on April 13th, 1914, at San Pedro de Macoris, a town on the southern coast of Santo Domingo. This is utilised for communication with the station at Santo Domingo City, with the central Romano station, and with ships approaching the port.

ADMINISTRATION.

The only legislation on the subject of radiotelegraphy consists of a special law passed June 8th, 1911, and published in the *Official Gazette*, No. 2207 of July 8th, 1911. This law exempts from taxation enterprises of public utility.

There is also in force a public contract with the Central Guanica and Central Romana (Sugar Refining) Companies, dated December 19th, 1913. This lays down the conditions under which the two companies conduct for the Dominican Government Public Radiotelegraphic Service through the medium of their stations.

Clause I deals with the rates per word for foreign messages, which for the general public amounts to 30 cents per word.

Clause II deals with radio rates in the island—8 cents per word.

Clause III deals with special rates for officials of the States and the two companies, press rates, etc.

Clauses IV, V, and VI deal with matters and methods of accounting.

SARAWAK

(See BORNEO, BRITISH.)

SEYCHELLES ISLANDS

THIS Colony consists of a group of islands belonging to Great Britain, almost in the middle of the Indian Ocean, and 600 miles north-east of Madagascar. Formally associated with Mauritius, the Colony of Seychelles was at one time administered from that island; but in 1888 a special Administrator was created, and the occupant of the post in 1903 was raised to the rank of Governor.

The principal island is Mahé (52½ square miles), and the Colony includes a number of dependent islands, which bring its total estimated area up to 156 square miles.

CONTROL AND ORGANISATION.

There are no private or commercial wireless installations. The only installation in the Colony was erected in 1915 at North-West Bay, Mahé, and belongs to the Admiralty.

There is no official of the Seychelles Government Service who is specially charged with the supervision of radiotelegraphy. Its control forms part of the general administration, of which the principal personnel will be found below.

<i>Official.</i>	<i>Title.</i>	<i>Address.</i>
Lieut.-Col. the Hon. Sir Eustace Fiennes, Bart.	Governor and Commander-in-Chief	Mahé
Mr. E. R. Logan	Chief Justice	Mahé
Mr. P. B. Pedrides	Legal Adviser and Crown Prosecutor	Mahé
Mr. E. Taylor	Treasurer and Collector of Customs	Mahé
Dr. J. B. Addison, O.B.E.	Chief Medical Officer	Mahé
Mr. G. C. du Boulay	Private Secretary	Mahé

ADMINISTRATION.

Radiotelegraphy is administered under the Ordinances, the text of which will be found below, and which cancel "The Telegraphic and Electrical Stations Ordinance, 1903," printed in our former issues.

The list of current rules here included is as follows :—

A—Ordinance No. 3 of 1914.

B—Ordinance No. 11 of 1917.

C—Regulations (No. 127) thereunder.

COPYRIGHT: "GEOGRAPHIA" LTD 55 FLEET STREET, LONDON, E.C. 4

ORDINANCE NO. 3 OF 1914.

Dated February 19th, 1914.

Enacted by the Governor of the Colony of Seychelles with the advice and consent of the Legislative Council thereof.

A To provide for the regulation of wireless telegraphy.

Be it enacted by the Governor of the Colony of Seychelles with the advice and consent of the Legislative Council thereof, as follows:—

1. This Ordinance may be cited as "The Wireless Telegraphy Ordinance, 1914."

2. In this Ordinance and in any regulation made thereunder the expression "Wireless Telegraphy" means any system of communication by telegraph without the aid of any wire connecting the points from and at which the messages or other communications are sent and received: Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

3. The Governor may whenever he shall deem it expedient to do so licence the establishment of any wireless telegraph station or the installation or working of any apparatus for wireless telegraphy in any place in the Colony or on board any British ship registered in the Colony.

4. (1) No person shall establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place in the Colony or on board any British ship registered in the Colony except under and in accordance with a licence granted in that behalf by the Governor.

(2) Every such licence shall be in such form and for such period as the Governor in Executive Council may determine and shall contain such terms, conditions and restrictions on and subject to which the licence is granted as the Governor shall consider desirable in the public interest.

5. (1) If any person establishes a wireless telegraph station without a licence in that behalf or installs or works any apparatus for wireless telegraphy without a licence in that behalf he shall be liable to a fine not exceeding two thousand rupees (Rs. 2,000) or to imprisonment for a term not exceeding twelve months and in either case be liable to forfeit any apparatus for wireless telegraphy installed or worked without a licence, but no proceedings shall be taken against any person under this Ordinance without the previous sanction of the Crown Prosecutor.

(2) If the Chief Justice or the Police Magistrate is satisfied by information on oath

that there is reasonable ground for believing that a wireless telegraph station has been established without a licence in that behalf or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any ship within the jurisdiction without a licence in that behalf he may grant a search warrant to any Police Officer to enter and inspect the station, place or ship and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

6. (1) The Governor in Executive Council may make regulations for all or any of the following matters:—

(i) for prescribing the form and manner in which applications for licence under this Ordinance are to be made;

(ii) for prescribing the fees payable on the grant of any licence;

(iii) for regulating the manner in which apparatus for wireless telegraphy on board a merchant ship whether British or foreign in the waters of the Colony shall be worked so as to prevent interference with naval signalling or the working of any wireless telegraph station lawfully established, installed or worked in the Colony or the waters thereof and so as to not interrupt or interfere with the transmission of any wireless messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea;

(iv) for prohibiting except with the special or general permission of the Postmaster of the Colony the working or using of any apparatus for wireless telegraphy on board a merchant ship whether British or foreign whilst such ship is in any of the harbours of the Colony;

(v) for prohibiting or regulating in case at any time in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy on board merchant ships whether British or foreign in the waters of the Colony the use of wireless telegraphy on board such ships while in such waters by such further rules as the Governor may see fit to make from time to time and either in all cases or in such cases as may be deemed desirable.

(2) Provided that no regulations made in respect of the matters described in paragraph (iii) (iv) and (v) of this section shall apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

7. When an applicant for a licence proves to the satisfaction of the Governor that the sole object of obtaining the licence is to enable him to conduct experiments in wireless telegraphy a licence for that purpose shall be granted subject to such special terms, conditions and restrictions as the Governor may think proper but shall not be subject to any rent or royalty.

8. Every omission or neglect to comply with and every act done or attempted to be done contrary to the provisions of this Ordinance or of any regulations made thereunder or in breach of the conditions and restrictions subject to or upon which any licence has been issued shall be deemed to be an offence against this Ordinance and for every such offence not otherwise specially provided for the offender shall in addition to the forfeiture of any articles seized be liable to a fine of one thousand Rupees (Rs. 1,000).

9. Ordinance No. 4 of 1903 is hereby repealed.

ORDINANCE NO. 11 OF 1917.

AN ORDINANCE TO AMEND ORDINANCE NO. 3 OF 1914.

Dated September 1st, 1917.

B Be it enacted by the Governor of the Colony of Seychelles by and with the advice and consent of the Legislative Council thereof, as follows:—

1. This Ordinance may be cited as "The Wireless Telegraph (Amendment) Ordinance, 1917," and shall be construed as one with the Wireless Telegraph Ordinance, 1914.

2. Section 6 (iv) of the Wireless Telegraph Ordinance, 1914, is hereby repealed and replaced by the following:—

(iv) For prohibiting except with the general or special permission of the Governor, the working or using of any apparatus for wireless telegraphy on board any ship whether British or foreign other than His Majesty's ships of war, whilst such ship is in the waters of this Colony and for the control or disposal of any apparatus, instrument or thing which may be used in connection with wireless telegraphy on board any ship (other than His Majesty's ships of war) whilst such ship is in the waters of the Colony.

3. Section 6 (2) of the Wireless Telegraph Ordinance, 1914, is hereby repealed.

4. (1) The Governor may appoint officers for the purpose of seeing that the provisions of the Wireless Telegraph Ordinance, 1914, as amended by this Ordinance, and any regulations made thereunder are complied with and it shall be lawful for such officers to go on board any ship whether British or foreign whilst any ship is at anchor in the waters of the Colony to see that such provisions are complied with.

(2) If any such officer is molested, obstructed, hindered or insulted while in the execution of his duties an offence shall be deemed to have been committed.

5. For the purpose of any proceedings under the Wireless Telegraph Ordinance, 1914, as amended by this Ordinance, or under any regulations made thereunder, the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship and for any breach of the Wireless Telegraph Ordinance, 1914, as amended by this Ordinance, and any regulations made thereunder.

6. Any summons or other document in any proceedings under the Wireless Telegraph Ordinance, 1914, as amended by this Ordinance, shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in command or charge of the ship.

7. The regulations published in *Gazette* No. 22 of 1914 under Government Notification No. 52 of 1914 are hereby repealed.

Passed in the Legislative Council at a meeting held on the 27th August, 1917.

REGULATIONS.

No. 127 of 1917.

C 1. The radiotelegraph stations on board ships (other than His Majesty's ships of war) shall not be worked whilst such ships are within any harbour or bay of the Colony.

2. For the proper enforcement of section 1 of these regulations ships of British register in any harbour or bay of the Colony must completely disconnect their aerial wires from their radio apparatus, the ends of such wires being suspended entirely clear of the radiotelegraph cabin, preferably from the main rigging, in such a manner as to show they are properly disconnected.

3. (1) Ships of foreign register in any harbour or bay of this Colony must, subject to the provisions of sub-section 2 of this section, take down their aerial wires completely and disconnect the same from their radiotelegraph apparatus.

(2) Ships of foreign register remaining in a harbour or bay of this Colony for less than twelve hours may, at the discretion of the Governor, be permitted to leave their aerials up, provided the same are disconnected in accordance with the provisions of section 2 of these regulations.

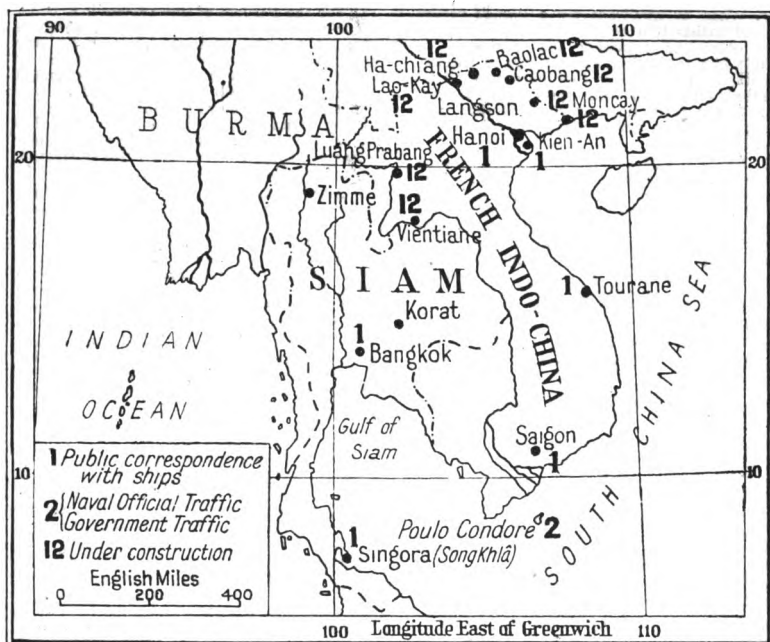

4. Any officer appointed under the provisions of section 4 of Ordinance No. 11 of 1917 may order that the radiotelegraph cabin on board any ship (other than His Majesty's ships of war) be sealed and he shall thereupon affix his seal to such cabin.

If any seal so affixed is removed or tampered with an offence shall be deemed to have been committed against these regulations.

Made by His Excellency the Governor in Executive Council at a meeting held on the 24th day of September, 1917.

SIAM

THE Kingdom known to us as Siam, to the natives as Muang Thai, lies between British Burma and French Indo-China. Its integrity is guaranteed by France and Great Britain under mutual agreement. The form of government is an absolute monarchy, with an Executive Council of Ministers.

The total area of Siam (inclusive of all the islands) measures about 240,000 English square miles. The coast line extends approximately over 2,000 miles, and geographically Siam lies between $5^{\circ} 40'$ and $20^{\circ} 20'$ N. latitude, and between $97^{\circ} 5'$ and $105^{\circ} 0'$ E. longitude. The greatest distance east to west is estimated at about 510 miles, and that from north to south 1,005 miles.

CONTROL.

Originally radiotelegraphy was organised in Siam under supervision of the Minister of Marine, but it is now controlled by the Ministry of Communications. The first stations erected were those at Saladeng in Bangkok (lat. $13^{\circ} 44' 32.49''$ N., long. $100^{\circ} 29' 22.30''$ E.), and at *Songkhla (lat. $7^{\circ} 10' 0''$ N., long. $100^{\circ} 36' 12''$ E.); both these land stations are directly controlled by Government.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Commander Phra Vidyu Duralikhit ..	Head of Radiotelegraphic Department	Bangkok
Commander Phra Vidyu Duralikhit ..	Chief Engineer, Wireless Station ..	Bangkok
Lieut.-Commander Luang Jarnarn-Aggikich ..	Assistant Engineer, Wireless Station ..	Bangkok
Junior Lieut. Add Tanucing ..	Principal Assistant	Bangkok
Junior Lieut. Mee Pathamanavin ..	Principal Assistant	Songkhla

ORGANISATION.

There are experimental, amateur, and instructional stations at Saladeng. There are also ship stations on Government vessels.

* Sometimes spelt "Singora."

ADMINISTRATION.

The law and regulations under which radiotelegraphy is administered in Siam will be found below.

A—Radiotelegraph Act, B. E. 2457 (1914).

B—Notice concerning the opening of Radiotelegraphy for Public Service, B. E. 2462 (1919).

C—Ministerial Regulations relating to the use of Radiotelegraphy, B. E. 2462 (1919).

RADIOTELEGRAPH LAW.

A This Law may be cited as "The Radiotelegraph Law, B.E. 2457" (1914).

2. It shall come into force from the date of its publication in the Government Gazette.

COAST AND LAND STATIONS.

3. The right to establish and work radio-stations for telegraphic and telephonic purposes on Siamese soil and on board ships permanently anchored in Siamese territorial waters is an exclusive privilege of the Government.

This privilege shall be reserved to the Department of Posts and Telegraphs in the Ministry of Communications.

4. The Army and Navy may establish and work independently radiotelegraph stations or field apparatus subject to such conditions as may be from time to time sanctioned in writing by the Minister of War or Marine.

Any station established under this section may be opened to public correspondence only under special arrangement with the Department of Posts and Telegraphs.

SHIP STATIONS.

5. No merchant ship under the Siamese flag shall establish or work any radiotelegraph or telephone apparatus without a licence from the Minister of Communications.

The Minister of Communications shall not grant such licence until he has been satisfied that the apparatus can work in accordance with the provisions of the International Radiotelegraph Convention of London, 5th July, 1912, and will be handled by qualified operators.

Such licence shall be for such time and subject to such conditions as the Minister of Communications may deem good.

6. No ship, whether under the Siamese or a foreign flag, excepting ships of war, is allowed while in Siamese territorial waters to send a message by means of her radiotelegraph apparatus when and where such message can be forwarded by the Government system, either with or without wires, except for the purpose of transmitting messages to or from a ship in distress.

SECURITY.

7. No person or persons engaged in or having knowledge of the operation of any radio-station shall disclose the contents of any message transmitted or received by such station for the purpose of transmission, except to the person to whom the same may be directed or his authorised agent, or to another station employed to forward such message to its destination, or in obedience to the directions of a Court of competent jurisdiction.

PENALTIES.

8. Whoever establishes or works any apparatus contrary to the provision of Sections 3

and 6, or in excess of the conditions laid down under Section 4 of this Law, shall be punished with imprisonment not exceeding six months or fine not exceeding five hundred ticals or both.

The captain or master of a ship, and the person directly responsible for the offence, if any, shall both be liable to punishment for every infringement of the provisions of Section 6.

9. Any person infringing Section 5 of this law shall be punished with fine not exceeding one hundred ticals.

10. Upon the conviction of any person of an offence under the foregoing sections, the Court may order the forfeiture of any apparatus used for the commission of such offence.

11. Any person injuring apparatus or committing any act of mischief to a radiotelegraph station lawfully established, or doing anything to prevent or intended to prevent the transmission or delivery of any radiotelegraph message by any such station, shall be guilty of an offence under Section 196 of the Penal Code.

12. Whoever commits any offence against Section 7 of this Law shall be punished under Section 279 to 281 of the Penal Code.

EXECUTION.

13. The Minister of Communications shall have charge and control of the execution of this Law.

It shall be lawful for him to frame regulations and to fix the scale of fees for land, coast, and ship charges in the transmission of messages by radiotelegraphy or telephony, as well as for licences under Section 5.

It shall also be lawful for him to frame regulations about the qualifications required from operators.

All such regulations shall be in accordance with the detailed Service Regulations appended to the International Radiotelegraph Convention.

Such regulations, on being sanctioned by His Majesty and published in the Government Gazette, shall be deemed to be part of this Law.

Given on the 24th day of April, B.E., 2457 (1914), being the 1,261st day of the Present Reign.

BY THE KING'S MOST EXCELLENT MAJESTY.

Whereas His Majesty's Government has always reserved to itself the exclusive right to establish and work means of telegraphic and telephonic communications throughout Siam;

And whereas apparatus for wireless telegraphy has now been devised practicable for use by land and sea;

And whereas it is desirable that ships under the Siamese flag, more specially passenger carriers, should be equipped with such apparatus, worked under proper regulations, for the greater safety of life at sea;

And whereas the regulations necessary to insure the proper and efficient working of wireless

telegraphic stations must conform in all respects with the provisions of the International Radiotelegraph Convention of London, 1912, to which His Majesty's Government has been a party;

Therefore His Majesty has been pleased to enact the following law:—

NOTICE CONCERNING THE OPENING OF RADIO-TELEGRAPHY FOR PUBLIC SERVICE.

Dated 22nd May, 1919.

B In view of the progress made in commerce and trade in this country, it is considered that the use of Radiotelegraphy which was originally established by the Royal Government for its own use should be extended to general public.

The Ministry of Communications having submitted these facts before His Majesty the King, has now obtained the Royal Permission that the Naval Radiotelegraphic stations in Bangkok and at Singora (Songkhla) should be open to public use from the 1st June, 1919.

The public radiotelegraphic service will be under the management of the telegraph officials of the Post and Telegraph Department, who will receive and despatch radiotelegraphic telegrams in a similar manner to the despatch of other telegrams in the Kingdom.

Senders of radiotelegraphic messages should write clearly the words "Wireless Telegraph" on the upper left-hand corner of the form supplied, before the names of the persons for whom the messages are destined.

(Sd.) 1st Grand Councillor,

Chao Phya Wongsa Nuprabadh,
Minister of Communications.

MINISTERIAL REGULATIONS FOR THE LICENSING OF RADIO-TELEGRAPHY UPON SHIPS, THE ISSUING OF CERTIFICATES OF COMPETENCY TO RADIO-TELEGRAPH OPERATORS, THE FIXING OF FEES FOR SUCH LICENCES AND CERTIFICATES AND THE FIXING OF FEES FOR LAND, COAST AND SHIP CHARGES IN THE TRANSMISSION OF MESSAGES BY RADIO-TELEGRAPHY.

C Whereas under Sections 5 and 13 of the Radiotelegraph Law, B. E. 2457, the Minister of Communications is empowered to licence the establishment and working of radiotelegraph apparatus upon merchant ships under the Siamese Flag, to frame regulations about qualifications required from operators and to fix the scale of fees for land, coast and ship charges in the transmission of messages by radiotelegraphy, such Regulations, on being approved by His Majesty and published in the Government Gazette to be deemed to be part of the Law.

It has now pleased His Majesty the King to authorise the Minister of Communications to issue the following Ministerial Regulations:—

1. The operation of radiotelegraph stations upon any merchant ship under the Siamese Flag must conform to the provisions of the International Radiotelegraph Convention of London, July 5th, 1912, the detailed Service Regulations appended to the said International Radiotelegraph Convention, the Radiotelegraph Law, B. E. 2457 and any amendments and alterations which may be made therein, and the regulations from time to time issued by the Minister of Communications under the authority of said Radiotelegraph Law, B. E. 2457.

2. No person shall work the radiotelegraph upon any merchant ship within Siamese territorial waters in such a way as to interrupt or interfere with

(a) Naval or military signalling.

(b) The transmission of messages between other radiotelegraph stations lawfully established.

3. Before the installation of any radiotelegraph apparatus upon any merchant vessel under the Siamese Flag, an application shall first be filed with the Minister of Communications, according to Form A of Schedule I, attached hereto. If the Minister of Communications is satisfied that the apparatus described in said application, will, when installed, be capable of working in accordance with the requirements of Section 4 (a) of these Regulations, an installation licence will be issued according to Form B. of said Schedule I. When the installation is completed, the applicant shall notify the Minister of Communications, who, thereupon, will cause an inspection to be made. If this inspection is satisfactory, the Minister of Communications will issue a ship licence according to Form C, and subject to the conditions therein contained. Such ship licence shall be good until March 31st after its date, but may be renewed within one month immediately after the expiration of the period for which it was issued. Such installation licences and ship licences shall be executed in duplicate, one copy to be retained by the Ministry of Communications and the other given to the licensee.

4. The Minister of Communications shall not grant such ship licence unless he is satisfied that—

(a) the radiotelegraph apparatus can be worked in accordance with the provisions of the International Radiotelegraph Convention of London and the detailed Service Regulations appended thereto, and that,

(b) operators qualified in accordance with the provisions of these Regulations and who are the holders of the certificates provided for herein will be employed to work the same.

5. A separate licence is required for each ship belonging to the same owner.

6. The fee for the issuance of each ship licence shall be 5 Bahts and a fee of the same amount shall be charged for each renewal thereof.

7. No person shall work a radiotelegraph on board any merchant ship under the Siamese Flag unless he holds either a first or second-class certificate of competency granted by the Minister of Communications.

8. The Minister of Communications shall grant certificates of competency in accordance with the conditions contained in the second Schedule to these Regulations.

9. Should a holder of a certificate of competency granted under these rules be proved to the satisfaction of the Minister of Communications wilfully or negligently to have failed to comply with the provisions of the International Radiotelegraph Convention of London, July 5th, 1912, the detailed Service Regulations appended thereto, the Radiotelegraph Law, B. E. 2457 or the Regulations issued by the Minister of Communications, or any amendments or modifications of any of these or any other Regulations which may be issued from time to time for his guidance, the Minister of Communications may cancel the certificate.

10. The Minister of Communications of any officer authorised by him may require the holder of a certificate of competency to produce the same for cancellation under Regulation 9, and the holder must comply with such requisition.

11. Nothing in these Regulations shall apply to the use of the radiotelegraph for the purpose of making or answering signals of distress.

12. Rates for messages transmitted to or received from ship stations, shall be as follows:—

Coast station transmitting or receiving charge for radiotelegrams to or from ships, 20 satangs (0.40 francs) per word with a minimum charge of 2 Bahts (4.00 francs).

Land charges for the receipt or transmission of radiotelegrams over the Inland Telegraph

System shall be those provided in the published tariff for inland messages. Land charges shall in addition include the actual expenses of postage or carriage, if the message is to be delivered outside of established telegraph districts.

Charges for relaying messages outside of Siam shall be fixed in accordance with published international tariffs.

These rates may be modified or supplemented and rates fixed for the charges at ship stations by the Minister of Communications.

SCHEDULE I.

Conditions and Forms of application for Licence to instal Radiotelegraph Apparatus on ships Installation Licence, and Ship Licence.

I.

Application for installation licences shall be made according to the following form:—

FORM A.

I,.....of.....the owner of the ship.....do hereby make application for permission to instal upon said ship apparatus for radiotelegraphy according to the following specification:—

SPECIFICATION.

Name of Ship.	Normal range of Signalling in Nautical Miles		Character of Apparatus		Source and Maximum Output	Power		If Alternator is used, Number of Cycles per second
	by day	by night	Description of Receiving Apparatus	Wave-length in Metres		Maximum taken by Transmitting Instruments.		
1	2	3	4	5	6	7	8	9

The above described apparatus will be installed in.....months.

Signed.....

II.

Licence for installation of Radiotelegraph Apparatus upon ships shall be according to the following form:—

FORM B.

Licence for installing Radiotelegraph Apparatus.

Whereas.....of.....has filed with the Ministry of Communications his application dated.....for the installation of radiotelegraph apparatus upon the ship.....

Now the Minister of Communications does hereby licence and permit the installation upon the said ship within the period of.....months from date of radiotelegraph application in accordance with the following specification:

Name of Ship.	Normal range of Signalling in Nautical Miles.		Character of Apparatus		Source and Maximum Output	Power		If Alternator is used, Number of Cycles per second
	by day	by night	Description of Receiving Apparatus	Wave-length in Metres		Maximum taken by transmitting Instruments.		
1	2	3	4	5	6	7	8	9

This licence and permission does not permit the licensee to operate said apparatus above described until after its inspection when installed and the issuance of a ship licence.

Signed.....
Minister of Communications.

III.

The ship licence provided for in Regulation 3, shall be in the following form and subject to the following conditions:—

FORM C.

Know all men by these presents that, whereas.....of.....hereafter called the "licensee," is desirous of establishing, maintaining and working on the ship..... belonging to the licensee, radiotelegraphy under Section 5 of the Radiotelegraph Act, B. E. 2457;

And whereas the licensee has agreed and by the acceptance of this licence, does become bound to operate and maintain the radiotelegraph installation for which this licence is granted in accordance with the International Radiotelegraph Convention of London of July 5th, 1912, the detailed Service Regulations appended thereto, the Radiotelegraph Law, B. E. 2457, and the Regulations thereunder by the Minister of Communications, and any and all amendments and modifications of any of these, which may be made from time to time;

Now the Minister of Communications hereby grants to the licensee during the term or period commencing with the date hereof and terminating on the 31st day of March, B. E. 24.... (19), licence and permission;

(1) To establish, maintain and work for the purpose hereinafter mentioned upon the ship..... but subject in all respects to the provisions of said International Radiotelegraph Convention of London, July 5th, 1912, to the Service Regulations appended thereto, the Radiotelegraph Law of B. E. 2457, and the Regulations issued by the Minister of Communications, and all amendments and modifications of any of these, apparatus for radiotelegraphy known as the..... system of radiotelegraphy.

(2) To transmit and receive messages by means of the licensed apparatus between the said ship and coast stations and other ship stations;

(3) To receive money or other valuable consideration for or in respect to the use of the licensed apparatus or for or in respect of the transmission or receipt of messages by means of the said apparatus, according to the schedule of charges fixed in the Regulations or by the Minister of Communications.

And it is hereby declared that the said licence and permission is granted upon and subject to the following further conditions and provisions:—

(1) The licensed apparatus shall not be used by the licensee or by any other person either on behalf of or by permission of the licensee for the transmission or receipt of any messages except those authorised by this licence.

(2) (a) The licensee shall not by the transmission of any message by means of the licensed apparatus or otherwise by the use of the licensed apparatus interfere with Naval or Military signalling or with any radiotelegraph station lawfully established.

(b) If at any time it becomes apparent that the working of the licensed apparatus upon said ship is inconsistent with the free use of naval or military signalling the licensee shall when required so to do by the Minister of Communications close said station upon said ship.

(3) The licensee shall comply with all such directions and observe all such rules and regulations as may be given or made by the Minister

of Communications from time to time for the purpose of preventing interference with the working of any other radiotelegraph station and for enabling the messages exchanged by means of the licensed apparatus, to be distinguished from those emanating from any other radiotelegraph station.

(4) The licensee shall at all times indemnify His Majesty's Government, the Minister of Communications and the Department of Posts and Telegraphs against all actions, claims and demands which may be brought or made by any corporation, company or person in respect of any damage arising from any act licensed or permitted by these presents.

(5) Subject to the provisions of this licence, the licensee shall transmit messages by means of the licensed apparatus on equal terms without favour or precedence whether as regards rates of charge, order of transmission or otherwise. except that preference shall be given to messages transmitted on behalf of His Majesty or of His Majesty's Government.

(6) The licensee shall so far as possible receive from ships and light stations all requests for assistance and all signals of distress and shall answer such requests and signals and retransmit them with the least possible delay to the proper authorities by means of the licensed apparatus, or any other means in the power of the licensee.

(7) The licensed apparatus shall be worked only by a person holding a certificate of competency issued by the Minister of Communications.

(8) The licensee shall not divulge to any person other than properly authorised officials of His Majesty's Government or make any use whatever of any message coming to the knowledge of the licensee through naval or military signalling.

(9) The licensee shall keep such accounts records and registers of all messages transmitted by means of the licensed apparatus as the Minister of Communications may from time to time require and such accounts, records and registers shall be open to the inspections of the Minister of Communications or his duly authorised representative at all reasonable times.

(10) The Minister of Communications or his duly authorised representative may at all reasonable times enter upon said ship for the purpose of inspecting and may inspect any apparatus fixed or being in such ship for the purpose of sending and receiving messages by radiotelegraphy, and the method of working such apparatus.

(11) The Minister of Communications may at any time by notice in writing but without assigning any reason revoke and determine this licence and thereupon this licence shall determine and become absolutely void.

(12) Any notice, request or consent (whether required to be in writing or not) to be given by or on behalf of His Majesty's Government or by the Minister of Communications or the Director-General of the Post and Telegraph Department, may be served by sending the same in a letter addressed to the licensee at the office for the time being of the licensee, or by delivery to the master of the ship upon which the licensed apparatus is installed and any notice to be given by the licensee under these presents may be served by sending the same in registered letter addressed to the Minister of Communications.

Signed and delivered by.....

Minister of Communications.

SCHEDULE II.

CONDITIONS AND FORMS FOR THE GRANTING OF CERTIFICATES OF COMPETENCY.

(1) Certificates of competency as to radiotelegraph operators on board merchant ships under the Siamese Flag, shall be granted by the Minister of Communications, subject to an examination and shall be in accordance with Form B. appended hereto. Such certificates shall indicate the system or systems of radiotelegraphy in which the examination was conducted, and shall certify that the holder :

(a) in the case of first-class certificates is able to send and receive, by sound, messages in plain language in the International Morse Code at a rate of not less than 20 words per minute (five letters being counted as one word); or

(b) in the case of second-class certificates is able to send and receive by sound, messages in plain language in the International Morse Code at a rate of from 12 to 19 words per minute (five letters being counted as one word); and

(c) is able to adjust the apparatus ordinarily used in some well-known system of radiotelegraphy so as to suit the varying conditions of working without using excessive transmitting power; and

(d) has an efficient working knowledge of the regulations applicable to the exchange of the radiotelegraphic traffic.

(2) Candidates for examination shall fill up an application according to Form A attached hereto, and submit the same to the Minister of Communications at Bangkok.

(3) Upon being notified that he has successfully passed the examination each candidate shall supply two photographs of himself, one of which will be attached to the certificate of competency, and the other to the duplicate of the certificate which is retained by the Minister of Communications. These photographs will be signed by the candidates and stamped by the issuing officers in such a way as to prevent substitution.

(4) A fee of 10 Bahts will be charged for each examination and an additional fee of 10 Bahts for the certificate issued to a successful applicant.

(5) Each certificate shall be good for five years and may be renewed at the expiration of that period for a like period of five years. Such renewal may be without re-examination if the applicant has been engaged in the actual transmission and receipt of radiotelegrams during at least three of the preceding five years. Otherwise an examination will be required. The fees for renewal examinations and the issuance of renewal certificates are the same as for the original examination and issuance.

(6) If the candidate satisfactorily passes the examination, he shall make a declaration that he will observe the secrecy of radiotelegrams which come to his knowledge in the course of duty.

FORM A.

Application for examination for a..... class certificate of competency as a radiotelegrapher.

1. Name
2. Residence
3. Date and Place of Birth
4. Nationality
5. System of radiotelegraph in which applicant wishes to be examined

The undersigned applicant for examination for a certificate of competency as a radiotelegrapher agrees that, if successful, he will observe all requirements, so far as they may apply to him, of the International Radio-Convention of London, July 5th, 1912, the detailed Service Regulations appended thereto, the Radiotelegraph Law, B. E. 2457, the Regulations used in pursuance thereof, and all amendments and modifications of any of these, which may be issued from time to time.

(Signature).....

FORM B.

... CLASS CERTIFICATE OF COMPETENCY.

Whereas,.....having been examined as to his competency as a radiotelegrapher, according to the Regulations in such case made and provided and said examination having been successfully passed.

It is hereby certified that.....is able to send and receive by sound messages in plain language in the International Morse Code at the rate of.....words per minute (five letters being counted as one word) and is able to adjust the apparatus ordinarily used in the.....system of radiotelegraphy so as to suit varying conditions of working, without using excessive transmitting power and has an efficient working knowledge of the regulations applicable to the exchange of radiotelegraphic traffic.

Accordingly this.....class certificate of competency has been issued to the said.....who by accepting it agrees to be bound, so far as they may apply to him, by all provisions of the International Radiotelegraphic Convention of London, July 5th, 1912, the detailed Service Regulations appended thereto, the Radiotelegraph Law B. E. 2457, and the Regulations issued under the authority thereof, and any amendments and modifications of any of these which may be issued from time to time.

Signed and delivered by.....
Minister of Communications.

SIBERIA

(See map on p. 389.)

SIERRA LEONE

SIERRA LEONE proper consists of a peninsula about 26 miles long and 12 miles broad covering an area of about 300 square miles. The Colony, however, is much more extensive, stretching from French Guinea on the north to the Republic of Liberia on the east and south-east, its total area being 4,000 square miles.

The capital is Freetown, and the colonial administration is conducted by a Governor and Commander-in-Chief, assisted by Executive and Legislative Councils. The same officials also administer the "Protectorate," a term which applies to the territories, not being portions of the Colony of Sierra Leone, lying between 6° and 10° north latitude and 10° and 14° of west longitude.

CONTROL.

A wireless telegraphy station is installed at Freetown, and is owned and controlled by the African Direct Telegraph Company.

The regulation of wireless telegraphy rests solely in the hands of the Government. There are no wireless clubs or societies.

ADMINISTRATION.

The Sierra Leone wireless laws and regulations were first formulated in the Decree of 1903, and the Schedule founded thereon. In 1912 this Decree and the regulations in the Schedule were amended by Ordinance No. 19 with the Schedule which was thereto attached. In the following year (1913) these were in their turn replaced by Ordinance No. 11 with its accompanying Schedule, both of which we print below. A set of Regulations issued on July 16th, 1917, has been superseded by an additional set issued on May 12th, 1919, which will be found below.

The list of reprints included here covers:—

A—Ordinance No. 11 of 1913.

B—Schedule dated May 23rd, 1913.

C—Regulation No. 1 of 1919.

AN ORDINANCE TO PROVIDE FOR THE REGULATION OF WIRELESS TELEGRAPHY.
No. 11 of 1913.

A Be it enacted by the Governor of the Colony of Sierra Leone, with the advice and consent of the Legislative Council thereof as follows:—

1. *Short Title.*—This Ordinance may be cited as the Wireless Telegraphy Ordinance, 1913.

2. *Definition of "Wireless Telegraphy."*—In this Ordinance, "Wireless Telegraphy"

means any system of communication by telegraph without the aid of any wire connecting the points from and at which the messages or other communications are sent or received: Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

3. *Licence for Wireless Telegraphy.*—(1) A person shall not establish any wireless telegraph station or instal or work any apparatus

for wireless telegraphy in any place or on board any ship registered in the Colony, except under and in accordance with a licence granted in that behalf by the Governor.

(2) Every such licence shall be in such form and for such period as the Governor may determine, and shall contain the terms, conditions and restrictions on and subject to which it is granted.

4. *Apparatus aboard ships to be worked in accordance with regulations.*—A person shall not work any apparatus for wireless telegraphy installed on any merchant ship, whether British or foreign, while that ship is in the territorial waters of the Colony, otherwise than in accordance with regulations under this Ordinance.

5. *Regulations.*—(1) The Governor may from time to time make regulations for carrying into effect the purposes of this Ordinance.

(2) *Schedule.*—The regulations in the Schedule to this Ordinance shall have effect except in so far as they may be amended or rescinded by regulations made under the authority of this section.

(3) If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships while in the territorial waters of the Colony shall be subject to such further regulations as may be made by the Governor from time to time, and such regulations may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

6. *Search Warrant.*—If a Magistrate is satisfied by information on oath that there is reasonable ground for suspecting that a wireless telegraph station has been established without a licence in that behalf or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any merchant ship without a licence in that behalf or contrary to the provisions of any regulations made under this Ordinance or of any licence granted under this Ordinance, he may grant a search warrant to any superior Officer of Police named in the warrant, and a warrant so granted shall authorise the Officer to enter and inspect the station, place, or ship, and to seize any apparatus which appears to be used or intended to be used for wireless telegraphy therein.

7. *Penalties.*—Any person who shall offend against any provision of this Ordinance or any of the regulations made thereunder shall be liable on summary conviction for every such offence to a fine not exceeding fifty pounds, and upon such conviction the Court may order that any apparatus for wireless telegraphy in connection with which the offence was committed shall be seized and forfeited.

8. *Repeal No. 22 of 1903, No. 19 of 1912.*—The Wireless Telegraphy Ordinance, 1903, and the Wireless Telegraphy Amendment Ordinance 1912, are hereby repealed.

SCHEDULE—SECTION 5 (2). REGULATIONS.

B 1. All apparatus for Wireless Telegraphy on board a merchant ship in the territorial waters of the Colony shall be worked in such a way as not to interfere with

- (a) Naval signalling, or
- (b) the working of any wireless telegraph

station lawfully established, installed or worked in the Colony or the territorial waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. In these Regulations, "Naval signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Naval Stations or between a ship of His Majesty's Navy or a Naval Station and any other wireless telegraph station whether on shore or on any ship.

3. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in any harbour or bay of the Colony except with the special or general permission of the Governor.

4. For the purpose of any proceedings under these regulations the master or person being or appearing to be in command or charge of any ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship.

5. Any summons or other document in any proceedings under these regulations shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in command or charge of the ship.

6. These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

Passed in the Legislative Council this twenty-third day of May in the year of our Lord, one thousand nine hundred and thirteen.

REGULATIONS (No. 1 of 1919) MADE UNDER SUB-SECTION (1) OF SECTION 5 OF THE WIRELESS TELEGRAPHY ORDINANCE, 1913 (No. 11 of 1913).

C Whereas by sub-section (1) of section 5 of the Wireless Telegraphy Ordinance, 1913 (No. 11 of 1913), it is provided that the Governor may from time to time make regulations for carrying into effect the purposes of the Ordinance:

And whereas by sub-section (2) of section 5 it is provided that the regulations made and passed by the Legislative Council, 23rd day of May, 1913, shall have effect except in so far as they shall be amended or rescinded by regulations made under the authority of the section:

And whereas by regulations made the 16th day of July, 1917, certain of the above recited regulations were rescinded and other regulations were substituted therefor:

And whereas I am minded to make other provision in lieu of the last above recited regulations:

Now, therefore, under and by virtue of the power and authority in that behalf vested in me it is ordered that the regulations made the 16th day of July, 1917, are hereby rescinded and the following substituted therefor:—

1. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used while such ship is in any harbour or bay of the Colony except with the special or general permission of the Governor.

2. These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

Made this 12th day of May, 1919.

SOLOMON ISLANDS

(See map on p. 356.)

SOUTH AFRICA (UNION OF)

THE Union of South Africa lies between 22° and $34^{\circ} 50'$ south latitude and $16^{\circ} 30'$ and $32^{\circ} 40'$ east longitude. Its total superficial area, not including the Protectorates of Bechuanaland, Basutoland, and Swaziland, which are included within the same geographical boundaries, but do not form part of the Union, is 473,075 square miles. The coast line extends from the mouth of the Orange River on the west coast to a point in latitude south $26^{\circ} 30'$ on the east coast, and measures about 1,725 miles. The greatest distance east to west is a little under 900 miles, and north to south a little over 1,800 miles. At the last complete census, taken in 1911, the population was 1,276,242 Europeans, 4,019,006 natives, and 678,146 other coloured races. On May 5th, 1918, a census of the European population was taken. The preliminary unaudited result of the census shows that there were 730,179 males and 694,511 females, exclusive of persons absent on active service or work in connection with the war. The Union was constituted on May 31st, 1910, under the South Africa Act of 1909, and embraces the former separate self-governing colonies of the Cape of Good Hope, the Transvaal, the Orange Free State, and Natal.

The Executive Government is vested in a Governor-General appointed by the Crown, aided by an Executive Council of Union Ministers, with two Houses of Legislature.

CONTROL.

The administration of radiotelegraphy is in the hands of the Postmaster-General. It is directed by the Engineer-in-Chief of Posts and Telegraphs, and is not treated as a separate unit.

For Colonies working under the direction of the High Commissioner of South Africa (e.g., Basutoland, etc.)—see under their own names.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Mr. H. W. S. Twycross	Postmaster-General	Pretoria
Major E. A. Sturman, C.B.E.	Secretary to the General Post Office	Pretoria
Lt.-Col. N. Harrison, C.M.G., D.S.O., M.I.E.E.	Engineer-in-Chief	Pretoria
Mr. J. H. Weaver, C.B.E.	General Traffic Superintendent of Telegraphs	Pretoria

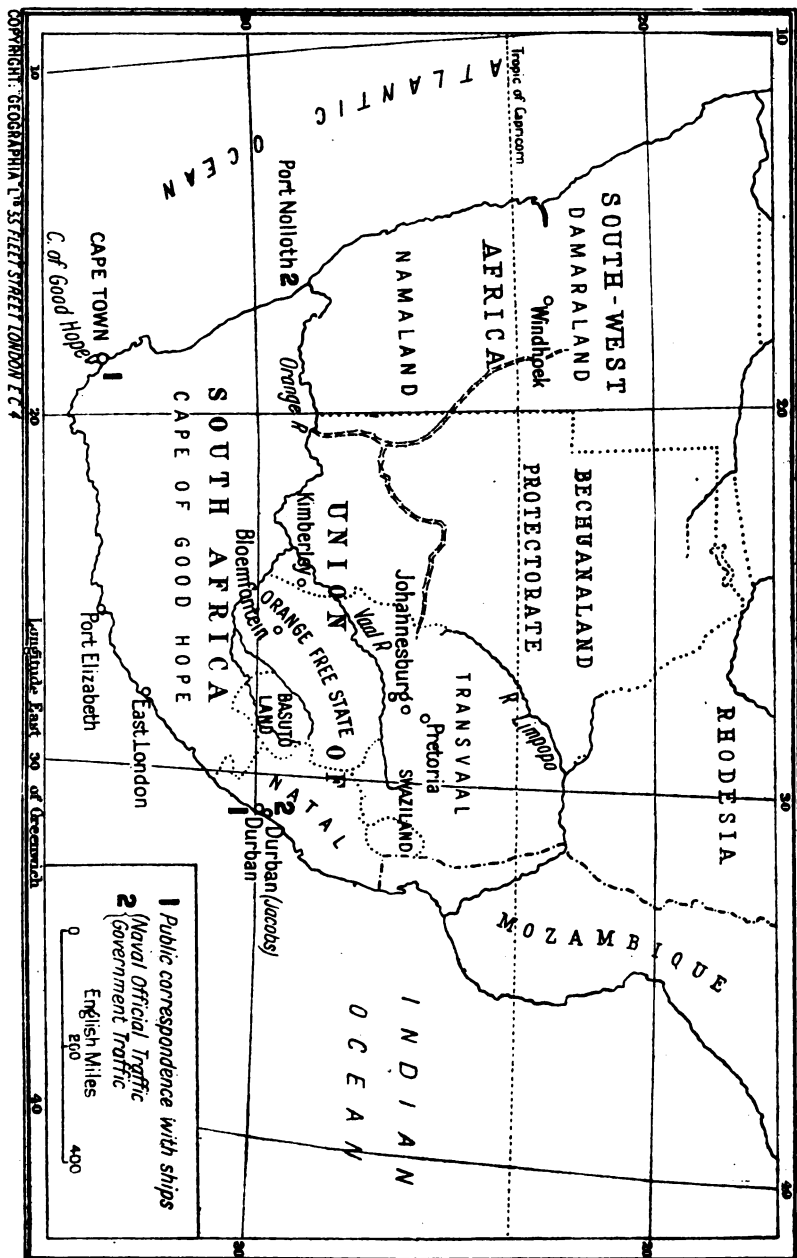

ORGANISATION.

There are four wireless stations in South Africa, under the control of the Union Government. The first was established at Durban in June, 1910, and another at Slangkop, near Cape Town, in May, 1911. In September, 1913, it became necessary in connection with the port defences to remove the Durban station from the position where it had been originally erected to a point some four miles distant. The change of situation has not adversely affected its efficiency.

There are no privately owned stations, and in regard to licensing of private experimental wireless stations the matter is still under consideration. It is probable, however, that the Government will decide to put no obstacle in the way of facilities for private scientific research, while every application will be considered on its merits.

The latest available statistics are as follows:—

Land stations for public service to ships	.. 2
Land stations for Government traffic only	.. 2
Ship stations on privately owned vessels	.. 4 (low power)

ADMINISTRATION.

The only statutory regulation on radiotelegraphy within the Union is that contained in the preamble to the Post Office Act, and Section 80 *ibid.*, both of which will be found below.

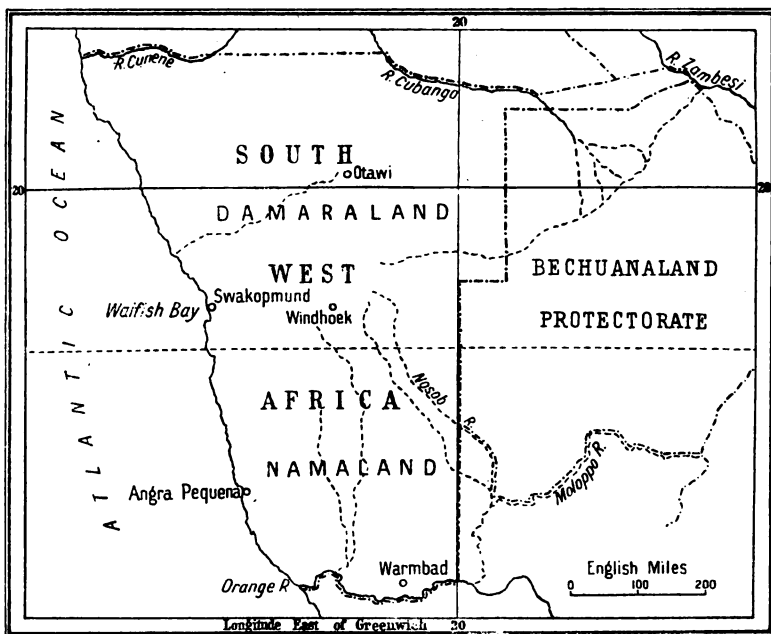

No licences in terms of the section of the P.O. Act of 1911 are being issued under present conditions, and there are no private licensees for radiotelegraphy in existence except four in respect of certain ships. The licence follows the same lines as that issued in Great Britain.

There is no Union Act compelling ships trading in South African waters to be fitted with radiotelegraphic apparatus.

A—Statutory Regulation (Preamble to P.O. Act, 1911).

B—Section 80 of Post Office Act, 1911.

C—Conditions of issue of Amateur Licence.

POST OFFICE ADMINISTRATION AND SHIPPING COMBINATION DISCOURAGEMENT ACT, 1911.

CHAPTER V.—SECTION I.

A In this Act, unless inconsistent with the context, "telegraph" shall include "telephone," and shall mean any system or means of conveying signs, signals, sounds, or communications, by the agency of electricity, magnetism, electro-magnetism, or by any agency of a like nature, whether with or without the aid of wires, and shall include the system commonly known as wireless telegraphy, or ætheric signalling, and any improvements or developments of that system.

"Telegraph line" shall include any apparatus, instrument, pole, mast, standard, wire, pipe, tunnel, pneumatic or other tube, thing, or means whatever, which is or may be used in connection with or for the purpose of sending, transmitting, conveying, or receiving telegraphic signs, signals, sounds, or communications.

1. The Postmaster-General shall have the exclusive privilege of constructing and maintaining telegraph lines and of transmitting telegrams or other communications by telegraph within the Union or the territorial waters thereof and of performing all the incidental services of receiving, collecting, or delivering telegrams or other such communications: Provided that—

(a) the owners of any system of railways may maintain and work for the purposes of any such railway, for the time and to the extent authorised by any law, any telegraph lines constructed in pursuance of rights conferred by that law; and

(b) the Postmaster-General may construct, maintain, or lease telegraph lines for private use or may, by licence, authorise any person to construct, maintain, and work private telegraph lines within the Union or its territorial waters and may prescribe the fees and conditions therefor.

POST OFFICE ADMINISTRATION ACT, 1911.

B 80. (1) The Postmaster-General shall have the exclusive privilege of constructing and maintaining telegraph lines and of transmitting telegrams or other communications by telegraph within the Union or the territorial waters thereof and of performing all the incidental services of receiving, collecting, or delivering telegrams or other such communications: Provided that—

(a) the owners of any system of railways may maintain and work for the purpose of any such railway, for the time and to the extent authorised by any law, any telegraph lines constructed in pursuance of rights conferred by that law; and

(b) the Postmaster-General may construct, maintain or lease telegraph lines for private use or may, by licence, authorise any person to construct, maintain, and work private telegraph lines within the Union or its territorial waters and may prescribe the fees and conditions therefor.

(2) No telegraph line shall be used for the purpose of transmitting or delivering telegrams for the public except by the authority of the Postmaster-General and upon such terms and conditions as he may prescribe, and the department shall have the right, by means of its officers, of inspecting all offices which are authorised to accept, transmit, or deliver public telegrams.

CONDITIONS OF ISSUE OF AMATEUR LICENCE.

PROCEDURE TO BE FOLLOWED.

The applicant should furnish :—

C 1. Evidence of his British nationality and two written references by persons of standing, who are British subjects and not related to the applicant.

2. His full Christian names and particulars of his occupation.

N.B.—If the applicant is a minor, the authority to use wireless apparatus can only be issued in the name of his parent or guardian, who should comply with the requirements and state his (or her) full address and relationship (if any) to the applicant. There is no objection to a minor working the authorised apparatus as the agent of his parent or guardian.

3. A remittance of 10s.

4. A description of the apparatus which it is proposed to instal and, if authority is desired for the use of thermionic valves, a diagram of the circuits in which they would be used.

5. A sketch showing the form, height and dimensions of the proposed aerial (including leading-in wires).

N.B.—Extreme height of aerial above ground roof. Total length of wire including leading-in wires.

100 feet for single wire aerial.

140 feet of wire where two or more wires are used, e.g., total length of 70 feet of double wire.

6. The address at which the apparatus would be installed.

7. Satisfactory evidence that he has in view some definite object of scientific value or general public utility. If scientific research is intended he should be certified as a competent investigator by a Government Department or some recognised scientific body.

8. The name of the person or persons with whose wireless installation it is proposed to communicate, communications beyond a radius of ten miles being forbidden.

9. The installation shall be subject to the approval of the Postmaster-General and to inspection by any of his officers from time to time

SPAIN

THE present Constitution of Spain after having been drawn up by the Government and laid before a *Cortes Constituyentes* elected for its ratification, on March 27th, 1876, was proclaimed on June 30th of that year. It enacts that Spain shall be a Constitutional Monarchy, the Executive vested in the King, and the power to make laws "in the Cortes with the King." The reigning monarch, Alphonso XIII, belongs to the House of Bourbon, which succeeded to the Spanish throne at the end of the seventeenth century. He married Princess Victoria Eugenie, granddaughter of the late Queen Victoria, on May 31st, 1906.

The territory included under the Spanish administration comprises 49 provinces, 47 in the Iberian peninsula and 2 provinces, namely, Canary and Balearic Islands, and as colonies, Fernando Po Island, the Muni coast and Rio de Oro, and Ceuta and Melilla, in Morocco.

The superficial area of the 47 provinces in the Peninsula is 505,207.72 sq. km., the area of the Canaries is 7,272.60 sq. km., and the area of Balearic Islands 514.11 sq. km.

CONTROL.

Radiotelegraphy in Spain is a State monopoly, under the control of the Home Office and the Ministry of War and the Navy. The establishment of a wireless public service was granted on June 26th, 1908, to "La Sociedad

Española Oerlikon," which was responsible for the erection of 24 land stations having three different ranges. The "Sociedad Española Oerlikon" then formed a company "Compañía Concesionaria del servicio público español de Telegrafía sin hilos," which erected the Cadiz, Tenerife, and Las Palmas stations, but did not complete them. The time granted in the contract having elapsed, the concession was then transferred to the actual holders of it, "La Compañía Nacional de Telegrafía sin Hilos," which was formed with the aid, and under the direction of Marconi's Wireless Telegraph Company, Limited, and at the suggestion of the latter, the original plan was altered and reduced to 10 stations, all of greater range.

Licences for erecting and working wireless stations by private companies are not granted, except in the case of teaching or meteorological receiving stations. According to the latest statistics the following stations exist :—

Meteorological observatories	4
Official seismological stations	4
Educational stations	7
Stations open for public service to ships	8
Stations open for Government traffic only	13
Stations open for private traffic	2

There are no *experimental* stations and no *amateur* stations.

There is no special form of licence, and the general conditions subject to which these licences are granted can be found in the addition to Article 6 of the Royal Decree of January 24th, 1908, which Article was modified by Royal Decree of July 19th, 1914.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Excmo. Sr. Don Francisco Bergamín ..	Home Minister	P. Recoletos
Excmo. Sr. Vizconde de Eza ..	War Minister	Génova 13
Excmo. Sr. Don Eduardo Dato Iradier ..	Navy Minister	Alcalá 93
Excmo. Sr. Conde de Colombl ..	Director-General of Posts and Telegraphs	Hotel Paris
Excmo. Sr. Don Tomás Aguilar ..	Sub-Director of Telegraphs ..	—
Sr. Don Pedro Dario del Nero ..	Head of Radio Service	—
Sr. Don Augusto Boyer ..	Second Chief	Alcalá 133

The only company holding permission to work wireless for public service is the "Compañía Nacional de Telegrafía sin hilos."

The companies engaged up to the present in erecting wireless stations are the following: La Compañía Nacional de Telegrafía sin hilos (Marconi system), A.E.G. Thomson-Houston Ibérica (Telefunken), La Compañía Ibérica de Telecomunicación, Centro Electrotécnico (Army Department), and Military engineers (for military purposes).

ORGANISATION.

Radiotelegraphy has from its initiation in practice, attracted much attention and interest in the Iberian Peninsula.

As early as 1899 commissions were appointed in Spain which, from time to time, issued reports to their Government on the subject of Wireless Telegraphy. As a result, a Royal Decree of May 21st, 1905, appointed a permanent commission, presided over by the Chief of the General Staff and including representatives of the War Office, Admiralty and Home Office, thus anticipating the first International Conference concerning Wireless Telegraphy—i.e., the one held in Berlin, 1906 (subsequently modified by the London International Convention of 1912).

Very little was actually done in regard to the erection of wireless tele-

graphic installations before 1906. Trials with unsatisfactory results had been carried out by the Army with field sets, and the Navy with stations on board the *Pelayo*, *Princesa de Asturias*, and *Giralda*. In regard to aviation, it is understood that the Spanish Government is studying a scheme of organisation and rules, although nothing has yet been published.

ADMINISTRATION.

Spain is one of the signatories of the important "Safety of Life at Sea" Convention, and has become a party to all the international agreements affecting radiotelegraphy. She has, moreover, passed separate laws and regulations framed with the object of establishing and developing this applied science in the home country and in her dependencies.

In the course of 1917 an important Royal Order was published by the Ministry of Marine, enacting that every merchant vessel of 500 tons and over must instal wireless telegraphy. The text of this Order will be found below together with the following current Rules and Regulations.

A—Law of October 26th, 1907.

B—General Rules, January 24th, 1908.

C—Regulations, January 24th, 1908.

D—Royal Order of September 4th, 1914.

E—Royal Decree dated February 20th, 1917.

F—Royal Order of June 22nd, 1917.

G—Decree dated October 12th, 1917.

H—Royal Decree of February 8th, 1917.

I—Convention of Madrid, dated June 17th, 1918 (as modified on June 4th, 1919).

J—Royal Decree of January 18th, 1920.

LAW OF OCTOBER 26TH, 1907.

THE GOVERNMENT OF SPAIN IS HEREBY AUTHORISED TO ESTABLISH AND DEVELOP THE WIRELESS, CABLE AND TELEPHONE SERVICES.

A H.M. Don Alfonso XIII, by the grace of God and by the Constitution, makes it known by these presents that Parliament has decreed and he, the King, has given his Royal assent to the following:—

ART. 1.—The Government is hereby authorised to establish and develop the wireless, cable and telephone services—availing itself of the co-operation of national institutions—by means of a Royal Order which will be published within four months from the promulgation of this law.

ART. 2.—The expenses entailed by each service will be covered by the takings of the concession itself. In the case of certain concessions, the proviso is reserved that the establishment may be taken over by the State in whole or part, by Royal Decree, should the so doing be considered as in the national interests.

ART. 3.—Concessions regarding these new services will be granted by public tender, and all necessary conditions must be fulfilled in order to safeguard the interests and security of the nation.

It is therefore decreed:

That all tribunals, magistrates, prefects, governors and all persons in authority, whether civil, military or ecclesiastical, whatever their rank and dignity, must obey and see to it that this law is observed in all its parts.

Given at the Royal Palace on October 26th 1907.

GENERAL RULES.

PROMULGATED BY ROYAL DECREE AS THE BASIS FOR THE ESTABLISHING OF WIRELESS SERVICE IN SPAIN.

B **ART. 1.**—The establishing and exploitation of all systems and apparatus available for the so-called "Hertzian telegraphy," "etherial telegraphy," and "radiotelegraphy," and all similar processes already invented or which may be invented in the future, shall be considered as included among the State monopolies regarding all means of electrical communications.

ART. 2.—The establishing and exploitation of the above telegraphic systems shall be controlled by (1) the Minister of the Interior in all matters appertaining to the general civil applications of the said systems, and (2) by the Ministers of War and Marine when and where those applications are specially connected with national defence and with the army and navy.

ART. 3.—All other official departments requiring a radiotelegraphic service can erect wireless installations by previous agreement with the Minister of the Interior. Such installations will be under the regulations established for the regular wireless service and wireless experiments.

ART. 4.—No experiments with the above-mentioned systems can be instituted in the Peninsula, or in the Balearic and Canary Islands, or in Spain's African possessions, without the authority of the Ministers of War, Marine or Interior, according to the kind of experiment which it may be proposed to carry out. Such experiments and trials shall be carried out under the official inspection of the respective departments responsible, excepting

only those of a technical character carried out by the personnel of the scientific institutions of the State. These shall be independent of the said departments, providing they adhere to the regulations laid down.

ART. 5.—The Minister on whose authority the above installations and experiments are established and effected must give notice thereof to the other Ministers, giving them also full particulars regarding their service and conditions.

ART. 6.—Acting in agreement with the Ministers of War and Marine, in the cases herein aforesaid, and acting independently in all other cases, the Minister of the Interior can authorise the installation of wireless stations, provided that none have been officially installed, when the said installations may have been applied for by individuals, societies, corporations or national institutions, subject to the following rules :—

(1) The applicant shall address himself in the first instance to the Minister of the Interior, stating clearly the place where the installation is to be erected, and supplying a plan of the building, together with the conditions and advantages of the locality.

(2) Such installations and the services they are expected to render shall be subject to the special rules and conditions laid down in each case, and to the general regulations established by the State for its own installations and wireless service.

(3) The Government shall have the right to close the service under extraordinary circumstances affecting the safety of the State and the maintenance of public order.

(4) The Government shall also have the right to acquire by purchase, whenever it may be considered convenient, and with the previous payment of an indemnity, the wireless installations hereinbefore mentioned and the valuation for such compensation shall take into consideration the actual condition of the material and of the installation itself.

(5) The concessionaire shall let the Minister of the Interior know, in good time, the date on which the station or stations will start working, in order to allow the personnel of the telegraph office the necessary time for their inspection.

(6) The petitioner must not consider himself entitled to proceed with the work of installation until the necessary authorisation has been granted.

The following rules were added by Decree of July 19th, 1914.

(7) If the stations are to be fitted up merely for the reception of messages and for scientific purposes, or to serve as auxiliaries to meteorological observatories, authorisation for the same can be obtained from the Minister of the Interior, provided that the application be made by an Official Institution or by a private individual acting with the support of an Official Department.

(8) These receiving stations must be inspected by the Director of Telegraphs of the locality where they are installed.

(9) The persons appointed to carry out the reception must take an oath before the Civil Governor of the Provinces, to keep secret all information they may gather from the radio-telegraphic messages.

ART. 7.—The ships belonging to the national mercantile marine can instal on board wireless stations worked on any of the wireless systems in current use, provided they obtain a special

permit to do so from the Minister of Marine, who will grant it in accordance with the conditions established by the International Agreement and Service Regulations adopted in Berlin on November 3rd, 1906.

ART. 8.—Permits to establish wireless installations will not be granted to any private individual, society, or corporation belonging to a foreign nationality.

ART. 9.—Any person or persons exploiting or using clandestinely any system of wireless, or any person or persons attempting to conduct wireless experiments with apparatus available for the purpose, will be prosecuted in conformity with the Penal Code, the general law, the military orders, or the administrative regulations, as the case may be. Prosecution for these offences will be carried out by the authorities entrusted with the administration of the said laws, orders and regulations; and the State will confiscate all material employed for such purposes.

ART. 10.—By agreement between the Ministers of War, Marine and Interior, the wireless stations which may be considered necessary and convenient for commerce, navigation and national defence will be erected on the seaboard of the Iberian Peninsula, on the Balearic and Canary Islands, and in the African possessions of Spain.

These installations will be under the control of the aforesaid three Ministers, as the case may be, both in the matter of supplies and of personnel and offices, and they will form a part of the national telegraphic system.

This linking up of the wireless with the land telegraphic service will be effected by the ministerial department controlling the various wireless installations.

ART. 11.—Authorisation is hereby given for the interchange of messages between ships belonging to the national mercantile marine and those belonging to foreign nations carrying wireless installations of current systems, and also for the interchange of messages between the said ships and the coast stations already established or to be established by the Ministry of the Interior on the sea board of the Peninsula on the Balearic and Canary Islands, and in the Spanish possessions in Africa.

The Minister of the Interior shall determine the date of the inauguration, the extension and the class of service of each station.

ART. 12.—The Government shall have the option of refusing or accepting those wireless systems the details of which have not been made public.

ART. 13.—The State accepts no responsibility for the wireless service. In the cases of errors or of non-delivery of radiotelegrams the procedure followed will be as established in Art. 35 of the Berlin regulations.

ART. 14.—Whatever the object of the installations, the wireless service shall be organised, whenever possible, in such a way as not to disturb other services of the same kind, or class. The ministerial departments interested shall adopt in each case such rules and regulations as may be found necessary, and shall also arrange regulations with other States regarding frontier installations.

ART. 15.—All wireless services, whether public, official, or private, carried on through the intermediary of land, coast and ship stations, shall be subject to the regulations hereunto attached.

ART. 16.—In addition to the rules herein contained, and those of the regulations mentioned in the previous Article, the provisions affecting Radiotelegraphy contained in the International Convention made in Berlin on November 3rd, 1906, together with the Service Regulations appended thereto, must be observed.

ART. 17.—The Director-General of Posts and Telegraphs shall see to the fulfilment of the stipulations made by Art. 13 of the International Agreement and of those made by Art. 37 of the Berlin Regulations, regarding the International Bureau established in Switzerland. The Ministers of War and Marine shall in accordance thereunto furnish the data required, which must be in the possession of the naval and military installations and stations and also data affecting the merchant ship stations, whose installations are authorised by the Minister of Marine.

ART. 18.—Messages received from or transmitted directly to a country or ship registered in a country which is not a signatory of the convention and regulations of Berlin, can only be admitted through the Spanish telegraphic system and through the coast wireless stations after a declaration has been made by the country in question expressing an intention of applying the rules laid down by the said convention, and their regulations regarding the regular routine of the messages and the security of the accounts. In their radiotelegraphic service the coast stations shall give preference to the service of those countries which have become parties to the international agreements.

Articles 19 to 34 and the additional articles appended thereto deal with wireless installations on fortresses.

REGULATIONS.

GOVERNING THE WORKING OF THE WIRELESS STATIONS IN SPAIN. GENERAL SERVICE.

CART. 1.—All persons are allowed to make use of the wireless service, but the Government reserve to themselves the privilege of suspending for an indefinite period, as they may judge convenient, either every class of communication or such communications as belong to some particular class, or communications which affect some special station or stations.

ART. 2.—The following regulations and conditions laid down for the radiotelegraphic service in Spain, besides the provisions affecting radiotelegraphy contained in the International Convention made in Berlin on November 3rd, 1906, together with the Service Regulations appended thereto, shall be applied to all wireless stations, whether public, official or private, on the coast of the Peninsula, the Balearic and Canary Islands, the African possessions of Spain, and to all ships navigating those territorial waters.

ART. 3.—Ship stations shall be free to select their system of wireless installation; but for coast stations the administration shall adopt the system and equipment judged to be the best available from the point of view of scientific, technical and economic progress.

ART. 4.—All coast wireless stations shall be linked with the general telegraphic system, by means of private lines, in order to secure rapid communications.

ART. 5.—The working of wireless stations of all classes shall be carried out in such a way that, as far as possible, no disturbance may be occasioned to other stations of the same kind.

ORGANISATION OF WIRELESS STATIONS.

ART. 6.—Wireless stations of all kinds must maintain reciprocal communications with the least possible waste of power.

ART. 7.—Wireless stations in Spain shall use the international signals of the Morse Code for the transmission of messages.

ART. 8.—All wireless installations in Spain including both coast and ship stations, open to the public, must carry on an interchange of messages irrespective of their wireless systems.

During the working hours fixed for each coast station the latter must receive the Morse signals and must also have a transmitter so disposed as to be able to reply in the signals of the same code.

ART. 9.—Coast wireless stations must accept and must give *absolute priority* to calls for help from ships in danger. They must, moreover, answer the said calls in the same order of priority and pass them on as urgent messages to the general telegraphic service.

ART. 10.—The administration shall establish three classes of stations—viz., public, official, and private. Those of the first class must have a radius of 600 kilometres and over, those of the second class one of 400 kilometres (there or thereabout), and those of the third class one of 200 kilometres. Exceptions may be made in accordance with practical experience in working.

ART. 11.—First-class stations shall have three wavelengths at their disposal—namely, one of 300 metres, another of 600 metres, and another which may reach the maximum length, but which must not be less than 1,600 metres. The last two will be used normally. The second and third-class stations shall have two wavelengths—namely, one of 300 metres and one of 600; and those of the second class will use normally the 600 metres wavelength, whilst those of the third class will use one of 300 metres, except in the cases referred to in Art. 14 final paragraph.

Coast stations situated near each other may maintain a special service between each other, provided that the distance between them allows of their doing so; but they must give preference to the Maritime Service. In the latter case, and for communications with national vessels on official matters, coast stations of both classes are allowed to use the special wavelengths to which their installations are adapted or adaptable for these services.

ART. 12.—Ships belonging to the Spanish Merchant Service shall use a normal wavelength of 300 metres, but they can alter this to a maximum of 600 metres.

Only in exceptional cases are vessels of small tonnage allowed to use *normal waves* of less than 300 metres.

ART. 13.—The General Post and Telegraph Office shall publish and keep always up to date a Directory showing the coast and ship wireless stations authorised and open to the public; together with the following information:—

(1) Name and geographical position of the coast station; identification signal in the International Code, and the port of register of the ship fitted with wireless.

(2) Call letters. (These must be all different and must be formed by groups of three letters.)

(3) Normal range.

(4) Wireless system adopted.

(5) The class of receiving apparatus whether automatic or auditive, etc.

(6) Length of waves used by the station. (The normal wave must appear in italics.)

(7) Class of service rendered by the station. This covers such items as general communication, restricted communication (*i.e.*, communication with ships, with steamship companies, with ships fitted with apparatus of the same system, etc.); public long distance communications; communications of a private nature; special communications (*e.g.*, those of an exclusively official character), etc.

(8) Hours of service.

(9) Coast and ship station rates.

The Directory above mentioned shall also include information regarding wireless stations not open to general public service and the existence of which has been made known to the International Bureau by the Spanish Administration.

ART. 14.—Wireless service in coast stations shall be, whenever possible, of a continuous nature, operating both night and day without interruption.

The Post and Telegraph Office shall fix, in each case, the hours of service of those stations where the service is limited.

Coast stations where the service is not of a continuous nature cannot close for the day without having transmitted all radiotelegrams to ships within their sphere of action and without having first received all the radiotelegrams advised by them. This proviso shall also apply in the case of ships signalling their presence before the closing hour of the station.

ART. 15.—Private corporations cannot instal ship stations nor can they work any such station without Governmental authorisation. Permits in these cases will be issued in accordance with the provisions of the Berlin Convention and Regulations, by the Ministry of Marine, and will be communicated by the latter to the General Post and Telegraph Office.

Ship stations duly authorised must fulfil the following conditions:—

First.—The system employed must be a tuned system.

Second.—The speed, both for the reception and transmission of messages, must not under normal circumstances be less than twelve words per minute, allowing five letters to the word.

Third.—The power transmitted to the wireless apparatus must under normal circumstances, not exceed one kilowatt. Nevertheless, greater power can be used if the ship is obliged to communicate over a distance exceeding 300 kilometres from the nearest coast station; or, if by reason of any interference, no communication can be established without increasing the power.

The service of the coast and ship stations shall be attended to by operators having their qualifying certificates issued by the General Post and Telegraph Office. This certificate must state the professional knowledge of the operator in the following matters:—

(a) Equipment of the apparatus.

(b) Auricular transmission and reception at a speed of not less than twenty words per minute.

(c) The knowledge of the regulations regarding interchange of wireless communications.

The qualifying certificate must also state that the Government has notified the operator that it is his duty to treat all communications as confidential.

Steamship companies are allowed to employ their own qualified operators provided they fulfil the conditions hereinbefore mentioned.

THE MAKING-OUT AND PRESENTATION OF MESSAGES.

ART. 16.—For the making-out and presentation of radiotelegrams the provisions of Articles 10, 11 and 33 of the Berlin Conference Regulations, in addition to the rules laid down in the following Articles, shall be observed.

ART. 17.—Radiogram forms must have the words *Radio Service* on the heading.

On the transmission of messages from ship to coast stations no mention will be made of the date and hour of deposit.

On the re-transmission of the telegraph lines the coast stations shall note their own name as that of the station of origin, followed by the name of the ship, and shall register as the hour of transmission the time at which the radio was received by them.

ART. 18.—The instructions for delivery of messages destined for ships at sea must be as complete as possible. The form must be filled up as follows:—

First.—The name of the addressee with additional indications if necessary.

Second.—The ship's name as it appears in the Directory, adding her nationality, and if necessary, as in cases where there are two or more ships of the same name, adding also her identification letters in the International Code.

Third.—The coast station name as it is given in the Directory.

ART. 19.—The following messages will not be admitted:—

(1) Reply-paid messages.

(2) Money orders.

(3) Messages to be paid on delivery.

(4) Messages demanding acknowledgment of reception.

(5) Messages to be forwarded.

(6) Messages at special rates, except those for transmission on the telegraphic section or over-land wires.

(7) Messages marked "urgent" except on the over-land wired service, and then only with the reservation that the provisions of the international telegraphic regulations must be applied.

(8) Messages to be forwarded by post or express.

ART. 20.—The messages may be written in plain language or in code in accordance with the interior regulations for ordinary service and with the international conventions on the matter.

ART. 21.—The officials at the stations can ask the senders of wireless messages to prove their identity.

RATES AND EXECUTIVE REGULATIONS.

ART. 22.—In the counting of words in order to apply the rates the officials must follow the provisions of Articles 18, 19, and 20 of the International Telegraph Service Regulations as revised in London in 1903.

ART. 23.—In conformity with Article 10 of the Berlin International Convention, the total rate for wireless messages shall include:—

(1) The rate applicable to the maritime section, namely,

(a) the rate in force at the coast station.

(b) the rate in force at the ship station.

(2) The rate established for the overland wired service, national or international, calculated in accordance with the general rules.

ART. 24.—The rate applicable to the maritime section is hereby fixed at 0.75 pesetas per word, of which 0.45 belongs to the coast station and 0.30 to the ship station.

With regard to the international service, in the case of messages to and from foreign ships, these rates shall be payable in francs, on the same basis.

The rate applicable to the overland wired service, national or international, shall be calculated and allocated in accordance with the interior regulations and with the international regulations.

The minimum rate applicable to the maritime section of wireless messages is hereby fixed at 7.50 pesetas, which is the wireless rate for a radiogram of ten words.

ART. 25.—The coast station rate will be charged only once, even if the message goes through several coast stations.

ART. 26.—The whole cost of the radiotelegram must be paid by the sender, and at ship stations a tariff indicating this must be displayed.

ART. 27.—For the purposes of book-keeping the coast station must consider itself as addressee with regard to the messages coming from the telegraphic service on their way to ship stations; and the coast station must consider itself as the original office with regard to the messages coming from ship stations for transference to the telegraphic service.

ART. 28.—Coast and ship station rates shall be calculated in accordance with the number of words computed, and in accordance with Article 23 of these Regulations.

ART. 29.—Merchant ships at sea can interchange messages if they find it convenient. The rates to be charged in such cases shall be laid down by the respective owners and shall not be taken into account by the National Administration.

ART. 30.—Ship stations on Spanish vessels shall send to those chartering them, upon their arrival in port, all documents in connection with and referring to all messages exchanged with coast stations. The charterers shall send such documents monthly to the General Post and Telegraph Office, where it will be kept for a minimum period of twelve months and where liquidation of the accounts must be made in due course.

ART. 31.—The installations on Spanish men-of-war shall use, in their communications with the coast stations open to the public, the wavelengths which—under the terms of the Berlin Regulations—may be agreed upon between the Minister of Marine and the Minister of the Interior for the official service.

Both Spanish and foreign men-of-war can exchange private messages with the coast stations or with merchant ships; but only for the benefit of their crews. In such cases the technical and tariff provisions of these Regulations and those of the Berlin Convention and the Berlin International Regulations for the

transmission of public correspondence, must be observed, as in the case of a merchant ship station open to the public. The regulations established to prevent the disturbance of wireless communications must be most carefully adhered to.

ART. 32.—When men-of-war exchange messages (private) with coast stations or with other ship installations they must follow the rules established for the computation of words and the collection of rates. In such cases the ship's purser in the Spanish vessels and the Minister of Marine shall respectively exercise similar functions to those assigned to the administration on board, and to the owner, as far as merchant ships are concerned.

In the calculation of coast and ship station rates for private service exchanged with foreign men-of-war, the General Post and Telegraph Office shall come to an understanding with the Administration of the country to which the said men-of-war belong.

ART. 33.—The same provisions shall hold good in the case of a military wireless installation, either permanent or portable, when the said installation utilises the stations established by the Administration for Public Service.

ART. 34.—Should, by some accident, the Submarine Cable Service be substituted for the Wireless Service for the sending of a message, the former shall only receive the rate applicable to a coast station. If communication by wireless is established between two points in Spanish territory otherwise without telegraphic communication, the rates charged shall be those of the Interior Telegraphic Service, and the rules of that service shall apply, except in the cases provided for in Article 19 of these Regulations.

ART. 35.—In the matter of transmission of messages, of the signals to be employed in them, orders of transmission, calls, acknowledgments of receipt, instructions as to the route to be followed by the radiograms, and instruction as to their final destination, the provisions made in Articles 15 to 32, both inclusive, of the Berlin Regulations must be observed.

ART. 36.—In cases when the return of charges made for radiotelegrams has been justly established the provisions of Article 35 of the Berlin Regulations must be observed.

BOOK-KEEPING.

In matters referring to book-keeping for the international wireless service the provisions of Article 36 of the Berlin Regulations must be observed.

GENERAL RULES.

ART. 38.—Coast stations, previously authorised by the General Post and Telegraph Office, shall furnish the authorised agents of Maritime Information Bureau with all such particulars concerning wrecks and disasters at sea as are of any interest to navigators, always provided that the said agents apply for such information.

ART. 39.—Authorised interchange of messages between ship stations on the high seas must be carried out in such a way as not to disturb the coast station's service. The latter shall have, as a general rule, the right of priority for Public Service.

ART. 40.—The order of transmission between ship stations on the high seas shall be settled by agreement between themselves.

The re-transmission of messages between ships at sea shall be arranged by agreement between the interested parties.

ART. 41.—The provisions of the International Telegraphic Regulations shall be applied by analogy, to radiotelegraphic communication as far as they are not antagonistic to these Regulations, or the Convention, Additional Agreement, and the International Regulations of the Berlin Conference.

ART. 42.—The provisions of Articles 5, 6 and 9 of these Regulations shall apply to all classes of wireless installations, official and authorised, even if they are not open to Public Service.

Madrid, January 24th, 1908.

Approved by His Majesty the King
—Maura.

(Seal.)

ROYAL ORDER OF SEPTEMBER 4TH, 1914.

ART. 1.—According to the Royal Order of January 25th, 1908, the inspection and regulation of the Wireless Telegraph Service on board vessels of the Mercantile Marine are under the supervision of the Minister of the Navy, and by delegation to the Director-General of Fisheries and Merchant Shipping. The installations should fulfil all the requirements of the said Royal Order together with the rules and regulations of the London Radiotelegraph Convention of June, 1913, and the Rules of the Safety of Life at Sea Convention, January, 1914.

Everything affecting the service shall be controlled by the Navigation Department, which shall attend to the following matters:—
(1) The registration of all new installations authorised.

(2) The forwarding of all documents regarding such new installations accompanied by the order for their recognition.

(3) The sending of a report to the Home Office and War Office as to the result obtained from the various installations, together with indications of their characteristics.

To attend to this service the Director of Navigation and Fisheries will nominate a chief or a superintending official, together with five wireless inspectors on the coast, and this staff must have the qualifications as set forth in the Royal Order of May 21st last.

ART. 2.—The distribution of the staff on the coast and in the maritime provinces under each inspector shall be as follows:—

Barcelona.—Maritime provinces of Barcelona, Tarragona, Valencia, Mallorca, and Minorca (the residence of the inspector being at Barcelona).

Cartagena.—Maritime provinces of Alicante, Cartagena, Almería, and Málaga, Melilla and Ceuta (the residence of the inspector being at Cartagena).

Cádiz.—Maritime provinces of Cadiz, Canary Islands and Huelva (the residence of the inspector being at Cadiz).

Vigo.—Maritime provinces of Vigo, Pontevedra, Villagarcía and Coruña (the residence of the inspector being at Vigo).

Bilbao.—Maritime provinces of Gijón, Santander, Bilbao and S. Sebastián (the residence of the inspector being at Bilbao).

ART. 3.—The wireless inspectors shall be under the orders of the Commandante de Marina of districts to which they are attached and in the ports of which they will have to make their annual inspection. They will only

be allowed to leave their habitual place of residence when, for the convenience of the shipbuilders, they have to inspect a station in any other part of their district.

ART. 4.—The wireless inspectors must attend to the following duties:—

(a) To verify and inspect all new installations concerning which they may have been notified by the Director-General of Navigation and Fisheries that they are ready for public service, and to send in a report of the result of their verification and inspection.

(b) To visit annually the installations of such ships as are registered in the ports belonging to the districts within their jurisdiction, and to issue the necessary certificate according to the London Safety of Life at Sea Convention.

(c) To inspect foreign ship stations on board vessels which take passengers in Spain with the object of verifying that they are in possession of the certificate issued under the Safety of Life at Sea, which certificate must have been issued by the maritime authorities of their respective countries.

(d) To report to the Director-General all remarks or complaints made by the ship-owners, crew or passengers in regard to this service so that the aforesaid Director may take such necessary steps as he may think fit.

(e) To see that all the staff that work the installations are in possession of the Government certificate according to the law of January 24th, 1908, with the object of making sure that all these installations are handled by duly qualified operators.

ART. 5.—For these duties a register book will be given to the wireless inspector in which he shall note the following particulars of each visit:—

(a) Date and place of inspection.

(b) Name of the vessel.

(c) System, radius, wavelengths, etc.

(d) Names of operators and dates of their certificates.

A copy of this information is to be sent every quarter to the Director-General in order that he can make out a list and maintain a register devoted to all important information and data.

ART. 6.—The naval and marine authorities will do their best to facilitate the work of the inspector, putting at his disposal the *craft* and *personnel* required by him for the fulfilment of his duties.

ART. 7.—When it is desired to instal a wireless station on board a ship, the builder, the owner, the agent or the captain must ask for permission from the Director-General of Navigation and Fisheries. As soon as the installation is completed the applicant must notify the above authority, stating the port in which he desires the visit to be made, so that the wireless inspector may receive instructions accordingly.

ART. 8.—Wireless installations are subdivided into three classes:—

(1) Stations with permanent service.

(2) Stations with limited service.

(3) Stations with special service.

Class 1 includes all vessels which carry twenty-five or more passengers and which have an average speed of fifteen or more knots. This class includes also ships carrying 200 or more passengers, having a speed of over thirteen knots, and travelling a distance of over 500 miles between two consecutive ports. The

latter vessels should carry at least two telegraphists.

To Class 2 belong all the steamers not included in Class 1, provided they are fitted to carry twenty-five passengers or more. During the voyage the ships of this class must have one telegraphist on constant watch during seven hours per day and ten minutes at the beginning of the other hours.

In cases where the vessel is more than 500 miles distant from the nearest coast, the watch must be permanent.

To Class 3 belong all ships which are not included in Classes 1 and 2, and having fifty or more persons on board and carrying less than twenty-five persons or none.

The watch service on these ships must be continuously maintained during a transatlantic voyage or when the ship is over 1,000 miles distant from the coast. In special circumstances, and whenever advisable for the safety of life at sea, ships of every class may be obliged to keep a constant watch.

Vessels belonging to subsidised Government lines are obliged to carry wireless no matter where they sail or what crew they carry.

ART. 9.—The radius of the wireless station shall be a minimum of 100 miles at sea in day-time when communicating with ships under normal conditions and circumstances.

All the stations must be provided with an emergency set, installed on the upper deck, which must be kept in the best condition, having a source independent of the main electric supply and capable of being set in instant working order; this set must be able to work during six hours at least, and must possess a radius of a minimum of eighty miles for ships of the first class and fifty miles for the others.

ART. 10.—When testing the transmission and reception of messages, both installations shall be made to work with a ship at a distance of about 100 miles.

The wavelength and the oscillation current of the aërials must be measured.

When the Director-General thinks it necessary, the curves of resonance will have to be made and the degrees of coupling adjusted. When it is necessary to test the state of the receiving apparatus, the Director may order that one or several of the officers in that service shall mark trial tests with the different stations at various distances during the voyage.

ART. 11.—Inspections must be made at the ports of Barcelona, Cartagena, Cadiz, Vigo and Bilbao, which are the places of residence of the wireless inspectors. However, if for the convenience of builders, the inspection should be carried out at some other port, these builders must defray the travelling expenses of the said inspector.

ART. 12.—The radio inspectors shall receive remuneration for all the inspections they carry out with regard to wireless installations.

The amount of this remuneration shall be 100 pesetas with an increase of twenty-five pesetas for each auxiliary transmitter which the ship may carry independent of the emergency installation. Such remuneration shall be the same whatever the rank held by the radio inspector.

The annual inspections held for the issue of certificates in accordance with the provisions of the London Safety of Life at Sea Convention shall be made free of charge.

(Signed) RAMON ESTRADA,
Director-General of Navigation and
Marine Fisheries.

Madrid, September 4th, 1914.

ROYAL DECREE DATED FEBRUARY 20TH, 1917.

Inscribed in the Official Record Under No. 49.

E His Majesty the King (whom God save) inspired by the sentiment of humanity, of which the crews of the merchant ships, which in these difficult times with bravery and with risk to their lives maintain our maritime commerce are deserving, has, in accordance with the proposal of the Director-General of Navigation and Sea Fisheries, designed to decree—

1. All merchant ships of 500 tons and upwards which make long sea voyages or long coasting voyages must carry a wireless installation having a minimum range of 100 miles, as laid down under the International Radio-telegraphic Convention.

2. Similarly the said ships will carry one or more lifeboats in proportion to the number of the crew, each fitted with its own motor, or provided with adjustable motors of such a kind as to answer the same purpose.

3. Local directors of navigation shall allow a certain time for each ship to be provided with these things, the shipowners having to certify before the said authorities that they have taken the necessary steps or made definite contracts to obtain them.

ROYAL DECREE DATED JUNE 22ND, 1917.

F In view of the request made by the "Cia Nacional de Telegrafia sin Hilos," His Majesty the King (whom God guard) has been pleased to order that all the radiotelegraphic stations concerned in the Royal Decree of Feb. 20th last inscribed in the Official Record under No. 49 shall carry emergency installations in accordance with Article 9 of the regulations for the service of installation and inspection of radiotelegraphy on board merchant ships on September 4th, 1914, excepting those installations which have sources of energy independent of that which forms a regular part of the ship's equipment and is fitted on deck.

Madrid, June 22nd, 1917.

ROYAL DECREE DATED OCTOBER 12TH, 1917.

Issued in the form of a Circular Published in the Official Gazette of the Spanish Ministry of Marine No. 235 of November 19th, 1917.

G In view of the collection of information by this Administration for the fulfilment of the Royal Orders of February 20th, and June 16th last (inserted in the Official Gazette of this Ministry and numbered 29 and 143 respectively) relative to the complete installation of wireless telegraphs on board merchant vessels of 500 tons and upwards, which are engaged in overseas and extended coasting trade, with a minimum range of 100 miles, on the conditions notified in the regulations governing wireless telegraphy.

And in view of the data recently communicated by the companies "A. E. G. Thomson Houston Iberica" and "Nacional de Telegrafia sin Hilos," the former saying that its resources permit the construction of 25 stations per month and that within one year 300 can be provided, whilst the latter give an assurance that they are able to supply wireless stations with the least possible delay, but not defining the duration of this delay.

It resulting from previous communications from this department that there are 57 stations already fitted and arranged for, and that there remain some 80 to be constructed or fitted.

It resulting, moreover, that this Administration deems a delay of eight months to be sufficient for the "Compañia Nacional de Telegrafia sin Hilos" to supply these 80 stations, that company being looked upon as a firm reputed in the business world as of good standing and with resources fully equal to those of the "A. E. G. Thomson Houston Iberica" and the delay of eight months being the double of that within which the latter undertake to fulfil those engagements.

His Majesty the King (whom God guard) in conformity with the information supplied by the Administration, and in agreement with his Privy Council, has thought it well to dispose that, beyond a delay of eight months from the date of publication of this Royal Order, the sailings of the ships mentioned in his Decree of February 20th of the present year shall be stopped if they fail to be fitted with complete wireless stations in accordance with the existing regulations, and that the Marine authorities in the provinces shall carefully communicate this decision to those who appear in their books as proprietors of the respective ships.

ROYAL DECREE OF FEBRUARY 8TH, 1917.

HART. 1.—All civil private wireless stations, whether they be transmitting and receiving stations, receiving alone, or assigned for the use of scientific or auxiliary meteorological observatories, are subject to the inspection of the Government, such inspection being carried out by the Home Office and the General Direction of Posts and Telegraphs.

The inspection shall be carried out by telegraph officials, and its object is to promote public order and interest, and protect the rights of the communication monopoly that belong to the State, in fulfilment of the present dispositions on the matter and in strict observance of the concession conditions.

In accordance with the rights granted by contract with the State to the "Compañia Nacional de Telegrafia sin Hilos," this company can also perform the inspection of the above-mentioned wireless stations at her own expense.

The appointment of inspectors by the company shall be countersigned by the Postmaster-General, and when in performance of their duty will be treated as public officials and be granted the same facilities in the exercise of their duties as those given to the Government inspectors stated in Arts. 3 and 4 of this Royal Decree.

The Home Office shall decide all questions which might arise in the carrying out of this private inspection.

ART. 2.—In addition to the inspection work which the Home Office or the Postmaster-General may at any moment judge convenient to carry out a constant inspection service shall be carried out in the said civil radiotelegraphic stations under the Spanish State authorities.

ART. 3.—To carry out the constant inspection service stated in the preceding article, an inspector for each station shall be appointed by the Postmaster-General, who shall superintend the work, and the station shall not be used even for scientific purposes, except under his

personal supervision. The inspector shall adopt such measures as he thinks fit to prevent the station being used during his absence.

When the working of a station cannot be attended to by one official alone, the Postmaster-General may assign two or more inspectors, and distribute between them the work of the station as he may judge convenient.

ART. 4.—Access will be allowed to the inspector of the station at any time of the day or of the night without need of permission, request, or notice of any kind.

For this purpose the keys of the place or places in which the apparatus is installed shall be given to the inspector by the owner or licensee of the station, so that no obstacle or delay may prevent his entrance.

ART. 5.—A weekly report of the general working condition of the station, stating the nature of the service, the day, hour, and minutes when they were effected, and any observation the inspector may judge should be specially noted, should be sent by him to the Telegraph Direction.

Immediate notice shall also be given by the inspector to the General Telegraph Direction of any technical or legal anomaly observed in the working of the station, and the orders of the authority shall be transmitted, executed, or caused to be executed by the said inspector.

ART. 6.—All applications for licence to instal a radiotelegraphic station must comply with the following conditions, as well as with all others in force at the time:—

(1) The purpose for which the station is to be employed must be clearly expressed.

(2) A plan of the site where the station is to be installed, its communication with the public street or road, and the places where the apparatus are to be mounted in a 2 per cent. scale, and another plan with diagram of connections and details of aerial in a 10 per cent. scale, shall accompany the request for the licence.

(3) A detailed list of the apparatus specifying their nature, trade mark, and manufacture number (if any), must accompany the application.

(4) The name, age, address, and professional title (if in possession of one) of the operator or operators who will work the station must be stated.

The Home Office Minister can grant or refuse the concession of the licence, and can also modify the technical conditions of the installation before or after the licence has been granted.

ART. 7.—No modification either of the installation or disposition of the station is allowed without authorisation of the Home Office Minister acting on information of the appropriate inspector.

All modifications should be reported to the General Telegraph Direction by the inspector of the station.

ART. 8.—Before a station is opened the proprietor or licensee will deposit a sum of 5,000 pesetas in the general safe of deposits at the disposal of the Postmaster-General, and set aside to cover the pecuniary obligations which the proprietor or licensee might incur.

This sum must be replaced should it diminish or disappear in making good the obligations for which it is set aside.

ART. 9.—The proprietor or licensee must pay all expenses incurred by the final inspection. These expenses comprise a sum which will be

fixed by the Postmaster-General, and which must not exceed 2,000 pesetas per annum, to be given to the inspector in monthly payments as a reward for his services, and in payment of all office expenses.

Office accommodation should also be provided for the inspector of the "Compañía Nacional de Telegrafía sin Hilos," should there be one.

Should there be no telegraph office in the place where the station is installed, the proprietor or licensee must provide decent food and lodging for both the official and private inspectors, should there be any.

ART. 10.—The General Direction will classify as major or minor offences any infringements by the proprietor or licensee or any of their staff of this Royal Decree or any other standing orders in this regard.

In all cases the following will be considered as a major offence:—

(1) Not fulfilling the conditions of the licence.

(2) Any modification in the installation or arrangement of the station without due authorisation of the Home Office.

(3) Deliberate obstruction of the inspector with regard to free access to the station under his charge.

(4) The using of the station for any service without the presence of the inspector.

(5) Infringement of the terms of Art. 8 of the Royal Decree.

ART. 11.—Apart from other criminal or civil responsibilities involved in the offences enumerated in the preceding article, the following penalties will be exacted:—

(a) Fine of 100 to 500 pesetas for petty offences.

(b) Fine of 501 to 2,000 pesetas for serious offences, together with loss of the licence and apparatus. The station will be dismantled at the General Direction of Telegraph's will.

The working of the station may be immediately suspended by the inspector on his discovery of any of the offences enumerated in numbers 1, 2, 3 and 4 of the preceding articles.

ART. 12.—Apart from other criminal responsibilities binding upon the inspector, acts of commission or omission infringing this Royal Decree or any other standing regulations on the matter will be considered as serious offences, and will be punished in accordance with the rules and regulations of the Post and Telegraph Corporation. Should the inspector not belong to the said corporation (*i.e.*, hold the rank of private inspector), the offence will be punished with the fine of 100 to 2,000 pesetas and disability from continuing in his office, the "Compañía Nacional de Telegrafía sin Hilos" being responsible for the payment of the fine.

ART. 13.—Any illicit station discovered shall be immediately dismantled, the General Direction taking possession of all apparatus. The proprietor and any other persons who may be found guilty of installing or working such a station shall, apart from other criminal responsibilities to which they be liable, be punished with a fine of 2,000 to 5,000 pesetas.

The owner of the building, director of the establishment, society, or corporation in

whose premises a clandestine station is installed, and who, as soon as it comes to his knowledge, does not report the fact immediately in the quickest possible way to the General Direction, will incur the same responsibilities.

ART. 14.—Trial for these offences shall be held in public.

An informer shall be entitled to half of the amount of the imposed fine.

ART. 15.—The use of radiotelegraphy granted to official centres for scientific purposes and worked by public officials is not subject to constant inspection, and is excused the deposit referred to in Article 8. The service will not be suspended, nor the apparatus confiscated, should any infringement be committed by the licensee or staff; but the persons guilty of the offence shall be subject to the criminal or civil responsibilities which may personally affect them. A report will be sent in by the Minister of the Home Office to the Minister under whose supervision the station is administered of the offences committed in order to assure the observance of this Royal Decree, and that these offences should be noted in the personal service records.

ART. 16.—The terms of the Royal Decree do not concern the "Compañía Nacional de Telegrafía sin Hilos" (except those which specifically affect this company), and the inspection of these stations will be subject to the conditions of the contract with the State.

ART. 17.—The authorisation for the working of radiotelegraphic stations granted with priority under the Royal Decree must be carried into effect. The General Direction of Telegraphs will immediately organise the constant inspection service for the stations not comprised in Articles 15 and 16.

A term of eight days is granted from the date of publication of this Royal Decree for all private authorised existent stations to send in to the General Direction the information referred to in numbers 2, 3, and 4 of Article 6, and also make the deposit ordered in Article 9. If the term expires before the fulfilment of these obligations, the station will be considered as illicit, and immediate proceedings taken under Article 13, unless the licensee shall present before the expiration of the fixed term a renunciation of his licence to the Minister of the Home Office through the General Direction. He must as a preliminary thereto have dismantled the apparatus.

The same term of eight days is given to those in charge of existing radiotelegraphic stations to hand over to the General Direction the information asked for in numbers 2, 3, and 4 of Article 6. Should the term expire without the fulfilment of these conditions proceedings will be taken according to Article 15.

CONVENTION OF MADRID, DATED JUNE 17TH, 1918, AS MODIFIED BY CONFERENCE OF JUNE 4TH, 1919, CONCERNING WAVELENGTHS TO BE USED BY STATIONS UNDER SPANISH CONTROL.

I. The undersigned have held meetings of a semi-official character in the Ministry of State, Madrid, Spain, on June 12th, 13th, 14th and 15th, 1918, for the purpose of discussing the means for avoiding interference in communications by wireless

telegraphy and for the establishment of a programme which shall benefit mutually the radiotelegraph services of the various Governments represented.

2. Attached and below are three annexes marked (A), (B) and (C), in which are contained the agreements unanimously arrived at by all the representatives present.

Annexe (A) sets forth the agreements adopted.

Annexe (B) contains the organisation proposed in the transmission and reception by wireless telegraphy of the stations of the Spanish Army and Navy.

Annexe (C) includes the organisation proposed in the transmission and reception by the stations of the Compañía Nacional de Telegrafía sin Hilos and of the Ministry of State.

3. It is understood that all the agreements and arrangements are subject to the approval of the various Governments represented.

Major R.M.L.I.
English Representative.

Naval Lieutenant,
French Representative.

Lieutenant (jg) N.N.V.
Representative of the United States.

Corvette Captain,
Representative of the Ministry of Marine.

Commander of Engineers and of the Army,
Representative of the Ministry for War.

Naval Lieutenant,
Representative of the Department of the Interior and of State.

ANNEXE (A).

AGREEMENTS ADOPTED.

1. The Agreements of the International Radiotelegraph Convention of July 5th, 1912, will be strictly observed.
2. *Always whenever possible*, communication on a wave of 600 metres will be prohibited.
3. In accordance with the Convention, Spanish merchant ships shall continue to use the 600 metre wave when communicating with commercial coast stations and between themselves.
4. Although war vessels are entitled to use any length of wave whatever, it is agreed for mutual convenience that Spanish war vessels shall not communicate with naval and military stations or between themselves on 600 metres, but with the wavelengths specified in the Annex (B).
5. It is agreed that inter-communication between Spanish coast stations, whether military naval or commercial, shall not be made with a 600 metre wave, but with the wavelengths fixed and specified in the Annexes (B) and (C).
6. When a Spanish military, naval or commercial coast station desires to send a message to a Spanish coast station (commercial) which listens-in on a wave of 600 metres, the call will be with a wave of 600 metres and immediately afterwards they will give each other the conventional signals to change over to the 900 metre wave, and all subsequent communication will take place on that wave.
7. No operator of a coast station or ship station shall listen-in for more than one wavelength during the same period of time.
8. As far as possible, efforts shall be made that Spanish wireless telegraph stations do not interfere with the advices transmitted by coast stations at fixed hours or with the familiar calls for assistance (*llamadas de auxilio*).

The hours at which those advices are transmitted by stations on a wave of 600 metres are at present as follows:—

Station.	Call Signal.	Time (G.M.T.).
Casablanca ..	CNP	0245, 1045, 1845.
Gibraltar ..	BYW	0830, 2030.
Monsanto ..	CTV	0145, 0945, 1345, 2145.
Orán ..	FUO	0030, 1400.
Toulon ..	FUT	0930, 2040.

Wavelengths longer than 600 metres, on which the aforementioned advices are transmitted, are not used in the Spanish organisation given in the Annexes (B) and (C).

9. As far as practicable, the wavelengths which have been adopted by all the nations for their press messages will be respected and not interfered with.

No press message shall be transmitted with a 600 metre wave.

10. With the object of obviating interference by the North American, English and French stations with the Spanish stations, the wavelengths selected in the Annexes (B) and (C) will not be changed as far as possible.

11. No call signal or any other working signal shall be made more than three times in each call, and no call signal shall be repeated more than three times in a quarter of an hour. (International Radiotelegraph Convention of London, July 5th, 1912, Articles XXV and XXVI.)

12. All nations represented agree to take the necessary steps to obtain the most exact synchronisation possible at all their stations with a view to ensuring the efficiency of the organisation of wavelengths given in the Annexes (B)

and (C), and so that the intermediate wavelengths of 300, 750, 1050, 1350, 1650, 2200, 2750, etc., shall remain free for the use of North American, English and French warships and stations.

13. All communications by wireless telegraphy shall be limited as far as possible.

14. Meetings of a semi-official character will be held in Madrid every six months (June 1st and December 1st) between the representatives of the United States, England, France and Spain, with the object of exchanging impressions regarding :—

- (a) Mutual organisation ;
- (b) Means for eliminating interference ;
- (c) Change of wavelengths ;
- (d) Complaints.

ROYAL DECREE OF
18TH JANUARY, 1920.

On wireless telegraph and telephone installations for scientific purposes.

J Wireless telegraph, or telephone, sending and receiving, or only receiving, installations, for scientific purposes, are divided into two classes, viz. : (1) Permanent installations ; (2) Provisional installations.

Permanent installations, either for research, or as a complement to meteorological observatories, or for any other purpose, will be subjected to the prescriptions of the Royal Decree dated 8th February, 1917.

Provisional installations, or those fitted with the sole object of scientific experimenting or study of any branch of wireless communication, will be permitted by the Home Minister at his discretion for a given time, under the following conditions :—

(1) Applications shall be accompanied by a full report of the experiments and researches which the applicant intends to carry out, showing the place or places destined for these experiments, with diagrams, if possible, of the aerial, transmitting or receiving apparatus and their category and importance.

(2) It must be stated for how long the licence is required in order to carry out experiments and for how many hours per day it is intended to use it.

(3) The installation shall be inspected by an appointed official of the Spanish Telegraphs, and always under the control of the local Chief of the Telegraphs.

(4) As every licence will be issued for a fixed time, at the expiration thereof the installation, comprising aerial and apparatus, shall be dismantled and the matter reported to the Director of Posts and Telegraphs.

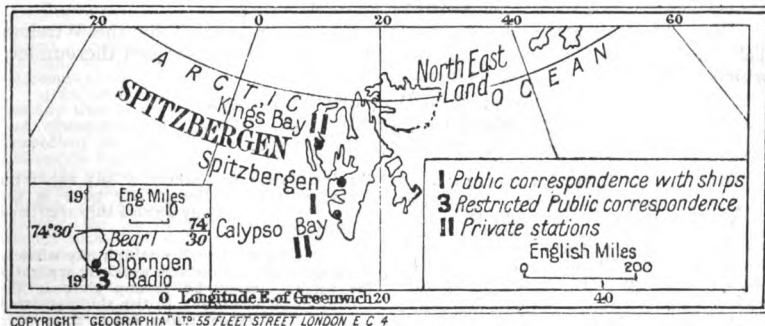

(5) Employing the installation for other than experimental and research purposes will entail a fine upon the licensee of pesetas 500 to 2,000, in addition to the confiscation of apparatus and aerial, which shall become the property of the telegraph authorities.

(6) The licensee shall bear all expenses consequent upon the official inspection of this class of installation, in accordance with the stipulations of the Director of Posts and Telegraphs.

(7) Installations licensed for experiments in transmission shall be operated only at the hours and on the wavelength authorised by the Director of Posts and Telegraphs, in order to prevent interference with official and public services.

SPITZBERGEN

THIS group of barren islands, discovered by Barents in 1596, has formed the starting point for many expeditions in their endeavours to reach the North Pole. They lie in about 80° N. latitude, and between 10° and 30° E. longitude, and possess rich mineral resources. Frequent attempts have been made in recent years to open up the archipelago commercially, and with that object several companies have been formed. One of these

COPYRIGHT "GEOGRAPHIA" LTD 55 FLEET STREET LONDON E C 4

owns two of the three wireless stations on the islands, situated respectively at King's Bay and Calypso Bay, whilst the third is owned and worked by the Norwegian Government. No laws and regulations yet exist regarding the working of radiotelegraphy, but as the territory has been placed under the suzerainty of Norway their proximate promulgation is to be expected.

On Bear Island, situated about midway between Norway and Spitzbergen a 3 k.w. Marconi Station has been erected. This land station is owned privately by the Bear Island Code Company in Tromsø, and is intended for communication direct with the Government wireless station at Fugoy (Norway).

STRAITS SETTLEMENTS

(See map on p. 139.)

THE Crown Colony of the Straits Settlements comprises Singapore, Penang, and Malacca. These settlements were transferred from the control of the Indian Government to that of the Secretary of State for the Colonies on April 1st, 1867. Labuan, the Cocos Islands and Christmas Island have since been annexed to the Colony.

The administration is vested in the hands of a Governor, aided by an Executive Council, legislation being under the direction of a Legislative Council, presided over by the Governor.

CONTROL AND ORGANISATION.

Commercial wireless telegraph stations have been erected at Paya Lebar, Singapore, opened for traffic on October 8th, 1915, and Penaga, Penang, opened for traffic on February 21st, 1916. These installations are Government land stations under the control of the Postmaster-General.

Wireless telegraphy is a State monopoly, and licences to erect and work stations are not issued to private companies or individuals.

There are no companies engaged in the manufacture of wireless apparatus, and no wireless societies, clubs, or publications. Arrangements have not yet been completed for the installation of aviation stations, and there are no wireless arrangements for the transmission of meteorological signals.

ADMINISTRATION.

The administration of wireless telegraphy is regulated by the Wireless Telegraph Ordinance of 1912, together with the regulations issued thereunder, which are printed *in extenso* below.

A—Ordinance of December 16th, 1912.

B—Regulations of January 5th, 1914.

C—Regulations of April 1st, 1919.

ORDINANCE OF DECEMBER 16TH, 1912.

A 1. This Ordinance may be cited as "The Wireless Telegraphy Ordinance, 1912."

2. The expression "wireless telegraphy" means any system of communication by telegraph as defined by "The Telegraph Ordinance, 1895," without the aid of any wire connecting the points from and at which the messages or other communications are sent or received.

Provided that nothing in this Ordinance shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

3 The Governor may, whenever he shall deem it expedient to do so, licence the establishment of any wireless telegraph station or

the installation or working of any apparatus for wireless telegraphy in any place in the Colony or on board any British ship registered in the Colony.

4. (1) No person shall establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place in the Colony or on board any British ship registered in the Colony except under and in accordance with a licence granted in that behalf by the Governor.

(2) Every such licence shall be in such form and for such period as the Governor in Council may determine, and shall contain such terms, conditions and restrictions on and subject to which the licence is granted as the Governor shall consider desirable in the public interest.

5. (1) If any person establishes a wireless telegraph station without a licence in that behalf or installs or works any apparatus for wireless telegraphy without a licence in that behalf he shall be liable to a fine not exceeding one thousand dollars or to imprisonment of either description for a term not exceeding twelve months, and in either case be liable to forfeit any apparatus for wireless telegraphy installed or worked without a licence, but no proceedings shall be taken against any person under this Ordinance except with the previous sanction of the Public Prosecutor.

(2) If a magistrate is satisfied by information on oath that there is reasonable ground for believing that a wireless telegraph station has been established without a licence in that behalf or that any apparatus for wireless telegraphy has been installed, or worked in any place or on board any ship within the jurisdiction without a licence in that behalf he may grant a search warrant to any police officer to enter and inspect the station, place or ship and to seize any apparatus which appears to him to be used or intended to be used for wireless telegraphy therein.

6. (1) The Governor in Council may make regulations for all or any of the following matters:—

(i) For prescribing the form and manner in which applications for licences under this Ordinance are to be made;

(ii) for prescribing the fees payable on the grant of any licence;

(iii) for regulating the manner in which apparatus for wireless telegraphy on board a merchant ship, whether British or foreign, in the waters of the Colony shall be worked so as to prevent interference with naval signalling or the working of any wireless telegraph station lawfully established, installed, or worked in the Colony or the waters thereof, and so as not to interrupt or interfere with the transmission of any wireless messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea;

(iv) for prohibiting, except with the special or general permission of the Postmaster-General of the Colony, the working or using of any apparatus for wireless telegraphy on board a merchant ship, whether British or foreign, whilst such ship is in any of the harbours of the Colony;

(v) for prohibiting or regulating in case at any time in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy on board merchant ships, whether British or foreign, in the waters of the Colony, the use of wireless telegraphy on board such ships while in such waters by such further rules as the Governor may see fit to make from time to time, and either in all cases or in such cases as may be deemed desirable.

(2) Provided that no regulations made in respect of the matters described in paragraphs (iii) (iv) and (v) of this section shall apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

7. When an applicant for a licence proves to the satisfaction of the Governor that the sole object of obtaining the licence is to enable him to conduct experiments in wireless tele-

graphy a licence for that purpose shall be granted, subject to such special terms, conditions and restrictions as the Governor may think proper, but shall not be subject to any rent or royalty.

8. (1) Every omission or neglect to comply with and every act done or attempted to be done contrary to the provisions of this Ordinance or of any Regulation made thereunder, or in breach of the conditions and restrictions subject to or upon which any licence has been issued shall be deemed to be an offence against this Ordinance, and for every such offence not otherwise specially provided for the offender shall, in addition to the forfeiture of any article seized, be liable to a fine of five hundred dollars.

(2) All convictions, forfeitures and fines under this Ordinance or any Regulations made thereunder may be had and recovered before a district court.

REGULATIONS.

B The following Regulations, dated January 5th, 1914, were made under the "Wireless Telegraphy Ordinance, 1912":—

1. All apparatus for wireless telegraphy on board a merchant ship whether British or foreign in the waters of the Colony shall be worked in such a way as not to interfere with (a) Naval signalling, or (b) the working of any wireless telegraph station lawfully established, installed, or worked in the Colony or the waters thereof, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. No apparatus for wireless telegraphy on board a merchant ship whether British or foreign shall be worked or used whilst such ship is in any of the harbours of the Colony except with the special or general permission of the Postmaster-General of the Colony.

3. If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships whether British or foreign while in the waters of the Colony shall be subject to such further rules as may be made by the Governor from time to time, and such rules may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

4. These Regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

THE WIRELESS TELEGRAPHY ORDINANCE, 1912.

REGULATIONS UNDER.

C In exercise of the powers conferred by section 6 of the Wireless Telegraphy Ordinance, 1912, the Governor in Council is pleased to make the following regulations:—

1. All apparatus for wireless telegraphy on board a merchant ship, whether British or foreign, in the waters of the Colony shall be worked in such a way as not to interfere with (a) Naval signalling, or (b) the working of any wireless telegraph station lawfully

3. If at any time, in the opinion of the Governor, an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control

5. The Regulations made on the 30th December, 1918, and published as Notification No. 5 in the *Gazette* of the 3rd January, 1919, are hereby cancelled.

SUDAN

A detailed map of the Anglo-Egyptian Sudan. The map shows the Nile River system, including the White Nile and Blue Nile, and the Red Sea to the east. Major cities like Khartoum, Omdurman, and Port Sudan are marked. Neighboring regions such as French West Africa, Belgian Congo, Abyssinia, and Eritrea are also labeled. A scale bar indicates distances in English miles (0, 100, 200, 300). A note in the top left corner states: 'Public correspondence with ships'.

lies in the hands of a Governor-General appointed by Egypt with the assent of Great Britain. All ordinances, laws and regulations are made by the Governor-General in Council.

CONTROL.

<i>Superintending Engineers' Dept.</i> (<i>Wireless Section</i>)— Staff-Sergt. W. Finding, R.E. (<i>Vacant</i>)	Wireless Inspector Mechanic Wireless Inspector Mechanic	G.P.O., Khartoum G.P.O., Khartoum

The wireless inspectors act as superintendents of groups of stations. The other personnel at the stations consist of European foreman engineers where possible in charge of groups of stations, native telegraphmasters and assistants, and native engine drivers and assistants.

ORGANISATION.

The first wireless installation in the Sudan was fitted at Port Sudan in the beginning of 1915, the first three inland stations, including those at Malakal and Gambela, being fitted in the autumn of the same year.

None of the stations is at present fitted with apparatus suitable for communication with aircraft. When the C.W. set at Khartoum approaches completion, the stations at Malakal and Mongalla, and subsequently the others, will be fitted with an alternative apparatus for receiving C.W. signals, but will still retain their spark transmission.

None of the stations transmits time, weather or meteorological signals.

ADMINISTRATION.

The Regulations affecting Radiotelegraphy in the Sudan are carried out under an Ordinance issued by the Governor-General, and dated at Khartoum, June 4th, 1906. No special regulations have been issued in pursuance of the Ordinance of 1906, and the service is conducted under the Provisions of the International Radiotelegraph Convention, 1912, and the Regulations for its execution. No licences for private wireless stations have hitherto been issued.

A—Wireless Telegraph Ordinance.

AN ORDINANCE FOR CONSTITUTING
WIRELESS TELEGRAPHY A
MONOPOLY OF GOVERNMENT.

No. 2 of 1906.

A This Ordinance may be cited as "The Wireless Telegraph Ordinance, 1906."

No person shall instal or make use of any apparatus for Wireless Telegraphy or transmit or receive messages by means of any such apparatus within the Sudan except the Department of Telegraphs or a duly authorised officer or official of the Sudan Government, unless such person is in possession of a special licence in writing from the Governor-General.

SWEDEN

(See map on p. 350.)

THE territory of the Kingdom of Sweden includes the eastern and main part of the Scandinavian peninsula. In the extreme north and north-east Norway and Finland are her neighbours. The border on the Finnish frontier is the Torne Elf, a river running from north to south, and falling into the northern end of the Gulf of Bothnia. Norway lies on the west of Sweden; and the Kiel, a chain of highland plateaux and mountains, forms the natural boundary thereof. The Kattegat to the south-west and the Baltic in a southerly and easterly direction separate her from the European continent.

The length of the country is estimated to be 2,500 kilometres from 69° north to 55° south latitude, and the size 450,600 square kilometres. Population about 6 millions.

Sweden is a constitutional monarchy. The Parliament consists of two chambers, of which the second chamber is directly elected by the people, and the first by the municipalities, in a somewhat indirect way.

The Cabinet is appointed by the King, and is supposed to be backed by a Parliament majority. The constitution rests on the fundamental law of 1809, revised in 1865.

CONTROL.

Wireless telegraphy, except in so far as the Navy is concerned, has been placed in the hands of the Kungliga Telegrafstyrelsen, which is a body under the supervision of the Minister of Public Works, and of which the Radio Bureau forms a special department.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Mr. G. Svensson	Minister of Public Works	Stockholm
Mr. Sven Ludvig Herman Rydin ..	Director-General (Head of the Kungliga Telegrafstyrelsen)	Do.
Mr. S. Ljungquist	Chief of Radio Bureau	Do.
Mr. A. S. Litström	Inspector of Wireless Installations	Do.
Mr. J. G. Holmström	Director of Radiotelegraphic Instruction	Do.

The first land station in Sweden was organised and owned by the Swedish Navy. At present 5 land stations belong to the Royal Swedish Telegraph Administration, 2 to the Swedish Navy, and one to the State Railways.

On January 1st, 1919, the Swedish Government took over permanently all wireless telegraphy in Sweden and on board Swedish merchant ships. Hitherto, the Société Anonyme Internationale de Télégraphie sans Fil in Brussels, controlling the Marconi as well as the Telefunken patents in Sweden, had a virtual monopoly in the Mercantile Marine, but by means of a friendly arrangement between the Swedish Government and the S.A.I.T., the former have acquired the patent rights of the latter.

No private companies, societies or individuals are permitted to work wireless telegraphy or erect stations without a concession from the Government. There are no wireless clubs or societies.

ORGANISATION.

Wireless telegraphy was first employed by the Swedish Navy in 1902, and was at the same time installed on the fortresses near Vaxholm, off Stockholm, on the Baltic coast. Wireless rapidly developed in the Navy, and only a few years after the first trials every ship was equipped. In 1904 a ship station and shore station were built in Karlskrona, but some years elapsed before wireless was introduced into the Mercantile Marine. In 1910 the s.s. *St. Paul*, of Gothenburg, was fitted with a Marconi installation, and soon afterwards there was much wireless activity amongst Swedish shipowners, so that by the end of 1920 some 90 ships of the Mercantile Marine were carrying wireless.

For ship and shore traffic there are stations at Boden, Göteborg, Hernösand, Karlskrona, Tingstäde on the Island of Gotland, and at Vaxholm, near Stockholm. An important 50-kilowatt station has been erected near Karlsborg and some more stations have been completed, but detailed particulars are not yet available.

LIST OF INSTALLATIONS.

Land stations for public traffic to ships	7
Land stations for restricted public traffic	2
Ship stations on Government vessels	51
Ship stations on privately owned vessels	90

ADMINISTRATION.

Wireless telegraphy and telephony are controlled by the Act of August 31st, 1907, and several sets of regulations.

The following is the list of the texts of the Swedish Laws and Regulations, which will be found appended hereto:—

A—Act of August 31st, 1907.

B—Royal Decree of June 20th, 1913.

C—Resolution of Director-General of Telegraphs, August 22nd, 1913.

D—Extracts from Statute 131, dated August 10th, 1914, and Statute 514 of December 23rd, 1915.

E—Royal Decree, dated September 4th, 1916.

F—Resolution of Director-General of Telegraphs, dated January 12th, 1917.

ACT OF AUGUST, 31ST, 1907.

A CONCERNING THE ESTABLISHMENT AND WORKING OF INSTALLATIONS OF RADIOTELEGRAPHY AND RADIOTELEPHONY.

1. Whosoever desires to establish in Sweden, on land or on board a vessel permanently moored in Swedish waters, an electric installation of radiotelegraphy or radiotelephony for public or private use must apply for an authorisation from the King.

2. The authorisation of the King must likewise be applied for, by any person or persons desiring to establish on board a Swedish vessel other than permanently moored, an installation of the kind referred to in Paragraph 1.

3. The authorisation granted by the King as prescribed in paragraphs 1 and 2, can only be granted for a certain period. In granting the authorisation, His Majesty prescribes under the reservation of private rights, the manner and conditions under which the installation may be established and worked.

4. Whosoever establishes or works, without the authorisation of the King or contrary to the provisions prescribed in the authorisation, an installation within the meaning of the present law, is liable to a fine of from 25 to 1,000 kronen if the penalty incurred by this contravention is not included in the Penal Code.

5. If an installation within the meaning of the present law has been established without the authorisation of the King, or contrary to the provisions prescribed simultaneously with the authorisation, or if the authorisation has been revoked later by the King, it is the duty of the Governors of Provinces to take the necessary steps to prevent any use being made of the installation.

6. Every fine imposed under the present law reverts to the State. Fines not paid on account of the insolvency of the delinquent are expurgated by terms of imprisonment as prescribed in the Penal Code.

7. The provisions of this law do not apply to State installations.

8. All regulations and all dispositions concerning foreign vessels not permanently moored in Swedish waters, which may be considered necessary for the proper working in Sweden of installations within the meaning of the Act, are made by the King.

ROYAL DECREE OF JUNE 20TH, 1913.

B WHICH CAME INTO FORCE ON JULY 1ST, 1913, REPLACING THAT OF AUGUST 31ST, 1907 (*see* YEAR-BOOK OF WIRELESS TELEGRAPHY AND TELEPHONY, 1913, pp. 151-2).

1. The working of installations of radiotelegraphy or radiotelephony on board a foreign vessel not permanently moored in Swedish waters is, except in cases of distress, prohibited in those parts of the Swedish Archipelago and Swedish waters near to the coast stations which shall be designated by the Director-General of Telegraphs acting conjointly with the Admiralty.

It is the duty of the Director-General of Telegraphs, acting conjointly with the Admiralty, to communicate these provisions to navigators in the way he judges most convenient, and likewise to inform the Governors of the Provinces concerned.

2. In order to exploit such stations in a Swedish port on board foreign vessels above referred to a special authorisation of the General Direction of Telegraphs, acting in conjunction with the Admiralty, must be obtained: the parties interested shall further more be bound to conform to the instructions, detailed edicts, if necessary, made by the Director-General of Telegraphs.

3. When an installation of the kind referred to above is exploited on board one of the foreign ships above-mentioned, the interested parties, if no regulation exists to the contrary, shall conform to the instructions fixed by the International Radiotelegraphic Convention which are in force with the service regulations thereto annexed.

4. Every contravention of this Decree, or of the regulations prescribed by the Director-General of Telegraphs in virtue of Article 2 above, will be subject to a fine of 25 to 1,000 kronen.

The fines revert to the State. Fines not payable by reason of the insolvency of the delinquent are expurgated by terms of imprisonment as laid down in the Penal Code.

5. The provisions of Article 4 hereof shall not apply to vessels of war.

C The following resolution made by the Director-General of Telegraphs relating to the prohibition of working radiotelegraphic and radiotelephonic installa-

tions in proximity to Swedish coast stations was issued on August 22nd, 1913 :—

In view of the Royal decision relating to the installing of wireless stations on board of certain Swedish vessels :

In view of the Royal Order of June 20th, 1913, relating to the working in Sweden of radiotelegraphic and radiotelephonic installations on board foreign vessels :

The Direction-General of Telegraphs, conjointly with the Admiralty, brings to the notice of interested parties that within a radius of ten nautical miles from the nearest Swedish coast station the operation of radiotelegraphic or radiotelephonic stations established either on board of Swedish vessels or on board of foreign vessels is prohibited during the hours when such coast station is open for traffic, except in cases of distress or for the purpose of corresponding with the nearest coast station.

This resolution does not refer to Swedish ships of war.

(The above Regulation refers to the working of wireless stations on board foreign vessels only whilst they are within the territorial waters of the Swedish Kingdom.)

EXTRACTS FROM STATUTES.

D In addition to the Acts and Regulations printed above, we include below such extracts from the 1914 and 1915 Statutes as apply to wireless telegraphy. These cover Regulations affecting Ship Stations and the various restrictions imposed on their use whilst within Swedish Territorial Waters.

SWEDISH STATUTES, 1914.

No. 131, DATED 10TH AUGUST, 1914.

His Royal Majesty's Gracious Rescript to H.M.'s Telegraph Department concerning prohibition of the use, within Swedish harbour precincts, of electric installations for wireless telegraphy or telephony on board of any vessel of a country at war.

In consequence of the outbreak of war between foreign powers, we have in connection with the provisions of Article 2 of our gracious proclamation of June 20th, 1913, concerning the use, within the confines of the realm, of electric installations for wireless telegraphy and telephony on board of foreign vessels, thought fit to ordain that until further notice it shall not be permitted to use such installations within Swedish harbour precincts on board of any vessel of a country at war. Which is hereby graciously brought to your notice for your cognisance and guidance.

SWEDISH STATUTES, 1915.

No. 514 OF 23RD DECEMBER.

Fifth Chapter.

Equipment of Vessels.

1.—Wireless Telegraph Installation.

ART. 56.

Vessels which must be provided with wireless installation.—Vessels which are used for voyages between different countries or between a country and any of its colonies, possessions or protectorates, shall be equipped with wireless telegraph installation, provided, however—

That such installation shall not be required if the vessel has fewer than 50 persons on board or if although the number on board is 50 or over, this is exclusively due to the fact that the master, by reason of sickness among the

crew or through other compelling, unforeseen circumstances, has been obliged to supplement the crew, or has saved persons in distress at sea, or by reason of obligation, according to law, has taken with him seamen or other persons ;

And that the Board of Trade may, on application, grant exemption from the obligation of having such installation, if the Board, in view of the route or other circumstances concerning the voyage, finds that such installation is not necessary and if such application concerns :—

(a) Vessels which do not go out to a distance of more than 150 nautical miles from the nearest coast ;

(b) Vessels which only in exceptional cases and incidentally have 50 persons or more on board for the reason that they take stowers or stowage labourers with them on a certain part of the voyage, and which on the one hand do not sail from one continent to another, and on the other hand are, during the said part of the voyage, between 30° northern and 30° southern latitude ; or

(c) Sailing vessels which are of rather primitive construction and which it is practically impossible to equip with wireless installation.

ART. 57.

Concession and classes of vessels.—Concerning H.M.'s permission to carry out such installation as referred to in Art. 56, separate enactments have been issued.

In sanctioning such installation as aforesaid the King will fix the class in which the vessel shall be classified, in accordance with the nature of the attendance of the wireless telegraph station.

ART. 58.

Range of the installation.—The wireless installation shall be sufficiently powerful to be able to transmit in day-time, under normal conditions, signals which can be clearly distinguished at a distance of at least 100 nautical miles from the vessel.

ART. 59.

Spare installation.—Vessels which are to be equipped with wireless installation shall have a spare wireless plant. This shall be placed wholly and entirely in the upper parts of the vessel, as high up as possible, and all its parts shall be fitted up so as to be protected as much as possible.

The spare plant shall have a source of power which is exclusively intended for the spare plant, and which can be brought into action most speedily.

The source of power referred to in the second paragraph of this article shall be capable of acting for at least six hours with a minimum range of 80 nautical miles in the case of vessels, for which uninterrupted attendance of the wireless installation shall have been provided, and of 50 nautical miles in the case of any other vessel.

If the main installation meets the requirements of the first and second paragraphs hereof as regards the spare plant the spare installation shall not be required.

ROYAL DECREE OF SEPTEMBER 4TH, 1916.

E r. When circumstances so demand the captain of a Swedish Government ship of war is entitled to prohibit the use of wireless electrical telegraph or telephone on board merchant vessels, whether they be Swedish or foreign, so long as they remain in Swedish territorial waters.

And the warship captain is moreover entitled, if it seem necessary for the observance of his order under the rule, to instruct the lowering of the antennæ.

In case the aforesaid captain has not prescribed a specific period during which the prohibition against using the wireless installation shall remain in force, the installation may be used and the antennæ be hoisted, as soon as the warship is out of range for exchanging visual signals with the merchant vessels.

2. The captain of a merchant vessel who shall violate this rule, or omit to obey any order given in accordance with Par. 1, shall be liable to a fine ranging from 25 to 1,000 kronen.

RESOLUTION OF DIRECTOR-GENERAL OF TELEGRAPHS, DATED JANUARY 12TH, 1917.

F Referring to His Majesty's resolutions conferring concessions on certain Swedish vessels for the

carrying of wireless telegraphic apparatus, and to His Majesty's Decree of June 20th, 1913, regulating the use within the Swedish Realm of wireless telegraph or telephone on the part of foreign vessels, the K. Telegrafstyrelsen (in consultation with the Admiralty) desires to make public proclamation that:—

The prohibition, affecting both Swedish and foreign ships against utilisation of electrical wireless installations, both telegraphic and telephonic, published in the Decree of the K. Telegrafstyrelsen of the 22nd August, 1913, shall be extended to include the whole Swedish archipelago. The only exception to this rule shall be made in favour of foreign vessels in case of distress, and in favour of Swedish vessels which find themselves in a similar predicament, or which may desire to exchange, receive or transmit messages with, from, or to, a Swedish coast station.

SWITZERLAND

THE Swiss Confederation is made up of the union of twenty-five separate political entities, or republics, organised into twenty-two cantons.

The area comprises 15,976 square miles, the population (according to the census of July 1st, 1915) numbers 3,880,500. The country extends from 45° 0' to 48° 0' north latitude, its longitude lying between 5° 0' and 11° 0' east of Greenwich. The length from north to south is 137 miles, the width from east to west 216 miles; the furthest points on its boundary are 223 miles apart.

The first Federal Organisation dates from September 12th, 1848, and the present Constitution came into force on May 29th, 1874. Supreme authority is exercised by the Federal Assembly, which consists of two Councils—the *Ständerath* or State Council, and the *Nationalrath* or National Council. The latter, which represents the Swiss people in its totality, consists of triennially elected members, each member representing a population of 20,000. The *Ständerath* (consisting of forty-four Deputies) represents the cantons, each canton contributing two members.

Both Chambers unite to elect the Federal Assembly, which wields the supreme authority and higher executive of the Confederation.

CONTROL.

Wireless telegraphy in Switzerland is controlled by the Department of Posts, Telegraphs and Railways, but there is no special branch of the department devoted thereto.

OFFICIALS CONTROLLING WIRELESS TELEGRAPHY.

Official.	Title.	Address.
Dr. R. Haab	Head of the Department of Posts, Telegraphs and Railways	Berne
Dr. R. Furrer	Director-General of Posts, Telegraphs and Telephones	Berne
M. Hauser	Assistant to the Director-General	Berne

Wireless telegraphy is a State monopoly, based on the general Federal Law affecting telegraphs and telephones, of December 16th, 1907, of which we print below the apposite clauses.

Licences are, however, granted for receiving stations only, available for a limited period, where these are to be used solely for the reception of time and weather signals. We append the form of such contracts.

ORGANISATION.

At the outbreak of the late war the Federal Council prohibited the erection of new wireless stations, and revoked all existing licences for utilising receiving stations. These private installations were accordingly forthwith dismantled, their apparatus being confiscated and stored by the Telegraph and Telephone Department. Up to the present these stations have not been restored, but re-installation has been authorised for stations belonging to public institutions, for general and technical instruction, and the Military Authorities propose shortly to extend this authorisation to industrial concerns. By way of compensation, the Federal Council decided, for the benefit of the dispossessed licences, to carry out the clause of the International Confederation of October 25th, 1913, relative to an international time association.

Starting with August 1st, 1916, the International Time Signal radiated from the Eiffel Tower is on working days telephonically transmitted by the Telegraph and Telephone Department at Berne to subscribers residing in Switzerland.

ADMINISTRATION.

The texts of the ruling Laws and Regulations reprinted here are:—

A—The Federal Telegraph and Telephone Law of 1907.

B—The Licence for Time and Weather Receiving Station.

C—Federal Decree establishing Telephonic instead of Wireless Reception of International Time Signals.

FEDERAL LAW REGULATING THE ORGANISATION OF TELEGRAPHIC AND TELEPHONIC ADMINISTRATION.

(Dated December 16th, 1907.)

CHAPTER I.

A ART. 1.—The right to establish and exploit any form of electrical telegraph and telephone in Switzer-

land, or to issue licences for any such apparatus is vested solely in the Confederation.

ART. 2.—Localities whose commercial, industrial, or political status warrants the establishment of telegraphic or telephonic stations shall contribute their just quota towards the expense of such establishment.

Subject to appeal to the Federal Council the Telegraph and Telephone Administration shall

decide the matter of installation and extent of the facilities granted. The Federal Council shall specify the rules governing the subvention and guarantees to be given by communities and individuals.

ART. 3.—The right of usage of such facilities shall be common to all. No special privilege with regard to fees or priority of transmission or reception shall be granted to any.

Nevertheless, official communications of the Federal and Canton authorities, as well as messages concerning the Service of Posts, Telegraphs, Telephones, and Railways shall have priority over those of individuals.

ART. 4.—The Supreme Direction of Telegraphic and Telephonic Administration shall belong to the Federal Council.

All regulations affecting this branch of service shall be issued by the Federal Council, so far as the latter shall not have delegated its authority to the Postal, Telegraphic, and Railway Departments or to the responsible officials thereof.

ART. 5.—The Federal Council shall conduct all negotiations concerning general telegraphic and telephonic agreements abroad.

Ratification of such agreements must be made by the Federal Assembly.

The Federal Council may, however, finally ratify agreements concluded with bordering countries on the basis of the general conventions affecting telegraphy and telephony.

ART. 6.—The Federal Council shall appoint all telegraphic and telephonic officials and employees. The nomination of individual employees or fixed classes of employees may however be delegated to the Postal and Railway Department or to the Managing Director of Telegraphs and Telephones.

ART. 7.—The immediate superintendence of all the administration of telegraphs and telephones is delegated to the Postal and Railway Department which is moreover entrusted with the necessary executive power.

CHAPTER II.

This chapter contains Articles 8, 9, and 10, which enumerate the classes of chief officials.

CHAPTER III.

This chapter is concerned with the organisation of telegraphic and telephonic zones and the offices and officials to be established in connection therewith. It contains Articles 11 to 16 inclusive.

CHAPTER IV.

Herein are laid down (in Article 17) the classification and maximum salaries of chief officials.

CHAPTER V.

In this chapter we find Articles 18 to 22 embodying the general rules applying to the nomination basis of appointment and responsibilities of the various officials.

CHAPTER VI.

This chapter covers Articles 23 and 24 and concerns itself with offences and penalties. It also includes Article 25 enumerating the previous decrees abolished by this law and Article 26 the formal Direction of Issue.

PROVISIONAL LICENCE FOR TIME AND WEATHER RECEIVING WIRELESS STATIONS.

There is hereby granted to
of

in the canton of a
Provisional Licence to make use of a receiving wireless station which shall be installed in the premises of as well as for the erection of an antenna composed of strands of metres length, between the aforesaid premises and on the following conditions:

1. The erection and upkeep, with all that thereto appertains, shall be carried out in accordance with the regulations laid down by the Federal Council with regard to electric installations, and shall be carried out at the expense of the licensee, who shall have, moreover, to come to an understanding with the corporations or individuals whose property must be hired.

2. The installations granted must not in any way interfere with the working and development of the telegraphic and telephonic systems of the State and/or of the railway companies.

3. The oscillating circuit must be constructed so as to be capable of exact and definite adjustment to a fixed length of wave.

4. The licensee must conform to the rules with regard to wireless telegraphy, which may be laid down, from time to time, by the Federal authorities.

5. The installation granted under this licence must be at all time and in every part accessible to representatives of the administration of telegraphs and telephones entrusted with the duty of control.

6. The installation shall only be used for the reception of time signals. Any other employment thereof (for instance, exchange of messages with radiotelegraphic stations in Switzerland or outside its frontiers, as well as the communication of any signals that may be received, or of their tenor, to third parties) will be considered as a violation of the rights of the confederation (see the provisions of Articles 23 and 24 of the Federal Law of December 16th, 1907, dealing with the organisation and administration of telegraphs and telephones).

7. When changes of any importance have to be made in the installation, or when its location has to be shifted, or if it is to be worked by any other person, the licensee is required to immediately advise the administration of telegraphs and telephones concerning the change.

8. The present licence may be withdrawn at any time and for any period, and this may be done without conferring the right to any indemnity. In such an event the whole installation must be displaced at the cost of the licensee within fifteen days from the period fixed for the expiry of the licence.

9. The licensee shall be responsible for any loss or expense incurred by the Federal administration in consequence of failure to carry out the terms of the present licence.

10. The licensee shall pay to the Administrator of Telegraphs and Telephones a fixed fee of five francs payable at the Central Local Telegraph Centre of to defray the inspection and to cover the cost of registering the licence.

Given at Berne the day of

I/We, the undersigned, after having acquainted myself/ourselves with the conditions and stipulations hereinabove set forth, declare myself/ourselves willing to accept them and abide by them.

The day of 19 .
(Signed)

TELEPHONIC TIME SIGNAL SERVICE.

SECTION A.

C Decree of the Federal Council dated July 21st, 1916.

The Swiss Federal Council, acting on the suggestion of its Postal and Railway Department, and in view of the Federal decision of March 27th, 1914, decrees:

1. That the international radiotelegraphic time signal radiated daily at 10.56 and at 11 o'clock (H.E.C.) from the Paris Observatory by the Eiffel Tower Station, shall be—during working days—retransmitted telephonically by the Administration of Swiss Telegraphs and Telephones at Berne.

2. Any regular telephone subscriber may take up a subscription to the telephonic time signal, arranging therefor with his telephone exchange.

3. Subscriptions are monthly or annual, and are valid for the civil month or civil year.

The rates of subscription are:

(a) Fr. 2.50 per month, or part of a month.

(b) Fr. 25 per year.

For ten months at least they must be paid in advance.

4. Over and above the possibility of regular subscriptions, telephone subscribers may arrange to be supplied with odd time-service messages on such circuits as receive them. Each separate message will be charged for at the rate of 20 centimes, and this fee will be included, with ordinary conversation charges, in the monthly account.

5. The Administrator of Telegraphs and Telephones will accept no responsibility with regard to any irregular working of the Telephonic Time-Signal Service; nevertheless every endeavour will be made to assure and develop the service.

6. If any interruption in telephonic transmission of the time-signal last for more than seven consecutive days, without this arising from any fault on the part of the subscriber, the subscription fee will be refunded proportionately to the duration of the interruption.

7. Every effort shall be made to carry this edict into effect on and from the 1st August, 1916.

The Postal and Railway Department shall take steps to carry this out.

Dated Berne, 21st July, 1916.

SECTION B.

Method of Administration.

1. Every telephone subscriber who desires to subscribe to the Telephonic Time-Signal Service must address a written request to his telephone exchange showing exactly what kind of subscription he desires to take up (see Article 4 of this section, paragraphs (a) to (c)).

2. The telephone exchange which receives an application for such a subscription may, under this rule, accede to the application immediately.

On the reception of a first request for a subscription, the Telephone Exchange puts itself immediately in touch either with the Central Station through whose intermediary the time signal will be sent, or with its own local centre.

3. The originals of all applications for subscription must be sent to the Chief Office, through the intermediary of the local centres.

4. (a) The fees for annual subscriptions must be paid in advance for December, together with the half-yearly fees for the ordinary telephone service.

For periods of less than ten months, starting with the first day of the subscription and until the end of the year, the tax is collected on the basis of the tariff applicable to monthly subscriptions.

An annual subscription becomes automatically renewed from year to year, and may be cancelled at any time upon giving eight days' notice. If, however, it has not run for at least ten months, counting from the beginning of the year up to the date of cancellation, the rate of tax applicable is that of a monthly subscription.

(b) Fees for monthly subscriptions for a settled period (temporary subscriptions) are payable in advance, and for the whole duration of the subscription.

In default of advice to the contrary on the part of the subscriber, his subscription is considered as cancelled on the expiry of the agreed period.

(c) Monthly subscriptions of indeterminate duration are renewed automatically month by month. They may be cancelled at the end of a month by notice given at least eight days in advance; the subscription fees being payable monthly and in advance.

(d) Requests for reception of odd time-service messages are only granted in the case of lines of some importance, and on condition that they are made at latest by 10.50 a.m. Applicants are rung up at 10.55 a.m.

Applications are noted by entering the number of the subscriber on tickets specially prepared for this purpose. These tickets serve as the basis for the rendering of accounts.

When it has not been possible to attend to an application, because the subscriber's line was engaged his enquiry is charged as a local conversation. Fees for odd time-signal messages are charged for at the end of each month on the same invoice as conversation charges.

5. Subscription rates and charges made for odd time-signal messages come under subsection 2(c) of the accounts for messages, and must in consequence be entered, duly classified (see Article 4 of section (a) above) on Form No. 600 under "Other Receipts."

6. The commission allowed to exchange proprietors attached to central stations of Class III, and of intermediary stations, who have to co-operate in the telephonic time-service amounts to 25 per cent. on receipts. This commission is taken into consideration when the annual telephone accounts are adjusted.

Time-service communications in transit should be recorded in the same way as ordinary conversations in transit.

7. When the time-signal message is transmitted to an intermediary station linked up with a central station of Class III, the latter has only a right to a commission of 2 cents per communication in transit, and the commission of 25 per cent. on the message is allotted to the proprietor of the intermediary station.

TRINIDAD AND TOBAGO

THE Colony of Trinidad and Tobago includes the island of Trinidad, which is about 69 miles long by 52 miles wide, with an area of 1,754 square miles, and the island of Tobago, which is about 26 miles long and 7½ miles wide, with an area of 114 square miles.

Trinidad is situated about 10° north of the Equator, between 61° and 62° west longitude, and Tobago is to the north-east of Trinidad, about 11° 9' north latitude and 60° 12' west longitude. They form a Crown Colony, and their government is administered by a Governor, assisted by an Executive Council and Legislative Council.

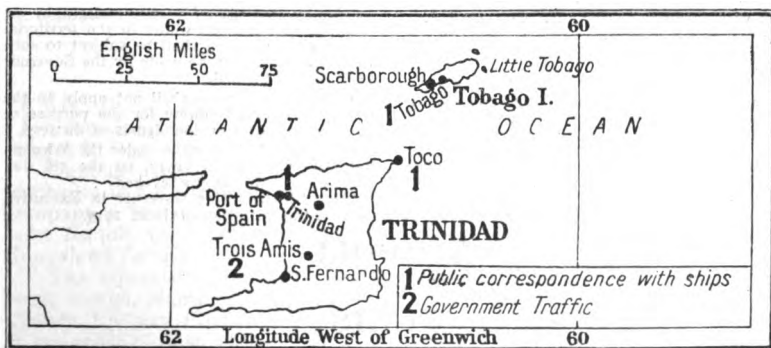

CONTROL AND ORGANISATION.

The first wireless station in Trinidad was erected in 1905 at the north-western corner of the island to obtain a direct sea line with Tobago, and merely to bring Tobago into telegraphic communication with Trinidad and thus with the outer world. It was a 2-kw. Lodge-Muirhead station. Subsequently this station was removed, and a 5-kw. Marconi station was erected in Port of Spain, with a daylight range of about 350 nautical miles and 1,000 nautical miles at night. Public ship and shore service is maintained therewith.

The Tobago station is on Fort King George, east of Scarborough, the capital of Tobago, and is a 3-kw. station (Marconi and Lodge-Muirhead), with a daylight range of about 350 nautical miles, and about 600 nautical miles at night.

The Trinidad and Tobago stations are open day and night for commercial service. There are no relaying charges between the two stations, and if ships are unable to obtain communication with Trinidad they endeavour to communicate with Tobago.

The Trinidad and Tobago Government Wireless Service is a branch of the Public Works Department and under the control of the Director of Public Works with the following staff :—

ADMINISTRATION.

The Law and Regulations governing radiotelegraphy are reprinted below :—

A—Ordinance No. 6 of 1917.

B—Regulations.

ORDINANCE No. 6 of 1917.

ISSUED MAY 8TH, 1917.

A Be it enacted by the Governor of Trinidad and Tobago with the advice and consent of the Legislative Council thereof as follows :—

1. This Ordinance may be cited as the Wireless Telegraphy Ordinance, 1917.

2. (1) It shall not be lawful for any person to use or establish in this Colony any apparatus or installation for the purposes of wireless telegraphy, without first obtaining from the Governor a licence in that behalf, to be granted on such terms and conditions as the Governor may from time to time prescribe.

(2) Any person contravening the provisions of this section is liable on summary conviction before a Magistrate to a fine not exceeding £50 or to imprisonment with or without hard labour, for any term not exceeding six months, and the apparatus and installation in respect of which a conviction is obtained may by order of the convicting magistrate be forfeited to the use of His Majesty the King.

3. (1) No person shall work any apparatus for wireless telegraphy installed on any merchant ship whilst that ship is in the territorial waters of the Colony, otherwise than in accordance with regulations made in that behalf by the Governor in Executive Council.

(2) Such regulations shall be published in the *Royal Gazette*.

(3) Any person contravening, or permitting, procuring, or assisting in the contravention of, any such regulation is liable, on summary conviction before a magistrate, to a penalty not exceeding £50, or to imprisonment, with or without hard labour, for any term not exceeding six months.

4. Any person who unlawfully and maliciously :—

(a) Injures, removes or destroys any apparatus or installation for the purpose of wireless telegraphy, or any part of such apparatus or installation ; or

(b) Obstructs or prevents in any manner whatsoever the sending, conveyance or delivery of any message or signal by wireless telegraphy :

is guilty of a misdemeanour and is liable to

imprisonment, with or without hard labour, for any term not exceeding two years.

5. The Wireless Telegraph Ordinance (No. 236) and the Wireless Telegraphy Ordinance 1909 are hereby repealed.

Passed in Council this twenty-seventh day of April, in the year of Our Lord one thousand nine hundred and seventeen.

REGULATIONS MADE UNDER THE WIRELESS TELEGRAPHY ORDINANCE, 1917.

B 1. All apparatus for wireless telegraphy on board a merchant ship in the territorial waters of the Colony shall be worked in such a way as not to interfere with (a) Naval signalling or (b) the working of any wireless telegraph station lawfully established, installed or worked in the Colony or the territorial waters thereof, and in particular the said apparatus shall be worked so as not to interrupt or interfere with the transmission of any messages between the wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

2. No apparatus for wireless telegraphy on board a merchant ship shall be worked or used whilst such ship is in any of the harbours of the Colony, except with the special or general permission in writing of the Director of Public Works of the Colony. Such special or general permission shall only be given to any ship subject to the condition that it shall not exchange signals with another ship except on the private business of the owners.

3. If at any time in the opinion of the Governor an emergency has arisen in which it is expedient for the public service that His Majesty's Government shall have control over the transmission of messages by wireless telegraphy, the use of wireless telegraphy on board merchant ships whilst in the territorial waters of the Colony shall be subject to such further rules as may be made by the Governor in Executive Council.

4. These regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering the signals of distress.

5. The regulations made under the Wireless Telegraphy Ordinance, 1917, on the 5th day of July, 1917 are hereby revoked.

Made by the acting Governor in Executive Council this 12th day of June, 1919.

Mr. Réák Halid ..	Director-General of Posts, Telegraphs and Telephones	Constantinople

UGANDA

THIS Protectorate, with that of the Kenyaland Colony and East African Protectorate, constitutes the whole area on the East Coast of Africa subject to British rule.

Uganda came under British dominion in 1890, and a portion of the territories was for a time administered by the Imperial British East African Company. The northern boundary is limited by the Sudan, the eastern by Lake Rudolf, the western by the Belgian Congo, and the southern by the Kenyaland Colony.

The administrative centre is Entebbe, the native capital of Uganda being Mengo, Kampala. Nile steamers from Khartoum ply to Rejaf. The Uganda Railway runs from Kisumu on Lake Victoria Nyanza to Mombasa on the coast of East Africa.

CONTROL.

Mr. W. G. Tucker ..	Telegraph Engineer in Charge	Entebbe

ADMINISTRATION.

Wireless telegraphy is administered under the following :—

ORDINANCE.

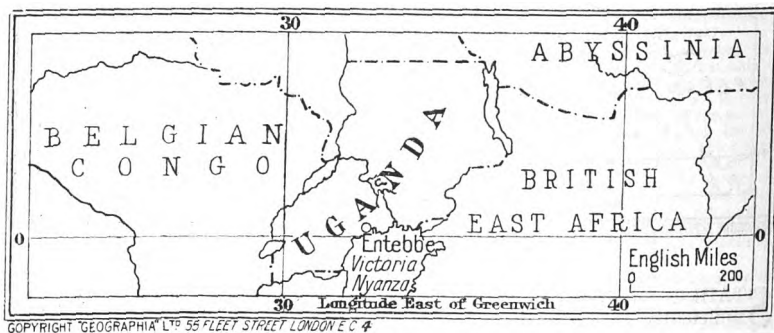

1. This Ordinance may be cited as "The Wireless Telegraphs Ordinance, 1908."

2. No person shall use or establish any apparatus or installation for the purpose of operating wireless telegraphs without a licence from the Governor.

Any person contravening the terms of this section shall be liable on conviction to a fine not exceeding Rs. 1,500 or imprisonment

of either kind for a term not exceeding twelve months, and any apparatus or installation in respect of which an offence under this section is committed may be forfeited and sold or disposed of as the Governor may direct.

3. It shall be lawful for the Governor from time to time by rules to prescribe the terms and conditions upon which licences to use or establish apparatus or installations for the purpose of operating wireless telegraphs may be granted.

UNION OF SOUTH AFRICA

(See SOUTH AFRICA, UNION OF.)

UNITED KINGDOM

THE correct title for the heart of the British Empire is that of the "United Kingdom," for just as we are a mixture of races, so are we also a mixture of nationalities. Wales was linked with England in the thirteenth century under Edward I, and in the Tudors has contributed a line of kings to the British throne. The Scotch joined hands with the English under James VI of Scotland and First of England, the Stuart Dynasty originating in the Northern Kingdom. Ireland remained a separate entity until the Act of Union, which came into force on January 1st, 1801.

The total area of the British Isles is reckoned at 121,377 square miles, whilst in 1914 the population numbered 46,500,000. In the same year there were 23,701 miles of railway and 2,886,025 miles of telegraphic and telephonic wires (exclusive of wireless aeriels).

Our own country is proud to share with Italy in the production of Senatore Marconi. If his father was Italian, his mother was Irish; and if Italy was the place of his birth, England has been the chief scene of his labours. The first British patent for Wireless Telegraphy was No. 12,039, lodged by the Italian inventor in 1896. Ever since that date the United Kingdom has been in the forefront of wireless activities, and British radio-telegraphy is continually expanding in all directions.

ORGANISATION.

Early in 1914 a Bill was presented to the House of Commons by the President of the Board of Trade to amend the laws relating to merchant shipping so as to give effect to the International Convention for the Safety of Life at Sea, signed at London on January 20th, 1914. Under the title "Merchant Shipping (Convention) Act, 1914," this Bill was passed in August, 1914, and was due to come into force on July 1st, 1915, but has not yet been put into operation. Part III of the Act refers to wireless telegraphy and is printed below.

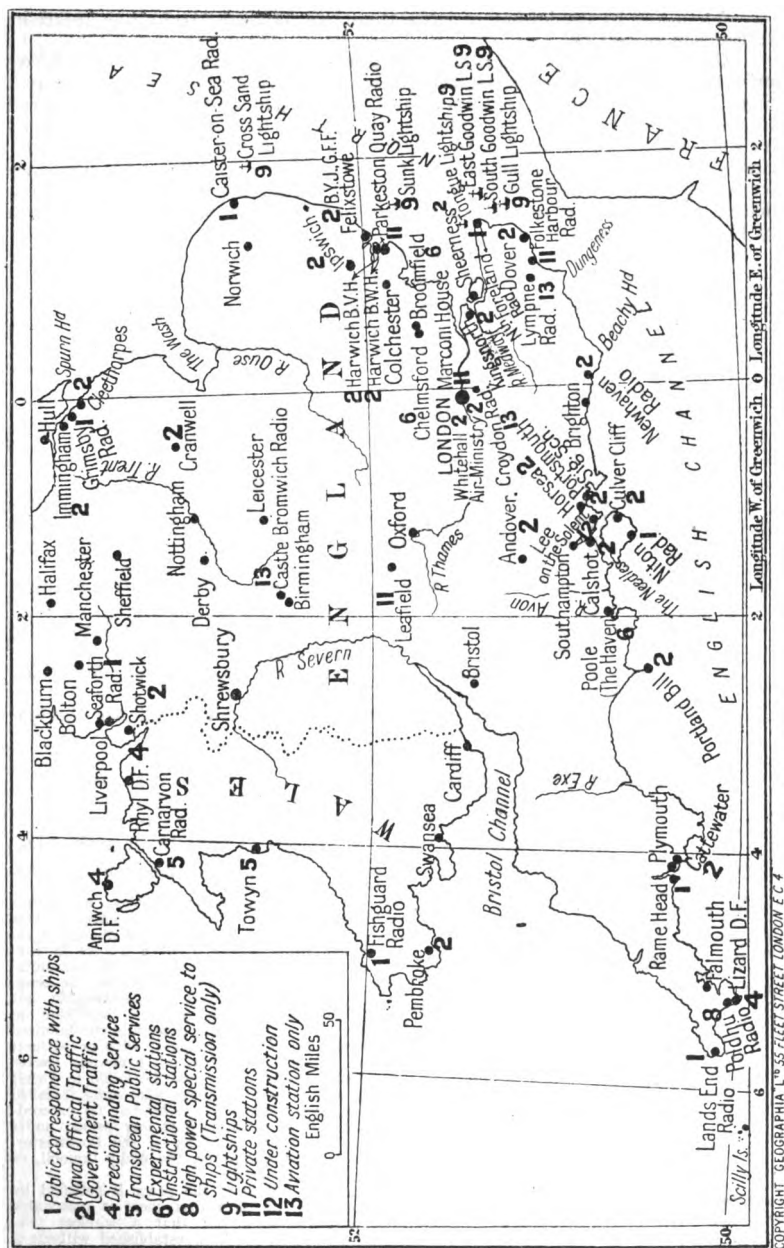

In the following pages we have included an extract from the Defence of the Realm (Consolidation) Regulations, 1914, which relates to the prohibition of the possession of wireless telegraphic apparatus, unless with the official permission of the Postmaster-General.

A new Act—the Merchant Shipping (Wireless Telegraphy) Act, 1919—came into operation on September 1st, 1920. We print the Act and rules herewith.

The form of Ship Licence ("D" below) is no longer operative, a fresh form being in preparation. In the meantime new installations are authorised by letter.

Regarding experimental and private business stations, a new Wireless Telegraphy Bill is to be introduced into Parliament, and when this has been passed the various forms of experimental and private business licence will be revised. In the meantime the General Post Office is issuing temporary experimental permits for (a) transmitting and receiving, and (b) receiving only, on the conditions stated below.

The partial removal of restrictions on amateur working which has already taken place was immediately productive of a keen stimulus to amateurism. The Wireless Society of London and kindred associations have resumed activities with more than pre-war ardour, and fresh societies are springing up in various parts of the country. (*For lists of Amateur Societies, see special section of Year-Book.*)

According to the latest statistics there are 85 land (excluding amateur) stations in operation.

Under the Air Navigation Regulations, 1919, extracts of which we print below, it is unlawful to establish or work any wireless telegraph apparatus in any British aircraft, except under and in accordance with a licence granted by the Postmaster-General, containing such conditions as may be approved by the Secretary of State for Air. A form of licence for the wireless installation on aircrafts reproduced below. The Syllabus of examination for certificate to act as wireless operator in aircraft is not yet definitely settled, but certificates in special cases are issued by the Post Office on the recommendation of the Air Ministry.

WIRELESS TELEGRAPHY ACT, 1904.

A Following the termination of the meeting of the delegates at the International Conference in Berlin in 1903, the British Government drafted a Wireless Telegraph Act to define the official position of the Postal and Telegraph Department in the United Kingdom in regard to the new development. The Act received Royal assent on August 15th, 1904, and the text is as follows :—

1. (1) A person shall not establish any wireless telegraph station, or instal or work any apparatus for wireless telegraphy, in any place or on board any British ship except under and in accordance with a licence granted in that behalf by the Postmaster-General.

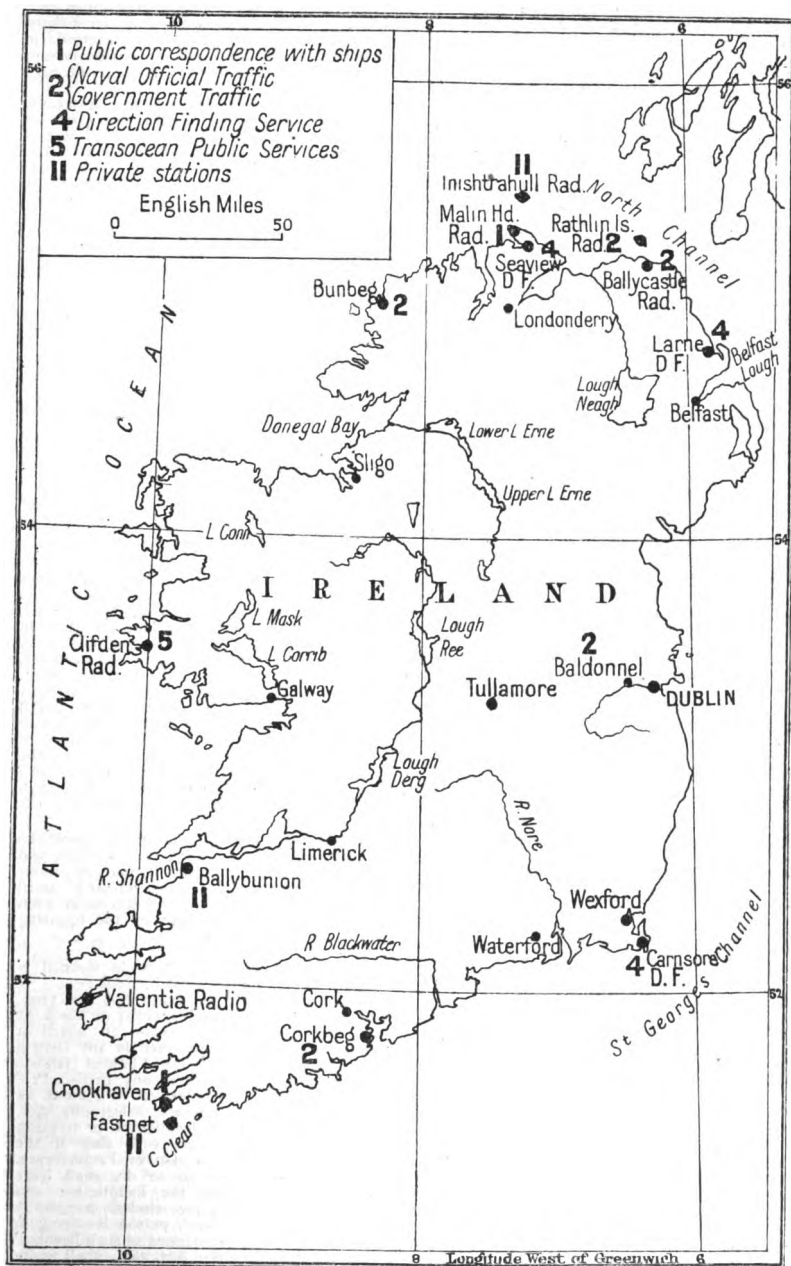

(2) Every such licence shall be in such form and for such period as the Postmaster-General may determine, and shall contain the terms, conditions, and restrictions on and subject to which the licence is granted, and any

such licence may include two or more stations, places, or ships.

(3) If any person establishes a wireless telegraph station without a licence in that behalf, or instals or works any apparatus for wireless telegraphy without a licence in that behalf, he shall be guilty of a misdemeanour, and be liable, on conviction under the Summary Jurisdiction Acts, to a penalty not exceeding ten pounds, and on conviction on indictment to a fine not exceeding one hundred pounds, or to imprisonment, with or without hard labour, for a term not exceeding twelve months, and in either case be liable to forfeit any apparatus for wireless telegraphy installed or worked without a licence, but no proceedings shall be taken against any person under this Act except by order of the Postmaster-General, the Admiralty, the Army Council, or the Board of Trade.

(4) If a justice of the peace is satisfied by information on oath that there is reasonable ground for supposing that a wireless telegraph station has been established without a licence in that behalf, or that any apparatus for wireless telegraphy has been installed or worked in any place or on board any ship

* The terms of these licences are no longer operative, and new forms of licence are likely to be issued shortly.

within his jurisdiction without a licence in that behalf, he may grant a search warrant to any police officer or any officer appointed in that behalf by the Postmaster-General, the Admiralty, the Army Council, or the Board of Trade, and named in the warrant, and a warrant so granted shall authorise the officer named therein to enter and inspect the station, place or ship, and to seize any apparatus which appears to him to be used, or intended to be used, for wireless telegraphy therein.

(5) Sections 684, 685, and 686, of the Merchant Shipping Act, 1894 (which relate to the jurisdiction of courts and justices), and section 693 of the same Act (which relates to distress for sums ordered to be paid by masters and owners of ships), shall apply to the jurisdiction of courts and justices in respect of ships, and to distress under this Act.

(6) The Postmaster-General may make regulations for prescribing the form and manner in which applications for licences under this Act are to be made, and, with the consent of the Treasury, the fees payable on the grant of any such licence.

(7) The expression "wireless telegraphy" means any system of communication by telegraph as defined in the Telegraph Acts 1863 to 1904, without the aid of any wire connecting the points from and at which the messages or other communications are sent and received; Provided that nothing in this Act shall prevent any person from making or using electrical apparatus for actuating machinery or for any purpose other than the transmission of messages.

2. (1) Where the applicant for a licence proves to the satisfaction of the Postmaster-General that the sole object of obtaining the licence is to enable him to conduct experiments in wireless telegraphy, a licence for that purpose shall be granted, subject to such special terms, conditions, and restrictions as the Postmaster-General may think proper, but shall not be subject to any rent or royalty.

(2) Where an applicant for a licence satisfies the Postmaster-General that a wireless telegraph station is to be used solely for the transmission of telegrams which are within the first or second exception from the exclusive privilege of transmitting telegrams conferred upon the Postmaster-General by the Telegraph Act, 1869, a licence for that purpose, if granted, shall not be subject to any rent or royalty.

(3) It shall be lawful for the Postmaster-General, due regard being had to the maintenance and exercise of effective control over wireless telegraphy, to grant special licences at reduced terms for the establishment and working of wireless telegraph stations to be used exclusively for the transmission within the United Kingdom of news to public registered newspapers. A schedule of all reduced rents or royalties imposed by any special licences shall be laid before both Houses of Parliament within fourteen days of the commencement of the session next succeeding the grant of any such licences.

3. (1) This Act may be cited as the Wireless Telegraphy Act, 1904, and may be cited with the Telegraph Acts, 1863 to 1904.

(2) This Act shall extend to the whole of the British Islands and to all British ships in the territorial waters abutting on the coast of the British Islands, and the Royal Courts of the Channel Islands shall register this Act accordingly.

(3) His Majesty in Council may order that this Act shall, subject to any conditions, exceptions, and qualifications contained in the order, apply during the continuance of the order to British ships whilst on the high seas.

(4) A person shall not work any apparatus for wireless telegraphy installed on a foreign ship whilst that ship is in territorial waters otherwise than in accordance with regulations made in that behalf by the Postmaster-General, and the Postmaster-General may, by any such regulations, impose penalties recoverable summarily for the breach of any such regulations not exceeding ten pounds for each offence and may provide for the forfeiture on any such breach of any apparatus for wireless telegraphy installed or worked on such ship. Save as aforesaid, nothing in this Act shall apply to the working of apparatus for wireless telegraphy installed on any foreign ship.

4. In the application of this Act to Scotland the expression "Misdemeanour" means crime and offence.

5. In the application of this Act to the Channel Islands and the Isle of Man:—

(1) The Lieutenant-Governor of the Island of Jersey or the Island of Guernsey, and the Governor, Lieutenant-Governor, or Deputy-Governor of the Isle of Man, as the case may require, shall be substituted for the Board of Trade.

(2) Offences may be prosecuted, fines recovered, proceedings taken, and search warrants issued in such courts and in such manner as may for the time being be provided in the Channel Islands and the Isle of Man by law, or, if no express provision is made then in and before the courts and in the manner in which the like offences, fines, proceedings, and warrants may be prosecuted, recovered, taken, or issued therein by law, or as near thereto as circumstances admit, and the bailiff or his lieutenant, or any jurat of the Royal Court in the Island of Jersey or the Island of Guernsey, and the judge or any jurat of the Court of Alderney, and the high bailiff or two justices of the peace in the Isle of Man, shall respectively be substituted for a justice of the peace.

6. This Act shall continue in force until the thirty-first day of July, nineteen hundred and six, and no longer unless Parliament otherwise determines. (It was renewed until December 31st, 1909, and has since been extended from year to year by the Expiring Laws Continuance Act.)

B The following Order in Council is dated February 29th, 1908:—

(1) The Wireless Telegraphy Act, 1904, shall apply to British ships whilst on the high seas, provided that a person on board a British ship which is registered in any British possession (other than the Channel Islands and the Isle of Man), or in any British Protectorate, shall not be deemed to commit an offence against the Wireless Telegraphy Act, 1904, by reason of the installation or working of wireless telegraphy on such ship if the authority in such Possession or Protectorate, having power by law so to do, shall have granted a licence for the installation and working of apparatus for wireless telegraphy on that ship, and if such person is acting in accordance with the provisions of such licence.

(2) The Interpretation Act, 1889, shall apply for the purpose of the interpretation of this

Order as it applies for the purpose of the interpretation of an Act of Parliament.

(3) This Order shall be published in the *London Gazette*, and shall come into operation immediately from and after the expiration of three months after this Order is so published.

(4) This Order may be cited as "The Wireless Telegraphy Order, 1908."

C An Order was issued in 1908 (No. 496) containing regulations relating to foreign ships:—

1. In these Regulations unless the context otherwise requires—

"Wireless Telegraphy" has the same meaning as in the Wireless Telegraphy Act, 1904.

"Naval Signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and Naval Stations, or between a ship of His Majesty's Navy or a Naval Station and any other wireless telegraph station whether on shore or on any ship.

"Territorial Waters" means such part of the sea adjacent to the coast of the British Islands as is deemed by international law to be within the territorial sovereignty of His Majesty, and includes harbours.

"Harbour" includes harbours properly so called, whether natural or artificial estuaries, navigable rivers, piers, jetties, and other works in or at which ships can obtain shelter, or ship and unship goods or passengers.

2. When communications are made by means of wireless telegraphy between a foreign ship in territorial waters and a wireless telegraph station in the British Isles, the rules in force for the working of wireless telegraphy at that station shall be observed.

3. All apparatus for wireless telegraphy on board a foreign ship in territorial waters shall be worked in such a way as not to interrupt or interfere with—

(a) Naval Signalling, or

(b) the working of any wireless telegraph station lawfully established, installed, or worked in the British Islands or the territorial waters abutting on the coast of the British Islands, and in particular the said apparatus shall be so worked as not to interrupt or interfere with the transmission of any messages between wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.

4. (1) Except with the special permission in writing of the Postmaster-General no apparatus for wireless telegraphy on board a foreign ship (other than a ship of war) shall be worked or used whilst such ship is in any harbour in the British Islands.

(2) Without prejudice to the operation of the general provisions of these Regulations, the use of wireless telegraphy on board a foreign ship of war while in a harbour in the British Islands shall be subject to such rules (whether prohibitive or regulative) as may be made by the Admiralty from time to time.

5. (1) If at any time in the opinion of one of His Majesty's Principal Secretaries of State an emergency has arisen in which it is expedient for the public service that His Majesty's Government should have control over the transmission of messages by wireless telegraphy, and notice to that effect is published by the Postmaster-General, after the publication of

such notice and until further notice the use of wireless telegraphy on board foreign ships whilst in territorial waters shall be subject to such rules as may be made by the Admiralty from time to time, and such rules may prohibit or regulate such use in all cases or in such cases as may be deemed desirable.

(2) Such notice as aforesaid shall be published in the *London Gazette*, the *Edinburgh Gazette*, and the *Dublin Gazette*, and in such other manner, if any, as to the Postmaster-General may seem fit.

6. (1) Any person who shall offend against any provision of these Regulations or of any Rules made by the Admiralty thereunder shall be liable on conviction under the Summary Jurisdiction Acts for every such offence to a penalty not exceeding ten pounds, and upon such conviction the Court may order that any apparatus for wireless telegraphy installed or worked on board the ship on which the offence was committed shall be seized and forfeited.

(2) For the purposes of any proceedings under these Regulations the master or person being or appearing to be in command or charge of any foreign ship shall be deemed to have authorised and to be responsible for the use or working of any apparatus on board such ship.

(3) Any summons or other document in any proceedings under these Regulations shall be deemed to have been duly served on the person to whom the same is addressed by being left on board the ship on which the offence is charged to have been committed with the person being or appearing to be in command or charge of the ship.

7. These Regulations shall not apply to the use of wireless telegraphy for the purpose of making or answering signals of distress.

8. These Regulations shall come into operation on the first day of July, 1908.

9. These Regulations may be cited as "The Wireless Telegraphy (Foreign Ships) Regulations, 1908."

D The following is a copy of the form of Licence granted by the Postmaster-General to establish Wireless Telegraph Ship Stations:—

LICENCE TO ESTABLISH WIRELESS TELEGRAPH SHIP STATIONS.*

To all to whom these presents shall come

I, The Right Honourable

His Majesty's Postmaster-General, send greeting:

Whereas by reason of the provisions of the Telegraph Acts 1863 to 1916 and the Wireless Telegraphy Order 1908 it is unlawful to establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place or on board any British ship (whether in the territorial waters of the British Islands or on the high seas) except under and in accordance with a licence granted in that behalf by the Postmaster-General:

And whereas — (hereinafter called the licensee) has applied to the Postmaster-General for the grant of a licence to establish instal and work apparatus for wireless telegraphy as defined in Section 1 (7) of the Wireless Telegraphy Act 1904 at the ship station or stations mentioned in the Schedule hereto.

Now I the above-named — His Majesty's Postmaster-General in exercise of all powers and authorities enabling me in this behalf do

* This form of licence is no longer operative, and a new form is likely to be issued shortly.

hereby grant to the licensee during the term or period commencing on the day of the date hereof and continuing thereafter so long as the Defence of the Realm (Consolidation) Regulations 1914 shall remain in force licence and permission—

(i) To establish instal and work for the purposes hereinafter mentioned at the ship station or stations specified in the Schedule hereto apparatus for wireless telegraphy of the kind specified in the Schedule hereto (which apparatus is hereinafter referred to as "the licensed apparatus"):

Provided that—

(a) Each ship station shall be of such class mentioned in Article XIII of the Service Regulations annexed to the Radio-telegraph Convention 1912 as is specified in the said Schedule opposite to the name of such station:

(b) The apparatus installed at each ship station shall be of the character specified in the said Schedule opposite to the name of such station;

(c) The sending apparatus used at each ship station shall be of such a character that the waves emitted are as pure and as little damped as possible and the receiving apparatus used at the said station or stations shall be of such a character as to afford the greatest possible protection from disturbance during the reception of signals;

(d) The apparatus shall include such emergency installation as may be required according to the class of the ship station under the provisions of Article XI of the Service Regulations annexed to the Radio-telegraph Convention 1912, and such control switch as may be required by the Admiralty;

(e) The licensed apparatus shall be so constructed as to be capable of using wavelengths of 600 and 300 metres in length as measured by the standard of measurement in use by the Post Office for the time being and such other wavelengths not exceeding 600 metres in length as shall be authorised in writing from time to time by the Postmaster-General. Provided always that the wavelength of 600 metres shall normally be used for communication and further that the wavelength of 1,800 metres may be used for transmission in the exceptional case contemplated by Article XXXV (2) (a) of the Service Regulations annexed to the Radiotelegraph Convention 1912:

Provided further that only the wavelength of 600 metres (except as directed by the Admiralty) shall be used by the licensee during the period of any war in which the United Kingdom is engaged;

(f) The apparatus shall admit of the transmission and reception of messages at the rate of not less than 20 words a minute five letters being counted as one word;

(ii) To send and receive messages by means of the licensed apparatus between the said ship stations and also between the said ship stations and coast stations and other ship stations. Provided that the licensee shall not except with the consent in writing of the Postmaster-General send or receive messages from and at the said ship stations when in any harbour in the British Islands; and

(iii) To receive money or other valuable consideration for or in respect of the use of the licensed apparatus or for in respect of the transmission or receipt of messages by means of the said apparatus.

And I do hereby declare that the said licence and permission is granted on and subject to the following conditions and provisions:

1. In these presents (and in the Schedule hereto) the following words and expressions shall have the several meanings hereinafter assigned to them unless there be something either in the subject or context repugnant to such construction (that is to say):—

The expression "the Postmaster-General" means the Postmaster-General for the time being.

The expression "wireless telegraphy" has the same meaning as in the Wireless Telegraphy Act 1904.

The term "telegraph" has the same meaning as in the Telegraph Act 1869.

The expression "Naval signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy, between ships of His Majesty's Navy and Naval Stations or between a ship of His Majesty's Navy or a Naval Station and any other wireless telegraph station whether a coast station or a ship station.

The expression "the Admiralty" means the Commissioners for executing the office of Lord High Admiral of the United Kingdom of Great Britain and Ireland.

The expressions "the International Telegraph Convention" and "the International Telegraph Regulations" means respectively the International Convention of St. Petersburg dated the 10th 22nd July 1875 and the Service Regulations made thereunder and include respectively any modifications of the Convention or Regulations made from time to time.

The expression "the Radiotelegraph Convention 1912" means the Convention signed at London on the 5th day of July 1912 and the Service Regulations made thereunder and includes any modification of the Convention or Regulations made from time to time.

The expression "coast station" means a wireless telegraph station which is established on land or on board a ship permanently moored, and which is open for the service of correspondence between the land and ships at sea.

The term "ship station" means a wireless telegraph station established on board a ship which is not permanently moored.

2. On and after the day of 192 the installation and maintenance of each of the ship stations mentioned in the Schedule hereto by the licensee shall subject to the provisions of this licence be deemed compulsory in accordance with the provisions of Regulation 37B of the Defence of the Realm (Consolidation) Regulations 1914.

3. The licensed apparatus shall not be used by the licensee or by any other person either on behalf or by permission of the licensee for the despatch or receipt of messages except messages authorised by this licence.

4. (1) The licensee shall not by the transmission of any message by means of the licensed apparatus or otherwise by the use of the licensed apparatus interfere with Naval signalling.

(2) If the Admiralty are of opinion that the working of the licensed apparatus at any ship station specified in the Schedule hereto is inconsistent with the free use of Naval signalling the licensee shall when required in writing by the Postmaster-General so to do close the said station.

(3) These provisions for the protection of Naval signalling shall be construed to be without prejudice to the generality of any other provisions of this licence.

5. For the purpose of this licence the licensee shall observe the International Telegraph Convention and the International Telegraph Regulations so far as the said Convention and Regulations are capable of being applied to wireless telegraphy in common with ordinary land and submarine telegraphy.

6. The licensee shall observe the provisions of any Regulations from time to time made under the provisions of the Telegraph Acts 1863 to 1916 by the Postmaster-General with the consent of the Treasury in relation to the conduct of wireless telegraph business so far as the same are applicable to the licensee.

7. The licensee shall observe the provisions of the Radiotelegraph Convention 1912.

8. The licensee shall comply with all such directions and observe all such rules as may be given or made by the Postmaster-General from time to time for the purpose of preventing interference with the working of any other wireless telegraph station and for enabling the messages exchanged by means of the licensed apparatus to be distinguished from those emanating from any other wireless telegraph station.

9. The licensee shall comply in all respects with all such directions and regulations as may from time to time be given or made by the Admiralty.

10. The licensed apparatus shall not without the consent of the Postmaster-General be altered or modified in respect of any of the particulars mentioned in the Schedule thereto.

11. The licensee shall at all times indemnify the Postmaster-General against all actions claims and demands which may be brought or made by any corporation company or person in respect of any injury arising from any act licensed or permitted by these presents.

12. (1) Subject to the provisions of this licence the licensee shall transmit messages by means of the licensed apparatus on equal terms without favour or preference whether as regards rates of charge order of transmission or otherwise. Provided always that signals of distress and messages in connection therewith shall receive priority over all other messages and that the order of transmission of such other messages shall be governed by the International Telegraph Regulations.

(2) In respect of messages transmitted on behalf of His Majesty's Government or the Government of any British Possession or Protectorate the licensee shall charge rates not in excess of half of the rates charged to the ordinary public.

13. The licensee shall so far as possible receive from ships and light stations all requests for assistance and all signals of distress and shall answer such requests and signals and send them with the least possible delay to the proper authorities by means of the licensed apparatus or any other means in the power of the licensee.

14. (1) The licensed apparatus at each of the ship stations mentioned in the Schedule thereto shall be worked only by operators holding certificates issued by the Postmaster-General and the licensee shall provide for the working of each station at least two such operators.

(2) Certificates will be granted to persons of

such technical proficiency and will be in such form and will be subject to such conditions as the Postmaster-General shall from time to time prescribe and they may be endorsed or withdrawn at the discretion of the Postmaster-General in accordance with the conditions to which the certificates are respectively subject.

15. The licensee shall not divulge to any person (other than properly authorised officials of His Majesty's Government or a competent legal tribunal) or make any use whatever of any message coming to the knowledge of the licensee and not intended for receipt by means of the licensed apparatus. The licensee shall exhibit at each of the ship stations specified in the Schedule hereto a copy of Section 11 of the Post Office (Protection) Act 1884 and any contravention of that section by any person in the employment of the licensee shall be deemed to be a breach of the provisions of this licence.

16. The licensee shall keep full accounts records and registers of all messages transmitted by means of the licensed apparatus and in such registers each of such message shall be accompanied by its identifying number and date and full particulars of its place of origin and of ultimate destination and such further particulars as the Postmaster-General shall from time to time reasonably require to be shown messages on His Majesty's service being in such registers distinguished from other messages. The licensee shall preserve all used message forms written and printed and transcripts of messages and all other papers for a period of at least fifteen months counting from the month following that in which the radiotelegrams were handed in as prescribed by the Radiotelegraph Convention 1912 and such registers and message papers shall be open to the inspection of the Postmaster-General or his officers thereto authorised at the registered office of the licensee for the time being or at such other place as may be agreed between the hours of 10 a.m. and 5 p.m. on every day except Sunday or a statute or general holiday.

17. The licensee shall render to the Postmaster-General such accounts as the Postmaster-General shall direct in respect of all charges due or payable under the Radiotelegraph Convention 1912 in respect of messages exchanged between the ship stations hereby licensed and coast stations and shall pay to the Postmaster-General at such times and in such manner as the Postmaster-General shall direct all sums which shall be due from the licensee under such accounts.

18. The Postmaster-General and any agent authorised in that behalf in writing by him may at all reasonable times enter upon all or any of the ship stations hereby licensed for the purpose of inspecting and may inspect any apparatus fixed or being in such stations respectively for the purpose of sending and receiving messages by wireless telegraphy and all other telegraphic instruments and apparatus fixed or being in such stations respectively and the working and use of such apparatus and telegraphic instruments respectively.

19. The licensee shall carry on every ship on which a ship station is established under this licence a print or copy of the licence certified under the hand of an appropriate officer of the Postmaster-General to be a true copy and shall produce such print or copy for inspection if required to do so by the competent authorities of the countries where the ship calls. The licensee shall also carry on every

such ship such documents as may be prescribed by the Postmaster-General for the purpose of enabling the licensee to communicate with coast stations and ship stations in accordance with the Radiotelegraph Convention 1912.

20. (1) The licensee shall pay to the Postmaster-General for and in respect of the licence hereby granted a royalty of five shillings per annum in respect of each ship station at which the licensed apparatus is installed.

(2) The said royalty shall be payable on December 1st in each year during which the licence remains valid.

21. Except with the consent in writing of the Postmaster-General the licensee shall not assign underlet or otherwise dispose of or admit any other person or body to participate in the benefit of the licences powers or authorities hereby granted or any of such licences powers or authorities.

22. (1) Inasmuch as an emergency has arisen in which it is expedient for the public service that His Majesty's Government shall have control over the transmission of messages by the licensed apparatus it shall be lawful for any Naval Military Customs or Police Officer or any other person authorised by the Admiralty to take possession of the licensed apparatus or any part thereof in the name and on behalf of His Majesty and to use the same for His Majesty's service and any such officer or person so authorised may enter upon any ship on which any such apparatus is installed and take possession of the said apparatus and use the same as aforesaid and subject to such use may use the same or allow it to be used for such ordinary services as may in his discretion seem fit to him or may prohibit and take steps to prevent the use of the same and issue directions which shall be obeyed by the licensee to prevent such use.

(2) Any such officer or person so authorised as aforesaid may instead of taking possession of the licensed apparatus as aforesaid direct and authorise such persons as he may think fit to assume the control of the transmission of messages by the licensed apparatus either wholly or partly and in such manner as he may direct and such persons may enter upon any ship on which any apparatus is installed accordingly or the said officer or person so authorised as aforesaid may direct the licensee to submit to him or any person authorised by him all messages tendered for transmission or arriving by the licensed apparatus or any class or classes of such messages to stop or delay the transmission of any messages or deliver the same to him or his agent and generally to

obey all such directions with reference to the transmission of messages as the said officer or person so authorised as aforesaid may prescribe and the licensee shall obey and conform to all such directions.

(3) The licensee shall be entitled to reasonable compensation for any damage to the licensed apparatus arising in consequence of the exercise of the powers conferred by this clause.

23. Nothing in these presents contained shall prejudice or affect the right of the Postmaster-General from time to time to establish extend maintain and work any system or systems of telegraphic communication (whether of a like nature to that hereby licensed or otherwise) in such manner as he shall in his discretion think fit neither shall anything herein contained prejudice or affect the right of the Postmaster-General from time to time to enter into agreements for or to grant licences relative to the working and user of telegraphs (whether of a like nature to those hereby licensed or otherwise) or the transmission of messages in any part of the United Kingdom by means of wireless telegraphy or by any other means with or to any person or persons whomsoever upon such terms as he shall in his discretion think fit. And (save as in the licence expressly provided) nothing herein contained shall be deemed to authorise the licensee to exercise any of the powers or authorities conferred on or acquired by the Postmaster-General by or under the Telegraph Acts or any of them.

24. Any notice request or consent (whether expressed to be in writing or not) to be given by the Postmaster-General under these presents may be under the hand of any one of the Secretaries or Assistant Secretaries for the time being of the Post Office and may be served by sending the same in a registered letter addressed to the licensee at the registered office for the time being of the licensee or if such notice request or consent relates to any particular ship station by delivery to the master of the ship upon which such station is installed and any notice to be given by the licensee under these presents may be served by sending the same in a registered letter addressed to the Secretary of the Post Office at the General Post Office London.

As witness my hand and seal this

LICENCE TO USE WIRELESS TELEGRAPHY FOR PRIVATE BUSINESS.*

Whereas
E of _____ in the county of _____ (hereinafter called "the licensee") is desirous of establishing installing working and using a system of wireless telegraphy as defined in Section 1 (7) of the Wireless Telegraphy Act 1904 :

And whereas by reason of the provisions of the Telegraph Acts 1863 to 19 it is unlawful to establish any wireless telegraph station or instal or work any apparatus for wireless telegraphy in any place except under and in accordance with a licence granted in that behalf by the Postmaster-General and it is also unlawful save as in the said Acts provided to transmit telegrams within the United Kingdom :

And where as at the request of the licensee I have agreed to grant to the licensee the licences powers and authorities hereinafter expressed and contained for the period upon the terms and subject to the stipulations and conditions hereinafter appearing :

Now I the above-named His Majesty's Postmaster-General in exercise of all powers and authorities enabling me in this behalf do hereby grant to the licensee during the term or period commencing on the day of the date hereof and terminating on the 31st day of December 19 _____ licence and permission—

(i) to establish and instal work at the stations specified in the Schedule hereto apparatus for wireless telegraphy (hereinafter called "the licensed apparatus") provided that the apparatus installed at each station shall be of the character specified in the said Schedule opposite to the name of such station ; and

(ii) to transmit and receive messages on the private business of the licensee by means of the licensed apparatus between the said stations.

And I do hereby declare that the said licence and permission is granted on and subject to the following conditions and provisions :

1. In these presents (and in the schedule hereto) the following words and expressions shall have the several meanings hereinafter assigned to them unless there be something either in the subject or context repugnant to such construction (that is to say) —

The expression "the Postmaster-General" means the Postmaster-General for the time being.

The expression "wireless telegraphy" has the same meaning as in the Wireless Telegraphy Act 1904.

The term "telegraph" has the same meaning as in the Telegraph Act 1869.

The expression "naval signalling" means signalling by means of any system of wireless telegraphy between two or more ships of His Majesty's Navy between ships of His Majesty's Navy and Naval Stations or between a ship of His Majesty's Navy or a Naval Station and any other wireless telegraph station whether on shore or on any ship.

The expression "the Admiralty" means the Commissioners for executing the office of Lord High Admiral of the United Kingdom of Great Britain and Ireland.

* The terms of this licence are no longer operative, and a new form of licence is likely to be issued shortly.

Apparatus shall be deemed to be "syn-tonised" when the transmitting apparatus is so adjusted as to communicate with a receiver which has a corresponding adjustment and to produce as little effect as possible on a receiver not having a corresponding adjustment.

2. (1) The licensed apparatus shall not be used by the licensee or by any person either on behalf or by permission of the licensee for any purpose except for the transmission and receipt of such messages as aforesaid between and at the stations specified in the Schedule hereto.

(2) No money or other valuable consideration shall be received by the licensee or by any other person with the authority or by the permission of the licensee in respect of the transmission or receipt of any messages by means of the licensed apparatus or any part thereof.

3. (1) The licensee shall not by the transmission of any message by means of the licensed apparatus or otherwise by the use of the licensed apparatus interfere with naval signalling.

(2) Whenever the operators at any signal station of the licensee perceive through the medium of the instruments used by them that naval signalling is proceeding they shall refrain from using the licensed apparatus until all indication that naval signalling is proceeding shall have ceased.

(3) The licensee shall if so required in writing by the Admiralty cease to use the licensed apparatus for such period (not exceeding two hours in any one day) as may be specified by the Admiralty.

(4) If the Admiralty are of opinion that the working of the licensed apparatus at any station specified in the Schedule hereto is inconsistent with the free use of naval signalling the licensee shall when required in writing by the Postmaster-General close the said station.

(5) These provisions for the protection of naval signalling shall be construed to be without prejudice to the generality of any other provisions of this licence.

4. The licensee shall observe the provisions of any Regulations from time to time made under the provisions of the Telegraph Acts 1863 to 19 _____ by the Postmaster-General with the consent of the Treasury in relation to the conduct of wireless telegraph business.

5. (1) The licensee shall so work the licensed apparatus as not to interfere with the working of any wireless telegraph station established in the British Islands or the territorial waters abutting on the coasts of the British Islands (whether on shore or on any ship) by or for the purposes of the Postmaster-General or any department of His Majesty's Government or for commercial purposes and in particular with the transmission or receipt of any messages between or at wireless telegraph stations established as aforesaid on land and wireless telegraph stations established on ships at sea.
